You are giving the Indian youth an impetus that will tell in the next generation, and are inspiring ideas upon them that can but be fruitful of good. The first noticeable feature of your training is to make them disabused with their old manner of living as the Agency Indians. They crave something higher and better, and will seek and work for it, and should be encouraged by every effort that can be made to assist them. I trust by the encouraging ring of the President's message, there may be some provisions made by Congress, that will give them ownership of land, and other assistance by which they can get into agriculture; this and pastoral life, in my opinion, is the future welfare of the Indian. In the gradations of civilization he will have to commence at the point at which he is at present; enter his physical necessities are the first to be supplied, and the best and the most accessible to him, to supply these wants, and at the same time, preserve his independent manhood, is from the products of the soil. Finally I would say, "millions for his education and not a penny to war with him."

Very respectfully yours,

HENRY C. KAUFMAN.

In charge.

## A PITCAIRN ISLANDER.

SIMPLICITY OF LIFE OF THE DESCENDANTS OF THE MUTINEERS OF THE BOONBY, AS DESCRIBED BY ONE OF THEMSELVES.

The marvellous and romantic history of the settlement of Pitcairn Island in the South Sea, by the sailors and officers (some of them noblemen) of an English ship, driven to mutiny by a cruel captain; the penitence and reformation of one of the leaders, and the subsequent growth of the little colony in primitive simplicity, and purity of manners, surviving even their discovery after many years by English and American ships, and adoption as an English colony, have been told before in the Workman. A San Francisco paper gives the following latest report from the Island, through one of its natives.

"James Russell McCoy, who was born on Pitcairn Island thirty-eight years ago, and lived there and in Norfolk Island all of his life until last January, is now in San Francisco. He is an immediate descendant of one of the Bounty mutineers. Last January he left the Island for his health, taking a voyage to Liverpool on the ship *Harvey Mills*, and coming from Liverpool to the same vessel. Mr. McCoy was not very favorably impressed with London. The weather was gloomy and foggy, and while the people were kind, their kindness did not overcome the climatic depression. He is highly pleased with San Francisco, and cannot speak of the kindness of the people without enthusiastic exclamations.

The islander is a very docile and pleasant man, who submits to an interview with the American, the manners, customs and enjoyments of the ninety-six persons inhabiting the islands. From the account, their life discounts in simplicity the sojourn of the exile Duke in the forest of Arden. There is no such thing as money in circulation on the islands. As an example, if one islander has two shirts

and another has none the one with two cheerfully gives one shirt to the other. Then if the man who has two shirts wants any sweet potatoes, yams, or a fowl, he goes to the place of the other man and supplies his want. The people wear English style of clothing. They get presents of various kinds from visiting ships and other vessels touching at the island, and give in exchange oranges, bananas, limes, lemons, sweet potatoes, coconuts, pumpkins and fowls. In exchanges of this kind the sailors generally get the best of the bargain. There has been some difficulty in getting garments suitable for women and children, but that has been in a great measure overcome by the generosity and activity of the ladies composing the Young Women's Christian Association of San Francisco, and the individual efforts of H. G. Williams, who takes great interest in the islanders.

The islanders dwell in houses made of boards, saved from timber grown on the island. All of the natives profess the Christian religion, and, according to Mr. McCoy's statement, the principal church, of life on that tropical island consists of singing hymns like those which Moody and Sankey sing. He said the young people do not dance, but they love to sing. On Sunday there is service in the church in the morning and evening, and Sunday School in the morning. There is prayer-meeting Tuesday evening, the Bible class Thursday evening, Simon Young teaches the Bible class, and heresy is unknown in that attitude. There are week-day schools where instruction in English is given.

The marriage relation on the island is about the same as it is in other Christian communities, except there are no marriages of wealth or title. Mr. McCoy describes them as being matrimonial. There is nothing that bears a resemblance of polygamy in the island.

Mr. McCoy is stopping at the residence of a lady, Mrs. Clarke, whose son was on the recently wrecked ship *Arctida*, and is now on Pitcairn Island awaiting an opportunity to go home. Mr. McCoy has been here for nearly two years in San Francisco. It is the first American city he ever saw, and while he is delighted, he confesses that he gets lost as soon as he goes out in the street and turns the corner.

The *Alumni Journal*, a little paper published and edited entirely by resident graduates of Hampton, and circulating among those who have left the school, has been already noticed and quoted by the Southern Workman.

Its January number is worth quoting from again. Its leading editorial on race character is worthy the attention of those who are interested in the stand young colored men are taking for their race.

"The point at issue, is not whether we are worse off morally than white people, but rather whether it is expedient for us to allow ourselves to indulge our appetites to the same extent that they do. What with dishonest clerks, absconding cashiers and gross speculators, strong and long established firms are failing every day, so that you can hardly pick up a newspaper but that you see accounts of one or more such happenings in various parts of the country. And yet does any one pretend to say that he will not trust a man because he is white? No! Why such a one would be laughed at. In spite of all these things the race moves on; still advances, making improvement in every department of human existence. They are, as we before said, established, their history is made. Our standing is yet to be determined, we have yet to make our race moral, or strong that the worst darts of the enemy will strike and fall harmless at our feet—we have yet to make our race integrity so firm that a few dishonest ones among us shall not cause the shadow of distrust to rest upon the whole race—we have yet to convince the world that we will go at the trades, which are the back-bone of prosperity, and stick to them until we are thorough masters, even though we don't see the shining gold streaming into our hand for a long time. Parents, put your sons and daughters at the trades and make them stick."

DIED.—At Hampton Institute, January 25, of consumption, Lealuta, (White Back) aged about 15, an Indian student of the Gros Ventres tribe, from Fort Berthold Agency, Dakota.

White Back was one of the latest importation of Indian youths who arrived at Hampton in November, and one of those whose medical examination immediately upon their arrival proved them to be in a

diseased condition of lungs, which should have insured their rejection by the Agency examiner, instead of the clean health bill they received. This was made a note of by the Southern Workman at the time, and is again especially mentioned, as is but just to the effort being made at Hampton.

He was mentally a promising boy, and came with an earnest desire for improvement. He could not talk English, but in his illness, Sarah Walker, a young girl of his tribe who had been here three years, was very kind in interpreting and helping to care for him.

DIED.—recently, in Saltville, Virginia, of consumption, John Gunn, formerly a student of Hampton Institute. An honorable incident in the life of this young man, an indication of his character, was related some time ago in the Southern Workman. We regret for his people's sake, the close of his life and influence. He left the Normal School very ill in July 1878, and it was thought he would not live more than a few weeks. His accounts showed a balance of nearly \$50 due the school, which was charged off as a loss. He rallied however, taught school, and surprised us in August, 1880, by payment of his debt in full. His letter was published in the Workman. He was a rare man; conscientious, industrious, and an earnest Christian.

The following letter was received shortly before his death, from the kind physician who attended him in his last illness.

Saltville, Va. October 8, '81.

GEN. J. F. B. MARSHALL,

Dear Sir:

At the request of Mr. John Gunn, who is still confined, and of his time in bed, I write giving you my candid opinion as regards his true condition, and I regret to say the chances are much against his recovery. He is cheerful and hopeful however, and what is still better he is prepared for the worst—to go "when the master calls." John has endeavored himself very much to all who know him, and will not lack for kind friends and good attention.

Respectfully,

J. C. WATSON. M. D.

## Horsford's Acid Phosphate

In Loss of Appetite.

Horsford's Acid Phosphate is used with great success in languor, loss of appetite and hypochondria.

## Medicines Made Tasteful.

To overcome the nauseous taste of some medicines many methods have been devised. It is caused by the capsules have superior advantages over all other forms. In this mode some of the most useful medicines are rendered tasteless and agreeable to the most delicate stomachs. Dan's Dick & Co. are the most successful manufacturers of Capsules in this country. Their products are world famed. Physicians' Monitor.

## TO CONSUMPTIVES.

Consumption, that scourge of humanity, is the great dread of the human family, is all civilized countries.

I feel confident that I am in possession of the only cure, infallible Remedy—now known to the profession—for the positive and speedy cure of that dread disease, and its unwelcome concomitants, viz., Cough, Asthma, Bronchitis, Nervous Debility, &c. I may be called an old fogey. I believe in medicine. Twenty-eight years' experience as a busy practitioner in the best Consumption Hospitals of the Old and New World, has taught me the value of proper medication, both local and constitutional, in the cure of this great enemy of our race. I have found it. But I am digressing. I started out to say to those suffering with Consumption or any of the above maladies, that by addressing me, they should be put in possession of this great boon, without charge and shall have the benefit of my experience in thousands of cases successfully treated. Full particulars, directions for preparation and use, and all necessary advice and instructions for successful treatment at your own home, will be received by you by return mail, free of charge, by addressing with stamp or stamped self-addressed envelope.

J. M. B. BELL.

## Horsford's Acid Phosphate

In Lassitude.

I have used Horsford's Acid Phosphate with good success in lassitude and inervation. Venice, Ill. C. S. YORREK, M. D.

## At Home.

## A LESSON FROM THE MOUNTAIN.

"As the mountains are round about Jerusalem, so the Lord is round about His people—forever. Psalm 125:2.

Revealed in radiant light, serenely strong,  
And steadfast, stood the mountain, a true type  
Of Him who through all changes, changes not,  
And when night shadows fell, we laid us down  
With peaceful thought of that enduring care,  
Which ever feeds the children of His love,  
As mountains girt Jerusalem around.

A storm broke wildly through the narrow gorge,  
And blotted out my mountain!

With morning light we sought the gloom to pierce,  
Yet scarcely could believe them standing still  
Upraised in strength behind that cold, dull cloud.

And so, we thought, it is with faith in Him  
Of whom the vanquished mountains were the type.

In joyful, sunny days, we doubt Him not;  
But when the heavy shadow of sorrow falls  
We question of His presence, and His love.

As good the cloud, and through its shining veil  
The mountain glorious faith appeared again—  
I thought upon another morning's dawn

When, all life's mass displacing, we shall see  
The form of One who truly walked with us,  
The path of life, although we knew Him not  
O then, ashamed before Him, we shall own

The help He offered, and we, doubting, scorned.  
Our blinding tears alone the weary path,  
Were all the only veil that hid His face.

O give us faith, though dark the night,  
To trust in Him, who surely brings the light  
Through life's brief many a darksome day,  
And sunny a path, whose love way,

Blaze out all hope of brightening day,  
And leads to dust,  
Vehemently, surely, shining bright,  
A day that will not set us light.

When joy will every grief require  
To thine that trust.

And faith is that life blessed gift,  
Sent down the heavy heart to lift  
And make through cloud-bank's gloom a rift;  
For so He saith.

If every path were smooth and bright,  
No danger feared, no joy to fight,  
How should we learn to trust thy might,  
O, blessed Faith!

Waterville, N. H. Aug. 29, 1879.

JOHN G. WHITTIER'S TRIBUTE TO  
PRESIDENT GARFIELD.

Through all the stages of the solemn tragedy which has just closed with the death of our modest and best, I have felt that the Divine Providence was overruling this mighty affliction—that the patient sufferer at Washington was drawing with cords of sympathy all sections and parties nearer to each other. And now, when South and North, Democrat and Republican, Radical and Conservative, lift their voices in one unbroken record of lamentation; when I see how, in spite of the greed of gain the lust of office, the strifes and meanness of party politics, the great heart of the nation proves sound and loyal, I feel a new hope for the Republic. I have a firmer faith in its stability. It is said that no man liveth and no man dieth to himself; and the pure and noble life of Garfield and his slow, long martyrdom, so bravely borne in the view of all, are, I believe, bringing for us as a people, "the peaceable fruits of righteousness." We are stronger, wiser, better for them. With him it is well. His mission fulfilled, he goes to his grave by the lakeside, honored and lamented as man never was before. The whole world mourns him. There is no speech nor language where the voice of his praise is not heard. About his grave gather, with heads uncovered, the vast brotherhood of man.

While the gift of conversation proves a clever man, the want of it is no proof of a dull one.

Repentance begins in the humiliation of the heart, and ends in the reformation of the life.

## Horsford's Acid Phosphate

In Indigestion.

I have used Horsford's Acid Phosphate in indigestion arising from nerve exhaustion. It is an admirable remedy.

St. Louis, Mo. F. W. BRADBURY, M. D.

## Health and Humanity.

"God is the cause of pleasure and light, maker of grass for the cattle, and of fruitful trees for man, causing the fish to live in the river and the birds to fill the air, lying awake when all men sleep, to seek out the good of His creatures."—From an Egyptian Ritual.

## THE HORSE'S NECK AND BEARING-REINS.

"Hast thou given the horse strength? Has thou clothed his neck with thunder? Who can be insensible to the magnificent utterances which, even in a language incapable of rendering the full beauty of the original tongue, throw all our modern poetry into the shade. Yet man seems to think that the Creator's idea of the horse's neck was a very imperfect one, and just as he neutralizes the natural elasticity of the hoof by iron shoes, he, by means of various contrivances, renders nugatory the exquisite mechanism of the hooves, muscles and ligaments from the neck to the shoulders."

I wonder if any of our readers have ever thought about the structures which enable a horse to hold his head up without fatigue. We could not do it, and if we were placed on all fours we would find our head drooping from sheer fatigue. In order to see how this is accomplished, we must make a dissection of the horse's neck. If we place a hand on the back of one neck and bend the head forward, we shall feel a strong ligament. If the skin be removed from the neck of a human being, this ligament is seen to be cord-like, and not to present any remarkable peculiarity of structure. In the horse, however, it is developed into a most wonderful mechanism. "Lapping over the back of the neck, it throws out a set of projections, each of which is fastened to one of the vertebrae of the neck in such a manner that, while it gives support to that particular vertebra, it works simultaneously with the others. Thus the animal can pass or shake its head, turn it round to its flanks, or press it to its knees, the powerful and highly elastic ligaments permitting all these movements, and by their own resistance restoring the head and neck to their normal position when the muscles are relaxed. The weight of the head and neck is very considerable, and by their movements the balance of the body is materially aided, e. g., in walking up a very steep hill the horse, when at liberty, takes his head and neck well forward, so as to keep the weight as much as possible in front of the fore feet. Man, however, is pleased to fancy that this freedom of action is mean and spiritless, and in a horse ought to hold his head up, no matter whether he is ascending or descending a hill, standing still, walking, trotting or galloping. This model seems to be the wonder horse of the toy shops, and the one of approach that he can make to the stiff rigidity of the toy horse, the better he is pleased. As if to increase the resemblance, he even cuts the mane short, "hogs" it, as the expression is, so as to make it look like the strip of fur along on the neck of the wooden horse. So, besides the rein, he attaches to the bit a leather strip called a "bearing rein"—I suppose because it is hard for the horse to bear—and fastens it to the side of the head, so as to render the animal incapable of lowering his head beyond a certain point, according to the length of the rein. Not content with this, a still more severe instrument was invented, and is known by the name of the "hack," or "Belmont bearing-rein."—Rev. J. G. Wood, in Good Words.

## NO GROC-SHOP.

(From the Amendment.)

Franklin, Delaware county, N. Y., is a beautiful village of clean, white, lovely dwellings, situated in one of the valleys of the Susquehanna, five miles from its railway.

A few years ago the town of Franklin had three distilleries in full blast and almost every man was in the habit of drinking intoxicating liquors, more or less moderately. Drunkards were abundant. Each year the town was visited by ten to fifteen purveyors to the county poor-house, and many of the houses were left in a dilapidated condition. Now, however, there is not a distillery or a dramshop in the town, nor a purveyor to be supported, and only four drunkards yet to be disposed of. The people are happy, the dwellings are patterns of neatness—not a dilapidated one in the village of Franklin—and the entire tax of the county, and State is only 75 cents on \$100, while the taxes of other towns in the county range from 90 to 150 cents on \$100.

Do you ask what has wrought this great change? I answer, For eight years they have elected "No-License" commissioners, and the town is free from the curse of the infernal drink.

Truly yours,

Est. Johnson, Brooklyn.

## Teacher's Table.

## HOW TO TEACH GEOGRAPHY.

BY J. F. HALL.

Supt. of schools in Delham, Mass. and formerly teacher in the Quincy schools.

ELEMENTARY, INTERMEDIATE OR 'A' PRIMARY COURSE.

First Term.—Systematic Course. ORAL INSTRUCTION.

1. GENERAL STUDY OF LAND IN TOWN. Drawing and molding continued: (1) Level land. (2) Slopes, gradual and abrupt. (3) Hills, hill ranges and hill systems. (4) Plateaus. (5) Highlands. (6) Valleys. (7) Lowlands. (8) Facts about rain. (9) Facts about water in the earth and uses of water as it passes through the soil. (10) Springs and brooks. (11) Rivers and river basins. (12) Wells, ditches and canals.

2. STUDY OF RELATIONS (reasoning).

Suggestive Problems.

(1) What if the earth's surface were perfectly level?

(2) Where does the rain go when it has fallen from the clouds? How do you know?

(3) How far down in the earth does rain go?

(4) What stops it?

(5) Where, when and why does it come out of the ground?

(6) What makes water flow?

(7) When does it stop flowing?

(8) Where does the water in the river come from? How much? What will they become?

(9) Why do rivers wind? Advantages?

(10) Bound a river basin.

Incidental Teaching.—1. Teach pupils to draw an outline map of the county on the slate or blackboard, and locate villages, prominent buildings, (churches, etc.), hills, rivers, ponds, etc.

2. Draw maps of the state. Locate principal cities, rivers and mountains.

3. Teach general facts about the state. Have pupils read all books available which contain anything of importance about the state and section of country in which they live. (See Guyot's, Mrs. Hall's, Appleton's, Swinton's, and Harper's Geographies.) Pupils should be examined on all they read.

Second Term.—Systematic Course. ORAL INSTRUCTION.

1. AIR AND WIND. Facts about them to be discovered.

2. FORMS OF WATER: (1) Air vapor. (2) Vapor. (3) Mist. (4) Steam. (5) Fog. (6) Clouds. (7) Dew. (8) Frost. (9) Snow. (10) Hail. (11) Glaciers.—Stories of.

Teach as far as possible by experiment.

3. ACTION OF WATER. Lead pupils to discover facts. Teach counts, shores, benches, coastlines, indentations, projections, islands.

4. STUDY OF RELATIONS (reasoning).

Suggestive Problems.

(1) Why does not the water wash all the land away?

(2) Why is the coast line often very irregular? Advantage or disadvantage?

(3) Where does land extend into the water?

(4) What shapes islands? Continental?

(5) What are tides? How many &c.?

Incidental Teaching.—a. Teach pupils to draw map of United States.

b. Locate principal mountains, rivers and cities.

Have pupils read all books available which contain anything of importance about the United States. (See Guyot's, Mrs. Hall's, Appleton's, Swinton's, and Harper's Geographies, etc.) Pupils should be examined on all they read.

Third Term.—Systematic Course. ORAL INSTRUCTION.

Study the SEES and IMAGINE THE USES.

PHYSICAL GEOGRAPHY.—1. Describe, mold and draw in outline the principal vertical and horizontal forms found on the surface of the earth.

Teach. 1. Plains. 2. Slopes. 3. Mountains. 4. Mountain ranges. 5. Mountain systems. 6. Plateaus. 7. Valleys. 8. Highlands. 9. Lowlands. 10. Rivers. 11. River basins. 12. Lakes. 13. Inland seas. 14. Oceans. 15. Projections. 16. Indentations. 17. Islands. 18. Continents.

2. Review carefully all previous work, giving special attention to the training of the imagination and conserving faculty.

STUDY OF RELATIONS (reasoning) continued.

Teachers will be furnished with lists of problems like those of First and Second Terms.

Incidental Teaching.—a. Review carefully all previous work.

b. Draw United States again, and outline states and territories. (See a and b, Second Term.)

Dissected maps are recommended.

## Agriculture.

## WORKING CAPITAL.

From the American Farmer.

There are two kinds of capital most farmers possess—one, their labor, the other, the money invested in their stock and farming implements, and perhaps a small amount in cash, too often put into some kind of railroad stock instead of being rightfully employed on the farm.

To farm successfully, at least in our State, one has to use both kinds of capital to the best advantage. Mr. Mechi, a sound practical English writer and farmer, said that "one of the most useful lessons a farmer can learn is what is the most profitable amount of capital to invest per acre, for on this depends much of his success."

Prof. Roberts, of Cornell University, recently delivered an address before the young men of that great school, on "the secret of large crops grown in England," in which he said: "It would take away the breath of an American farmer to even hear an Englishman's enumeration of the spuddings, the grubbing, the tithings, the harrowings, the cross-harrowings, the rollings and cradlings that a heavy clay field is subjected to before it is considered ready for wheat. What is all this for? Simply to unlock the full storehouse of Nature."

I shall merely speak now of labor as capital, though I am fully convinced that the more money a farmer can judiciously invest in his farm, the better returns he may expect.

Now to illustrate from my own farm: Last spring I put in corn ten acres. I run out liming soil, soil a clay loam which has been limed on the soil two years before with sixty bushels of fresh oyster-shell lime per acre, being all the land I could spare for that crop. So I decried to work it thoroughly, and it was well plowed, harrowed, cross-harrowed, rolled, and made as fine as garden soil. Rows were marked out 3x33 feet, corn dropped, three kernels to a hill, and covered with a cultivator on the 14th day of May. When the corn came up a mixture of equal parts of ashes and plaster was applied, a handful to each hill. The field was thoroughly worked, the ground kept mellow and the weeds kept under. The result was the corn grew right along, had a beautiful dark green color, and ripened a fine crop of sound corn. I have husked out 105 barrels of five bushels each, and have a little more to get out yet.

Another example: Two acres were put in Early Rose potatoes, same kind of soil and the same thorough preparation of ground. The rows were marked out three and a half feet apart, and ratted butcher-manure per acre in them, eight three-horse loads per acre. These rows were then run through with a subsoil plow, to mix the manure and soil and to deepen the soil in the bottom of the furrow; then 600 pounds of good bone were spread in the rows, and the potatoes (of Northern growth), cut to two eyes, were dropped fifteen inches apart and covered lightly with two furrows by a one-horse plow. They were planted April 13th, were well-worked, and harvested July 18th. Yield by measure, 480 bushels of fine clear skin potatoes, which sold for good prices in the market.

From these and other examples, we see the great value of using one's capital of labor, of experience, and of means in a thorough manner. If one has only means to work twenty acres, make that a success by diligent, honest labor, and whether the season be wet or dry, the yield will not be wholly a disappointment; whereas if we extend our means over forty or fifty acres, we may receive a small reward, oftentimes none at all.

In my vicinity lives an old crippled Irish gardener who annually raises two or three pigs, and from the compost makes his little garden grow abundant crops of choice vegetables. His hoe and spade are his only tools, and yet he grows more from that little patch than many get from one or two acres. His pig furnishes the manure for the garden, and the garden keeps the pig.

What I would impress upon every farmer is, make the most of your own home labor. Gather the leaves, the odds, and the rubbish of the farm; make them into a compost heap; and whatever crop you put in, do it in the best manner. After you have done all this, then buy fertilizers—not before.

## Horsford's Acid Phosphate

An Invaluable Remedy.

I think Horsford's Acid Phosphate an excellent and invaluable addition to our list of remedies.

## THE HYGEIA HOTEL,

AN ENLARGED AND IMPROVED.

### OLD POINT COMFORT, VA.

Situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Cape of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. Mails, landing only twenty rods from the Hotel, which is substantially built and comfortably furnished; has two (2) hydraulic passenger elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; water; rooms for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or any public building in the country. As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanatorium. Has during the cold weather over 15,000 square feet of the spacious verandah (of which there are over 35,000 square feet encircling the house on all sides) enclosed in glass, enabling the most delicate invalid to enjoy the sunshine and fine water view without risking the slightest exposure. The climate of Old Point Comfort is unequalled for salubrity. *Malaria fevers being absolutely unknown.* The record of the Meteorological Observatory for the past ten years shows an average temperature of 60 deg. in winter, 70 deg. in summer, 70 deg. 50 deg., 40. in autumn; 45 deg., 44 deg., 42 deg. in winter; and 48 deg., 52 deg., 63 deg. for spring. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For pleases and nervousness, the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful exposures of the Hygeia.

ICE YACHTING ON THE HUDSON.

[From Harper's Weekly.]

## AMONG THE COLORED PEOPLE.

BY ODEA LANOHORSE.  
NO. 1. A DISMAL ROMANCE.

Few people who talk of the "Negro Problem," realize how very destitute most of the colored people are, and how manifold are their difficulties, when they would attain the position to which the very best rank of American citizens have a right to aspire.

The tribulations of a young couple who lived near me some years ago, afforded a painful illustration of these facts, and elicited much sympathy among their more fortunate neighbors.

A young Negro, named William Green had been for some time "keeping company" with a dusky damsel called Susy Smith, William being in the employment of a butcher in the city, and Susy earning her living in a tobacco factory. Both were members of a flourishing colored church, and Susy's rich, melodious voice, made her very valuable in the choir.

Whatever may be said of the extravagant and emotional religion of the colored churches, they often exercise a wholesome influence on morals.

In cases like that of my young friends, the committee assigned to such duties, admonish the "courtship couple," that they had better be married, warning them that any suspicion of impropriety will be visited with suspension from church privileges, a terrible penalty in African eyes, involving great social loss. This usually results in a speedy marriage, and these forward the elders of the congregation smile benignly on the wedded pair, and greet them with cordial wishes, and much good advice.

When William and Susy had received their friendly warning, and announced their purpose of being married at an early day, many unlooked for obstacles beset their path. William being a comparative stranger in the place, and having little money and no credit, found it difficult to make the necessary arrangements. Susy's step-father, who had hitherto interposed no objections to her sweethearts' attentions, now loudly announced that his house was already too small for his own family, and would by no means accommodate mother person. Her mother, a somewhat shrewish personage, previously silent on the subject, now declared that she "didn't know nothing about that strange nigger, an' didn't want nothing to do with him."

It was after long searching that a room was found, which could be rented at a price to suit the purse of the impecunious young housekeepers, and the landlord demanded a month's rent in advance.

The license, costing something like ten cents to be procured, and at this point the would-be bridegroom was informed by the colored pastor he had "done quit trustin' married folks, de alius 'peared to tink they didn't owe nothin' to the person what fixed em arter dey bin married a while, an' ef dey wanted his services dey had to pay him 'forehand."

These incidental expenses, with the bride's outfit, consumed most of the slender stock of money on hand, and the lover's troubles were further increased, when the wedding day, proved one of the most inclement of the mid-winter season. About noon a message from the minister informed them that "owing to the inclemency which had pervaded his frame since his late illness, he would be unable to distribute the ceremonies of matrimony in such a distant, an' ef dey wanted to git married dat night dey mus' come to him."

The luckless groom was despondently considering the investment of his last dollar in a vehicle, when his employer, the butcher, took pity on him, and offered the bridal party the covered wagon used in his business, stipulating, however, that as his horse was not very sure-footed, it must be returned before the fast-falling sleet should harden into ice, and render the road dangerous.

After all had at length been arranged, the much-tried couple set out on their expedition to the Parsonage, the bride being arrayed in the white dress and gay ribbons she had provided for the wedding, expected to take place at home. When they reached their destination, it transpired that some mistake had been made in the hour appointed, and his African reverend was enjoying himself in a twelfth party given by a parishioner in much more comfortable circumstances than those of the unlucky couple who had gone through so many difficulties to meet the requirements of nuptial life.

There was nothing to do now but wait for the parson, who did not arrive for some hours, and in the meantime the butcher, became uneasy and sent for his wagon, leaving the bride and groom to begin their wedded life by a tramp through dreaching rain, with ice, snow and sled underfoot. This resulted in a severe illness with the bride, but had also the effect of softening the hearts of her parents, and eliciting kindness and sympathy among their neighbors. After a while things began to look a little more promising. The young husband found steady work and good wages, and the bride, who seemed quite content in her

simple house-keeping, gradually recovered strength and resumed her work in the factory. Again Susy's sweet voice woke the echoes in the hills around, as she went at dawn, and returned at dusk from her daily work, and William was seen steadily going his rounds with a cheerful, smiling face.

Unhappily, the pleasant state of things did not continue many months.

African troubles in domestic affairs, in common with the rest of humanity, and as in the families of other races, the mother-in-law sometimes casts a cloud over a horizon, which might otherwise prove serene.

Perhaps William had not forgotten the harshness of his wife's mother, before their marriage; perhaps the unfriendly relative interfered unwarrantably in the household, at any rate various altercations ensued between the young man and the old dame, which the amiable wife could not prevent. One of the quarrels culminated in William's also giving his quick temper to get the better of him, and in a scuffle between them, the woman received a severe cut in the shoulder, or, as a factious local editor described the affair, "An amiable young African made a premature attempt to dissect his mother-in-law, but only succeeded in inflicting a bad flesh wound." The hurt proved quite serious, the woman was confined to bed a long time, and the rate step-father appeared for the prosecution, when his son-in-law was tried on the ground of his being "an attack with intent to kill." William disclaimed all such intentions, but ill-feeling was known to have existed between the parties, and he was sentenced to the penitentiary for three years. An interval of some days elapsed between the sentence and its execution, and the poor young wife had grieved so bitterly and shown such tender affection for her husband during the trial, that she was permitted by the jailer to spend as much time as the prison rules allowed, in William's cell.

Susy constantly carried her captive spouse such refreshments as were suited to African tastes, and in her small means, and in one of her visits, gave him a big cone of corn bread, explaining to be sure she who admitted her, that "she knew William had plenty of good vittals at the jail, but de po' boy, hankered so far 'pon a bread from home, she had fetched him one right out de dea. It was so hot, she couldn't hardly take it."—In the "wee wee" hours of the night following, William was captured by the jail guard, just as he was bidding adieu to prison walls and darance wife, having opened a passage for himself, with the aid of tools furnished in Susy's innocent looking corn pone. He was again despatched to the penitentiary, and Susy arrested and tried for the breach of the laws she had committed in trying to aid her dusky lord, with whom she had doubtless expected to find no other secrets and treasures new. She was sent to jail for six months, and the judge, in pronouncing sentence, said he had given her the smallest penalty the law allowed for such offences, adding that he knew she had been prompted by worthy affection, and he was sincerely sorry for her.

## JOE-YAHTING ON THE HUDSON.

"An ice-yaht flits about like a swallow, skimming over the river with the speed and grace of a bird. She is better than a bird, for she takes you along in her flight and gives you the triumph of wing, as she sweeps, and swings, and trembles on through space. Mount this wayward flyer as she is launched upon the wind. Your course is down the Hudson from Poughkeepsie, and, as your sail begins at a moderate speed, you can observe the scene.

The wind pours down over the banks of the river in strong gusts. The sky is partly covered with clouds; the gray desert of water has lost its gleams of color; snow-squalls enshroud the dark headlands, and the grim face of Nature frowns with stormy gloom. It is a time to draw up to the fire and talk of home, while one is basking in luxury and warmth. But you are launched upon the wind; the light snow whirls upward in the lee of the mainsail, and she seems a spirit of the air in a cloud, sweeping onward like a whirlwind. The wind howls in the rigging, the ice crashes, the rudders ring, and you hold on to the shrouds in a nervous frenzy of excitement. As she turns in her sudden motions, you feel as though you were trying to fly on in some swift tangential course, even though your hands and feet remain. Space opens freshly before you every moment as a strange, devouring void, and you fly into it with a wild, erratic motion, seemingly beyond the rule of human will or natural law. You are not shut up in a ponderous train—a whole world of material, roaring, jolting matter. Here you fly alone through the keen air and the flashing sunshine, with the speed of a bird soaring in the sky. But your eyes are not those of an eagle, and they see things changed by the rapid passage, objects seem melted down and drawn out into blurred, elongated forms; shapes and colors are lost, and things

look blue. Now the wind lulls again; you listen to the roaring of the gusts sweeping up the bluff and through the bare forest; then a louder roar comes on, as express trains thunder out of the tunnel. The windows are filled with eager faces, and waving handkerchiefs stream in the wind; the engine blows a shrill whistle, and you wave an acceptance. But the wind plays you false, and the train passes in triumph. Then all at once you get the breeze and more up; you skim along with ease compared to the thundering tread of the iron horse, and you gain on him. As you come abreast, the windows and platforms are crowded with excited people; you hold on your course and, with the next gust, pass them as though they were slowing up, while they cordially salute your victory with more waving and whistling. You soon lose sight and sound of them; the wind roars in the rigging; as the yacht swings in her course, her extreme speed makes her divergences appear like leaps from side to side—a mad, reeling motion! Such a flight over the earth is among heroic feats, and it kindles your nature with the fire of valor. But the flight is done, and you must stop the triumph of the wing; you descend from the clouds of snow and the roaring storm on which you flew as an eagle on a whirlwind; you return to the common earth, to the long, narrow valley of ice, dull and gray between its headlands, now flaming out in the cold, clear, silent evening.

Ice-yahting seems to be the scene of reckless feats. In its early days, when the men were less skillful, and the yachts, being ill-balanced, were less manageable, accidents sometimes occurred. But now that experience has improved the methods of handling and sailing, ice-yahting may be called a safe sport. Serious accidents are almost unknown, and yachtsmen do not hesitate to sail with their families under reasonable conditions of safety. The ice-yaht is the fastest object moving on the earth; but if any one find her motions too slow, let him put on skates, and holding one end of a long rope made fast to the bow, take a tow behind her on smooth ice; when she is under full speed put her about sharply, and give him a swing before he lets go the rope, as if from a sling. He will compare himself to a bullet."

—Scribner's Monthly

## HOW TO GOVERN A SCHOOL.

Extracts from a lecture by Rev. Dr. A. D. Mays, of Boston, Mass., before the Hampton, S. C. Institute.

There are three divisions in education; the training of the character, the training of the mind, the training of the hand. No one of these can be neglected with safety.

Goodness of soul is built on the basis of sleeping violence, whose animation is suspended. The individual considers himself safe, and is lulled by their false security by the thunderings beneath them, and the showers of lava which pour forth from their craters. Just such a dangerous experiment, does a teacher try who educates the mind without educating the character. The power of the imagination is so easily lulled to sleep, that ten times greater than that of the stage driver; and so the power of an educated man for harm is ten times greater than that of an ignorant man. Cultivation of the mind alone does not make men gentlemen. It had the tendency to make elites. Only broad culture will make men labor for others. Culture of the mind alone will raise men above their fellows, without giving them the inclination to stretch out a helping hand to those below.

The responsibility of the teacher at the present day is enormous. The teacher stands in the place of the parent. He is to carry on the training which is commenced at home. The State commits its children to the teacher. Virginia gives one million and a half annually for the support of schools.

It is necessary in governing a school that the teacher should be what he tries to teach his children to be. He must know how to govern himself before he can govern others successfully. These children are keen observers of character. They look up and discover of what material the teacher is made. They imitate his defects of character. They understand quite clearly what a teacher really is, and no words will hide the truth from them.

There lived in Kentucky not many years ago an old-time school master, more given to flogging than to moral suasion; with a good deal of confidence in the advice of Solomon in regard to the advantage of using the rod. Now this man was accustomed to introduce the school exercises with very long prayers. A half-hour was a short absence of time for him. His scholars chafed under this ordeal, and one of the older boys devised a way of putting a stop to it. One morning when the master was in the midst of his devotions, the youth rose from his seat, climbed up to the clock and turned the hands one hour forward, hoping thus to make the teacher believe that he had consumed an hour and a half in his prayer. But the master, who was a man of prayer, his prayer came to a sudden stop. He rushed down from the desk, seized the

poker and dealt summary justice upon the unwary youth. Now do you suppose that that man's prayers ever induced those boys after such a display of temper?

I have in mind another teacher. I can see him now as he came into school after there had been some unusual disturbance among the boys. He walked up to the desk, and stood for several minutes with folded hands, perfectly quiet. Then taking the Bible, he turned over the pages until he found the desired passage—"He read these two words in a clear voice: 'Be courteous.'" That was all. He closed the book and went on with the exercises of the school. That quiet manner, and those two words made an impression on those students that will last as long as they live.

In this age, the teacher's position is the most responsible because he is to train sovereigns; he is to make rulers. The President of the United States is merely the servant of the sovereign citizens of the country. We have to form the character of our subjects, and of the reigning power. So it will not do for us to train up children to be machines. Each individual must be studied, and individual powers must be developed. You have seen blades of grass free in place, standing stiff and individual. You have seen the same nothing in the wind. Now we don't want to make iron-clad men. There is a certain class in every school, and severity must be used in dealing with them, but for the majority of the students in our schools, individual and gentler methods must be adopted. May none of you waste in your pupils such feelings as two graduates of the Boston Latin school had toward an old master. They had made a vow during their school days that if they met that man after they left school, and had a fair chance, they would thrash him. Long years afterward, passing a cemetery where the graves were being opened for the purpose of removing the bodies to another ground, they came upon the house of this same old master. Rolling up their sleeves they shook their fists at the remains, saying, "We have you now."

In order to govern successfully, the teacher must learn to love even children. You may say that is impossible, but it is absolutely necessary. How is it to be accomplished? Did you ever notice how a fire in a grate is made? The coal is found, it is kindled into a fire by blowing. From that one coal the fire extends to the rest of the fuel, until all is in a blaze. Find one I will in the breast of the child, and you can find the rest of the child. Work for your children. We all love the people we work for.

Give your children enough to do. Don't leave them idle the greater part of the day. Let them have letters, and when they are given reciting, let them be writing their lessons. If you do not utilize their spare activity, they will turn it to making mischief. When I first began to teach, I called the children up in the morning to say their A. B. C. (excellent signs which meant nothing to them,) then I left them to themselves for the rest of the day. As a result, there was a long procession to the water-pail, then there was a long procession to the fire. Make your children get to do these things, by giving them plenty to do.

Govern children through their governing class. There are always leaders among boys. Get hold of them. Set yourself to get their confidence. Make them your helpers. Govern the others through them.

"When I was a young man, I was invited to take a school in the neighborhood of my own home. The school had a bad character. The boys had turned out the last teacher, and were waiting to do the same for the next one that came. I consulted with several men who lived at our house. She said to me, 'Go ahead. Take the school and I will help you. I know this country pretty well, and I know the scholars in that school. There are two great gals' who go there. Now I will go and see them, and if you can get those gals' on your side you will be all right.' The school commenced, the rebellious boys made their threats. Once it seemed as though I should have to give way, but the 'two great gals' stood by me, and I came out ahead.

No one who walks the streets can have failed to notice the great number of very small boys who smoke cigarettes and cigars incessantly. It is equally evident that this habit is injurious. A remedy for this growing evil, which bids fair to introduce new and objectionable weaknesses and diseases among our youth, is most important. In Germany the mischief done in growing boys has been found to be so great that the Government ordered the police to forbid lads under 16 from smoking in the streets. Several cantons in Switzerland have also done this.—Press.

—Men's lives should be like the day—more beautiful in the evening; or, like the summer, glow with promise and the autumn, rich with golden sheaves, where good works and deeds have ripened on the field.

# Southern Workman.

**TWELVE PAGES MONTHLY.**  
(Reduced to eight pages from July to October,  
four months.)

Printed on the Normal School Steam Press by  
students trained in the office.

S. C. ARMSTRONG, } Editors.  
H. W. LUDLOW, }

Mrs. M. F. ARMSTRONG, } Regular  
Mrs. W. N. ARMSTRONG, } Contributors.  
Mrs. O. H. LANGHORNE, }

**TERMS: ONE DOLLAR a year IN  
ADVANCE.**

Specimen copies sent upon application.  
To secure safety, it is important that money  
should be sent by check, Post office orders, or  
registered letters. Write plainly; give name  
in full, and name of Post-office, County, and  
State to which the papers are to be sent.  
A limited number of advertisements inserted  
at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1 column.	3 75	7 50	13 50	23 00
1-2 "	5 00	13 50	23 00	40 00

Hampton, Va.

## Hampton Tracts for the People.

**SANITARY SERIES.** Ten numbers published.  
1—Health Laws of Moses. by H. W. Ludlow.  
2—Duty of Teachers. by F. W. Collinswood.  
3—Trovegar's Diseases. by M. F. Armstrong.  
4—What I Found in June. by S. R. Childers.  
5—A Standard House. by M. F. Armstrong.  
6—What I Saw in the Sanitary Reform. (English)  
7—The Rights of the Body. by S. R. Childers.  
8—The Two Breaths. by Rev. Charles Kingsley.  
9—Civilities and Uncivilities. by E. Harris, S. J.  
10—Our Jewels. by M. F. Armstrong.  
Published by Publisher's Form, New York.  
Edited and printed at Hampton Institute.  
For sale by all dealers; specimens sent from Ham-  
pton 6 cts. a number, or 5 cts. a set.

WE HAVE quite assimilated and saved  
the Negro; we are, however, destroying  
the Indian by stuffing him with beef and  
starving him as to ideas. We are be-  
coming the Chinese to go, for they beat  
us at whatever they undertake.

Such are our relations with the three  
races with whom this nation is called  
Provisionally to deal.

The Negro is more than holding his own.  
Miscegenation, so rapid in slavery, is  
somewhat checked, and the race is for-  
ever with us. The black man is, the  
world over, found mingling with the  
white man; no other race survives the  
contact except the Chinese, from whom  
the white man is inclined to get away.

The curse upon Canaan, his after ages,  
proved a blessing in disguise. He has  
been a servant, but has learned the arts  
of his master, and has an empire in the  
rich lands of the South that nobody can,  
for reasons of climate, dispart. Africa is  
being opened up; fine types of Negroes  
are discovered. Not as with the Malay  
and Polynesian races, where the presence  
of the Caucasian (except in the Dutch  
colonies), has meant death to the natives;  
the black tribes of Africa seem likely to  
survive contact with Europeans.

We may leave the Negro to himself.  
There is politically no Southern question,  
because there is no Negro question.  
The ballot, after all, settles the  
business. The race has not thrown a  
pauiser upon the nation; it produces and  
consumes enormously; its consumption  
and production keeping tens of thousands  
of white people employed, and countless  
Northern factories busy. Its very criminal-  
ity is so tractable that their peniten-  
tary labor, with good management, more  
than pays expenses.

They tax their own states slightly for  
the care of the infirm, insane and desti-  
tute. They are no longer wards of the  
nation, but are helping shape its future.

They are ignorant, but that is not their  
fault. No race in like condition, in all  
history, has made such good use of educa-  
tional opportunities. We must help

them, not because they are weak, but  
because they are strong. Their suffering  
is not now the question. It is our own. Our  
ex-slaves can endure the consequences of  
their own ignorance as long as we can.

They are a rapidly growing, political  
power. The practical man used to say,  
"They will die out," and passed them by;  
the sentimentalist said "We owe them a  
debt and must help them." Now  
the practical man who has some interest  
in national credit, and knows about the last  
census, cannot be indifferent. Diametrically  
opposite political combinations have  
recently been made in Virginia and in  
Tennessee. Colored voters followed  
their leaders with equal readiness either  
way. Intelligent ideas of duty did not  
decide their course, because they did not  
have intelligent ideas as to guide them.  
Well paid mercenaries have more influ-  
ence.

The case with the black race is pre-  
cisely what it is with the white: only  
while not one Negro voter in ten can  
read and write well and live in ten whites  
can, that of the former is something  
like five times more pressing than that of  
the latter.

The day of physical relief is passed;  
the relief of to-day is for our own sakes  
as much as his. The race is using its  
vast political force without knowing what  
it is about. It is worth our while to  
teach them to think.

Enfranchisement created a terrible  
danger, but the danger was necessary to  
create an interest in their welfare. With-  
out it, the wonderful efforts that have  
been made to enlighten them would never  
have been made. The logic of necessity  
alone would do. Necessity and not phi-  
lanthropy created the comparatively  
flourishing school system of the Southern  
States.

The factors, that, after emancipation, set-  
tled the Negro problem, were the Consti-  
tutional amendments, (or citizenship)  
education, and the teachings of experi-  
ence.

For a short time after the war, the Ne-  
gro was, at certain points, fed by govern-  
ment.

We had the duty of feeding about two  
thousand freed people at Hampton, Va.,  
from March 6, 1866, to Oct. 1, 1866, and  
the opportunity of studying the effects  
of such policy which had been con-  
tinued several years. They seemed as  
poor as poverty could make them. They  
were perfect in the art of beggary. Govern-  
ment support by pauperizing steadily  
pushed them down.

Given the authority to continue or cease  
the issue of rations, we ceased Oct. 1, 1866,  
offering a refuge in hospital to all  
who feared starvation. There was ground  
for anxiety, although for weeks the peo-  
ple had been carefully warned to be ready  
to take care of themselves. Not a sign  
of trouble appeared. Better times began;  
squalor disappeared; there was more in-  
dustry and less vagrancy, and steady im-  
provement to the present day.

Indians are like other people. Feed-  
ing Indians at Agencies is the old "in-  
dian" system perpetuated, with the  
same wretched results—breeding beggars.  
It is done however, by treaty stipulation.  
But that treaty stipulation does not pre-  
vent the enormous gratuities of the gov-  
ernment from being used as a leverage;  
for instance for making the children attend  
school. Efficient Indian Agents have  
done this—but how many are efficient?  
One wise agent required of his people  
a return in labor for rations received,  
and accomplished much. There is, here  
and there, in the Indian reservations, a  
light shining out of the general darkness  
and hopelessness, by way of a man.  
There are 66 Indian Agents but not 66  
lights. They are generally a self-mean-  
ing, honest men, the best that can be got  
for their meagre pay, which is a sort of  
protective tariff established by Congress  
against first-class men.

Until this policy changes, the Indian  
will founder about as he is doing;  
individuals with special chances may  
improve, but there will be no advance  
along the whole line, ending all he can  
get from government, well aware that they  
who have behaved the worst get the most

for keeping quiet. Then the constant  
changes, from the highest executive au-  
thority to the agent in charge, as well as  
the rotation of legislators, prevents ex-  
perience from doing its perfect work. Ignor-  
ance of his condition is thus fundamental  
where knowledge of it should be.

While a kind and increasing interest  
in the red race is perceptible throughout  
the country, Congress gives them a little  
over \$400,000 in 1875 year than last—  
about two dollars a piece extra. It is a  
gain that will hardly affect the Indian.  
Demoralization and death are likely to  
keep ahead of improving influences.

Any change seems hopeless. What  
should be done? For one thing, with  
the Negro, stop the rations or make them  
conditional upon industry, but provide  
for extreme suffering. But ex-  
cellent management would be required,  
which means first-rate men throughout  
the entire range of officials. This is, after  
all, the Alpha and Omega of the Indian  
question.

Give him the vote as it was given to  
the blacks. This would force things, as  
it did in the South. Perhaps it is the  
best remedy. The Indian is not fit for it,  
neither is the Negro; but it compelled  
the South to educate him. The Indian as  
a voter would create a hue and cry from  
the states and territories where they are  
situated. No longer would a few Eastern  
men and church committees wait on Con-  
gress for a hearing, and then go meekly  
home. Delegation after delegation from the  
West would stay in Washington, and de-  
mand education as a protection from these  
wild voters, until they got it.

With the vote would go all that pertains  
to citizenship. He would blunder, but  
like the Negro he would blunder ahead.  
Let it come at once, not because a gradual  
preparation would not be the best way,  
but a gradual preparation is not going on,  
and is not likely to.

The ten thousand Indian children who  
are now at school, out of the fifty thousand  
who ought to be there, and the marked  
improvement among certain tribes, are a  
slight offset to the deterioration of the two  
hundred thousand who are suffering only  
as white men would under the same  
circumstances.

People of this country who cannot take  
care of themselves, don't get taken care  
of. Our Government is not meant for  
the rule of colonies and of wards, and of the  
weak generally, but of the strong and  
self-reliant, who can state their grievances  
and get what they want in the name of  
the electoral vote they can throw.

The education of the Negro was ne-  
glected by public men, but not his vote;  
for it made members of Congress.

The best way to make a man of the  
Indian is to treat him as a man; forcing  
upon the Negro seemed ruinous, but it suc-  
ceeded.

We let the foreigner vote almost at  
once; why not the Indian? Which is the  
most dangerous?

Give him political power, and education  
will be increased tenfold from the demand  
of the Indian and from the necessity of it.  
No less pressure will suffice. A kill or  
cure remedy like this is better than the  
simply killing policy of the day.

Supplying Indians with wisely chosen,  
well paid men, to put them up to better  
things, is improbable as the reappearance  
of Moses. Our political system forbids  
it, not theoretically but practically.

The introduction into the Indian ser-  
vice of a number of army officers, making  
the Bureau semi-military but independ-  
ent, like the Signal Service, has been  
thought of, and is, perhaps, the only prac-  
ticable way of establishing an efficient per-  
manent policy. There are no such men  
for the management of Indians, as a  
certain class of army officers, whose intel-  
ligence, experience, humanity and power  
are equal to every exigency of the Indian  
question. This plan might conflict with  
interests too strong to be overcome.

The five railroad lines that are holding  
this continent are forcing tremendous in-  
fluences upon the Indian, creating condi-  
tions which he can survive only as he shall  
have the innate power to resist them.  
It will be, after all, every man for  
himself, when it comes to the question

of avoiding temptation. We can but  
help him by sending him men of force and  
high tone to influence him, and by provid-  
ing the practical education, which Carlisle  
and Hampton are allowed to illustrate in  
a small way, but which Congress refuses  
to multiply.

To this end there must be a revolution  
of the Government policy, if not of its  
policy, then of the organization of the  
Indian department, for the sake of a better  
policy.

We may discuss hereafter, the very dif-  
ferent relation of the "heathen Chinese,"  
to our country. They are a race phre-  
quently addicted to such virtues as industry  
and thrift; but while adding enormously  
to our wealth, they send so much back to  
their aged parents at home that they can-  
not be tolerated and must "go." They  
are equivalent to any machinery that pro-  
duces goods more cheaply than hand la-  
bor, thereby turning many people out of  
certain employments, but more than make  
it up in other ways.

The following table has been carefully  
prepared by Prof. C. C. Painter, who rep-  
resents the American Missionary Association  
at Washington, in the effort it is  
making to secure adequate national aid in  
the work of general education. This As-  
sociation has expended several millions of  
dollars during the past few years in train-  
ing teachers for the common schools of  
the South, who have but limited opportu-  
nity for teaching, because, as this table will  
show, the school funds of these states are  
so inadequate; sufficient to keep a school  
open for only a month or so, in many of  
the states, during the year. By changing  
from district to district, the teacher may  
manage to find employment at a moderate  
salary for several months, and thus live,  
but the pupil forgets during the long va-  
cation what he imperfectly learns during  
a short school term, and it is the old ques-  
tion of the frog—that jumps up two feet  
during the day and slips back three during  
the night,—how long will it take him to  
get out of the well?

It will be seen that, of a fund distributed  
to the states and territories on the basis  
of illiteracy, considerably more than two-  
thirds of it would go to the old slave  
states; but largely over one-half of the  
whole would go there because of colored  
illiterates.

This table supposes a fund distributed  
to the states by the general Government  
which will give annually \$3.00 per cap.  
to each illiterate person ten years of age or  
over, who cannot write. This would re-  
quire a total of \$18,719,958. This would  
give to the 16 old slave states and the D.C.  
a total of \$14,449,579. But of this sum  
\$9,187,932 would go because of colored  
illiterates, and \$4,961,657 because of white  
illiteracy, leaving to the other states \$4,  
570,439 for whites and blacks of the same  
class. Of this last sum, \$169,632 would  
be given because of colored illiterates, but  
in the table no distinction is made because  
of color in these states; all are accounted  
as whites.

The states are grouped by two, select-  
ing those that have nearly the same  
population, for the sake of comparison  
and contrast, and it must be remembered  
that the basis is illiterates, not the whole  
number of school children. In the South-  
ern states where common schools are new  
and ill supported, those classes are nearly  
equal—the illiterates being somewhat  
the larger; e.g. in S.C. the total number  
of school children is 239,463; the illiterates  
(10 years of age and over) is 369,848.

In Miss. sch. child. 363,370; illiterates 373,201  
" N.C. " " 426,829 " 465,393  
" Va. " " 483,701 " 430,252

While, of course, in the states which have  
sustained an efficient common school sys-  
tem, the illiterates are few compared with  
those of school age, as

In Kan., sch. child. 315,231; illiterates 39,476  
" Mich. " " 486,993 " 63,728  
" N.Y. " " 1,623,727 " 87,158

Inferences from these figures as to the  
value of the schools are legitimate.

This table shows, 1st, total population  
of state by last census; 2d, total number  
of illiterates, 10 years of age or over; 3rd,

number of colored illiterates in Southern states. 4th, total sum from state and local taxes expended for common schools, 1880; 5th, what this sum would give to each school of illiterates (not school children) which is found by dividing the total illiterates by 30, for an average school; 6th, what a fund yielding \$3.00 per capita to illiterates would carry to each state; 7th, how much of this in the Southern states would be for colored illiterates; 8th, how much to white illiterates; and 9th, total white population of Southern states, all being counted as white in the other states.

A few obvious suggestions force themselves upon us from these figures: (1) How long will it take North Carolina, for example, to make safe voters of her illiter-

ates at the rate of \$30.00 per year for each school of 30 such persons? (2) The ballot is in the hands of this ignorance by act of National legislation, and the danger threatened by it is not to North Carolina alone but to Iowa and Oregon also. (3) The question of providing for the education of these masses is indeed a vital constitutional question, as living over an open sewer is a constitutional interest. The safety of the Republic is the supreme law of the Republic, and providing for that safety is the supreme duty of the statesman.

The table does not include all the states, as the intention is to illustrate the need of such help; not to make an exhaustive exhibit.

STATE	Total population	Total illiterates	Total illiterates per capita	Total illiterates per school	Total illiterates per capita	Total illiterates per school	Total illiterates per capita	Total illiterates per school	Total illiterates per capita	Total illiterates per school

#### EDUCATION BY CONGRESSIONAL AID. BY PROF. C. C. PAINTER.

The flood of bills thrown into both houses of Congress proposing to create and distribute a fund to the States and Territories on the basis of illiteracy, to supplement the educational work they are doing, indicates an interest on the part of Congressmen in this vital subject, but what is more hopeful, and much better, indicates also a demand on the part of the people in all sections of the country that something adequate shall be done.

These bills confirm the old adage: "Many men, many minds"—and each one shall violently insist upon his own views being carried out, it may prove that in this multitude of counsellors there is not safety, but confusion and defeat for the present, yet this body politic is strongly inoculated with the sentiment that something will be done in the near future.

Our limited experience in statesmanship begs a becoming modesty which forbids over bold suggestions as to how this fund shall be created, or under what supervision and by what machinery administered, but a wider experience as educators, we trust, will disarm a captious criticism, if we make two or three as to principles which should guide the wisdom of the statesmen who shall give hope to the measures demanded.

1. The help should be so given that it will stimulate rather than supersede the necessity of state effort. In our opinion it would be an infinite hurt if this responsibility, either of supporting chiefs, or controlling exclusively the interests of common schools should be taken from the states, or be materially interfered with.

2. It should be help for the common schools; temporary aid in the training of teachers perhaps, chiefly in giving them opportunity to teach the vast ignorant masses who have this ballot in their hands, that they may use it with safety to the Republic, rather than to teach men to farm scientifically, or to be skilled artisans or wise professional men.

"The safety of the Republic is the supreme law of the land." This is the maxim which not only justifies, but demands action on the part of the general government; and it should also suggest the limitations under which the action should be taken.

3. The help should be immediate and not remote. The fortunes of war, and the

necessities of legislative action have made citizens of a large mass of ignorant men, whose votes are to shape for well or woe, the character of our laws, and this at a time when the states in which this ignorance is chiefly found, were utterly impoverished by the deprivations of that war, and possessed neither the means nor the disposition to do the Educational work which alone can convert this mass of ignorance and element of danger into one of enlightened strength and safety.

The time has fully come when these states see and feel the necessity of this, and are putting forth their strength to do the work, but from sheer inability must leave it largely undone for generations to come.

There is no longer the least excuse for the general government, if it refuses to meet the emergency which it has thrust upon the Republic.

Largely more than one half of a fund for the education of the illiterate, would go to the South for Negro illiteracy; less than one-fourth because of white illiteracy.

Alabama has 433,447 illiterate persons, 10 years of age or over, who cannot write; of these 331,680 are colored. She is able at present to raise only \$17. per annum for each school of 30 such persons. North Carolina raises \$20. for each such school. How long before these states, at this rate, can make safe voters of these people, concerns not these states alone, but is of vital moment to every state, and citizen of this Union.

If Congress should create a fund which would give \$3.00 per annum for the education of this class alone. It will require an aggregate annual sum of \$18,719,568. Of this, Mississippi would receive \$1,119,603, but of this, \$959,529 would be for colored illiterates, and \$160,344 for white illiterates. While New Jersey which has nearly exactly the same population, would receive only \$159,747 from the same fund, which is nearly the same amount as Mississippi's share for white illiteracy.

The more closely the facts are studied the more clearly does it appear that this sum and this effort is demanded because of Negro illiteracy, for which the nation at large is responsible, and every part of it alike is concerned. Experience should have made it apparent at this time, that neither political party can safely rely upon this element as an ally for party measurement; it is a broken reed always, which will grievously wound the side of him who leans upon it; it becomes a deadly blind-

geon, and with it he will beat out the life of civil liberty, unless he is timely disarmed by the prompt and adequate action of the government, in providing that the citizen it has made shall be qualified for the duties and responsibilities with which he is charged.

#### EDITORIAL CORRESPONDENCE.

(Continued From Last Number.)

AT NASHVILLE.

After dinner, we drove for a couple of hours about the city, visiting the splendidly built and equipped Vanderbilt University (for whites) with its fine, new divinity hall. We had time to see but not inspect the Central Tennessee College (Methodist), and the Nashville University (Baptist) for Negroes; each with about three hundred students, borders, from this and other states. Both are doing excellent work: in part theological. We passed the University of Tennessee, adopted by the Trustees the Peabody Fund for training college of a high order where Southern whites are fitted to teach. Some \$20,000 are annually distributed in sums of \$200 each for students' personal expenses, and upwards of \$10,000 are yearly paid for teachers' salaries. The Peabody Fund is, I believe, to be finally distributed in about ten years. It is expected that this college will get about a million dollars, and be an excellent educational monument to the great philanthropist, Peabody. This will be a good use of the money. To make the teachers to make the people. It may be well to state here, that by the census, 43 per cent. of colored children of the South, and 52 per cent. of the white children are within the range of some sort of school advantages. It is estimated that about one-tenth of the colored population are literate, and that three-fourths of the white population can read and write.

We drove by the Medical College, Young Ladies' Seminary, and, for one, realized as never before what a wonderful centre for Southern education Nashville is. This is its distinctive feature. It is central, accessible, northern; (the tendency is to go north for the best school advantages). It has a good society; there are many aristocratic old families here of unbroken continuity of ideas, traditions and possessions; the climate is excellent. Being the State capital, it has a certain distinction. We called on the Capitol, on Governor Colquhoun, who was very polite.

Appropos of Tennessee, I insert the following information, the two wings of the Democratic State, thoroughly conversant with its affairs, and one of the most useful men in it.

"There are three political parties in Tennessee—Republicans, State-credit Democrats, and low tax Democrats. At the election in 1890, on the State ticket, and in general, for members of the legislature, each party made nominations. On the Presidential issue, and on Congressmen, the two wings of the Democratic party went together. The result was that the State was Democratic on National politics; on State issues the Republicans elected the Governor by a plurality. The State credit Democrats, 67,434 low tax, 79,101 State credit.

The Republicans elected 9 Senators and 36 members of the House. State credit, about half of the remaining 16 Senators and half of the remaining 39 members of the House. Low tax, about half the Senators and half the members of the House. The Republicans might have elected the United States Senator, but there were personal jealousies, and so the members did not work together well. Result, the State credit Democrats, by republicanism, elected General Jackson. The colored people almost uniformly voted the republican ticket. Fewer voted the low tax ticket than voted the State credit, as far as I know. The State credit Democrats are the best men of the democratic party; as far as I know, they are the most sincere and reliable in the support of education, and equally friendly to the colored people. The State has been enjoined in the supreme court of the state against using new bonds in settlement of the State debt, but the case has been permanently advanced on the docket, and the impression seems to prevail that the injunction will be dissolved and the debt settled.

The feeling between the low tax and state credit Democrats is strong, and if the debt question is removed from the politics of this state, there can be but two parties. Wise and energetic action on the part of the Republicans, however, will suppress the State credit party and the Republicans. The State credit party has the most of the old leaders, and comprises the aristocracy and the best social culture of the state.

The State school system is pretty efficiently administered, as things go in the South. The sentiment of the State is strong and grows stronger in favor of efficient public schools. All of the cities, and most of the villages, have reasonably good schools. In the country, the

turn is very short, three or four months a year. The great majority of country and village schools have no efficient teachers, but the demands increase every year, and genuine progress is made. Larger sums of money are required, and the people are restive under taxation. If the state debt question gets settled, we all feel that the way will be open for more rapid advance in educational work. We have a good state Superintendent, and a good many teachers' conventions and institutes are held each year. The large number of Colleges and Seminaries in the state are yearly turning out a good number of better educated teachers, and teaching is respected by Southern men and women of the better families more than it used to be. There seem to be no influences at work in any party to disturb the educational progress of the State, but all are united in desiring to see all classes educated. The Legislature is afraid to impose heavy taxes, but public sentiment promises soon to sustain the State in doing more for public schools."

Just before leaving to take the night train for Cincinnati, I stood on the steps of "Julius Hall," the magnificent \$120,000 building erected by the Jubilee Singers, and looked across the valley between the hills crowded by the hills and that on the Capitol stands.

A mist had filled it, concealing from view everything but the noble Grecian edifice opposite. There it rose, high in mid air, without a sign of foundation—it seemed to float upon a cloud. The sensation was indescribable—it was so real and yet so mystical; as grand a sight as ever I saw.

In Cincinnati, making my base of operations the Burnet House, I secured, through a friend of introduction, the companionship of a most interesting gentleman, with whom I drove about for four hours, sipping up the time between arriving and leaving most profitably.

The city rises rapidly from the river level to the crest of a hill, beyond which there is a pretty, rolling country, settled up with pleasant farms, and a few of which are elegant, comparing with the finest suburban residences of any eastern city. We drove through Eden Park to Walnut Hill, passed the well known Home Theological Seminary, where the revolt of students in 1833, because of the prohibition of discussion on the slavery question led to the founding of Oberlin College, inspired the men who inspired the American Missionary Association, and three weeks into a never torpid life this wealthy institution that tried to suppress conscientious exposure of a public wrong. We saw the building where Mrs. Stowe wrote the earlier chapters of "Uncle Tom's Cabin." The anti-slavery discussion was hot in Cincinnati, for it was upon this border. Here was a station of the underground railroad. An odium long rested on those who championed the cause of the Negro. There was plenty of high-topped piety here, as elsewhere, opposed to it.

The drive through Mount Auburn and Burket Park was pleasant. Leaving Avon, we on the right, we passed through the lovely, suburban town of Clifton, a beautifully built up and kept municipality—Avon is similar but not quite so elegant—broken by wooded, rocky hills, and laid out in a pleasant, most charming and refreshing resort for the wealthier class of the city. The finest places are those of Messrs Boloway and Shambaugh, which rank with any in the country. I think they surpass in "Picturesque America."

To see all this, and think that, within the memory of living men, it was a wilderness, is amazing.

These and other residences overlook the fertile Mill Creek Valley, where thirty Gay men farmers have their market gardens, raising acres of celery, cabbages, etc. Across the valley is Spring Grove Cemetery.

We wind down between the hills back to the smoky town, passing the "Bellows" which is perched far up on the crest of a commanding hill, the base of which has been cut away for a road. Here the pleasure loving people gather day and night, for beer drinking, dancing and fresh air. They are drawn up from the city in cars on an iron track, at an angle of 45 degrees. In and about the city are many such resorts; groves and gardens to the entire population of 200,000. The Sunday question is a serious one. Europeanists to Europeanize the day; the New England element opposes them, chiefly by legislative measures at Columbus, the State capital. Sunday theatres and variety shows of the lowest kind, after a short time, were suppressed. The sale of intoxicating liquors on Sunday was prohibited, except as medicine. All the shops were kept open as before, each one furnishing a physician's certificate to whoever wanted a drink. Sunday excursions continuing into the night were shown to be a cause of terrible delinquency among the young, and even worldly men saw the need of checking them.

However innocent may be the Sunday freedom and pleasure in the Fatherland, American license tends to convert the same methods

into means of mischief. The priest complains that the once simple Irish girls returning from America are aly and dangerous. So the conservative influences of their own country. Liquor that is wholesome over there, maddens here. Our air is a dangerous stimulant, our social atmosphere is intoxicating. While Puritan ideas must change, European ideas on the Sunday and other questions, cannot be adopted without serious danger to the morality that is at the bottom of our civilization. Fortunate are no more to blame for this change than a low class of Americans who improve every opportunity to corrupt the innocent. There is no escape from their aggressive views.

We were fortunate in getting inside of the great Music Hall, a noble structure, flanked on each side by capacious wings, one devoted to art and the other to an industrial exhibition. It reminded me of the Royal Albert Hall in London, which I saw last summer. There is nothing in America like this splendid great hall with a seating capacity for 5,000. At 7:30 this evening, (December 28), there will probably be over 8,000 people. Standing room is sold for \$2.50. The receipts are over \$20,000. Paid herself has \$7,000 of it. With the Thomas Orchestra, and a choir of 600 voices, will sing the Messiah. Looking from the entrance, across the long diameter of the oval, the great organ at the farther end seems in a misty distance, floating in a glory of its own. How the heavenly sounds will roll between these walls to night!

Cincinnati is a commercial city, its leading industries being pork packing, iron work of all kinds, and manufacturing, notably carriage making. It is a centre for distribution. New York houses have branches here. But it is distinctly a city of pleasure, as Nashville is a city of pleasure. Its tone is of amusement or recreation. The pleasure idea is in the air. A clergyman told me that it required the same pressure to bring together a congregation of 300 people as in the East to gather 400.

Cincinnati with 300,000 souls will not support as many solid, improving lectures as Worcester, Massachusetts, with a population of 39,000. But it is full of public spirit. What of its wealth shall reach the third or fourth generation will, as elsewhere, be seasoned, imbued with higher and nobler ideas. A palace car goes daily from Cincinnati to Jacksonville, Florida. The consolidated railroads that run North and South, mutually controlled and owned by Northern and Southern men, are the most effective "baking bands over the bloody chains" of our times. The combinations are getting so vast as to render rupture next to impossible. Pecuniary interests have been known to keep together even religious societies when rent with opposing convictions. Money is a tie that binds as nothing else can. Capital is like a conservative old gentleman who has the horrors at whatever may effect his person. Even Aver and solidified wealth is in the interest of peace and good will on earth.

The roads that run north and south harmonize; those that run east and west, civilize. The Chesapeake and Ohio, by going through upper Kentucky from Huntington to Louisville, 140 miles, draws from a very fine grass region a population of horses that had infected it. The horses are good, if it doesn't look like it, is a moral force. How little people realize the true significance of railroads. It should be taught in every school. Teachers are usually not up to such things, from the country school master to the college professor. Huntington, Jay Gould and Vanderbilt, and such men, are great civilizers. Capital can't help serving God.

Going thirty miles an hour along the banks of the Kanawha river in West Virginia is not most favorable for sight seeing, but it is lovely looking out of the car windows up and down this valley which reminds me of that of the Housatonic, only here both valley and river are wider. In a couple of hours, we leave the Kanawha, and dash into the valley of the New River. Here is what I have often read of and have longed to see. The stream is high and rushes magnificently down the valley closing in; steep, rugged sides, with jagged trees and the roar of the torrent, make a wild scene. The railroad engineers are here. What do they mean by cutting out this difficult way? We soon find out. About every mile is a collection of small chert hills perched upon the rocks, and a steep railway track down which some loaded train is coming. This is dug from the mountain side, and dumped directly into the cars. Here is an untold wealth of soft coal, which is mined to rare advantage, for no shaft is sunk. The coal is there. They strike the seam of coal at once where it crops out in the hill side, and dig horizontally; draining is easy; there is no hauling. From its bed to the car, the coal goes down with a minimum of labor and cost. Southern capital has been put in freely, business is growing; this region will be born of its wild beauty. Sixty miles of this is not

thrice. Then we turned into the quiet valley of the Greenbrier river, passed the White Sulphur Springs by moonlight, reaching Norfolk and Hampton the next evening.

I rode from Boston to Nashville through a settled country and could not have written half a column about it if it is all a matter of course, the same thing repeated. But the Chesapeake and Ohio railroad, from Cincinnati to Richmond, was constantly fresh and interesting.

I reluctantly agreed to go to Nashville, and decided to from a sense of duty, not dreaming of the interesting experience before me. I shall more than ever believe that "virtue is its own reward."

S. C. A.

#### TOUGALOO UNIVERSITY, MISSISSIPPI

Rev. G. Stanley Pope, President, gives the following account of this excellent institution, (under the fostering care of the American Missionary Association of New York) which is devoted to training about 300 Negro youth to be teachers and to work.

It is doing the right kind of work for the South.

Making grass grow where it never grew before, is next to putting in ideas where there were none before. Where grass grows, there is good stock; a region that raises good beef produces a good type of people.

Slavery was a greater curse to the ground than to man. The soil negle redemption as much as the souls there. Grass for the one; ideas for the other! Our Southern Schools are not for brains alone, but for the whole man. Their teachers should be not mere pedagogues but citizens.

Tougaloo University is most worthy of help.

"We are on the great through route from Chicago to New Orleans, a little over 30 hours' ride from Chicago. We begin to put our strawberries into Chicago market about April 10. We could put other fruits into that market equally well. We have market right at home for all the high grade Ayres and Jersey stock we can spare, and the demand for this stock is going to increase. Some of the planters near us are getting interested in improving the milking qualities of their cows, and I expect it will not be very long until some of them begin to raise red clover to feed their cows. At present I have the only clover field that I know of anywhere in the vicinity."

The old planters here told me that clover would all burn out in July and August, but this is the third year, and it is coming on very nicely this winter. We shall prove to our students, and through them to a great multitude of people in this state, that it is just as easy to raise a crop worth \$20.00 or \$100.00 as it is to raise a crop worth \$5.00 or \$10.00. It is an easy thing, after raising such a crop, to raise red clover to feed her. We shipped a very little asparagus last spring. The spring we will be able to ship a considerable, we have not had money to do with, and so have only made a very small beginning.

The girls are receiving thorough instruction in sewing, laundry and house work, but nothing has been developed yet to make their work a profit to the institution. They pick our berries very largely. This gives them very pleasant outdoor exercise in the spring.

The State has been giving us \$2,000 for two years past. I think the appropriation will be increased this year. The State supports a Colored Normal School at Holly Springs, 185 miles north of us. Also Alcorn Agricultural and Mechanical College, four miles off the river at Rodney, some way below Vicksburg. This has not been well managed, and is at present costing the state about \$150,000 per year. It formerly cost much more. County Supts tell us that our teachers are the best they get. With our system of normal training and manual labor we are developing brains and making in a very satisfactory manner. We are a long way behind Hampton, but we are "Wagging up the hill so slow." We shall continue to wage. Our students are enthusiastic in their Temperance and S. S. work. Their influence in these directions is most two years since, that he could tell the moment he stepped inside a room where a Tougaloo student was teaching.

The poverty of the people white and black is greatly in the way of rapid development, in the Yazoo valley, though there are some very thrifty colored people. Our present Lagrange school is quite wide awake on the subject of education. I wish I could spend two or three days with you and get your ideas and methods.

Yours truly,  
G. STANLEY POPE.

#### THE WORD CARRIER.

A newspaper with this significant title, organ of the Dakota Mission of the American Board for Foreign Missions, edited by Rev. Messrs Stephen B. and Alfred L. Riggs, and printed half in English and half in Indian, published in its January number, an English editorial headed "Dancing," calling attention to a report in a letter supposed to come from an Indian mother, that some of the girls returned from Hampton had gone to balls and danced all night, and excused themselves by the assertion that their teachers at Hampton danced. The editor declares his disregard of the statement, and it is only a pity that in that case he should have made his paper the carrier of idle words. While Hampton has not experienced any damage from it, we can but regard its spirit as neither fridely nor wise. We regret to see the same spirit in the publication in the same number, of the article, "Where shall our Indian Brother go to School," quoted from the New England Journal of Education, and given with the weight of that paper's name, without explaining that it is merely a reprint of one of the editors—Rev. Alfred L. Riggs—own letters to the Journal. Its chief point is that eighty thousand Indian children ought to be put to school right away, but Hampton and Carlisle together can only take 400, and if all the freedmen's schools should open their doors to Indians, and Carlisle should be multiplied by 10, they could not provide for one-sixteenth. This calculation one might make without help. Yet Mr. Riggs seems to think that Captain Pratt and General Armstrong desire to transport the whole 80,000, and says, "If we were not planning for Indians we should never hear of such a proposal."

The weakness of this is apparent and not worth argument. We only regret to see it in a paper that is supposed to represent in any degree, the time honored American Board. The Board would multiply these opportunities for practical training of Indian youths in such schools, but the accommodation of 80,000 children in them surpasses our wildest dreams. Mr. Riggs's suggestion is the laminate establishment by Government of a public school system for the whole Indian country as efficient as that of Massachusetts, with—what would seem to be then superfluous—Government aid and extension of the Mission schools.

We regard the Indian work as one, East and West, and rejoice in it all. Calmer reflection should show Mr. Riggs that success at the East means success in the West. His work like ours, leans on public sentiment. The education, not of 80,000 Indian children, but of the millions of white people who will decide whether they shall be educated or not, must be done at the East, anywhere. This is the indirect but perhaps the most important meaning of Hampton and Carlisle. Thousands more are interested in Indians than before these began their work. More than anything else they have been the foundation and the sustaining of the new department in the Indian cause. Hampton is at the bottom of an effort at present being made in Washington, better organized than any before, for the extension of the Western work of Indian education.

While, as we have heretofore said, the bulk of the work of Indian education must be done at the West, we believe that the Eastern work has an important mission to both races. We do not regard the Eastern training, as Mr. Riggs does, as "an unmetamorphosed attempt to educate a race outside its own country." If the Indian is to be a citizen of the United States, he is not leaving his country when he goes East, but fitting himself to live in it, in the civilization which is fast coming to him.

Mr. Riggs's letters contain some interesting statistics of the present condition of Indian education. We only wish that he had confined himself to these and other points on which he is well informed, instead of betraying such discreditable ignorance of the work and position of Hampton and Carlisle. There is work enough for all. And we would heartily welcome the aid he might give from his own experience of methods and results at Santee. This would be of real value to the whole Indian cause, which cannot be said of his letters to the Journal. While Hampton and Carlisle have nothing to thank them for, they will be most grateful to the writer's own reputation for good judgment, and no more help to his own branch of the work than to ours.

#### AN EFFORT OF HAMPTON GRADUATES.

As we have very successfully done before, we heartily commend this excellent and promising enterprise of our graduates to the practical sympathies of friends of Hampton and its ideas.

CIRCULAR.

DEAR FRIENDS:—The farm of one hundred acres which we contracted to buy for the School a few months ago, has been paid for, and is now in the hands of a Board of Trustees, and its cultivation begun. On the place are four small buildings, which we thought at the time of purchase could be used as a answer for school purposes for at least the first year, but the attendance being so much larger than we expected, we have been unable to use them in that way. For the present session, we are kindly permitted by one of the church congregations in town, to use its house of worship and public school building. These buildings do not answer the purpose; besides we cannot trespass on their kindness another session. The attendance has averaged about eighty this session, and will doubtless be much larger next session. There is no alternative. We must have a building. We have plans for a building containing one large assembly room, six recitation rooms, library and reading-room, office, boarding hall in basement, and sleeping quarters for girls on attic floor. The cost of this building will be about \$3,000.

We want to lay the corner stone of this building on the day of closing exercises of the present session (Thursday, March 30th). To get the foundation work in proper condition for laying the corner-stone will cost about \$300, which we are now making an effort to raise, and it is earnestly hoped that all friends who receive this circular will give something towards laying the foundation of our first building.

B. T. WASHINGTON,  
OWEN A. DAWSON, Teachers.  
JNO. W. CARDWELL,  
Tuskegee Normal School, Tuskegee, Alabama,  
February 13th, 1892.

#### O.A.R.D.

Received \$30. from "A. B. C." Boston, Mass., on behalf of the Kansas Agricultural and Industrial Institute, for colored refugees, at Columbus, Kansas.

S. R. WINE, Assoc. Sec.  
We publish the above acknowledgment by request of Mr. Wine. If this donation, with others, is, as he believes, in response to the SOUTHERN WORKMAN's notice of this worthy institution, we are very glad, and hope it may be limited.

#### Hampton Normal and Agricultural Institute

AT  
HAMPTON, VIRGINIA.

Incorporated in 1870, by special Act of General Assembly of Virginia; exempt from taxation. Devoted to the Education of Negro and Indian youth in Agriculture and the Mechanic arts, and as teachers of their respective races.

S. C. ARMSTRONG, Principal; J. F. B. MARSHALL, Treasurer.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all, (provided by friends). Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

This institution is aided by the State, but is supported mainly by voluntary contributions. Besides State aid and Government help for Indians, the sum of \$30,000.00 a year must be raised by contributions, to meet current expenses.

Annual scholarships of seventy dollars, to provide free tuition, are solicited. Donations of any amount are most acceptable, and are invited from all.

The great need of the institution is a permanent endowment fund.

The Hampton Institute is supported by, and responsible to, no denomination or society, and has no paid soliciting agent or machinery whatever, but depends directly upon the public. It is earnestly Christian in its teachings and influence.

Present attendance, 404 students, of whom 90 are Indians. Average age 19. Negro boys 210; Negro girls 158. Indian boys 63; Indian girls 38. All but twenty-five board at the Institute; twelve states represented, but chiefly Virginia and North Carolina.

#### FORM OF REQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of ..... dollars, payable do., do.

For further information address,

S. C. ARMSTRONG, Principal,  
Hampton, Virginia.

## LETTERS FROM HAMPTON GRADUATES.

A WORTHY REPRESENTATIVE. BUCKLING ON THE ARMOR. TEACHER AND PREACHER. HARD ON LIQUOR WEIGHT. HOW A SCHOOL HOUSE WAS BUILT. FROM A DAY SCHOLAR. TALKING HAMPTON. FROM AN UNDER-GRADUATE.

## A WORTHY REPRESENTATIVE.

The young man whose versatile talents are indicated in the following letter, is a worthy representative of his race, whether in politics, teaching, or pig raising, and deserves the success he has made for himself in all those departments, in spite of the loss of a right arm.

Md., Jan. 10th, 1882.

Dear Gen. With great pleasure I inform you how I have spent the time since last May, when I closed my school.

I have under cultivation two acres of very fine looking strawberry plants, and they will be ready for picking this coming spring. I was elected, last fall, a delegate to the state convention to represent the county. Since then I have reopened merchandise again, doing very well so far. I have purchased another house and lot. My two pigs weighed 895 lbs. They cost \$65. per lb., and I sold them at 73 per lb. \$132.12. The ages of pigs, since month.

Dear Principal, give my kind regards to all the faculty and all the members of 1877, and all the school. I hope you all had a happy Christmas and Happy New Year.

From your pupil, J.

## BUCKLING ON THE ARMOR.

A young man who graduated from Hampton several years ago, and went into service at the North instead of teaching, after having won much confidence and respect from his employers, has at last felt that his duty is in the South.

"I think I am getting along very well with my school. I opened with seven scholars, to-day I have thirty-four; my monthly average will be near twenty-five. I have opened a night school for those that can't attend during the day. I have some real old men; it is astonishing to see how much interest they take in it. I have also organized a Sunday School. Many sacrifices are made by the parents to send their children to school.

I think I shall enjoy my work instead of disliking it, for here are plenty of young minds to be trained and older ones to form better characters. By the help of God I shall try to do all I can for them. They have no minister so I am called upon when they have a prayer meeting to read and explain a chapter.

Sunday my schoolhouse was crowded to its utmost, to hear a minister who had promised to preach for us but failed to come. They were determined to make good use of the time so they called on me for a chapter. I read a portion of Christ's sermon on the Mount, as that needed but little explanation. Don't think that I put myself forward with these people, for I do not. You know how it is with a teacher to this part of the country. I think I would like teaching if the accommodations and surroundings were better. After a men labor hard all day he likes a comfortable place to rest at night, which is hard to get here. I do get very homesick sometimes for my Northern friends. I shall try to make the best of the five months and do all the good I can.

My best regards to Mrs. M. and all of my Hampton friends.

With great respect,

Your pupil, C.

## TEACHER AND PREACHER.

A colored preacher who, with commendable desire for more education, secured two years at Hampton, by the help of his faithful wife, writes thus of his twofold efforts among his people.

—, Va., Nov. 24th, 1881.

Dear Friend:—I write that you may know how I am getting on with my school etc. I would have written sooner, but I have been waiting for a visit from the Supt. But he has not been able to see me yet; therefore, I write without further delay.

I opened my school on the 17th of October. My average for last month was 26.26. I was warmly received, and am much respected by all the neighborhood.

I am leading a revival among them. We began our meeting on the 18th of Nov. During last week we had seven conversions; five of whom were my pupils. This week we have four more, three of whom are my pupils.

Our meeting is going on, and shows a good prospect for the future.

My health has been better since I have been up here in the mountains than I expected. I shall write again after the Supt. comes to see me.

Very truly Yours, H.

## A TUTOR EXAMINATION FOR A LIGHT WEIGHT.

The examinations which graduate candidates for schools are subjected to, vary greatly with the district. Sometimes a Hampton diploma is accepted in lieu of any, but it behooves one to be ready for the ordeal. Examinations for city schools are naturally more severe, and the young woman who gives the following description of one, has reason to be congratulated on her success.

—, Va., Oct. 14th, 1881.

According to promise and wish, I write to tell you about my examination, school, etc.

You remember I spoke to you about being an applicant for the room in which Miss — taught, as soon as I got home from Hampton. The Superintendent sent for me I went directly, and oh! Miss H. —, you can't imagine how he discouraged me. He said, "Why you are very small, you keep order? How old are you? Why Miss —, how can you be older than me? Well there are two applications in, yours and Miss —'s. I will have to meet the board before I can do anything." So ended our unpleasant conversation that day, and I left scolding myself because I only weighed ninety-nine pounds.

The following Wednesday he sent for us, and told us that the board had decided to have us both examined the following Saturday, and that day, and I left scolding myself because I only weighed ninety-nine pounds. The following Wednesday he sent for us, and told us that the board had decided to have us both examined the following Saturday, and that day, and I left scolding myself because I only weighed ninety-nine pounds. The following Wednesday he sent for us, and told us that the board had decided to have us both examined the following Saturday, and that day, and I left scolding myself because I only weighed ninety-nine pounds.

He then left us with these questions on a piece of paper, with pen, ink, and paper, for the answers. He came back 12 o'clock. We were then through answering the given questions. Then he excused us to get our dinner, allowing us until 3. We went back at 3 o'clock; he then gave us ten hard examples; the hardest was cube root. We stated these working those examples until 6 p. m. At that time I had worked every one of them excepting one, and that was a kind of puzzle to me. It was, "write twelve thousand twelve hundred and twelve."

He gave another funny example; "add 12 miles, 4 bricks and 2 quarts of hominy." I saw that trick in a second. He did not send word who was the successful one, until Monday p. m., and then it was I. I would like to tell you what he said about my examination, but I must leave it for some one else to do. I went to teaching Tuesday, a. m., and found everything pleasant. I have 30 on roll, and teach orthography, philosophy, reading, spelling, geography, drawing and writing. I can't possibly express how much I enjoy it. I sincerely thank you for your kindness in recommending me.

The next time I write I will tell you about my school and not examination.

Hoping you are well and enjoying teaching as much as I.

I remain your student, S.

## HOW A SCHOOL HOUSE WAS BUILT.

The following letter gives an interesting picture of one way in which school houses are going up in the South. It is well to be helped; it is still better to help one's self, and certainly those who are so willing to help themselves deserve all the help they need.

Gen. S. C. Cappahosic, Va. Nov. 4th, 1881.

Dear Sir:—Please allow me space in the Workman, to make the following financial report, and remarks, in reference to my school and work here.

I have been here about two years. During the summer of 1881 I took steps to build a school house, and on application to the school board I received the contract to build one of one room 18x25, for \$275.00.

Desiring a large and a two-story house, I received

from patrons, in labor etc., 80.00  
From Northern, and other friends to the cause, 153.00  
From school board for teaching last term, 300.00  
From patrons for assistant teacher last term, 30.00

Total Receipts \$738.00

During this time, from August 1880 to October 1881, at the commencement of this term, I paid out for school house, \$480.00  
To assistant teacher, 120.00  
On Christmas tree for the children, 8.00  
For books, crayons etc., for the children, 0.00  
For industrial implements, 4.00  
For board, 72.00

Total expenditures, \$853.00

Balance, \$53.00

I worked ten weeks on the house, and taught seven months since August 1881, and the only compensation to my part was the \$33. I am employed again this term at \$20. We are burdened the same as last term, in paying a part of my assistant's wages. We worked very hard and willingly last term hoping that we would not have it to do this term; but as there are over a hundred pupils in this school, I am compelled to have an assistant, and as the school board does not pay ample wages we have to make it up.

It is my intention to give more industrial training this term than last, if proper means and implements can be obtained. I find that this instruction is very much needed.

I am glad to report that we have witnessed a great revival here this summer. Not only on any day and Sabbath school pupils have professed religion; 130 have joined our church this year.

I enjoy teaching when I can witness such promising results as I have here; and would be glad to stick to it, but I fear that I shall be compelled to resort to some other employment for a living. Yet I try to keep in good faith, trusting in God that I shall be able to do so. I brought me safe thus far. But I can say of a truth, that the work of the colored teachers in the South is a great missionary work. In many instances they have to take the place of preachers, political instructors, and in almost all cases that of parents.

Well I hope that all who are interested in the work will pray for us, that I may be successful in doing much good. Now let me ask the many friends and those who have helped me and my work here in any way, to accept my sincere thanks and prayers.

Ever yours, sincerely at work,

W. B. WEAVER.

## FROM A DAY SCHOLAR.

The day scholars in the Normal School are of course less under its influence, and we are the more gratified when they do well and devote themselves industriously to work among their people, as some of them do. One of them writes thus of her work.

—, Va., Dec. 6th, 1881.

Dear Miss —, I commenced teaching in October, for my first term from home, and I felt rather doubtful as I went to my school on Tuesday morning.

I looked at my pupils and saw how much larger most of them were than myself, and what a poor school house I had, and I wished myself home many times.

I opened school and went to work with all my heart, and at the end of the week I found I was getting along so nicely, I was proud of myself.

My Superintendent came around to see me last week and he was so pleased with my teaching. It is the first time he has had a Hampton teacher here, and he says I may keep the school just as long as I want it. The people are very ignorant here and very low in their morals.

There are very few respectable families here, and most of them are poor enough.

I go to Sunday school every Sunday and teach the Bible class, but there are not more than three or four in the whole school who have a Bible.

The people here never heard of Thanksgiving before I came here, so I gave my pupils holidays and they had a picnic, (something they have never had before) and I never saw children more happy than on that day.

They have never seen a Christmas Tree, so I told them I would have one for them, if they are good boys and girls, and they jumped for joy.

I am so far in the country I never hear from the Supt. and I feel very anxious to know what is going on at Hampton.

Very Respectfully,

P. S. I have a boy and girl who are very anxious to go to Hampton school when I come home in April. I think they can enter the Middle Class.

## TALKING HAMPTON.

An "honor girl" of the last class, writes very pleasantly of her work and the influence she is exerting.

—, Co., Va., Jan. 16th, 1881.

Dear Teacher:—Your letter was received several days since.

I am still doing very nicely teaching, and enjoy it more every day. (I got my first grade certificate) I have a large number of new scholars. Many could not come till since Christmas. Those that have come lately are more advanced than any that I have had. It pleases me so much to hear the children say they love to come to school, and sometimes, when their parents want to keep them at home, the children cry so that they have to let them come. My school has been improved since I first came here. It is quite comfortable now. I don't have to trouble myself about ventilation much; because the room is usually well ventilated when both windows and doors are closed. I have one nice large black board and a nice set of charts, both of which are very useful to me and my school.

I have talked so much Hampton and Gen. Armstrong, since I came here, that nearly all of the people, both old and young, think they know all about each one now. Some of the girls here want to go to Hampton, next term. I think that three girls from here can certainly leave this place next fall for Hampton. I hope they may succeed in getting there.

I understand that there is a very large number of students at Hampton. I am glad to guess the girls need their new buildings more than ever.

I hope you enjoyed the Christmas holidays! I did not have any pleasure at all for I was sick the whole week, and the week after.

As it is very late, I shall close by wishing you a Happy New Year.

Your loving pupil, M.

## FROM AN UNDER-GRADUATE.

Many students of Hampton and other large schools begin to teach before they have graduated. It is very desirable of course for a teacher to have all the preparation possible, but if he can write as good a hand and spell as well as the average of the following letter, and is proportionally well grounded in the other elementary studies, and has a gift for teaching, he can do a great deal of good. The better a teacher he is the sooner he will feel his limitations and deficiencies, and we are glad to see that this young man is one who feels the need of "brightening up," and appreciates the advantages of the school, with an honorable desire to pay for them.

—, N. C., January 30th, 1882.

Dear Principal:—I received a card from Mrs. Dixon some weeks ago, saying that you wanted to hear from me concerning any work as a teacher. I am glad to say to you, sir, that I am doing work in this county of teaching the young children of my race. I now have a good school going on of which I am the Principal. I set up on the ninth inst. The first day that I commenced, my number was 30, and now at this writing it numbers about 60. All except two (who cannot say their a b c) can spell, read, and write quite well. My scholars not having books so that I can classify them as I want, to save time I have one of my highest scholars assist me. My highest scholars are in division of decimals, and most of those that are in arithmetic are in common fractions. I have a Second Grade Certificate that I'm now teaching under, the salary of which is \$25. per month. The term is only for four months, as the school was so long being started.

Dear Principal, as it has been so long since I've heard from you personally, you will please excuse me if I should write too lengthily.

My school will end in May, and after then my desire is to go to Hampton and work days and go to night-school until next December if permitted by you. This request is that I may brighten myself in many of my studies, as you know that I've never finished my course at Hampton. I also hope to be able to bring along enough money to defray my expenses while I was at school, and was unable to pay. Please do not think that I've forgotten what you have said to me, for I have not. I am honest, for I've not, and will not until it is paid. If I am permitted to come as I've asked, please sir let me know when you write. Many thanks to you, kind Principals, for the papers you have been sending me. I'd be glad to receive an old paper at any time from the Reading Room. Hoping to hear from you again shortly.

I remain your ob't. student, M.

## SKETCHES OF MISSION LIFE.

BY MRS. C. C. ARMSTRONG.  
CONCLUDED.

Shortly after my mother's death, my daughter and I began our preparations for the homeward journey. It seemed to me that to make a third voyage around Cape Horn was impossible for me, and I was almost in despair, when a generous offer of a free passage by way of the Isthmus, came to my rescue. Our farewells were soon and sadly said, and in a few days, after a tolerably comfortable voyage, we landed at Chagres, where our first night was spent, in a filthy house, on hard beds on the floor, with a hearing of all the profane vulgarity of a crowd of rough men, from whom we were only separated by a low partition. The noise, confusion and sense of danger, not to mention rats and vermin, prevented sleep, and the dawn of day was welcomed by all. Breakfast was of the poorest, with drinking water from Chagres river, and then began the difficulties, perplexities and dangers of an Isthmian journey.

We were crowded into boats, but even my cramped and uncomfortable position did not prevent my enjoying the grand, wild scenery on the banks of the Chagres and the mountains on either side. We passed through dense forests where lofty trees were festooned with wild vines, and made brilliant with many colored flowers. The dense shrubbery was flecked with bright flowers of delicate odor, while the chattering of monkeys and parrots, and the singing of birds lulled the eye. Bely abigails basked in the sun on logs near the shore, and occasionally a big one would give us as alarming suggestion of what would happen should a boat upset.

At night the hundreds of travellers in the boats found shelter as best they could, some in huts on the shore, some in boats at an exorbitant price. I obtained lodgings in what seemed like a dilapidated hen house, where we lay down on a bullock's hide spread on the ground, with carpet bags for pillows, and our shawls for covering. I have always been strongly opposed to fire arms, but that night the firing of a pistol by one of our party was a joyful sound. We had the means of protecting ourselves. The trees and wheat of humanity were mingled in that motley crowd.

The second day was similar to the first, with occasional stops for the purpose of rest, which gave us opportunity to see something of the gables on shore. They seemed in every way much more degraded than the Hawaiians, more heathenish and less civilized, so that the former, after this journey, rose considerably in my estimation. That night we spent in boats moored to the shore, where the number and appetites of the mosquitoes effectively banished sleep, and the evening of the third day brought us to the end of our journey, where we found a forlorn hotel with a high sounding name, and in utter weariness fell asleep on its hard beds.

The next morning, after a breakfast of crackers, we mounted on mules, astride of Spanish saddles, and I can smile now, though I could not then, at that day's journey. My mule was not remarkable for docility, and he rushed on over steep places, through mud holes, and narrow passages between the rocks, with small regard for the feelings of his rider. He understood, apparently, that he was traversing the path of a man who knew it far better than I, and as he would have his own way, I just managed to hold on and go ahead till night brought us to the dilapidated town of Panama, dull and gloomy, except as travellers enlivened it.

After a couple of days' waiting, we embarked on a steamer which seemed like a palace to us, and upon which, except for the overcrowding with a very rough class of passengers, we were really quite comfortable. There came the Golden Gate and San Francisco, where my impressions were mainly of muddy hills and poor, hastily built houses, and then at last we were fairly started for home. This last voyage of twenty-eight days from San Francisco to Honolulu, was only a repetition of our former miserable experience, and glad enough we were to see Diamond Head, that never-changing sentinel, towering up above the little town, dry and dusty, but very pleasant to our eyes.

I found that all had gone well during my absence, and soon and smoothly settled back into my routine of work. My husband, in the midst of his multitudinous labors, was glad that I was able to continue my special mission work, and certainly for me it never lost its interest. The natives were still eager for instruction, and were often really responsive and earnest in their desire to find a better way.

There is one evidence of their sympathy and willingness to work when rightly directed, the remembrance of which must always be a pleasure to me as long as I remember anything.

The grounds around our church, including the little mission cemetery, were surrounded only by dilapidated adobe walls, which gave free admittance to children and cattle, and

was entirely destitute of verdure or shade of any kind. This had long been an eyesore to me, and I had looked about for some means by which to effect a change. One day some of the native women came to me and said: "You have worked many years for us, and we have given you nothing. Now we are going to have a feast to give some money for you." I was touched by their kind simplicity, and while telling them gratefully that I needed nothing for myself, suggested that what they collected should be kept as the beginning of a fund for building a stone wall around the church grounds. They seemed pleased with this, and contributed at once about \$60.00. Slowly the good work went on, but it did not stop, and at the end of a few months we had the satisfaction of seeing a substantial stone wall in place of the ruined adobe. In the meantime, I had proposed to the women to plant the grounds with trees and ornamental shrubs, and to this end distributed among them seeds and slips, which they were to start in boxes, and bring to me for planting. This, in a small way, was a success; the men prepared the ground for us, the old women watered the plants, and surely God gave the increase, for as years went by, the barren neglected spot, became a beautiful garden, a fit resting place for the beloved dead, whom, one by one, we have been called to lay beneath its shining palms.

I had many friends among the natives; men and women, to whom I became warmly attached, and whose Christian lives I respected. Of such I must always think with pleasure and satisfaction, as though I have been sent here to give the particulars of their conversion from heathenism, and gradual growth in character, yet I can positively say that I have no doubt either of the reality of their change, or that it came as the direct result of missionary effort.

In 1860 my husband, then in the prime of life, and fullness of his strength, started from Honolulu on one of the tours which he was in the habit of making, to examine schools and preach to the people. At a short distance from Honolulu, his horse, frightened by the opening of an umbrella, shied, threw him, and so injured him, that what he was found by some natives, he was quite helpless. He was taken to a Chinese hut near by, and from there brought to us. He lay at home for three weeks, slowly progressing, but thought towards recovery, but just as we thought him out of danger, suddenly, with hardly a moment's warning, he left us. For twenty-two years he has been at rest from his labors, but he never had a more earnestly carried out, and as I look back upon his life, I cannot but believe that the hope so dear to his heart, must somehow be realized.

Looking back upon my own half century of life in the Islands, I can see in the light of experience, that there is room for much improvement in the manner of doing missionary work. I can see that multiplied inefficiencies must be brought to bear on the awakened mind of the heathen, so that it will not do to use only those means or those, but that all means should be accepted and used to the glory of God.

At the Islands we had many and peculiar disadvantages to contend with, and our work has, from the onset, been severely tested and criticized. I have no desire to give my own opinion or to question the verdicts of others as to the past. No one can be more correct than I that mistakes were made, that better methods might have been adopted, that, in short, though we were missionaries, we were also human beings. I can only say, that little band of workers among whom my lot was cast, that the faith had hope which through many years strengthened our hands to sow the seed, assure us still that it is God's good time and in the place of his appointing, the harvest will be gathered.

## MECHANICAL INSTRUCTION AT HAMPTON INSTITUTE.

That Hampton Institute is an industrial school is understood. To what extent the mechanical trades are taught, is distinction from farming, is probably not so generally known, though full official statements are published yearly, and a report on this, with the other departments of the school, was given in the last November number of the Southern Workman.

A separate and more detailed account of it may be of value, especially as, in some directions, it has doubled in force since the November report. In connection with this fact, it is interesting to notice that the addition of the Indian students to the school has necessitated and made possible this increase, and has therefore, in this way, as in others, been of direct advantage to the colored students as well.

Both Negro and Indian students work: the former for their board and clothing (the latter, \$70 a year being provided by friends); the latter, unable to do profitable work, only to learn; their board and clothing—the latter only a part—being paid for by Government; their tuition, as that of the Negro, by friends. Having agreed to teach trades to our 60 Indian

boys and any yield from their labor being minor matter, at their board was paid, the school, on their account chiefly, employed nine extra foremen and skilled mechanics. Fifteen colored apprentices have been, or soon will be placed under the same men, and eleven Indians were put into shops already organized for colored students, their labor not being accepted, but that they might learn.

The departments of mechanical industry and instruction in the school and their condition at present are as follows:

## ENGINEERING DEPARTMENT.

J. B. H. Goff in charge.

## OUTFIT:

Three 40 horse power boilers  
Oae 80 " " "  
Oae 50 " " "  
Oae 17 " " "  
Oae 12 " " "  
Oae 10 " " "  
One 60 horse power Engine  
Two 8 " " "  
These supply steam for heating different buildings and for power.  
Four steam pumps—of different manufactures.  
Water works  
Gas works.

Instruction given is in steam and gas-fitting, with care of engine and boiler. The apprentices also get some ideas of working at the beach with cold-chisel, file and ratchet drill.

## COLONEL APPRENTICES—

Andrew Brown, Senior, 4th year, working 2 days a week and 1 vacation.  
Oliver Duncan, Senior, 3d yr., working 2 da. a wk.  
Abram White, Middle, 1st " "  
Shadrach Morris, Junior, 1st " "  
Givens Drummond, 1st yr., " "  
Robert Johnson, 1st " "  
Edward Edwards, 1st " "  
Edward Goles, 1st commencing, work all the time. Will attend Erasmus Edwards' Night School after April.

## INDIAN APPRENTICES—

Louis Egerd, Sioux, 1st year.  
Joe Archambeault, Sioux, 1st year.  
Many boys, 1st yr., all the time. Will work 5 afternoons a week, studying mornings.  
Of the colored apprentices last year, Edward Suggs who had served two years, working days and attending the night school, has now returned to school in the Junior class, having learned his trade. Jacob Connor is attending night school, and having served our year in this department has now charge of the engine and boiler at the saw-mill.

## REPAIRING DEPARTMENT.

The repairing of machinery on the place, of the saw mill, printing office and farm, is done by the Engineer's department. It has also charge of the

## FIRE DEPARTMENT,

whose outfit is a powerful hand Handeman machine; and of the

## KNITTING DEPARTMENT,

which has 33 Lamb (hand) knitting machines, worked by student labor, according to demand of the firm in Boston. Last year, upwards of 15,000 dozen pairs of mittens were made, by over twenty colored students, chiefly boys, thus paying part of their expenses, some fifteen of them working through the summer vacation.

The progress and success of the colored and Indian apprentices, in the Engineering department, are reported by the manager as good, the average comparing favorably with white apprentices of the same age.

## WORK DONE.

In the last year seven buildings on the place—6 large, and 1 small—have been heated by steam, and the apparatus has all been erected by student's labor. They are now finishing that is two more large buildings. Fifteen hundred feet of underground piping have been laid, of from 2 1/2 inch to 6 inch diameter, carrying steam from central boiler to the different buildings. This, with the repairing above mentioned, is also included in the work of this department.

## INDIAN TRAINING SHOP.

Mr. J. H. McDowell in charge.

## CARPENTERING DEPARTMENT.

Instruction given—in this department are three skilled white mechanics who all act as instructors, working with the apprentices in the various classes of work done.

## COLORED APPRENTICES.

Wm. C. Brown, Middle, serving 2d year, working 3 days a week.  
M. L. Minter, Middle, serving 1st year, working 2 days a week.  
Chas. Williams, Night scholar, serving 1st year, working days.  
Thos. L. Jones, Night scholar, serving 1st year, working days.

## INDIAN APPRENTICES.

John Downing, Senior, 2d year, working 3 days a week and 1 vacation of 3 1/2 months.  
Michael Oshkeney, Senior, 2d year, working 3 days a week and 1 vacation of 3 1/2 months.  
John Kiag, Junior, 2d year, working 3 days a week.  
Willie Hunter, Junior, 2d year, working 2 days a week and 1 vacation of 3 1/2 months.  
David St Cyr, Junior, 1st year, working 2 days a week.  
Astonito, Indian class, 1st year, working 5 afternoons a week, studying mornings.  
John Archambeault, Indian class, 1st year 5 afternoons a week studying mornings.  
Medicine Bull, Indian class, 1st year, 5 afternoons a week, studying mornings.  
Tiarkasin, Indian class, 1st year, 5 afternoons a week, studying mornings.  
Good-wood, Indian class, 1st year, 5 afternoons a week, studying mornings.  
Bleck Hawk, Indian class, 1st year, 5 afternoons a week, studying mornings.  
Thomas Tuttle, Indian class, 1st year, 5 afternoons a week, studying mornings.  
Little Eagle, Indian class, 1st year, 5 afternoons a week, studying mornings.  
Poonoos—The manager reports that with few exceptions the apprentices of both races have made satisfactory progress in acquiring their trade.

WORK DONE. The work done is the repairs on buildings on the place, and the construction of school and other furniture, and putting up minor buildings. The next one under way is a gymnasium, a frame building, 60 x 135 feet.

## TINNING DEPARTMENT.

INSTRUCTION is given by a white journeyman.

## COLORED APPRENTICES.

Claudius Clements, Middle 1st year. Working 3 days a week.  
(A native African boy from Liberia, aged 17, speaks English).

## INDIAN APPRENTICES.

Charles Picotte, Highest Indian class, 1st year. Now Night student, works days.  
John Garfield, Indian class, 1st year. Working 5 afternoons, studying mornings.  
Telma, Indian class, 1st year. Working 5 afternoons, studying mornings.  
Teyiwicants, Indian class, 1st year. Working 5 afternoons, studying mornings.  
Creckling Wing, Indian class, 1st year. Working 5 afternoons, studying mornings.  
Poonoos—The Manager reports: "All are doing well, learning rapidly."  
Work. They are engaged in the manufacture of tin and sheet-iron ware, and such tin-roofing and spouting as is required on the place.

## SHOE DEPARTMENT.

INSTRUCTION is given by a white foreman.

## COLORED JOURNEMEN.

## INDIAN APPRENTICES.

George Stricker—Highest Ind. class, 1st year.  
Wm. Saul, " " " "  
Mato, " " " "  
Cato, " " " "  
All the above work five afternoons a week, studying mornings.  
Poonoos. "All learning fast for beginners."

## BY ORRA LANGHORN.

And now, when his motherly heart and soon after her son's death a nephew of her husband was taken into the household, and being a youth of fine disposition, he was greatly profited by his aunt's judicious training, and is now like a child to her, the pride and hope of her declining years, and one of the promising colored citizens of the town. Three other boys, the children of relatives, were from time to time taken into the family, and all trained to usefulness and industry. These boys all learned to work in the tobacco factories, and earned good wages working beside Aunt Sarah's husband, a quiet, well-meaning man, who, if not equal to his thrifty and

gamous woman, of good natural ability, capable of accomplishing a great deal of labor. Her mother "Aunt Nancy," who says she has had 11 children, and never knew the backache yet," is also a person of remarkable constitution. Aunt Nancy's husband "Uncle Josh," is Martha's step father, but seems very fond of her children, and is treated by them as if he were her own father. Uncle Jos's description is way of life, as "Jobbin' 'roun' to git de cot." This means that he has several places to work among the poor class of white people or well-to-do Negroes, and does what in the North would be called "chores," receiving his compensation in broken victuals and old clothes.

Negroes who have belonged to the better class of white people, have a singular objection to a pauper funeral, even when in the direst poverty, and Martha would listen to no suggestions of the kind, though in the midst of a dreary season and already heavily burdened. "It is the last kindness I can do my husband," she said piteously. "I must hurry her deathly." And by dint of begging and hectoring among her neighbors, she contrived to carry out her determination. The fashionable white undertaker was employed, two

I have found Horsford's Acid Phosphate to  
 act very kindly on aged persons.  
 Toledo, O. M. H. PALMER M. D.

If you want the best and cheapest young folks' paper in the United States, subscribe for "THE YOUNG FOLK CIRCLE," an eight-page illustrated paper, published at Cleveland, O.; only 35 cents a year, and you get a present of two pictures, one of which is worth more than the price of the paper for a year. The paper is published by an old and reliable Cleveland firm, and you are sure to be fairly dealt with. If you send them the names and addresses of 10 children under 18 years of age, they will send you a fine picture of President Garfield and family, the house where he was born and home at Mentor.

## OLD POINT COMFORT, VA.

Situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going out returning, with the U. S. Mail, landing only twenty rods from the Hotel, which is substantially built and comfortably furnished; has two Otis hydraulic passenger elevators, gas and electric bells or Creighton's Oral Announcer in all rooms; water; rooms for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or any public building in the country. As a resort for the pleasure-seeker, invalid, or post-place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests presents inducements which especially are not equalled elsewhere as a summer resort or cold weather sanatorium. Has during the cold weather over 15,000 square feet of the spacious verandas (of which there are over 55,000 square feet extending the house on all sides) covered in glass, enabling the most delicate invalid to enjoy the sunshine and fine water view without risking the slightest exposure. The climate of Old Point Comfort is unequalled for salubrity. Material features being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 60 deg., 74 deg., 76 deg., in summer; 70 deg., 59 deg., 40 deg., in autumn; 45 deg., 44 deg., 42 deg., in winter; and 48 deg., 92 deg., 60 deg., for spring. The prevailing atmosphere, and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleepers and nervousness, the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most beautiful soporifics of the Hygeia.

For further information address,

H. PHOEBUS, Proprietor.

## PATENTS

We continue to act as Solicitors for Patents, Caveats, Trade Marks, Copyrights, etc., for the United States, Canada, Cuba, England, France, Germany, etc. We have had thirty-five years' experience. Patents obtained through us are well known in every part of the world. This firm and office are located in the United States at No. 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100. Address: 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200. Address: 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 212, 213, 214, 215, 216, 217, 218, 219, 220, 221, 222, 223, 224, 225, 226, 227, 228, 229, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 278, 279, 280, 281, 282, 283, 284, 285, 286, 287, 288, 289, 290, 291, 292, 293, 294, 295, 296, 297, 298, 299, 300. Address: 300, 301, 302, 303, 304, 305, 306, 307, 308, 309, 310, 311, 312, 313, 314, 315, 316, 317, 318, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329, 330, 331, 332, 333, 334, 335, 336, 337, 338, 339, 340, 341, 342, 343, 344, 345, 346, 347, 348, 349, 350, 351, 352, 353, 354, 355, 356, 357, 358, 359, 360, 361, 362, 363, 364, 365, 366, 367, 368, 369, 370, 371, 372, 373, 374, 375, 376, 377, 378, 379, 380, 381, 382, 383, 384, 385, 386, 387, 388, 389, 390, 391, 392, 393, 394, 395, 396, 397, 398, 399, 400. Address: 400, 401, 402, 403, 404, 405, 406, 407, 408, 409, 410, 411, 412, 413, 414, 415, 416, 417, 418, 419, 420, 421, 422, 423, 424, 425, 426, 427, 428, 429, 430, 431, 432, 433, 434, 435, 436, 437, 438, 439, 440, 441, 442, 443, 444, 445, 446, 447, 448, 449, 450, 451, 452, 453, 454, 455, 456, 457, 458, 459, 460, 461, 462, 463, 464, 465, 466, 467, 468, 469, 470, 471, 472, 473, 474, 475, 476, 477, 478, 479, 480, 481, 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492, 493, 494, 495, 496, 497, 498, 499, 500. Address: 500, 501, 502, 503, 504, 505, 506, 507, 508, 509, 510, 511, 512, 513, 514, 515, 516, 517, 518, 519, 520, 521, 522, 523, 524, 525, 526, 527, 528, 529, 530, 531, 532, 533, 534, 535, 536, 537, 538, 539, 540, 541, 542, 543, 544, 545, 546, 547, 548, 549, 550, 551, 552, 553, 554, 555, 556, 557, 558, 559, 560, 561, 562, 563, 564, 565, 566, 567, 568, 569, 570, 571, 572, 573, 574, 575, 576, 577, 578, 579, 580, 581, 582, 583, 584, 585, 586, 587, 588, 589, 590, 591, 592, 593, 594, 595, 596, 597, 598, 599, 600. Address: 600, 601, 602, 603, 604, 605, 606, 607, 608, 609, 610, 611, 612, 613, 614, 615, 616, 617, 618, 619, 620, 621, 622, 623, 624, 625, 626, 627, 628, 629, 630, 631, 632, 633, 634, 635, 636, 637, 638, 639, 640, 641, 642, 643, 644, 645, 646, 647, 648, 649, 650, 651, 652, 653, 654, 655, 656, 657, 658, 659, 660, 661, 662, 663, 664, 665, 666, 667, 668, 669, 670, 671, 672, 673, 674, 675, 676, 677, 678, 679, 680, 681, 682, 683, 684, 685, 686, 687, 688, 689, 690, 691, 692, 693, 694, 695, 696, 697, 698, 699, 700. Address: 700, 701, 702, 703, 704, 705, 706, 707, 708, 709, 710, 711, 712, 713, 714, 715, 716, 717, 718, 719, 720, 721, 722, 723, 724, 725, 726, 727, 728, 729, 730, 731, 732, 733, 734, 735, 736, 737, 738, 739, 740, 741, 742, 743, 744, 745, 746, 747, 748, 749, 750, 751, 752, 753, 754, 755, 756, 757, 758, 759, 760, 761, 762, 763, 764, 765, 766, 767, 768, 769, 770, 771, 772, 773, 774, 775, 776, 777, 778, 779, 780, 781, 782, 783, 784, 785, 786, 787, 788, 789, 790, 791, 792, 793, 794, 795, 796, 797, 798, 799, 800. Address: 800, 801, 802, 803, 804, 805, 806, 807, 808, 809, 810, 811, 812, 813, 814, 815, 816, 817, 818, 819, 820, 821, 822, 823, 824, 825, 826, 827, 828, 829, 830, 831, 832, 833, 834, 835, 836, 837, 838, 839, 840, 841, 842, 843, 844, 845, 846, 847, 848, 849, 850, 851, 852, 853, 854, 855, 856, 857, 858, 859, 860, 861, 862, 863, 864, 865, 866, 867, 868, 869, 870, 871, 872, 873, 874, 875, 876, 877, 878, 879, 880, 881, 882, 883, 884, 885, 886, 887, 888, 889, 890, 891, 892, 893, 894, 895, 896, 897, 898, 899, 900. Address: 900, 901, 902, 903, 904, 905, 906, 907, 908, 909, 910, 911, 912, 913, 914, 915, 916, 917, 918, 919, 920, 921, 922, 923, 924, 925, 926, 927, 928, 929, 930, 931, 932, 933, 934, 935, 936, 937, 938, 939, 940, 941, 942, 943, 944, 945, 946, 947, 948, 949, 950, 951, 952, 953, 954, 955, 956, 957, 958, 959, 960, 961, 962, 963, 964, 965, 966, 967, 968, 969, 970, 971, 972, 973, 974, 975, 976, 977, 978, 979, 980, 981, 982, 983, 984, 985, 986, 987, 988, 989, 990, 991, 992, 993, 994, 995, 996, 997, 998, 999, 1000. Address: 1000, 1001, 1002, 1003, 1004, 1005, 1006, 1007, 1008, 1009, 1010, 1011, 1012, 1013, 1014, 1015, 1016, 1017, 1018, 1019, 1020, 1021, 1022, 1023, 1024, 1025, 1026, 1027, 1028, 1029, 1030, 1031, 1032, 1033, 1034, 1035, 1036, 1037, 1038, 1039, 1040, 1041, 1042, 1043, 1044, 1045, 1046, 1047, 1048, 1049, 1050, 1051, 1052, 1053, 1054, 1055, 1056, 1057, 1058, 1059, 1060, 1061, 1062, 1063, 1064, 1065, 1066, 1067, 1068, 1069, 1070, 1071, 1072, 1073, 1074, 1075, 1076, 1077, 1078, 1079, 1080, 1081, 1082, 1083, 1084, 1085, 1086, 1087, 1088, 1089, 1090, 1091, 1092, 1093, 1094, 1095, 1096, 1097, 1098, 1099, 1100. Address: 1100, 1101, 1102, 1103, 1104, 1105, 1106, 1107, 1108, 1109, 1110, 1111, 1112, 1113, 1114, 1115, 1116, 1117, 1118, 1119, 1120, 1121, 1122, 1123, 1124, 1125, 1126, 1127, 1128, 1129, 1130, 1131, 1132, 1133, 1134, 1135, 1136, 1137, 1138, 1139, 1140, 1141, 1142, 1143, 1144, 1145, 1146, 1147, 1148, 1149, 1150, 1151, 1152, 1153, 1154, 1155, 1156, 1157, 1158, 1159, 1160, 1161, 1162, 1163, 1164, 1165, 1166, 1167, 1168, 1169, 1170, 1171, 1172, 1173, 1174, 1175, 1176, 1177, 1178, 1179, 1180, 1181, 1182, 1183, 1184, 1185, 1186, 1187, 1188, 1189, 1190, 1191, 1192, 1193, 1194, 1195, 1196, 1197, 1198, 1199, 1200. Address: 1200, 1201, 1202, 1203, 1204, 1205, 1206, 1207, 1208, 1209, 1210, 1211, 1212, 1213, 1214, 1215, 1216, 1217, 1218, 1219, 1220, 1221, 1222, 1223, 1224, 1225, 1226, 1227, 1228, 1229, 1230, 1231, 1232, 1233, 1234, 1235, 1236, 1237, 1238, 1239, 1240, 1241, 1242, 1243, 1244, 1245, 1246, 1247, 1248, 1249, 1250, 1251, 1252, 1253, 1254, 1255, 1256, 1257, 1258, 1259, 1260, 1261, 1262, 1263, 1264, 1265, 1266, 1267, 1268, 1269, 1270, 1271, 1272, 1273, 1274, 1275, 1276, 1277, 1278, 1279, 1280, 1281, 1282, 1283, 1284, 1285, 1286, 1287, 1288, 1289, 1290, 1291, 1292, 1293, 1294, 1295, 1296, 1297, 1298, 1299, 1300. Address: 1300, 1301, 1302, 1303, 1304, 1305, 1306, 1307, 1308, 1309, 1310, 1311, 1312, 1313, 1314, 1315, 1316, 1317, 1318, 1319, 1320, 1321, 1322, 1323, 1324, 1325, 1326, 1327, 1328, 1329, 1330, 1331, 1332, 1333, 1334, 1335, 1336, 1337, 1338, 1339, 1340, 1341, 1342, 1343, 1344, 1345, 1346, 1347, 1348, 1349, 1350, 1351, 1352, 1353, 1354, 1355, 1356, 1357, 1358, 1359, 1360, 1361, 1362, 1363, 1364, 1365, 1366, 1367, 1368, 1369, 1370, 1371, 1372, 1373, 1374, 1375, 1376, 1377, 1378, 1379, 1380, 1381, 1382, 1383, 1384, 1385, 1386, 1387, 1388, 1389, 1390, 1391, 1392, 1393, 1394, 1395, 1396, 1397, 1398, 1399, 1400. Address: 1400, 1401, 1402, 1403, 1404, 1405, 1406, 1407, 1408, 1409, 1410, 1411, 1412, 1413, 1414, 1415, 1416, 1417, 1418, 1419, 1420, 1421, 1422, 1423, 1424, 1425, 1426, 1427, 1428, 1429, 1430, 1431, 1432, 1433, 1434, 1435, 1436, 1437, 1438, 1439, 1440, 1441, 1442, 1443, 1444, 1445, 1446, 1447, 1448, 1449, 1450, 1451, 1452, 1453, 1454, 1455, 1456, 1457, 1458, 1459, 1460, 1461, 1462, 1463, 1464, 1465, 1466, 1467, 1468, 1469, 1470, 1471, 1472, 1473, 1474, 1475, 1476, 1477, 1478, 1479, 1480, 1481, 1482, 1483, 1484, 1485, 1486, 1487, 1488, 1489, 1490, 1491, 1492, 1493, 1494, 1495, 1496, 1497, 1498, 1499, 1500. Address: 1500, 1501, 1502, 1503, 1504, 1505, 1506, 1507, 1508, 1509, 1510, 1511, 1512, 1513, 1514, 1515, 1516, 1517, 1518, 1519, 1520, 1521, 1522, 1523, 1524, 1525

# Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. XI.

HAMPTON, VA., APRIL, 1882

NO. 4.

## CORRESPONDENCE.

January 18th.—Steamer has gone, leaving us again to the solitude of the great Pacific. My room is as situated here in the N. E. corner of the Hawaiian Hotel that the moment my eyes open in the morning they look upon the sea. This morning it was a most ruddy clouds—a world of gold. Sunrises and sunset in the tropics are sudden affairs.

I had a meeting of doctors in my office yesterday to discuss the leprosy question. It was a very interesting two hours' session, for though there is much difference of opinion as to treatment, causes, etc., there is none as to its incurability. It seems quite certain that there are four thousand lepers in this kingdom, with apparent symptoms, while there are hundreds more whose symptoms are latent. If segregation is the only way to treat them, we shall have to put 4,000 lepers in this kingdom, into hospitals, and that will cost \$500,000 a year; that is, one-half the revenue of the Kingdom. So it is getting to be a serious matter.

January 25th.—Yesterday I galloped round Diamond Head. The weather is superb. Pure, clear and almost cold. The clouds suddenly cover the mountains with mist, and showers follow down the valleys. As I am to sit out long on my verandah when the wind blows. I have just heard that the Deputy Sheriff in Maui has shot and wounded two Portuguese who resisted him in serving a warrant. This is had in view of the charges made against us of badly treating Portuguese. I have sent the Marshal up to investigate the matter. The contract system of labor is no doubt a hard one. The great difficulty is that the laborers here contract for less pay than free laborers get, and are therefore restless and discontented.

February 6th.—Yesterday I went out to Kaneohe, reaching the "Harris" plantation in the afternoon. The view from the Pali was as beautiful as ever. Nowhere in the world is there a finer combination of mountains and ocean, or more beautiful landscape. On Sunday morning we rode over the long hills to the seashore, where the great waves come in on the pure white sand. At times we had to urge our horses out into the waves to get around the sharp rocks which jutted out, or to avoid quicksand. At length we struck a great plain stretching from the sea to the mountains. It was Waimanalo, formerly my brother's ranch. Underneath the soil is the coral rock, and in some way there has been a subsidence, leaving a hollow space between the rock and the upper soil, which resounds as one gallops on it. The ranch has gone and a sugar plantation has taken its place. I cut a stick of the growing cane and ate it as we rode along. We rode back to Kaneohe through heavy showers. Thousands of cattle were scattered over the plain, and in front of the superintendent's house was a fine cow with a young calf, with whom I attempted to open an acquaintance. As we were quietly approaching her, she suddenly looked up, shook her head and chased us. We all took to our heels, jumped up on the nearest fence, my companion remarking that the cow showed little respect for the Hawaiian government, when she dared to chase the Atty. General, the Minister of the Interior, etc., etc., and make the Government in general get on the fence. I quite agreed with him, and was obliged to admit that had she been a little quicker she would have succeeded in tossing the Government into the air. I was told that one day last week, a bullock got loose going down this Pali as he was standing there. The bullock came along. The bullock chased him, knocked him down, and then ran down hill after three other Chinamen whom he saw in the distance. They saw him coming and climbed a tree, where he kept them and together until evening, when he left, and they came down.

Last night the moon was at the full. We went out to walk and make a show, as usual, which went on up towards the high mountains in the center of the Islands. As it passed over, the moon came out and made the most magnificent lunar rainbow. It was perfect. The feet of the arch was wide and massive, and the arc itself broad and wonderfully luminous. Behind the bow, the clouds were thick and dark. The colors changed from white to primrose, and finally a second falter bow came out above the first, lasting about five minutes. And only a handful of degraded heathen Chinese and Kanakas to witness this wonderful sight!

This morning we got up at six o'clock and galloped to the Pali. The clouds hung low on the mountain, and as we ascended we were enveloped. At 9 A. M. we were in this city, and I plunged into official business of all kinds.

The King sent me a Kahuna who says he can cure leprosy. So I told him to pick out a leper and cure him. He thereupon tried to explain his treatment. I think it was a pint of brandy, a junk bottle ground to fine powder, and a tenpenny nail!

I made some notes at Kaneohe which are of value. The Rev. Mr. Parker's church founded in 1842, is nearly deserted, the late native pastor dismissed for adultery—pagan Chinese living in the parsonage, a Chinese Jose house close by, the Catholic claiming most of the natives who are left. While riding yesterday, we stopped at a Chinaman's at Kilue. His place is in a beautiful valley, high mountains above it, and the sea just below. The valley contains about 300 acres, which was formerly in two patches cultivated by Kanakas. Now it is in rice, the Kanakas has gone, and the Chinaman has taken his place. It is the best commentary on the situation. The natives have given up even the raising of taro. The Chinaman leases the land, the Kanakas go to Honolulu and wastes his money. R—tells me that the natives are quite given to drink. He pays his hands off on Saturday. They club together, buy gin or brandy, and on Monday morning are, many of them, without food, so that he has to advance food to them until the following Saturday. The law forbids the sale of liquor to natives, but they get all they want from the Chinese. I notice a curious state of things. The nation receives a large revenue from the duty on liquor. Now every intelligent man knows that this liquor (gin and cheap brandy) is consumed by natives, and yet it is forbidden by law to sell or furnish liquor to natives! It is mainly done through Chinese who have the right to buy and use liquor. They peddle it out to the natives, and as a rule are not caught, as the native would cut off his source of supply if he informed against the Chinaman. It is surprising to see the rapidity with which the Hawaiians are giving up their lands to the Chinese. The Hawaiian loves his homestead, and at first generally refuses to sell. His Chinese neighbor keeps at him, makes him presents of gin, and finally gets the Kanaka in a weak moment to sign a deed. Often, before the end of the year, he will be seen working for the Chinaman.

February 9th.—To-day occurred the event of the season, the business opening of H. H. Keokakalani's new house on Emma street. The house is in modern style, built at great expense, and richly furnished. To-day being his birthday, he has a "house warming," with one could see a few evidences of the Hawaiian taste in the kahili. The company was brilliant; I do not think any city of its size in the world could produce a better assemblage, as to dress and general appearance. The ball opened at 8 p. m., with a "state quadrille," in which the Chiefs, danced with the King, officials and the royal family making up the so-called "natives" and half white women dance with much grace, and make a picturesque contrast with their white sisters. Out-of-doors, the Kanakas had collected in force. The music as usual was good; the air cool and pleasant, and, to a stranger, the whole scene was brilliant and interesting.

The wind comes from the southward and brings in the steady roar of the breakers. There is something inexorable in it. So they sounded when my father landed here fifty years ago, and when I was born, and when he died; and when I die, it will be the same. February 11th. To-morrow (Sunday) is the King's birthday, but Saturday (to-day) has been proclaimed as the holiday. As a schooner was about to leave for the Gilbert Islands with laborers returning to their homes in the South Sea Islands, I went on board officially, to see how things were arranged. Mr. Bingham and several missionaries were on board to see Mr. Welkup, a missionary, who was going to his new field. The men are recovering, but the Catholic Priest who attends them says if we don't discharge the Sheriff it will stop immigration. All this occurs just at a time when the state is accusing an attorney, and now we shall be accused of killing our slaves offhand.

We have another troublesome case to deal with. There is much money made by the natives in distilling liquor secretly, and the Chinese are also engaged in the business. In Waipio valley, Hawaii, a still was discovered and the Sheriff sent two natives up to find it. As they were walking along the road, one of them fell dead, shot by a Chinaman who was in advance of them. It has long been evident to me that there are many rascally Chinese here, the scropegras of Canton.

Steamer announced—Mail closing. W. N. A.

## STUDY AND WORK.

A LECTURE TO THE STUDENTS OF HAMPTON, BY DR. MAYO.

How can you teach habits of industry in school? Let this be one of your first questions. There are no longer two opinions in regard to the capacity of your race for education. More has been done among them in fifteen years than was ever done in any other race in similar circumstances. The North exaggerates what is done however, and the South under-rites it. Enemies say education spoils you—makes you shirk work. They fail to see that the laziest people are the ignorant. Industry in school makes industry at home. Nothing will ever come to my man who won't work. Man is born naturally lazy. Education arouses his sleeping powers. Education is not to help to shirk work, but to help to move work more work and better work. It is the difference between the scythe and the mowing machine. The mowing machine takes the places of the scythe because it can do more work in a better way and less time. Train children to put brains in their hands. Under the same skin is the object of true education. The greater a man's power, the more work he has to perform. Don't be foolish enough to feel above work. You have heard of the humorous and characteristic re- huke administered by Abraham Lincoln to an English exquisite who, surprising him one day brushing his boots, presumed to exclaim, "Why—really now, Mr. President, do you black your own boots?" "Why of course" replied the President with a laugh—"whose boots do you black?"

New methods awaken the mind of children. You will send out children anxious to find out things for themselves. Inspire in them the idea of the dignity of work. Tell them stories of your own experience—of its value, the efforts and sacrifices you have made in gaining your education, and what good they have done you; show them that the work they do at home is itself an important part of education. You will thus also make the parents your friends.

Every teacher has a little territory which belongs to him. Your little school house is to be his home. It is to be your children's home. Don't make them too dependent upon you. Don't do for them what they can do for themselves. Transform your school house into a mere shed into a home by the labor of the children as well as your own. The worst thing possible is a shiftless teacher. Show your children how to work. You could get it up a night school for house-keeping. A New York teacher knew, being a natural mechan-

ic, taught his children to pot pans into windows. The complaint is in the South that boys won't learn trades. Southern colored young men could all learn trades. Now is their chance. If they don't, the South will by and by be filled with European mechanics. Trade-unions will be formed and it will be impossible to compete.

Another reason for teaching children to work is the debt of love and help they owe to their parents. That is a reason for your working. Go home to them and help them up. Sacrifice yourself to send some one else in your family to Hampton. I know a little fifteen-year old daughter of a minister in the North who is pulling up her whole family. By her own exertions she got her brother into a Normal school. The brother has died, and now she has begun with the girls. Pull up somebody with you whatever you rise to. Don't feel that you will be fit to go to Heaven unless you have helped some other man up there.

At the National Academy of Art in London, Landseer's picture of Queen Victoria on horseback was once exhibited. Of course there was a great crowd. A lady went with her little girl, but there was a great wall of Englishmen between them and the door of the room. The little girl seeing small slipped through ahead, and then turning, exclaimed to the amusement of the gentlemen appealed to: "Now pull mamma in." That is the secret of our American life. The children often pull up the parents, and every one can pull up somebody else.

## A CHINESE OPIUM DEN IN NEW YORK.

We speak with contempt of the weakness of the savage in yielding to the vices of civilization. What shall we say of an enlightened people, degrading itself to adopt those of an "inferior race." The Oriental habit of opium eating and smoking is spreading in this country with appalling rapidity. A physician who has given the subject the most careful investigation, writes to Harper's Weekly a terrible statement of facts. At a low estimate, there are already in this country from three to five thousand Americans, who are habitual opium smokers, aside from the many thousands more who are under the control of the drug in other forms, and their number is rapidly increasing, so that already there is hardly to be found a city in the country where opium-smoking den are not to be found, frequented by both men and women. San Francisco and other cities of the West, stringent laws have been passed to break them up, but with no effect but to close more public places, and multiply secret ones. In the ten years from 1870 to 1881 the amount of opium brought openly into this country from China more than doubled, reaching the immense amount of 77,199 pounds, besides what has been smuggled in, and this notwithstanding the fact that the number of Chinamen in the country has been decreasing. The habit of opium eating or of taking laudanum or morphia, is almost always fastened upon the unfortunate victim through its frequent use as a medicine; often by the advice of physicians, who have much to answer for, in carelessly recommending it without warning. Opium-smoking, on the contrary, is taken up in curiosity or self-indulgence generally. Its first effect is pleasurable sensation, a dreamy state of listless contentment with one's self and all the world. After a few months indulgence, these comfortable feelings all disappear, and the smoker would gladly give it up, but finds to his horror that the effort occasions terrible distress and pain, which he weakened will, and powers of endurance refuse to carry him through. The habit is ruinous to body and mind. In its slavery, the opium smoker neglects his business and his family, and spends the better part of the day and night sunk in lethargy, only half alive, in the polluted air of the lazzaret which disgraces a brute by its name of den.

We are indebted to Messrs Harper, for a view of one of these opium dens in the great city of New York, kept, as most of them are, by a Chinaman, but frequented chiefly by Americans.

If civilization owes this vice to Chinese immigration, and its own weakness—we may remember that when the Chinese government was making earnest efforts to prohibit the opium trade and cultivation, civilized warfare with civilized warfare, forced him upon the curse which is now threatening Western civilization.

TWELVE PAGE MONTHLY.

(Published to eight pages from July to October, four months.)

Printed on the Normal School Steam Press by students trained in the office.

S. C. ARMSTRONG, } Editors.  
H. W. LUDLOW, }

MRS. M. E. ARMSTRONG, } Regular  
MR. W. N. ARMSTRONG, } Contributors.  
MISS ORRIS LANGRISH, }

TERMS: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application. To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly, give name in full, and name of Post-office, County, and State to which the papers are to be sent. A limited number of advertisements inserted at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1.00	2.75	5.00	9.00
1-column.	2.75	7.50	13.50	23.10
1-2 "	5.00	13.50	23.10	40.00
1 "	10.00	23.10	40.00	70.00

Special notices 10 cents per line.

Job work from all parts of the country is solicited, and will be executed cheaply and well. Estimates given.

## Hampton Tracts for the People.

**SANITARY SERIES.** Ten numbers published by H. W. Ludlow.  
1—Health Laws of Moses, by H. W. Ludlow.  
2—Duty of Teachers, by E. W. Collingwood.  
3—Preventable Diseases, by M. F. Armstrong.  
4—Who found Jesus? by H. W. Ludlow.  
5—A Hannel House, by S. F. Armstrong.  
6—Woman's Work in Sanitary Reform, by S. F. Armstrong.  
7—The Rights of the Body, by S. F. Armstrong.  
8—The Two Breasts, by S. F. Armstrong.  
9—Cleanliness and Disinfection, by E. Harris, M. D.  
10—Our Jewels, by S. F. Armstrong.  
Published by Purness's Sons, New York.  
Sold and printed at Hampton Institute.  
For sale in both places, specimens sent from Hampton at 6 cts. a number, or 60 cts. a set.

The Negro and the Irishman were both a foreign infusion; in such a low condition mentally and morally, in their original state, unmodified by contact with American life, that the possibility of their present condition as citizens seemed hopeless. They were fitted for citizenship first, by surrounding influences, secondly, by assuming its responsibilities.

Northern and Southern civilization seem each best adapted to develop the race which was placed in their midst. Up to a certain point, slavery, perhaps, schooled the Negro better than any other system would have done. At any rate it was the only condition under which the African could have access to an Anglo-Saxon people. Both races have fastened themselves to the soil of America and are strengthening their hold by steady increase in wealth and population. Both were once saturated with ignorance and superstition; both have been the objects of national hatred, and excited great alarm because of their want of affinity with native Americans; and as a result, the blood of Irishmen and Negroes has been spilt in our streets. Wise men could not see what the country was coming to. But all are now voters: the North and the South are quiet, and who dares say that Irishmen and Negroes are not capable of becoming good citizens? Who would take away the ballot from them? It has been their duty; it has been their right, in connection with the even greater educational force of American life, which, absorbing these foreign elements, has unconsciously modified them and produced the marvelous difference that exists to-day between the native African or Irishman, and our representatives of these people.

Why could not a like responsibility and influence modify, in the same way, the Indian and even the Chinese race? The Indian has been steadily losing his foothold in the land of his fathers, and seems likely to lose much more. His treatment has been special. He has preferred to keep, and has been kept, at arms length. Even when, as in the case of the "Six Nations" of New York, he has been surrounded by a white population, he has not learned and mingled with whites as the Negro and Irish have done, and has thus failed to get the benefit and stimulus that they did.

The Indian question is not one of national danger but one of diffidence. The Indian's weak point is a want of vitality; he has not endurance. His mental and moral environment is equal to that of the Negro or Irishman. His fine traits command the interest and admiration of those who teach him. He is quick to learn the ways of farming and the mechanic arts, but continuous industry, while not wanting in many individuals, is, as a rule, not found in the race. He is volatile and fickle as a little child. The other races with whom we are dealing, have bodily stamina, are used to labor and in this have the first condition of progress.

The partial Indian census of 1881 gives 2329 births and 1959 deaths, which is presumably the general proportion of births and deaths. In favorable circumstances the Indian population holds its own; but circumstances are far from favorable to all of the tribes.

There is no hope for Indians to become like other people until they shall have the chance that others have. With them we shall gather as we sow. Feeding and clothing a people never made men of them. The Indians to-day, are, we believe, not a whit lower than the same number of Negroes or Anglo-Saxons would be in like circumstances.

We expect Indians to learn to swim without going into the water. They will not begin the work of civilization until they stand on the same ground with the Negro and the Irish. They must be made citizens by making them citizens, while guarding their titles to lands that rapacious white men shall not get the advantage of them, and make their last state worse than their first.

Let the Indian face the alternative of idleness with hunger, or labor with comfort, and then, not till then, will he work out his salvation. His present position is unnatural and false. He is being killed with kindness. Put him under the usual and natural conditions of life; the necessity of labor, law and order, with a good practical education for his children, and we shall see the survival of the fittest. Many might die, but the severe training of real life would develop every possibility and probably result in creating out of the residue a people who would assimilate with us, like the Negro and the Irishman, and perhaps increase.

Atwart this plan, lie the treaties that grant free food, and free clothing, until they become self-supporting. Industry is thus discouraged; for idleness brings a sure support, while labor leads to loss;—the reverse of the natural order of things.

There is in the present treatment, no wisdom, and success is impossible, with ever changing agents and officers, and the employment of cheap men to manage their affairs.

The transition from wardship to citizenship, would be a most delicate, difficult matter, requiring time and wisdom; but it would be better to initiate the policy at once than to continue the present weakening, pampering process. Peace has been purchased by feeding them; there is neither point nor method in this.

The Indian is ready to try the white man's way as never before.

The destruction of the buffalo was to him what emancipation was to the slave. It has forced him to civilization, whose rough edge comes upon him like the line of a prairie fire, and wraps itself about him. He must meet it as he meets the fire: he must fight fire with fire, or he will be consumed.

American civilization has been achieved by a sturdy race capable of making a way where they could not find one.

Certain rights have been proclaimed as the bulwark of our liberties, but the real bulwark is the stuff that the people are made of. It is popular to speak of individual liberty, the rights of citizens, free schools and constitutional guarantees, as the essential of a noble and progressive race, when, in reality, they are only the expression of race, force and temperament that push men through fire and blood if necessary, to their attainment. What in one race is the expression of innate force and the result of struggle, is, with other races in our midst, something imposed from without; given and not won.

The popular idea seems to be, however, that our institutions are a cause rather than an effect, that the rights of citizenship are enough to make a citizen. Believing as we do in the educative power of the ballot box, for it has been a wonderful stimulant and teacher of the Negro race and of the Irish people, we think that there is, generally, an under-estimate of the personal element in citizenship.

It is difficult for us to realize the position of the weaker races—that they are comparatively destitute of our instinct and individual forces, and did not have civil liberty as our race did through its only struggles.

For years the great political issue has been, shall the Negro be allowed to vote. The land has echoed with speeches and been flooded with documents relating to this. Any duty beyond this has been faintly recognized. Mass meetings everywhere to assert political rights? now and then two or three have gathered together to consider the need of an enlightened conscience to direct their use. The man and not the citizen is after all the chief concern.

The natural order is to prepare men for citizenship and then bestow it upon those who are fitted for it.

Practically the order must be reversed, because only as the right to vote is extended downwards will education go downwards. Mr. Wm. E. Forster's great education bill for England was possible only after the extension of the franchise, and was, he says himself, the result of it. Necessity was the argument. The expending of upwards of a million of dollars annually for Negro education by the late slave states was against the cherished theories of two hundred years, but it had to be done, because the Negro was a voter.

Without the argument from danger, appeals to Congress to relieve the illiteracy of the South would be as the idle wind. Abstract humanity, justice in itself, has little power in the legislative concerns of men. The unfranchised will be neglected. Enfranchise the ignorant, then disfranchise ignorance, is the order of progress to-day. First make citizens, then make men, is not the natural or logical order but it is the only way to do. Wealth will not care for poverty, knowledge will not care for ignorance, until they are threatened.

Enfranchise the Indian, then make a man of him. He will be beaten about "from pillar to post" till he can vote. Then contempt will change to solicitude, neglect to care. Unhappily, in national legislation, political wisdom seems to have exhausted itself in the net of enfranchisement so far as the Negro is concerned.

The wisdom of doing as much for the man as for the citizen has not been felt. But the country, or rather the Christian churches of the country, have done something. Since 1865, ten millions of dollars have been raised and given, mainly through American churches, in charity, for the lifting up of the illiterate South. This was done in response to a patriotic and Christian duty which rests upon our public men far more than upon private citizens.

No other people has received so generous a gift. Is it not one of the noblest acts in American history? It has been done quietly. The newspapers have hardly noticed it. Recently, no New York daily paper could be got to publish, except for pay, the letters of a popular writer whom a leading Association desired to have write up, from personal observation, the record of a great educational work for the ex-slave, in which four millions of dollars had been expended; and the plan was given up. Pages of political gossip would have had a better chance.

Partisan feeling has little humanity in it. "The one is the danger of our country

the other is its hope. There is no patriotism in caring only for the vote that is to be on our side. It is patriotic to be concerned that every man votes intelligently. The man is of more consequence than his vote; but that is not good politics. To make men we must first make them citizens, but that is only the beginning of it. Citizenship from its responsibilities, is a powerful educator, but to be able to read and write well, is as important to the voter as light to the traveler.

An act has passed the Senate, and is now before the House of Representatives, to enforce treaty stipulations relating to the Chinese; advocated by Senator Miller of California, and opposed by Senator Hoar of Massachusetts. It provides for the suppression of Chinese labor immigration for the next twenty-five years, on the ground of cheap labor and want of race affiliation, henceforth immorality, unimpressibility, aggressiveness, and a supposed impending "unarmed invasion." The point of the argument is to protect our workmen. The question is that of free trade in labor.

Senator Hoar replied in effect that there is labor enough for all in the unoccupied millions of acres of timbered and arable land of California. The Chinese have reclaimed a million acres of once useless swamp lands, built railroads, along which already thousands of white men have homesteads built, and secured employment through which vast regions of land have been made available for cultivation by access to market. They have utilized by irrigation great tracts of land, opened up mines by digging canals and making dams. In spite of their cheap labor, white carpenters, bricklayers, stone cutters, machinists, mill hands, shoe makers, common laborers, and domestics are getting better pay than white people doing the same work in the East. It has cut down the Irish wages from 6 and 8 dollars a day to 3 and 4, and there's the rub.

Mr. Crocker, a California capitalist, said of the Chinese: "I think that they afford white men labor; their presence here affords to white men a more elevated class of labor. If you should drive these 75,000 Chinamen, you would take 75,000 white men from an elevated class of work, and put them down to doing this lower class of labor that the Chinamen are now doing, and instead of elevating, you would degrade white labor to that extent."

Anti-Chinese argument is based in large part, not upon Chinese inferiority, but upon dread of Chinese superiority in most of the occupations of life. Their civilization may be too strong for ours.

The late Senator Morton who presided over the well known Senate committee on the Chinese, who visited California and investigated thoroughly, said: "If the Chinese were white people, being in all other respects what they are, I do not believe that the complaints and warfare made against them would have existed to considerable extent. Their difference in color, dress, manners and religion have, in my judgment, more to do with this hostility than the alleged vices or any actual injury to the white people of California."

By the census of 1870, there were 63,254 Chinese in America; by that of 1880, there were 105,463, or one five hundredth of the whole population of our country. There is not a particle of evidence to support the cry of an "unarmed invasion" from the slums of China. All that have come belong to a single one of her seventeen provinces. Her traditions and education are against emigration. The government opposes it.

The hint of the Chinese quarter in San Francisco, which we personally inspected in the summer of 1880, is due to the neglect of the police to enforce the state law requiring each Chinaman to occupy a room containing not less than 500 cubic feet. This neglect is the result of bribes paid to the police from a fund kept by Chinamen for the purpose. They have never been disturbed in their fifth. Money is stronger than law. Many points are covered by the following extract from a letter from Joaquin Miller dated 1879.

"As early as 1854, this cry against the Chinese began to be heard along the wharves and about the hotels of San Francisco. It came

from Irish laborers and porters, but the cry was equally loud against the Negro and the Mexican. In a few years it became more and more centered on the Chinaman, for the Mexican had melted away before us and the Negro had gravitated back home. But the cry now came also from the Irish "jolly" who, by exorbitant wages, had brought the Chinamen into competition. These chambermaids, etc., had brothers, lovers. These brothers and lovers were voters—makers of Congressmen. The Chinamen did not vote, and so had no champion. This is the key to the whole question. This entry against the Chinamen has from that day been a political shibboleth. No man yet, so far as I have known, has gone to Congress and had the manhood to rise in his place and bravely tell the truth and speak a fearless word for this silent and friendless stranger.

About 1856, the Chinamen began to take hold of the placer mines alongside of the miners of the Sierras. Up to that time, he had confided himself, as a rule, to the pan and the rocker, and kept in the wake of the white miner; but now he took to the long tom, sluice, and flume, and bought and worked mines on a large scale. He never ventured to "take up" a claim, but timidly held his ground by toll of sale from some speculator, who had sold it to him at a fabulous price. The honest men of the Sierras welcomed them, and side by side they worked together for many years; and I am certain that every miner of those days who has no selfish ends to serve will gladly testify to the honesty, industry, and neighborly good-nature of these silent little brown men. These people, at the same time, were terribly taxed by the county authorities; but they always came up promptly, and without a word of complaint paid what was demanded of them. At Carson City, Grant County, Oregon, they paid \$5 a head for every Chinaman. They had to constantly endure wrongs from every drunk and ruffian or reckless "hoodlum" who saw fit to impose upon them; yet they were the most peaceable people we had among us. I saw them as judges of this country for four years, and I will state on the honor of a unguaranteed that the calendar, both criminal and civil, showed the names of at least a white man to one Chinaman, although the Chinese population, during the most of this time, outnumbered the whites. Let me here say that I never, during all my years of intercourse with this people, saw a drunkard, a miser, a single drunken Chinaman. I never saw a Chinese beggar; I never saw a lazy Chinaman. They are perhaps the most industrious people in the world. It is a part of their face shall tell his bread.

Can the United States afford to fear these patient and simple people? They will not harm us. They are not strikers, rioters, and burners of cities. But there is something more in this than the selfish question of our own security. The Chinaman who returns home carries something more than gold to his land; he takes with him and disseminates there all the art, civilization, freedom, or truth which he found here. These are the real missionaries of China. This bill must not become a law. This bill attempts to make it so; but it is a bill to enslave every one of the great names that advocated it. The little men who stand as alphas to dignity and add to these great figures in Congress are not, perhaps, so much to be admired as pitiful to see these great minds prostituted to such selfish aims. They pay a poor compliment to the intelligence of the people of the Pacific coast if they think they are not perfectly understood. No, the Creator of us all opened the Golden Gate to the whole wide world. Let no man attempt to shut it in the face of his fellow-man.

Chinamen in America become the true missionaries to China. Their first sighted government at home sees this, and hence is opposed to their leaving home, knowing that in time, foreign ideas will be felt, for they are sure to return. Chinese are charged by going abroad, especially when they marry. They have married Irish women in New York. The rising generation of half native and half Chinese in the Sandwich Islands is an improvement on the native stock. Their children are not heathen. There are about five thousand Chinese in California under more or less direct Christian influences. The politician knows little of the subtle but real forces that lie under the surface of things. He has little thought of the Providential movement.

The Anti-Chinese cry is essentially a political one originated by Democrats and taken up by Republicans. If there were 3,000 Chinese voters it would stop. Exorbitant labor was cut down by Chinese competition to higher wages than Eastern workmen got, but the Irish could not endure it and carried their grievances into politics.

Chinese servants are a born to housekeepers. Yet with all their competition Irish domestics are more fastidious and higher priced than in the East.

While not easy to assimilate, the Chinese can be modified. They have not seen an attractive side of American life, and no wonder they do not take kindly to the civilization that welcomes them with bricks and refuses them fair trials.

There are no finer business men or gentlemen than the Chinese merchants of San Francisco. In general, a low class comes to our shores. Their labor has added not less than three hundred million of dollars to the wealth of the Pacific slope and adds to it, it is estimated, at the rate of sixty millions a year. It has added nothing to the cost of a police force or penitentiaries, for they leave force or industry would be thrown back.

The Chinese are not dangerous except on the side of morals. The better class of them rank high as to integrity, but the common herd are sensual. There are over a thousand Chinese prostitutes in San Francisco, in part owned as slaves, by Americans who do an infamous business, checked somewhat by laws which are but partially enforced. Is there any special danger from them over others of like class? Immorality is a public danger, and when it threatens the existence of the state it should be met, if possible, by individual legislation. There seems to be no up-preciable or special danger to our institutions from Chinese immorality. There is danger from no other source.

Chinese labor is the equivalent of any labor saving machines that drive people from their occupation into another. To labor, this race is to labor the march of improvement on the Pacific coast.

The quiet effort to Christianize the Chinese in California is a seed sowing whose fruition will be in time an awakening in the Celestial Empire. It is to the world "fully." Every grand result in history was in its beginning, folly. The power of Christian truth to leaven society, is the most tremendous force in the world, but it does not count in politics.

The greatest channel through which saving influences have ever proceeded will be, we believe, the Golden Gate of California. The sudden emancipation of five million slaves created the most difficult problem ever given to a country. It has a harder one before it—the redemption of China. Nothing was ever so needed like the idea of citizenship for the slave, but it is done. Nothing is believed to be more desired than the redemption of China, but it will be done.

The Chinese question has been called Christ versus Confucius. It is that. The difficulty is that these Orientals while industrious, thrifty and well behaved, worship idols. We wish to retain their virtues but change their religion. It is this that prevents their assimilation.

In another column we publish part of a private letter from the author of "Sketches of Mission Life" in which a bright and dark side are presented. The moral elevation of the Chinese in San Francisco is no more thought of to-day than that of the Negro was in New York twenty-five years ago. Helpers in this cause are few, obscure and laughed at for their pains. But their efforts are like sowing grains of mustard seed, which in time will branch into wide spreading results. The Eastern states take little interest in this. The well known English traveler and author, Prof. James Bryce, M. P. tells us that American Missionaries are leavening Western Asia with new ideas and impulses, creating a movement and inveterate order of things. It is quite as possible to do for China what is being done in Asia Minor. The former is our next-door neighbor and the work is peculiarly our own. A hundred thousand of her people are on our shores in short range, inviting the attack of our moral and spiritual forces. Here is the open door to China. The solution of the Chinese question is for the Christian church of America. It expended ten million of dollars for the ex-slaves and saved them to civilization.

The Turks of Europe and the Magyars of Hungary were originally of the same race and faith. The difference to day, is

due to the change by the latter of their religion, and receiving their faith of their adopted country. Can it be done with the Chinese? This is to-day a most serious challenge to American Christianity. It is a question, under God, of their choice in the matter. They can do it if they will.

Here is the point, and pH of the coming contest between Eastern and Western civilization. William H. Seward said that "the Pacific Ocean would see day by day the theatre of the world's greatest events." In personal resource the Chinaman is too much for us, for he beats us at whatever he undertakes. Has he superior spiritual force? His gods have met our own God on the Pacific coast. But the most significant thing in this connection is the meeting of the waves of Eastern and Western civilization at the Hawaiian Islands, situated between the two hemispheres where a bloodless war of forces is going on, of deepest importance to America. This battle of ideas is beneath the frothy oratory and newspaper discussion of the day.

There are about thirteen thousand Chinese in the Hawaiian Islands, nearly all male adults, and increasing. In five years there will be 20,000 of them.

The 45,000 native islanders (some 12,000 of them male adults) are decreasing; ten per cent of them have leprosy; the race is doomed. There are besides Chinese about 6,000 foreigners, chiefly Americans, English, Germans, and Portuguese.

Senator Miller said in his speech: "The complete conquest of the Hawaiian Islands by the same insidious method (Chinese immigration) is assured within ten years, unless vigorous measures are applied to prevent it."

That is not the worst. Few Chinese women come; there are more than two men to every woman; polyandry prevails; few children are born, morality is disappearing, men become ferocious, civilization is being destroyed. This is the result of a Chinese majority by the males of a soft 'Polynesian' race. For other facts, see, in another column, correspondence from Honolulu by Mr. W. N. Armstrong, Attorney General, etc., etc.

The Chinaman is crushing the Kanaka; the mischief is in the line of morals. What is there in California to correspond to this? Nobody in Hawaii has seriously complained of Chinese competition. There was, as in California, work enough for all. The Chinese in both countries got good pay; in both illnesses is fruitful. Character, not capital or labor, is the real sufferer.

The almost inevitable refusal on financial grounds, to renew the Reciprocity Treaty between this and the Hawaiian government, now nearly expired, may on that ground be sound, but half the sugar that ground be bankrupted. The Chinese who have a genius for associating capital and cheap management, will buy them up, strengthen their foothold, and make it their own as soon as they shall see fit to take the right to vote, which is open to them. Ten years will improve the Chinese in Hawaii, that has made but little headway. Seemingly hopeless it is the only thing to do. Americans can swallow the Chinese, but the Chinese can swallow the Hawaiians. Our diplomacy has work to do, in the vast development of the Pacific Ocean, to be hastened by the canals that shall connect the two oceans, the Chinese shall not have the key of the situation.

Those beautiful islands, the "Central blue of the great Tranquil Sea"—may be fated to bear an important part in the conflict of the civilizations that face each other across the Pacific Ocean.

#### A LETTER FROM MRS. HAYES.

A letter recently received from Mrs. Ruth of Hungary, gives such a charming, char-

acteristically American picture of a graceful transition from the dignities of the Presidential Mansion to the sweets of country home life, that we venture to share it with our readers, relying on the forgiveness of the gracious lady whose interest in the cause which Hampton represents was heartily manifested from Washington, and is still so kindly expressed.

#### DEAR FRIEND:

Almost a year has passed since we left the beautiful city with all its attractions and the many kind and true friends. It has been quite natural to come back to the old home life, and take up its cares and duties as well as pleasures. The best food for chickens and the proper care of Alderneys is no little matter, and of course occupies much valuable time which otherwise might be wasted. We are now completely settled, if I may say that word in connection with furniture and carpets. The beautiful ferns came safely, and we are still in the United States of America, and likely to be there the remainder of our days. Many thanks for the Southern Workman. My interest in Hampton does not cease. Now I want to ask you whether sending some good papers to you for the far away teachers would be desirable. I will take the liberty of sending some I now have at my rate. With best wishes and kind remembrances to all, in which Mr. Hayes joins,

Sincerely,  
LUCY W. HAYES.

Fremont, Feb. 3, 1882.

We publish the following private letter from an enterprising Hampton graduate, who has succeeded in establishing himself as a shoemaker in Philadelphia, and is gradually getting an excellent run of custom of the best class. Three of his brothers and sisters, (all from North Carolina,) have graduated here, and are teaching with success. His forcible, straight-forward statement touches the root of the matter; the need of practical training of educated colored youth, who, with book knowledge only, are not likely to win amid the competition of the times, and under the special pressure through prejudice, that is upon the Negro.

Genl. S. C. ARMISTEAD,

Dear Sir:

Several of my friends have asked me to get the Catalogue of the Hampton Normal School for them. You will please send them, if you have them to spare; three or four copies of 180 and '81. By it there may be only if not more, added to your school next term. I have a young friend who is anxious to go off to school next Fall, and if possible I will turn him towards Hampton. He is a very enterprising and ambitious young man, about eighteen years old, and has been taking care of himself for some years, and saving a little money, which is very rare for a young man like him, here, being thrown in the society that he has. He wants a trade and an education, and I am satisfied that he will be of some use to himself and to those by whom he may be surrounded. Most young men who go from Philadelphia to the High Schools, come back looking for some lofty position, and many of them while waiting and looking, fall into idleness and end up with that class who are called "corner loafers," if I am allowed to make such an expression, it is not their fault—and it is their fault.

They are educated, but have not had the proper training, or their intellects have been educated not their hands. They come expecting something to open up to them, and do not "try to find a way and make it."

Industrial Schools are the places for training and educating colored youth; and about the only successful school where they can be educated and kept upon their level. We can see evidence of it every day. More clearly in the North than in the South, and more clearly I think that those who fall in the road and the only road for them to succeed, but they over-look it, expecting some sudden uprising. When one has all through life been kept in the line of manual labor, he is not so apt to look for anything of that kind.

You will please excuse this long unbusiness like letter, for I only intended to ask you to send the Catalogue, when I commenced to write. Inclosed please find stamps.

Respectfully yours,

DAVID D. WEAVER.

No. 923 Lombard St., Phila.

BY THE AUTHOR OF "SKETCHES OF MISSION

LIFE.

One day Mrs. D— came with her gentle horse and light buggy, and took me to ride. The day was clear, bright, and the ever beautiful hills were in the Park, some of which were fringed with flowers and evergreens. A green shrub, from scattered seeds, the lupin, grows on many of the sa d-hills and contrasts prettily with the white sand. The sand hills seemed immoderate, and were a wilderness to me. After a long circuitous route, over a high-faloot, hard, level road, we reached a fine elevated spot, and suddenly the view was spread out before us. The sea, the mountains, the broad Pacific at Waikiki with its circling horizon, calm blue water, and ever restless white foaming surf, but minus harks and boats. Somewhat the water look ed like wheat

C. C. A.,

There should now be a determined effort by the friends of the colored people to liberate their children for operative labor. At present, the poor whites alone work in the factories, mines, and Negro is sent out. Equivalents of the apprenticeship system are to be found in our trades, and every college for teaching the youth should have an "annex" for teaching the elements of mechanical industry. Unless this is done, the inevitable European, at some distant hour, will be able to say to the colored brother in personation of the white man, "You and your tenant live on the land, as fowls of the air, as the condition of Ireland. All these great schools for colored youth should be a thoroughly enclosed and fenced-in system, where the children of the poor of the South, the Negro, but for their development of the South and the prosperity of the country."

COLONEL MEACHAM

### EDUCATION A HOSTAGE.

## CORRESPONDENCE

A BIT OF HISTORY, AND A PROPHECY

(From these two instances, as well as many others, we see that the people in their sovereign capacity can undo decrees and earnings that run to the letter, though requiring the forecast of many years. We would not, therefore, stand fast in the policy shown, that the educational policy of this country is controlled by a power which can deliberately plan and carry out its purposes, and, like an individual, grow in strength with each achievement. In 1881,—President Garfield, in his inaugural address, speaking of the danger of the franchise from illiteracy, struck the key word. "The institutions, power of the Nation and the States, and all the volunteer forces of the people, should be summoned to meet the danger by the savory influence of universal Education."

**F. & F.**

COMINGS OF THE WRECK

Mr. John Walker, of the London Times, has addressed a letter to the editor of THE SANITARY ENGINEER, on this City, requesting an opinion as to the system of ventilating sewers by perforations or open gratings in the streets. The compliment paid to American sanitary engineering by Mr. Walker's letter, is most flattering; but that it is deserved will not be questioned by those familiar with the merits of the authority Mr. Walker consults.—*New York Com'l Advertiser.*

HORSFORD'S ACID PHOSPHATE

**A Brain Restorer.**  
Horsford's Acid Phosphates restores the brain when worried by the wear and tear of a  
active business life.

## INCIDENTS OF INDIAN LIFE.

The past month has not been especially eventful with us who have charge of the Indian students. Every thing seems to be going on quietly, and both study and work show improvement. In making my monthly visits to the foremen of the different shops, I find very few or no complaints. In their class rooms, it is to be seen clearly by those who visit them, like the Indian, like the Negro, has a brain, and if only given a chance of cultivation, he will show his hidden qualities.

By some, Indian education is considered a loss of time and money, but I feel confident that those who visit our school and Indian classes are more favorably impressed.

I was one day having my arithmetic class answer questions as usual, before sending them to the blackboard. I asked several questions. My class was composed mostly of boys who had been here a year. I had company that morning, and here allow me to show you the difference between a recitation from a colored class and an Indian class. A colored class will do its best before company; while the Indians will do very little, on account of their being extremely bashful. I gave this example my class. "John has 3 cents and Henry has 4 cents more than John, and Charles has 7 times as much as Henry; how much did Charles have?" This was not an easy example for an Indian class who had only had one year's schooling—and a new and hard language to learn. I had all kinds of answers. The visitors seemed much interested in my class as they watched the little fellows trying to solve the problem. At last a little boy called out "40 cents." As soon as I called for his explanation, it was given in his broken English.

Some of the boys in the lowest classes, who arrived in October, unable to speak any English at all, are doing nicely in their studies, and speak English exceedingly well. Charles Picotte, a Sioux boy, who has been here two years, and who was in the Sioux class of our Indian school, has been put into the tin-shop to prepare himself to take full charge of it next year. Charlie attends the night school and keeps up in his studies. He is a very good and bright boy, all of his friends feel proud of his promotion, and will watch his success with interest. There seems to be no doubt now as to his being a credit to himself and his tribe.

The boys in our shoe-shop are doing well. The shop has been moved into the "Stone Industrial Building," which is quite an improvement, as they were crowded in the old shop; besides it was in many ways uncomfortable. They have moved into a new house, with a new manager, and I believe with a new determination.

O. M. M.

## FROM GRADUATES OF OTHER SCHOOLS.

We have frequently asked for communications from graduates of teachers from other schools at Hampton. We are always glad to hear and speak of their good work. A few such letters of much interest have been sent us by the kind friend to whom they were written, whose untiring, practical sympathy has encouraged and helped many of these young teachers from Hampton and other schools.

LE MOYNE NORMAL INSTITUTE,  
Memphis, Tenn., February 11, 1892.

Miss M. A. L., Philadelphia, Pa.

Dear Friend:

Your note of the 6th inst. and the volume you send to our library are both received. We thank you most heartily and are glad to have the book in our collection.

We have in about three years, succeeded in gathering a library of about one thousand volumes—and we find it of great value in many ways—especially as an aid in the formation of fixed habits of reading in our students, and without which we find that their other training and education are often to a great extent forgotten, and of comparatively little value to many of them, precisely. We become more and more thoroughly convinced after years of experience that what we do for these people must, to the fullest extent possible, be brought to bear on their everyday lives, to be of the most benefit to them.

Besides our regular work as a Normal school, with a course of study similar to the courses of the Northern Normal schools, leaving out other languages than our own, we have a department of practical instruction where the girls are taught needle-work &c., cooking and housekeeping, and later on in the course, nursing or care of the sick. For this work we have an especial teacher and an experimental kitchen, sewing rooms &c. To the young men we give special

business instruction and something of theoretical farming, stock raising &c.

Our chief work though is in the instruction of teachers, and a large percentage of our students are already teachers. Pardon me for writing this at length, I do so thinking some facts of our work may be of interest to you.

While there is much to be done for the colored people, who we have in this work for them, feel greatly encouraged at the progress made in the past ten or fifteen years.—There is hope for the future.

Very truly yours,  
A. J. STEELE.

Gloucester Co., Va., July 26th, 1891.

Miss M. A. L., Philadelphia, Pa.

Dear friend:

While in attendance at the Teachers' Normal Institute held at the Hampton N. and A. Institute, I received a valuable package of reading matter for myself and scholars, and was told that you were the benefactor. I thank you very much for the package. I wish I could see you to tell you how much I appreciate your gift. I am entirely unknown to you, and you are known to me only by reputation. I will take this opportunity to tell you of my work among my people.—I was born a slave, December 25th, 1850, in this country. My mother stayed at home with her overs during the late war; being a small boy I stayed with her. My father died November, 1858.

Both my father and mother could read, but could not write. With the help of my mother and one of my cousins, I learned to read. B. C. B. first, as we had to in those days. Afterwards I got white boys of my size or smaller, to teach me whenever a chance offered itself. By my own efforts and what little instruction I could get, I wrote my first letter in the summer of 1867. In the year 1866, I professed religion, and have been trying to live a Christian ever since. In the summer of 1868 I commenced to teach Sunday school; a work that I like so well, that I have never gotten tired of it. I am happy to state that many of my Sunday school scholars have become followers of the Lord Jesus Christ.

I passed an examination to teach in the Public Schools of this county, in the year 1875. I had never gone to school one month in my life. I have and do now study very hard. In the spring of 1878, I attended the Richmond Institute, Dr. C. H. Corey, President. My teachers were pleased with the advancement I made in my studies. I want to go back whenever I can. I have been examined several times to teach school, and have gained each time in my examination. Last year I averaged on six studies, 0.16; 10 being the maximum. I have taught with much success since I began in 1875. I love the work, notwithstanding all the trouble, and the many disadvantages under which country teachers labor. I have a black-board in my school, but no reading or writing charts, nor wall maps. If I had these things I could do a great deal more in the school room. I provided black-boards, crayons &c. for my school; and sometimes give books to poor children. I want to do all I can for my poor people. I have been for six years clerk of our District Association which contains 80 churches, and Secretary of our District Sunday School Convention which contains more than 50 Sunday schools. I will try and send you a minute of each, next fall, to let you see what we are doing in this direction. I must again thank you for your gift, and assure you that any thing that you may give to any people will be thankfully received.

Respectfully yours,  
JAMES T. TONKINS.

Pleasant occupation tends to prolong life, for longevity is much dependent upon the feelings of the mind.

Don't carry your head so high that you cannot see stumps in your way, over which you may stumble.

## A VALUABLE BOOK OF REFERENCE.

The Cyclopaedia of Practical Quotations, compiled by J. K. Hoyt and Anna L. Ward, and published by Messrs. I. K. Funk & Co., New York, is a vast storehouse of those jewels of speech, crystallized thought, from which every one wants to borrow now and then to adorn his own style. No one need fail to find the very one he wants in the 17,000, for it is not only there, but easily discoverable by the beautifully classified index. A biographical dictionary of authors, one of Latin law terms, of Ecclesiastical terms, and of Latin quotations, and Proverbs of several languages, add to the value of this very useful and attractive book.

## HORSFORD'S ACID PHOSPHATE

In Tonicity of Liver,  
And extreme gastric irritability, resulting from malarial poison, has given good results.

## Hampton Normal and Agricultural Institute

INCORPORATED IN 1870, by special Act of General Assembly of Virginia; exempt from taxation. Devoted to the Education of Negro and Indian youth in Agriculture and the Mechanic arts, and as teachers of their respective races.

S. C. ARMSTRONG, Principal;  
J. F. B. MANNING, Treasurer.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division. Tuition free to all, (provided by friends.) Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 10 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State, but is supported mainly by "voluntary contributions." Besides State aid and Government help for Indians, the sum of \$30,000.00 a year, must be raised by contributions, to meet current expenses.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all.

The great need of the institution is a permanent endowment fund.

The Hampton Institute is supported by, and responsible to, no denomination or society, and has no paid soliciting agent or machinery whatsoever, but depends directly upon the public. It is earnestly Christian in its teachings and influence.

Present attendance, 464 students, of whom 90 are Indians: average age 18. Negro boys 216; Negro girls 158. Indian boys 62; Indian girls 28. All but twenty-five board at the Institute: twelve states represented, but chiefly Virginia and North Carolina.

## FORM OF REQUEST.

I give and desire to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of ..... dollars, payable to, &c.

For further information address,

S. C. ARMSTRONG, Principal,  
Hampton, Virginia.

## A PLACE FOR YOUR DICTIONARY, A PLACE FOR YOUR MEMORANDA, A PLACE FOR YOUR PERIODICALS, THE NOVELS DICTIONARY HOLDER.

100 Comic songs, words and music, 30 cts.  
100 Sentimental songs, words and music, 30 cts.  
100 Old Favorite songs, words and music, 30 cts.  
100 Open Songs, words and music, 30 cts.  
100 Irish Songs, words and music, 30 cts.  
100 European Songs, words and music, 30 cts.  
100 Scotch Songs, words and music, 30 cts.  
All of the above for Two Dollars. The above comprises nearly all of the most popular music ever published and is the best bargain ever offered. Order at once. Postage stamps taken. Pamphlets, Volleys, Gallies and Musical Instruments at low prices.

World Mfg. Co. 120 Nassau St. New York.

## THE MALE VOICE CHOIR.

A collection of original and selected Gospel Songs. By L. O. EMMERSON. Published by Oliver Ditson & Co., Boston.

The almost universal love for the better class of so called Gospel songs, has caused a demand for this kind of book. It is quite an encouraging fact that there are enough men-singers in low with sacred music to warrant this outlay for publication. Mr. Emerson has arranged his book with his accustomed skill and taste. The music flows smoothly; there are no rough places for the voices to grate over; the old standard hymns, as "There is a Fountain," etc., are well-remembered, and the brief arrangement of "Jerusalem, my happy home," shows how beauty may be condensed without loss. Of the Gospel songs proper, as "Cross and Crown," "Christian, this your warfare," "Till I see Jesus," etc., there is no lack. An excellent feature is, that the highest part is not very high and always easily within the reach of an ordinary tenor voice. With the low price and the really good music, there seems to be no reason why this should not be very successful.

## COUNTRY BOARD.

BOARD AT OLD POINT COMFORT. A—Perkins seeking change of Climate and a laborer air can find excellent accommodations, with moderate prices, at a select private boarding house pleasantly situated on the Chesapeake Bay, and opposite the entrance of the celebrated Fort Mifflin. Address Mrs. S. F. EATON.

## We Know Personally

The immediate effect Macqueen Matton Ointment has in subduing the pain caused by Piles. A single application proves this, and three or four complete the cure. Sufferers, read and act!

From W. Halsey, Editor and Publisher, 214 Fulton St., New York: "I had been suffering from Piles. I used but one box of Macqueen Matton Ointment, and the torment of years was gone."

ROASTED COFFEE quickly becomes impaired, parts with its good qualities and absorbs hurt, when exposed to air impregnated with the odor of Tobacco, Spices, or any impurities or moisture. To prevent this we close and seal the pot of the Coffee from our Patent Process of Roasting, which causes the natural oils and real essences to remain in the Coffee itself until ready for use. Still further to more effectively preserve the full strength and aroma of our Coffee, we have recently after raising in TIN FOIL PACKAGES (for which we have the exclusive patent for the United States on Roasted Coffee) by which the Coffee is more perfectly hygienically sealed, than in any package before. This to the public is rendered invisible to the action of damp weather and the volatile effects of hot weather, and will retain its fine qualities and full strength unimpaired in any climate, on land or sea, for years.

## J. B. LAZEAR &amp; CO., NEW YORK. BALTIMORE.

PIANOS from \$125 to \$1600—Grand, square and upright. Warrented. EXAMINE. Washington, N. J.

## TO CONSUMPTIVES.

Consumption, that scourge of humanity, is the great dread of the human family, in all civilized countries.

I feel confident that I am in possession of the only sure, infallible remedy—now known in the profession—for the positive and speedy cure of that dread disease, and its unwelcome concomitants, viz., Coughs, Asthma, Bronchitis, Nervous Debility &c., &c. I may be called an old fogey. I believe in medicine. Twenty-eight years experience as a busy practitioner, in the best Consumption Hospitals of the Old and New World, has taught me the value of proper medication, both local and constitutional, in the cure of this great enemy of our race. I have found it. But I am digressing—I started out to say to those suffering with Consumption of any of the above ailments, that by addressing me, they shall be put in possession of this great boon, without charge, and shall have the benefit of any experience in the treatment of cases successfully treated. Full particulars, directions for preparation and use, and all necessary advice and instructions for successful treatment at your own home, will be received by you by return mail, free of charge, by addressing with stamp or stamped self-addressed envelope,

DR. M. E. BELL,  
101 N. CALVERT ST., BALTIMORE.

ORGANS from \$200 upwards. All warranted. 65 top organs, with stock music and books, only \$200. DANIEL F. HEATY, Washington, N. J.

## Horsford's Acid Phosphate

For loss of appetite, sleeplessness, etc. Pamphlet free. Rumford Chemical Works. Providence, R. I.

## THE WORTH OF WORKMEN.

An exchange says:—"The value of the Negro population as a laboring force in the country is beginning to be appreciated. Large bodies of Negroes from the South have been taken to Pennsylvania and New York by contractors; worked there for months, and returned to their homes. Seven hundred Negroes from Virginia are working in a company's mines in Minnesota. A Pennsylvania contractor expects to take two thousand Negroes from the South to Colorado to work on a railway contract. An engineer in charge of one of the largest engineering enterprises in Boston, writes: 'The Negroes have saved us.' The Negroes are patient, steady, and faithful when well treated. The population of Ireland is 5,150,489, and diminishing. The black population of the United States is 8,577,497, and increasing. It costs \$30 a head to import laborers. These are important facts to bear in mind in considering the future development of the country."

**A COLORED EXCHANGE.** We are happy to make this acknowledgement which is rather late but has been crowded out of former numbers, of pleasant words for the Southern Workman from one of our colored exchanges, "The People's Advocate," published in Washington, by Mr. J. W. Cromwell; Mr. Geo. P. Richardson and Rev. S. P. Smith, editors. Quoting an editorial on the condition of the industries and the colored population of Virginia, the Advocate commends it to the attention of colored young men. It agrees with the Workman that the colored people do not, as a class, support papers, and prefer a poor political paper to a good business journal. It thinks it is time now for the people to take a forward step in this direction. The Advocate is itself a very creditable looking sheet, and has grown since we first knew it. We wish it usefulness and success.

## HAMPTON'S RETURNED INDIAN STUDENTS.

PRISONERS OF WAR.

The first Indian students received at Hampton, and consequently the first returned to their homes, were of the United States prisoners of war taken in Indian Territory in 1875, for savage and murderous attacks on emigrants. Their history in St. Augustine Fla., under the wise care of Captain Pratt, and afterwards at schools in the East, has been frequently told.

Of these, but one remained the whole three years at Hampton. This one was Henry H. Cheyenne, one of the oldest of the young men. He came with the rest, in April, 1878, and went home in June, 1881, having improved much in his understanding of English and learned the carpenter's trade. He must have been about twenty-five years old when he was taken prisoner, and had been prominent in the desperate deeds of his tribe; but the transformation in him seems thorough.

Soon after his return, Agent John D. Miles, of the Cheyenne and Arapahoe Agency, wrote that, after a brief visit to the camp and an address to the chiefs announcing his new ideas, he had returned to the Agency and gone right to work. Agent Miles wrote again Sept. 23, 1881, to Capt. Pratt in a letter enclosed in the Captain's report to the Commissioner of Indian Affairs: "Henry H. is at present in the sick list, having overworked himself in helping under a trade. His whole heart is for progress among his people, and both his preaching and practice he endeavors to help his people forward."

The following St. Augustine students, after fifteen months at Hampton went to Carlisle, where they remained about two years, aiding in the care of its new pupils as well as receiving instruction. To Captain Pratt, therefore, they owe the chief part of their development. Their year at Hampton of course had its share in it. On both accounts, we are glad to publish the results.

Agent Miles in the letter above quoted, reports of the Cheyenne students: "Little Chief is in the Agency Physician's office as interpreter and assistant, and is rendering good

service; lives and dresses like a white man and keeps up bravely with his correspondence. Matches is employed at the Agency; is rendering great service as interpreter for the missionary, and his example and influence are good. Roman Nose is just the same, no signs of relapse. Caloose is hard at work, exemplifying his faith in civilization by acting and working as white men do. Soaring Eagle and White Bear (an Arapahoe), are the only ones who seem to have lost ground, and they, from lack of opportunity, than perhaps from lack of spirit. Tieh-ke-mat-se is in the employ of the Smithsonian Institute, and is now with Mr. Cushing, in Arizona or New Mexico, making collections for that Institution."

Major Hunt, Agent, reports of the Kiowa young men, Sept. 30, '81: "Tone-ke-sh is a perfect failure. I have tried him at everything; but he breaks down and goes off of his own accord, unable to forego the allurements of an indolent camp life; Onetoint (quite a good carpenter at Hampton,) has done better than any, but needs a paternal hand. Last year I gave him a room in the school as teacher, and he did well, and him now to work among the people, collecting children for the school. He has a well balanced mind and I am quite sure he wants to do right, as I have always found him truthful, and can trust him."

## DAKOTA INDIANS.

Thirty Indian students, twenty-five boys and five girls, after three years training at Hampton Institute, were returned here October 1, to be stationed in Dakota Territory, where places to work had been provided for them. This has been the most thorough test of the Indian work here, and has been watched with great care, through frequent correspondence with agents, missionaries and the returned students themselves.

Five months have passed, and while a longer time may modify their record, it is proper to lay before those interested the results of the experience thus far, with its lights and shadows, both of which were, of course, to have been expected. For this purpose, we give a resume of the above mentioned correspondence.

## YANKTON AGENCY.

Travelling north on the upper Missouri, the first Indian agency we reach in Dakota, is the Yankton Agency, Major W. T. Amrus, agent. His mission work is under the care of the Episcopal church. Rev. Joseph Cook, whose mission is Rev. J. P. Williamson. Each church has its mission boarding school, and there is a third under charge of the agents.

Here were left six students of the thirty: two girls and four boys, of the Sioux tribe, viz: Carrie Anderson, aged 13; Lizzie Spider, 17; Frank Yellowbird, 21; Edwin Bishop, 17; David Simmons, 16; Oscar Brown, 16.

Of all six, Rev. J. P. Williamson writes Jan. 13th: "So far, they have all run well. I have not heard a shadow against one of the six. They attend one or the other of the churches regularly. They are immediately recognized as being of the Christian party, and leading spirits among the young of that party. Their appearance is always creditable and their dress neat. The girls have changed no article of dress. They have dropped their hats and raised their shawls, but that is fashion, and if it came from Paris might revolutionize our country. They are all employed at something—the boys at teaching school, shoe making and clerking, and the girls at home. Perhaps the girls might do something more, but it is difficult here to find employment for such girls, and it is first and greatest step towards civilization—the first and greatest step towards our day school. David Simmons is assistant teacher in our day school. I judge that not one in a dozen white boys of sixteen would do his work as well. He is prompt and reliable and old. He not only teaches, but has care of the room. And the appearance of his mother's cabin, and I might say the same of others, has decidedly improved since his return. Edwin Bishop attends our church regularly, and handled his letter from Hampton Chapel a few days ago. He has also a class in the Sabbath school which he teaches with interest. He is employed as a shoe maker in St. Paul's (Episcopal) school. Lizzie Spider lived in our family a month and did house work satisfactorily, but has now gone to her father's, who lives twenty miles away, among the Ponces. Carrie Anderson makes house attractive."

Rev. Joseph Cook writes Jan. 27th:—"Edwin Bishop is employed as shoe maker at St. Paul's (school). He is very earnest in his work, in fact I think they had had to limit him as to the time he shall spend at it, lest he injure his health. It is quite refreshing to see

one err on that side; the other has examples by the score. Edwin is teaching other boys his trade, and is doing a good work. He is generally well esteemed. Oscar Brown is stronger than when he returned. He is quiet and well behaved, and commends himself to those who have the charge of him. Of late he has been spending a part of the day in school, and does some little jobs about St. Paul's."

This is the bright side of the report. The shadows have been the return of the two girls to the Indian camp, from the places provided for them, and that of Frank Yellowbird from St. Paul's school, where he had some employment. "While there," Mr. Cook reports, "he did admirably and everybody liked and was interested in him." He has, however, since then returned to his church, and is now, we learn, at work in the Government blacksmith shop at the agency. The return of the girls to their Indian home is of course a danger and disadvantage to them, yet natural, and possibly productive of good, as Mr. Williamson suggests. That they have not forgotten Hampton, is evident from the letter of the agent, Major Anderson, which brings the latest report from all.

In writing Feb. 13th: "Carrie Anderson has just left my office. She wishes me to write that she wants to return to Hampton and will be ready to go most any time you can arrange for her. She also asked to stay at my school (just opened) till you are heard from. Lizzie Spider went to her father at the old Ponca Agency. Carrie's folks have a letter saying she has returned to Hampton. I hope it is true. Edwin Bishop, is doing well at St. Paul's school. Frank Yellowbird is now in temporary board for duty with Mr. Standing at the Boarding school."

A still later letter from Major Anderson, Feb. 27th, says "Carrie is now in our school, waiting permission to return to Hampton. Felix Benoit, (returned after the others, on account of chronic disease (not pulmonary) which prevented his steady attendance at school) is doing nicely in the tin shop as apprentice."

I hope you will think favorably of my suggestion of placing girls in families, and the boys as apprentices, (at the East) for at least one year after their school here ends. The time should be three years instead of one. I think you can gain that of the parents. Then I can easily get that of the parents."

## LOWER BRULE.

From Lower Brule, the next Agency north of Yankton, the latest report is February 6th, from the agent, Major Wm. H. Parkhurst, who writes of the five boys returned there, George Bushatter, aged 18, employed as putter and teacher in the Government school, Henry Reconciler, 21, as blacksmith; James Lezelo Reconciler, 20; Joseph Winnebago, 19, and Lezelo Reconciler, 19, as carpenters; all them on wages of \$13 a month besides rations.

Major Parkhurst's reports of the last three young men, Winnebago, Winnebago and Zed, a general independence and indifference to rules and to work, and the admonitions of him and their native elders, Rev. Luke C. Walker. Major Parkhurst is evidently treating the case with impartial wisdom. He has turned them over to the master carpenter to keep strict account of their work, and pay accordingly, for what they do. This

method is the right one for Indians as much as for white men. It would be well if all Indian agents and the Government itself understood the fact and how to apply it. Fifty years ago, such boys, with good stuff in them, but heavily and conceited as white boys occasionally are, could not inevitably go to ruin in such an ordeal. Now, we have strong reason to hope for them, though they are in a dangerous position. It is noteworthy that Zed's father, a Frenchman, has counseled the boys to better things. The Major thinks they show the truth of the saying that a little learning is a dangerous thing. On the other hand, he reports that "George Bushatter is doing good work—has been working steadily since the first week of his return, and is assistant teacher, doing splendid work in the school, in which there are now some forty pupils, 31 boarders and 6 day scholars."

A letter from this young man to the Southern Workman, is given at the close of this report.

Of Henry Reconciler, also, Major Parkhurst has only good to write. He says Henry had a great deal of work to do for his mother upon his return, such as wood-cutting, repairing of houses, building stable, and general work in putting the place in good order. He has also done some building freight for the trader, being paid by him a fair price. At present, he is working well in the blacksmith shop as apprentice, and gives good satisfaction."

A letter has also been received from Mrs. Sophy Walker, wife of Rev. Luke Walker,

the native Indian missionary in charge of this station; she writes, Nov. 29th: "I am glad to say that our boys are doing well. Of course they need looking after a little. I think George (Bushatter) will be the interpreter at the boarding school. The boys have built themselves houses. I wish you could see them on Sunday at church. They look very nicely indeed. We are proud of them."

## CROW CREEK.

Twenty-eight miles above Lower Brule on the river, is the Crow Creek Agency, to which four students were returned; viz: Ziewie, aged 18, (daughter of Don't Know How), the progressive Indian whose store at the agency bears the sign of D. K. How. Andrew Fox, aged 19, and Paman, aged 22, nephews of Wila, an intelligent and prominent chief, who told his people that if only one of their young men should return to teach them civilization they ought to think it had paid to send them to school. The fourth was Edward Ashley, aged 21, who was engaged as assistant teacher in the Government school, Fox as helper in office work, Paman as carpenter, and Ziewie as assistant in care of girls and laundry in the school.

Major Geo. H. Spencer, their agent, writes of them November 26th, that Andrew Fox had been transferred by his own wish to the carpenter shop, where he and Paman are doing all that could be expected. "Edward Ashley is doing splendidly as assistant teacher, taking pride and pleasure in his work. Ziewie has left the school and gone into the store of her father, where I think she will remain."

The report from Crow Creek seems only to improve with time, and we are very happy to publish the latest received from the agent, Major Spencer, and Mr. J. C. Beveridge, chief clerk at the agency, an English gentleman of classic and cultivated tastes.

Major Spencer writes as follows:

Crow Creek Agency, Dakota, March 7th, 1882.

GEN. S. C. ARMISTEAD, HAMPTON, VA.

My dear General:

In reply to yours of 2nd inst. will say that our returned Indians are all doing splendidly. Ziewie is filling the position of clerk and book-keeper in my father's store. He went off on a trading expedition to Red Cloud and Spotted Tail Agencies and was gone about two months, leaving Ziewie in entire charge of his store, which he was absent, and she has very successfully managed him affairs. Edward Ashley is doing good service as assistant teacher at the Industrial School which now has twenty-five scholars and is progressing finely under the management of Miss Nellie A. King.

Frank Paman, and Andrew (Fox) Smith are at work faithfully in the carpenter shop and will in time make good workmen. I obtained authority to increase their pay from \$180 to \$240 from the Hon. Commissioner of Indian Affairs, this quarter. If all your pupils turn out as well as ours have, you certainly may have reason to feel proud of your work.

Respectfully yours,

Geo. H. SPENCER.

U. S. A. AGT.

From the very interesting and careful statement of Mr. Beveridge, dated Feb. 18th, last sent at the same time with that from Major Spencer, we have a few very interesting facts of educating Indian children in the East and of separating them wholly from tribal influences, was first resorted to at this Agency, and three boys and one girl were sent to Hampton. These, as you know, were Edward Ashley, Andrew Smith and Frank Paman; the one girl was Ziewie or Yellow-Girl—all full-blooded Indians.

Upon their return here you wisely urged the immediate necessity of finding them suitable occupations and of putting them at once to work. As the Agent fully coincided with you in your views of this matter, the employment at hand for them, and the following appointments were made: Edward Ashley and Ziewie were placed in the Industrial Boarding School as assistant teachers. Andrew (Fox) Smith was retained as assistant in the office, and Frank Paman was apprenticed to the Agency carpenter. Edward Ashley and Ziewie were assigned to quarters in the school, taking their meals with the children, and were comfortable room in one of the Agency buildings was given to Andrew and Frank, and an arrangement made with the proprietor of the hotel by which the boys would have their board for five dollars per month each, and their rations from the Gov-

ermant.

Edward reported for duty on October 7th, and up to the date of this letter has not lost one hour. He teaches a class of eight Indians and two white boys and four Indian girls, ranging in age from six to thirteen years. His instruction is of course confined to the rudimentary branches, and comprises orthography, reading and the simpler rules of arithmetic. He takes much interest in his duties and is an earnest, patient and persevering preceptor. His conduct and manners are irreproachable; he is very punctual in his habits, and his room in the school is scrupulously neat and clean. His furniture at first consisted of a bedstead, a few chairs, a table, a stove and a washstand; he has added from his own earnings, a carpet, matting, window curtains, some pretty vases filled with artificial flowers, and so repolished and rejuvenated an old condemned cupboard that it makes a very neat and presentable bookcase. In the upper part of this, his books are nicely arranged on shelves made by himself, while the lower part is partitioned for his papers and letters.

Edward appears to have entirely shaken off the apathy, listlessness and stolid resistance of the Indian. He is entirely self-possessed, prepared to meet you in conversation, very ambitious and anxious to improve and always polite and respectful in his language. He is alert in his person, dresses well and in good taste, but he occasionally has a little elaborate in his costume. Hampton has much reason to be proud of Edward.

Andrew Fox Smith was at first employed as assistant in the office, but finding that he was a wretched penman and that his capacity did not extend beyond mechanical details, he was apprenticed to the Agency carpenter. His first efforts were directed towards the improvement of his penmanship, which, with the useful and very much improved, partly at mutual expense. Andrew is a boy of very excellent disposition, rather more generous than the others, with a keener appreciation of kindness shown him. He is not so ambitious as Edward, and is far more easily influenced than the latter. I believe that his future will be entirely shaped by his associates, and his capacity will be ascertained by his habits and conduct are most satisfactory; he is obedient, willing and industrious; has made steady progress in his trade, and under proper direction and careful management will undoubtedly become a more careful, precise and thorough workman than Andrew. Frank, however, is much more extravagant than the others, and has developed a capacity for contracting debts which is neither promising nor creditable. All these boys have shown a capacity for continuous labor which could not be excelled by whites, and is very rare among Indians.

Zewie entered the school on the same day as Edward and rendered service up to and including October 22nd. On the evening of that day she was visited by her father and obtained permission from the Principal to make a brief visit to the latter. Several days elapsed and she failed to return, but finally sent word that she did not propose to come back and would remain to the end of her relations. On further inquiry into the circumstances, it was found that her father, who keeps a trading store, was anxious to secure her services for himself. Zewie was reported by the Principal of the School (who had much experience), as being the quickest and neatest Indian girl she had ever seen. This superlatively quiet and neat Indian girl is now in charge of her father's store; her associates are the Indians who drop in for occasional trade or the equally uncultured members of her own family. Amid such surroundings she may forget all she ever learned.

Upon the return of the boys it was suggested that a portion of their earnings be set aside as a reserve fund for their future use and as a curb upon their anticipated extravagance. This suggestion the Agent declined to adopt, being desirous of testing the permanency of the economical principles instilled into them at Hampton. It also seemed unfair to place them without proof under the disadvantage of a doubt as to their prudence or as subject boys of some training and education to the ridicule of the tribe by depriving them of their free agency in the disposition of their earnings which has been always conceded to the wildest Indians. It was deemed necessary, however to oblige them to keep an exact record of their outlay, and for this purpose each was furnished with a small account book. On the debit side of this, is entered the actual amount earned by the boy and paid by the Government, while the boy himself makes the credit entries. The latter, of course, are investigated and verified. Their principal outlay thus far has been for clothing, furniture and ornaments for their room, articles of stationery and the usual paraphernalia of civilized surroundings. This presents a marked

contrast to the purchases made by the average Indian, which usually consist of articles of food, paint, ear bobs, tassel and trumphy.

The boys are great correspondents; they write in both English and Indian, and receive many letters. They spend their evenings mostly in their rooms, receive occasional visits from their friends, but devote most of their spare time to reading English books and writing letters. A short time ago I chanced to drop into the room which Andrew and Frank occupy. I found Frank wrestling with the stove which "would not light up," and Andrew engaged in some mysterious occupation which appeared to completely engross his attention. Glancing over his shoulder, I found that he was just completing a series of regulations for the guidance and government of casual visitors to his room, which he passed to Frank Pansai for signature and then posted up in a conspicuous part of the room. The following is a literal copy of the document in question:

- NOTICE
- No. 1. No play here.
  - No. 2. No sit down in the bed.
  - No. 3. No chew here.
  - No. 4. No spit the floor here.

Just smoking here in this room.

Sit down here and talk like me.

ANDREW F. SMITH.

In this connection I may observe that Andrew and Frank are particularly fortunate in being placed under the charge of Mr. Fuller, the Agency carpenter. He is a most respectable man, a finished workman, kind, patient and full of sympathy for the boys, and taking but first with the boys and of unwearied patience. Under his supervision I have no anxiety as to their future.

The Indians were at first disposed to regard Hampton as a sort of educational trap set by white men to catch and swallow their children. The return of these scholars has entirely unfixed this prejudice and secured the full confidence of the Indians. They are now anxious to send their children away and several applications have been made on this subject. I ascribe the change to the manifest progress made by the pupils—their adoption of civilized habits—their capacity for extended intercourse with the whites and their social recognition by the latter. I have never seen the Indian eye glaze as it does when one of the boys walks up to my desk and addresses me on some ordinary topic. They discover by my response and with native intuition that I fully understand the boy and the continued conversation confirms this impression. At such times I have noticed an expression on the faces of the Indians, of mingled pride and wonder, which well might interest a physiognomist.

The boys are much sought as interpreters, are extremely useful in this capacity and perform the day very intelligently.

They have acquired a certain influence with the tribe and are treated with marked consideration. Their experiences in the East and their superior attainments do not appear to have inflated them in the slightest degree, and they are more obedient and respectful than the ordinary Indian. It was confidently expected that the boys would return to urge for their shoes," but alas! for the prophets, their predictions have not been verified."

Mr. Beveridge closes his letter with a consideration of the subject of industrial education for the Indian, which is interesting, as giving an impartial opinion of one who lives among the Indians as to the advantage to them of Eastern training. He says very truly:

"This Indian is not so deficient in talent and natural capacity as is generally supposed; he acquires information with comparative ease, and under proper direction is capable of some culture. The want of success of local schools I ascribe mainly to their vicinity to camp life and the theoretical character of the instruction. Books alone will accomplish little. He soon wastes of the whole instruction, remains under protest, and on his emancipation and return to camp life often develops into a first class specimen of the Aborigine loafer."

"Keep an Indian's head busy and you can always do something with his head; give him plenty of healthy outdoor work, instruct him gradually in the principles of agriculture, stock raising, mechanics or something that will be of practical benefit to himself and the tribe, be scrupulously exacting in the matter of cleanliness and regularity, be patient always, treat him kindly but firmly, punish him promptly when he is negligent or lazy, and by long transformation. This I believe is the essence of the system adopted at Hampton, and is the only practical and rational plan of dealing with Indians. I believe that the establishment of a half dozen similar institutions would go further towards solving the Indian problem than any of the measures heretofore adopted, and that, of the millions who are annually wasted upon Indians, a good proportion might be profitably diverted in this direction. That your excellent institution may meet with a full measure of recognition and

appreciation by the Government and the general public, is the sincere desire of

Yours very respectfully,

J. C. BEVERIDGE,

Clark at Crow Creek Agency.

CHEYENNE RIVER.

Ninety miles further up the river, is Fort Bennett, at Cheyenne River Agency, where are five of the students: Louis Aggenou-brow, aged 17; Leroy Shutsunay, 16; Harry Brow, 17; Henry Fisherman, 20; and Joseph Vaha, 19. They have been heard from repeatedly through the missionary, Mrs. J. F. Kinney, in charge of St. John's (Episcopal) school, and the agent, Major Leonard Love. Nothing but favorable reports have been received, Mrs. Kinney writes, Nov. 23d: "Your five boys are doing very nicely. We have one of them take dinner with us each Sunday. They all say they are homesick, or rather homesick sick, and would like to return with Lieut. Brown in February." Major Love wrote, January 14, in answer to inquiries in detail:

"Harry Brow, since his return, has been employed as assistant teacher at the Agency boarding school for Indian boys, at a salary of \$20 per month. His conduct has been very good. He seems to take a deep interest in the education of the Indian boys, and I think tries to set a good example before them."

"Henry Fisherman has been employed in the carpenter shop, at the same salary. His conduct has been good. I think he is a good Christian boy, and tries to do just right. He was to have been established in a tin shop (this trade learned at Hampton) but when the Sioux were asked for I was informed that the Sioux appropriation was exhausted."

"Louis Aggenou-brow has been employed in the blacksmith shop. He is not much of a scholar, but seems willing to work and tries to learn. His salary also is \$20 a month."

"Joseph Vaha has been employed in the blacksmith shop, at the same wages. He has worked fairly well. His conduct has been very good. He has been steady and tries hard to learn his trade."

"Leroy Shutsunay has been employed as messenger boy in the office, (same salary.) Although in poor health, he has been steady and tried to do his duty. I may say again that I have of the others. His deportment and conduct have been most excellent."

Major Love seems to exert a parental care over his charges. He states "These young men are required to attend church twice every week," and says in another letter, "Since they returned from their respective homes, I have kept them at the agency. I do not permit them to visit the Indian camp for the reason that I think it has a very bad influence." His latest letter—February 9th, says, "They are now all doing splendidly."

STANDINO ROCK.

Nearly 200 miles above Cheyenne River, is Standing Rock Agency. Major McLaughlin, Agent; his mission work under charge of the Roman Catholic priest, Father Stroph. The three students returned there are John Pleets, aged 21, employed in charge of the agency stable, at \$1 a day, Rosa Pleets, his sister, aged 18, and Thomas Corrie, aged 19, employed as an assistant agency carpenter, at \$1 a day. On reaching the agency, the young men asked and obtained permission to take their meals and have sleeping rooms at the Agency, preferring not to go back to the Indian camp.

Major McLaughlin writes of them: Nov. 2, "that both the young men are doing well. Rosa, like the girls above mentioned, soon left the place of service provided for her, and the Indian girls' school, for her home in the Indian camp, and Major McLaughlin feared she could not be kept in the school, though he would try to put her there again under the care of the sister. Letters have been since received however from Rosa herself, asking earnestly to return to Hampton, and as in the case of the others, we cannot but regard this as an indication that the good influences have been lost but are stirring in the heart and conscience. It is and when the desire for better things has to be in variance with the Iowa culture. The case of the Indian girl is perhaps the oldest and influences draw her more strongly and she has less help to resist them than the young men. The boys are grouped together, and hold each other up. This kind of such association is apparent in every case. The chief anxiety in regard to them is reported from the agency where it has not been found practicable to give them a house or rooms by themselves and they have been allowed to live in their separate homes, in the Indian camp. The comparatively small number of girls received thus far has necessitated their return home—here they are, and shall not be as heretofore. The girl thus returning is isolated and unsupported. She cannot make a respectable, independent home for herself, and the worst of her is lost re-educative and less attractive than theirs."

Her problem is one which calls for all help and sympathy. As one Indian girl writes: "Hard out here to be good woman."

A lady of Hampton, Va., whose very interesting letters from Dakota, have been a valuable contribution to the "Southern Workman" during the past year, kindly undertook to look after some of our returned students, while she should remain there. Her view of Rosa's case is thus given:

"Yesterday I called to see Mrs. M—the wife of the Indian agent. She spoke of Rosa Pleets and was regretting her backward movement. She told me that Rosa was very much dissatisfied here, and quite anxious to return to Hampton. It seems that the poor girl has many disadvantages there in the way of evil associates among her nearest kinsfolk."

It would be very hard, I imagine, for a white girl to overcome all the difficulties she has to contend with.

I think her mother and cousins influenced her against coming to live at the mission. It seems to me, and the McLaughlins agree, that the poor girl has in my disavowal to let her return to Hampton."

The two young men are doing first-rate. They are good, conscientious workers; and have the respect of every one."

FORT BERTHOLD.

A hundred and fifty miles to the north west, lies the last agency on the upper Missouri in Dakota; the Fort Berthold agency, of the Gros-Ventres, Arickarees and Mandans, remnants of tribes, long affiliated with the Sioux. The agent is Major J. Kaufman; the missionary work is confided to the Congregational church, which has a boarding school there, Rev. C. L. Hall, missionary. To this agency were returned one girl and five boys, as follows: Josephine Malnoure, aged 21, Gros Ventre; Karanach—Nawag—19; White Wolf—an Arickaree, 23; Laughing Face, 21; Tom Smith, 17; Ara Hotchick, 16, son of Harl Horta, a chief of the Gros Ventres; and Kawhat, 15.

On arriving at the agency, Karanach, as spokesman for the boys, declared in presence of the agency officials and many Indian relatives and friends, that they were not going to live like Indians but were going to work and show the white man that they could work; that they intended to save their money, and some day buy cattle and nice houses with floors and bedsteads, and things like white men have. At their request, they were given three rooms at the agency, to occupy together, so as to go back in the camp. They went right to work in the places provided for them, and for the most part have kept steadily at it. One very favorable indication is that the last reports are the best. November 24, Rev. Mr. Hall wrote: "I cannot give you altogether a rose colored report. There has been disagreement among themselves and failure to come to church and school as much as they should; but they are doing perhaps better than I expected. Josephine is doing well. She interpreted on Thanksgiving day quite well, and then went home and put up a pulpit for seven at her father's house. [Her father is French.] For several days, we have let her take care of Mrs. Ward's morning school, thinking that lady's school, and she seems to keep order, and I hope will succeed in teaching them something. Karanach and Ahuka are sincere, I think, in spite of infirmities. Laughing Face and Tom Smith are up the river with the agency herd, and I have not seen them for several weeks. I hope what I say will not discourage you; if you knew the inside of Indian mission work, it would not. We appreciate the great help your work is to us, and hope that we may cooperate closely. We entertained some of the boys last evening—Thanksgiving day. They were all out to meeting in the morning."

On February 14th, Major Kaufman writes: "Karanach asks me to say to you that he very much desires to return to your school for additional instruction, to remain in your care for one or two years. He has a laudable ambition to become proficient in his trade—shoe making—also to become better acquainted with the English language. He could now get employment in Bismark as journeyman, but he was better skilled in the trade, which he greatly desires to do."

"Josephine Malnoure has been the greater portion of her time since her return, with the family of Rev. C. L. Hall. Ahuka—George White Wolf—is in the agency carpenter shop at work. Laughing Face is now in the blacksmith shop learning the trade; so far, doing well."

Thomas Smith is assistant herder, and is a good boy. Ara-hotchick and Kawhat have been attending school since cold weather began."

Rev. C. L. Hall writes February 17th.

"Karanach and Ahuka are doing quite well, coming to our house to school in the evening after their day's work. Josephine, though it was miles away, Josephine has gone back to her father's house to live entirely, and only comes here to do a little work. She

## At Home.

Rich gift of God! A year of time!  
What pump of rice and slat of day,  
What lures wherever our Northern clime  
Makes Autumn's dropping woodlands gay,  
What air's outblown from ferny dells  
And clover-bloom, and sweet-briar smells,  
What songs of brooks and birds, what fruits  
And flowers,  
Green waves and moonlight snows have in  
its round been oars.

Whittier.  
A friend, (he might write the word with  
a capital) to whom the above beautiful lines  
from our Quaker poet were sent on a New  
Year-card, responds with the following verses,  
which—moved by the enclosure of sweet  
soul and images—he has "ventured to add."  
We are glad he ventured, and that his corre-  
spondent's nature to give us liberty to share it  
with our readers.

Thus, for the year that's past—  
Our grateful hearts recount 's byous things,  
Hoping that even its doubts and wanderings  
May help as home at last;

And, for the unborn year  
Ours be the Master's will which prompt to  
deeds  
Rather than words—deposes ghastly creeds,  
and loving, casts out fear."

E. T. Jan. 1882.

## LITTLE DUTIES.

A letter carrier in one of our large cities  
(a few months ago, found on reaching the post-  
office after a long run of delivery, a letter in  
his bag that he had overlooked. It would  
have taken him half an hour to return and  
deliver it. He was very tired and hungry.  
The letter was an ordinary, unimportant look-  
ing missive. He thrust it in his pocket and  
delivered it on his first round the next day.

What consequence followed? For want of  
that letter a great firm had failed to meet their  
engagements; their notes had gone to protest;  
a mail was closed and hundreds of poor work-  
men were thrown out of employment.

The letter carrier himself was discharged  
for his oversight and neglect. His family  
suffered during the winter for many of the  
necessaries of life, but his loss was of small  
account compared to the enormous amount of  
misery caused by his single failure in duty.

Another case; a mechanic who had been  
out of work a long time in New York, went  
last September to collect a small sum due  
him. The gentleman who owed it, being en-  
joyed at some trade, irritably refused the  
money. The man went to his wretched home,  
and as he went by the sight of his hungry  
wife and children, went out to the back yard  
and hanged himself.

The next day an old employer sent to offer  
him a permanent situation. Here was life  
and a family left paupers because a bill  
of a dollar or two was not paid at the right  
time.

The old Spanish proverb says, "There is  
much thing, as a trifle in the world."  
When we think how the lives of all mankind  
are tangled together, it seems as if every  
word or action moved a lever which set in  
motion a great system of machinery, whose  
effect is beyond our control. For this reason,  
if for no other, let us be careful to perform  
promptly and well the duties of life—even the  
most trivial.

Selected.

RELATION OF FOUL AIR TO CON-  
SUMPTION.

"Experiment has shown that if an animal  
be kept confined in a narrow, closed apart-  
ment, so that the air supplied is always more  
or less vitiated by the carbonic acid which it  
expire, however well fed that animal may be,  
tubercle (consumption) will be developed."  
If this be the case, a large percentage of cases  
of consumption should be met with among the  
inmates of foul, ventilated schools. But, for-  
tunately, the disease is comparatively infre-  
quent under the age of fifteen, and added to  
this is the protective influence of the active  
exercise in the open air usually indulged in  
by school children. It is upon the teachers  
that its blighting effects are most apparent;  
as they are predisposed by age, they neglect  
exercise in the open air, and their mental lab-  
ors are, and very of mind exhausting. Of  
eleven teachers who died during the last eight  
years within the limits of one county in Penn-  
sylvania, two died of acute disease, one of an  
chronic one, and one of a fatal disease, and  
of nine teachers, eight died of acute dis-  
eases and one gentleman; the other, a gentle-  
man, will recover, at least for a time. From  
"Schoolroom Ventilation," by Dr. J. Higgins,  
in Popular Science Monthly for August.

## Health and Humanity.

## NOAH'S MENAGERIE.

From a sermon to children, by the Rev.  
Dr. Blake, of Tunton, Mass., suggested by  
the preservation of animals, as recorded in  
the account of the deluge in Genesis.

"It is wonderful how much care God takes  
of all, even the smallest creature he has made;  
hence he saved samples of all of them in the  
deluge, and he clothes and feeds them abund-  
antly everywhere since, and is very much  
displeased when men maltreat and injure  
them.

And now I have come, secondly, to the  
lesson which I especially wish you children  
to learn, from God's care of his creatures of  
all kinds: it is not to abuse or trouble any of them  
for which God has expended so much kindly  
thought and provision.

Sometimes children seem to have a natural  
disposition to abuse God's creatures. Probab-  
ly it is from an ignorant thoughtlessness, and  
a parent's neglect to teach them better; but  
it often looks as if some children took a de-  
light in hurting animals, and their parents  
apparently have no idea of the disposition it  
is cultivating in their children. If my words  
are for the little folks, I hope they will also  
pass on through them to stay at least with  
their elders; if you need any hints.

As the spring time is now coming on, and  
the trees are full of birds building their nests  
and raising up their little families, and the  
young animals—like the kittens and the  
puppies—are full of life, playing and gambol-  
ing, it seems to be the time to say to all  
boys and girls, and to older people, too,  
"DON'T ABUSE GOD'S YOUNG CREATURES."

It is wrong, God made them to live and  
enjoy life, and they have a right to kindness,  
certainly, as long as they do not injure us,  
and I don't blame them for standing up for  
their right. There is room enough for you  
and for them, and if you keep out of their  
way they will, most of them, let you alone.  
Some of them may be made on purpose to  
stir you up in your forgetfulness, and teach  
you carefulness of their dominion. You may  
not see what is the use of a weep, or a moan,  
or a cry, or a fly, or a snake; but the Lord does  
it, he would not have made them; and he  
will then pretty effectual means of showing  
their use, and you shall find out if you dis-  
turb them. Still it is wrong to abuse and  
torment even a bee or a fly. If you must be  
rid of them, kill them quick! Don't be cruel  
and abusive of the little gentle creatures.

But I speak more for the useful animals,  
such as the horse, the cow, and even the dog  
and the cat. It is plainly wrong to abuse  
these, as they have a special claim to fair  
treatment. Every tender-hearted person feels  
it, and will show it. Yet the horse, especial-  
ly, is fearfully abused; and by men and boys  
who ought to know better. He is overloaded,  
and then he is whipped. He is scared with  
loud words and noise, and then he is whipped.  
He is starved and weakened, and then  
whipped; when the driver himself is the only  
one who deserves the whipping.

I wish sometimes that I could talk  
English; I think there would be some fearful  
tales told about the hitching-posts along the  
streets of our towns; and some market-boys  
would get a dismissal for their abuse to their  
little creatures' horses; and they would rich-  
ly deserve it. But the poor animals cannot  
tell their sufferings, and there are all too few  
disposed to take their part. Do you children  
say a kind or even sharp word for the animals  
who cannot speak for themselves?

2. It is cruel to abuse animals. They have  
feelings. When they are maltreated they  
know it and show it.

Think before you strike your dog or throw  
your cat out of the door, or fling stones at  
the frogs and toads, or at the sweet-singing  
birds in the trees, or starve your canary.  
Think that they feel a hurt as much as you  
would, in their little bodies, and drop your  
stick and your stone.

3. Cruelly to animals will make you cruel.  
Your mind and your feelings grow just as  
your body does, by exercise. If you begin  
when you are little to torture animals, you  
will torture your little brothers and sisters as  
you grow older, and probably you will make  
a hard-hearted and unkindly man when every-  
body will hate. Nero, the Roman emperor,  
it is said, enjoyed, when he was a small boy,  
to pull off the legs of flies, and watch their  
struggles to get on. When he became emperor  
he enjoyed seeing the wild beasts tear the  
Christians in pieces, and he wished that all  
the Romans had but one neck, so that he  
could cut off all their heads off at one blow.  
He grew to be the most cruel of tyrants, and  
ruined to this day.

I beg you, parents, to spend some thought  
and questions on how your children treat the  
little birds and animals about your home.  
Test them, and show them just how they  
be gentle to everything which God has  
made, if you will have them tender to-  
wards you when you shall be old.

I hope you, children, will never forget

that God made and cares for your kitten, and  
your dog, and your horse, as well as for  
yourself—and that he will not forget how  
you treat his own creatures—make their lives  
as pleasant as you can, for it is all the life  
they have, and they will show their thank-  
fulness to you as well as they can. But if you  
abuse them they will be shy of you, and I  
am afraid to come near you, and we shall fear  
that you will grow to feel as they do when we  
become old. Our Dumb Animals.

## Teacher's Table.

SOME HINTS ON THE TEACHING OF  
ELEMENTARY GEOGRAPHY.

To Prof. Hall's very complete system of teaching  
Geography, given in the last three numbers of the  
Southern Workman, we add the following valuable  
hints, furnished for our grammar teachers by their  
friend, Mrs. E. S. L. Watson.

A knowledge of facts concerning the sur-  
face of the earth or of any part of the surface,  
is *Elementary Geography*; a systematic arrange-  
ment of these facts, with a knowledge of their  
causes, is *Scientific Geography*.

In the teaching of young children, element-  
ary Geography only should be attempted.

That the pupil may be prepared to study  
the facts in Geography, it is necessary that he  
should have right ideas of position, direction,  
and distance. Hence, the first series of lessons  
should have reference to the development of these  
ideas.

Absolute and relative position may be taught  
by exercises and questioning, somewhat as  
follows:

"What have I in my hand? Where have I  
put it? Where now? Where now? Now!  
Now! Draw a square like this line drawing;  
put a dot in the middle of the square; at the  
right in your square; at the left, etc., etc."

Teach direction by the compass and other  
means, first the cardinal points, then the in-  
termediate points. Let the pupils walk in  
different directions and describe where they  
go; let them look in different directions and  
name what they see, etc.

Teach distance by using and requiring the  
pupils to use the rule, tape or chain, as applied  
to the edges of their books, slates, desks, the  
length and breadth of the room, yard, etc.,  
etc. Let them judge of distances by their  
eye, then verify by the measure. Teach the  
boundaries of the desk, room, yard, etc. Let  
the pupils draw diagrams of the same on some  
convenient scales.

Let the pupil study the school district or  
village. Actually take him on some elevated  
spot, and teach him to observe and to describe  
the situation of the village, its size, its bound-  
aries, its surface, whether land or water; of  
the land surface teach him the hills, plains,  
valleys or whatever lies before him—of water  
surface, the brooks, rivers, ponds, etc. Let  
him make models and diagrams of what he  
sees. Let him note the soil, the productions,  
and find out the occupation of the people,  
and other matters of interest. He has then  
the elements to start from, and when he begins  
to study about natural or political divisions in  
Geography which he cannot see, will be able,  
by comparing them with something he has  
seen, to understand analogously. Much may be  
seen from the windows of Academic Hall and  
from the cupola of the barn; these are excel-  
lent places in which a Hampton student may  
begin the study of Geography.

Test the pupil's knowledge of natural divi-  
sion, by letting him construct ideal models of  
the same. For materials for modeling, clay,  
moistened sand or putty can be used. Keep  
the hands of the pupils active, as well  
as the eyes and brain.

I would teach the pupil about the township  
in which he lives, and tell him that several of  
these townships make a county, and many  
counties a state; and many states the  
United States; all these united for their pro-  
tection and government; teaching more or less  
of these matters as the pupils were more  
or less mature, enough at least to enable the  
pupil to name the town, county and state, and  
country in which he lives, and to tell who is  
the governor of the state and President of the  
United States. This will require some months,  
perhaps a year to teach.

No matter, better lay a good foundation  
slowly, than have your pupil's ever after learn  
merely words, and gain no ideas. Par-  
ticularly in the case of the young, it is for human beings  
to attain knowledge of things.

## The Shaking Editor.

Lawrence Cott, a newspaper man in Colum-  
bia, Ohio, says he shook with Ague for over  
a year, in spite of all the medicines he took,  
quinine, iron, etc. He got a box of Theria-  
line, took it, ceased shaking and has not had  
a chill since. Theria-line is a sugar-coated  
gum cure, and costs only 25c. a box. It has  
never failed.

## Agriculture.

## LIFE ON THE FARM.

The following sensible reflections are from  
an editorial of the Springfield, (Mass.)  
Monthly, "Good Company."

As to its idleness—whatever has been the  
case in the past when there were swamps to be  
potted and nurseries to be lifted from almost  
every field; when it was a long way to market  
and the buyer paid for produce in "trade";  
when almost all implements were laboriously  
hewn out at home or clumsily hammered out  
by the village blacksmith—there is, happily,  
has changed on the farm now, and less need  
of it every year. Taking the year through,  
the working hours of a man on a farm are no  
longer than those of the section hand on the  
railway or the stevedore in the ship who has his  
own garden to be before breakfast or after  
supper. The busy lawyer and the doctor in  
average practice work longer and harder than  
the farmer. The grocer and the editor and  
book keeper each sees less of his children in  
their waking hours than the farmer who some-  
times carries them in their "day life." More-  
over, within a few years, labor-saving imple-  
ments have wrought a wonderful change in  
almost every feature of farm work.

It must be conceded, of course, that the  
profits of farming are not so large on the aver-  
age as those which are realized by men who  
are successful in mercantile or professional  
life. But such as they are, they are *sure*;  
twenty fold surer at least. Large profits are  
always contingent on large risks. One must  
not expect the same rate of interest from Gov-  
ernment bonds as from mining stocks. The  
wear and tear, the losses and defeats of busi-  
ness men in the last ten years, have been a  
experience that no farmer need covet. He  
may well be satisfied with the small income  
that, taking one year with another, is such a  
sure one; to resign the five chances of alibing  
success in commercial life to those who are  
willing to take the ninety-five chances of ruin  
therein.

The cities and towns are full of men who  
once had visions of a business success that  
would in monthly profits put to shame the  
small savings of a farmer's lifetime. On the  
home stretch of three score and ten they find  
themselves dependent for a livelihood on sal-  
aried positions which they hold by a dimly  
uncertain tenure, or on the precarious com-  
missions of a canvasser or a commercial trav-  
eler. In comfort and in income, the lives they  
now lead make a shabby showing compared  
with what they might have done as farmers,  
and point an important moral for the young  
men who are now debating whether they will  
turn their backs on the farm and try their  
luck in the lottery of city life.

## EGG SHELLS.—OYSTER SHELLS.

That hens may freely they must have  
material from which to form shells for their  
eggs. The Hebrews complained of their tak-  
ing manure in ancient times that they were re-  
quired to make bricks without straw. The  
hens of many modern poultry-keepers may  
complain that they are expected to produce  
eggs without being furnished with shell-  
material.

An egg-shell is composed principally of  
carbonate of lime. This carbonate of lime  
is secreted and applied to the egg in its pas-  
sage through the last eight inches of the ovi-  
duct. When this is known it is easy to see  
that there must be a sufficient amount of the  
carbonate in the tissues of the hen or the shell  
cannot be secreted. The lime is furnished to  
the tissues and secreting cells by the blood,  
and it must be furnished to the blood by the  
progress of digestion, which is the reduction  
and preparation of the food for assimilation  
and selection in the form of the egg.

If the necessary material is not furnished  
to the hen, she cannot and will not manufac-  
ture eggs any more than the cow will secrete  
and produce milk without proper food.  
Lime in some form is a necessary ingredient  
in the bill of fare of a hen. She gets a small  
quantity of it in the grain and other food she  
eats, but not enough to supply her own tissue  
and make shells for her eggs if she has typh-  
oid. It must therefore be furnished in her food.  
This can easily be done where oyster shells  
can be obtained. They should be broken up  
with a hammer into pieces small enough for  
the fowls to swallow. They will have to be  
taught to eat them if they have not been used  
to them, but they will soon learn, and will  
eat considerable quantities when they can get  
them. This is as simple as a, b, c, but it is  
important if you want your hens to lay.

## Horsford's Acid Phosphate

## In Nerve Exhaustion.

I am altogether pleased with the properties  
of Horsford's Acid Phosphate in nerve exhaus-  
tion and dyspepsia.

SPRING.

## SPRING.

BY JAMES RUSSELL LOWELL.

I, country-born an' bred, know where to find  
Some blooms that make the season suit the  
mind,  
An' seem to catch the doubtin' blue-bird's  
notes,—  
Half-vent'rin' liverworts in furry coats,  
Bloodroots, whose rolled-up leaves of you  
occur,  
Each on 'em's cradle to a baby-peril,—  
But these are jes' Spring's pickets; sure ex-  
sine.  
The rebell' frosts 'll try to drive 'em in;  
For half our May's so awfully like May 'n,  
'T would ride a Shaker or an ev'ge saint;  
Though I own up I like o' our luck'ard  
springs  
Thet kind o' haggie, with their greens an'  
things,  
An' when you 'most give up, 'thout more  
words  
Toss the fields full o' blossoms, leaves an'  
birds.  
Thet's Northern natur', slow 'n' apt to doubt,  
But when it does git stirred, ther's no gin-out!  
Fust come the blackbirds clatt'rin' in tall  
trees,  
An' settin' things in windy Congresses,—  
Queer politicians, though, for 'I'll be skinned  
Ef all on 'em don't lead against the wind.  
'Fore long the trees begin to show believ',  
—The maple crimson to a coral-red,  
Then soft swarms swing off from all the  
willers  
So plump they look like yaller caterpillars,  
Then gray hoes-butts leak buds unfold,  
Softer'n a baby's be at three days old;  
Thet robin-redbreast's almanick; he knows  
Thet alter the trees 's only blossom-snows;  
So choosin' out a handy crotch and spouse,  
He goes to plast'rin' his adobe house.  
Then seems to come a hitch,—things lag be-  
hind,  
Till some fine mornin' Spring makes up her  
mind,  
An' ez, when snow-swelled rivers cresh their  
dams  
Heaped-up with ice the dovelists in an' jams,  
A leak comes spurtin' thru some pin-hole cleft,  
Grows stronger, fiercer, tears out right an' left,  
Then all the waters bow themselves an' come,  
Sudden in one great slope o' shelterin' foam,  
Jes' so our spring gits ev'rythin' in tune.  
An' gives one leap from April into June;  
Then all comes crowdin' in; afore you think,  
Young oak-leaves mist in the aside-hill woods  
with pink.  
The catbird in the laylock-hush is loud;  
The orchards turn to heaps o' rosy cloud;  
Red-cedars blossom tu, though few folks  
know it,  
An' look all dilt in sunshine like a poet;  
The lime-trees pile their solid stacks o' shade  
An' drowsily slumber with the bees' sweet  
trade;  
In ellum-shrouds the flashin' hangbird clings  
An' for the summer 'y'g'a his hammock  
slings;  
All down the loose-walled lanes in archin'  
bowers  
The har'ry droops its strings o' golden flow-  
ers,  
Whose shrilly 'hearts the school-gals love  
to try  
With pins,—they 'll worry youn' to go,  
himely!  
But I don't love your cat'logue style,—do  
you!  
Ef of set off Nat'ur by vendoo;  
One word with blood in't twice ez good  
ez two;  
'Nuff sed, June's bridesman, poet o' the year,  
Gladness on wings, the bobolink, is here;  
Halfbird in tip-top apple blooms be swingin',  
Or climbs against the breeze with quiverin'  
wings,  
Or, givin' away to 't'n a mock despair,  
Runs down a brook o' laughter, thru the air.

## THE LAST DANCE AT MEADOW HILL.

BY ORRA LAMORNE.

Mrs. Lamorne's sketches of life among the freed-  
men, have interested many of our readers. The fol-  
lowing picture of one of the last occasions of a com-  
mune between the gaities and miseries of the  
old, and the stern realities and development  
of the new.  
Old master was dead, the plantation had  
been sold, and the white family had all gone  
to their new homes, excepting one of the  
young gentlemen, who remained alone in the  
deserted mansion.  
At Christmas after the sale of the land, the  
division of the slaves among the heirs had  
been arranged. This had been done by draw-  
ing lots, but in some cases of personal pre-  
ference or to keep families together, exchanges  
had been made to the satisfaction of all  
parties. None of them had been sold "out of  
the estate" as Negroes expressed it, but there  
was naturally much sadness among them at  
leaving the old homestead and parting from  
each other. Jennyson, the overseer, remained  
in his cottage near the servants' quarters to

preserve order on the place. The general  
breaking up was to be made on the 1st of  
January, and the Negroes asked young "Mas'  
Charles's permission to give a grand ball to  
part to their friends in the neighborhood,  
before the final parting.

It seems curious now to recall such scenes  
as this, and to read the slave code which pre-  
scribed such heavy penalties for the meeting  
of Negroes after dark. Young master really  
granted the request, and only urged that re-  
spectable people should be invited, and or-  
der maintained. The feast prepared for the  
occasion was both substantial and elegant.  
Abundant supplies of fowls of every kind,  
lams, sausages, roast, mutton, dried beef,  
sausages, being prepared by the most skill-  
ful cooks, more than one of whom had a wide  
reputation as a culinary artist. There was  
great variety of bread, cakes, pies, jellies,  
preserved fruit, etc. Most of these viands  
were supplied by the land, and each family  
furnished its quota from private stores, old  
master having always allowed his people  
much latitude in raising fowls, pigs, vegeta-  
bles, etc.

There was plenty of milk and butter in the  
dairy, and a joint fund was raised for the  
purchase of groceries and such things as could  
not be procured at home. Although invita-  
tions were issued, in order to save the man-  
agers from pecuniary loss each guest was ex-  
pected to pay fifty cents on his arrival. This  
was customary among the colored people, and  
excited no comment.

The slaves of people in good society were  
very particular as to their associates, measur-  
ing their acquaintances by the recognized pos-  
session of their masters, and being very scorn-  
ful in their look towards such unfortunates. Af-  
ricans as chance to have come into possession  
of "po' white folks that couldn't muster  
but one or two niggers to their name," where-  
as the masters of these arrogant persons  
counted their slaves by the hundred, one  
family in the district owning over a thousand.

In the inviting invitations for this entertain-  
ment, there were doubtless as many heart-  
burning grudges by these very houses, as  
among the free-givers, as is common in pre-  
paring for festivals in other classes of society.

A fiddler was engaged for the occasion, and  
some of the vacant rooms of the deserted  
house decorated with evergreens, the tables  
being set in one apartment, and what had been  
the school-room for master's children, looking  
out on a long porch, used as the ball room.  
"Mas' Charles" and the overseer received for-  
mal invitations, and one or two young gentle-  
men from the neighborhood who wanted to  
see the fun, and had come over to spend the  
night, were included in the invitations to them.

About dusk the guests began to arrive. All  
were of course arranged in their best attire,  
which was in many cases the cast off clothing  
of "these white-folks." A new suit of home-  
spun would not have been considered for a  
moment, in comparison with a half-worn  
broad-cloth or a somewhat dilapidated silk-  
dress, even though the fashions were decid-  
edly antiquated, and the discarded robes of  
young master or the slightly tarnished robes  
of young mistis were deemed very becoming  
to sable swains and dusky belles in their own  
eyes.

On such occasions, many young white ladies,  
sympathizing with the excitement of the col-  
ored girls who had been their companions  
from childhood, would put the finishing touch-  
es to the toilet of their maids, adding con-  
tributions from their own stores of lace, flow-  
ers, ribbons, etc.

The guests once assembled, all went merry  
as a marriage bell.

Old master's funeral, which had taken place  
amid floods of tears, the sale of the beautiful  
homestead, where many of them had been  
born, the approaching separation; all was for-  
gotten for the time, as the amiable and mirth-  
loving creatures threw themselves with all  
the abandon of their ardent natures into the  
festivities of the hour.

Games were played, all, of course, ending  
in plying forfeits, songs were sung, and sto-  
ries were told by those having talents in that  
line. Then the supper was served and duly  
appreciated. Perhaps some of the guests be-  
held an abundance to which they were little  
accustomed, and enjoyed the feast on the  
principle that it might be long ere they  
should look upon it like again.

"Mas' Charles" and his companions were not  
forgotten, a table being set in that young  
gentleman's room and amply supplied from  
every dish prepared for the banquet. Mr.  
Jennyson, the overseer, was expected by  
the managers, was invited to join the set.  
This man could neither read nor write, and in  
education and intelligence fell below many of  
the slaves, whom it was his business to con-  
trol, nearly all the house-servants of this es-  
tate being able to read and many of them  
knowing how to write, and being very intel-  
ligent people. The overseer was a quiet  
specimen of his class, however, was a quiet,  
staid man, who was thought of as a farm man-  
ager by his employers, and quite popular  
among the Negroes, with whom he was never

needlessly harsh, and with whom he worked  
steadily, setting them a good example by his  
industrious habits.

At eight o'clock the frolic began in earnest,  
the fiddler was allowed no rest, and the house  
shook with the animation of the dances.  
Quadrilles were repeated endlessly, with many  
improving variations, and the Virginia reel,  
which combined many features of the horn-  
pipe, jig, polka, highland fling, with no  
doubt a suggestion of the African war-dance,  
imported and handed down by involuntary  
emigrants from Ethiopia, was often called for  
and performed with unwearied zest. The  
"wee sma'" hours were approaching, and the  
overseer was reluctantly discussing with his  
companions the propriety of suggesting to the  
loose makers that it was time for them to  
close their revels, when an untoward event  
occurred which threatened to dissolve all  
this gaiety in gloom.

The enjoyment was apparently unaltered,  
and the dancers indulging in strength and  
spirit, when a young man named Scipio  
Tomkins, who had elicited the admiration  
of all by his astonishing feats and flights, in  
attempting to execute an especially impres-  
sive fan-dance or pigeon wing, vaulted high  
into the air, and unable to stop himself, went  
head foremost through a window, and struck  
with a tremendous thump upon a large wood-  
en chair which stood upon the porch below.  
The top of the wooden vase, unable to resist  
such an attack, promptly gave way, and Scipio's  
head, amidst unusual disorder, reached the  
bottom, and he and the chair into which he  
was tightly wedged, rolled over together on  
the floor and lay quite motionless.

In a moment, the music and dancing ceased,  
the overseer and "Mas' Charles" were sum-  
moned, and all gathered in consternation  
around the hapless dancer, who was supposed  
to be dead. This was a very serious thing in-  
deed, for Scipio represented in his active  
life, and for once too penetrating head, at  
least a thousand dollars in money to his mas-  
ter, a neighboring planter. It might become  
a serious question of responsibility for Scipio's  
death, and the overseer, who was a man of  
a troubled conscience, told the Negroes to  
set out for their homes as speedily and quiet-  
ly as possible, while he and some of the old  
people separated. Scipio's negro master, the  
partner, the church, and examined the extent  
of his injuries.

For a long time the disabled dancer showed  
no signs of life, but gradually he revived, fi-  
nally sat up, and at length after much appli-  
cation of camphor and brown paper, and a  
copious draught of whiskey, he picked him-  
self up and went home, leaving the churn  
much the worse for the encounter.

## THE PANTHEON IN PARIS.

BY CHARLES A. ROBINSON.

(Formerly Pastor of the American Church in Paris.)

For the Southern Workman.

When any enthusiastic countryman of ours,  
sojourning in the French Capital, and sight-  
seeing among its celebrities, betrayed the  
most unassuming desire to climb high, and  
wanted to have us do the talking and the  
guiding for him up to the top of the Arc  
de Triomphe or the Place Vendôme column,  
we used to evade the pressure by saying calm-  
ly, "well, you must climb the Pantheon, and  
will work yourself aloft better, and see three  
times as much."

Around the crown of the dome, just under  
the lantern, runs a spacious balcony; and from  
this, the most elevated spot in Paris, a mag-  
nificent prospect is presented of the city and  
everything about it.

The building itself is celebrated for its  
beauty, as well as for its history, and its me-  
mories of the stormy past. King "Louis, in  
the far-back ages, built a Christian church on  
this spot, just after his conversion. This he  
dedicated to the apostles Peter and Paul, and  
so it stood for a while, but when the Nanterre  
madison Genevieve died, she was buried within  
the enclosure, and thence forward the edifice  
took her name, and she became a canonized  
the patron saint of Paris. This was about  
A. D. 512.

That church remained for an unusually long  
time; but in 1764 it was pretty much in  
ruins. Madame de Pompadour persuaded  
Louis XV to start another near by to take its  
name and place. The money was raised by a  
lottery, the people piously yielding with each  
other in providing for the expense when their  
great patroness was to be honored. After  
all its wild fortunes, this edifice has come to  
be a church again, and goes by its double  
name; it is either the Pantheon, or the Eglise  
de Genevieve.

This celebrated woman, St. Genevieve, was  
reared at Nanterre, just outside of Paris.  
Early noticed for her sanctity by one of the  
bishops of that time, she was easily persuaded  
to enter a convent in the city. Here, for a  
long time, she lived a pattern of angelic  
works and prayer. Before long she started  
the community with a prediction that a horde  
of barbarians would sweep down from the  
north, and when the Rhine, and suddenly  
menaced the province, her words were ac-

cepted as if from high heaven. So she ven-  
tured to budge her gift of prophecy again,  
declaring that she would be able to do no harm  
to Paris. The people believed her, and re-  
mained firm. Singularly enough, for some  
never explained reason, the great commander  
used to be as he approached the city, and  
eventually withdrew without attack. The  
people immediately asserted that Gene-  
vieve's piety had averted the destruction.  
Her fame rose to the greatest height.  
Even that deplorable old creature who popu-  
larized a pillar-top at Antioch, Simon Stylites,  
varied the monotony of his useless life, by  
sending messages to inquire after her health.  
It was devoutly whispered around that she  
could work miracles, and all that. By and  
bye she died, as most things human do; then  
she was numbered among Roman Catholic  
saints.

Poor Louis XV stopped church building in  
order to have the small-pox, and died. His  
grand edifice was incomplete when the great  
revolution under Louis XVI began. The  
people have long loved to visit the Pantheon,  
by that time, and changed the purpose of the  
building. In 1791 the National Assembly de-  
clared that it should be called the Pantheon,  
and used for the burial-place of distinguished  
men. That is the reference of those prodig-  
ious words, so singular to be put on the front  
of a church, meaning literally, "Dedicated  
to the great men of an appreciative country."

For a period of years this plan seems to  
have been actually carried out. The vaults  
underneath the nave and transepts are con-  
structed for the reception of stone coffins; and  
many of them are filled now. In the centre  
of the crypt are shown the tombs of the in-  
dels Voltaire and Rousseau. The bodies are  
not in them now, however; these were re-  
moved mysteriously during the restoration of  
the thoroughness. And even the cenotaphs are  
separated by high and closed partitions from  
all the rest. When the building came to be  
used as a church again, the parish clergy pe-  
titioned long and seriously that every vestige  
of memorial of such unholy heretics might be  
taken away; but the authorities objected, and  
the priests did the best they could to conceal  
the continuation.

In the enclosed chamber stands a marble  
bust of Voltaire, said to be an admirable  
likeness of the witty sceptic. Out of the  
tomb of Rousseau, extends a hand bearing a  
torch. It is a prodigious chink of wood  
curiously carved from the local guide-book  
that the meaning of this is:—"He sheds light  
around him even after death."

The galleries are curiously constructed  
under this church, the passages wind intricate-  
ly. And at one point visitors are led up into  
an angle, set off by a railing, that they may  
listen to a remarkable echo. A whisper is re-  
peated over and over again, and often away  
mysteriously in the distance. And the stroke  
of a gong is so deafening in the multiplied  
reverberations, that warning is generally given  
to the timid before the noisy bell is struck.

Some fine paintings, copied and original,  
adorn the interior of this edifice. It is one of  
the noblest pieces of architecture in Paris; and  
yet it strikes every visitor so comfodally  
in to be often unappreciated. It is a sort of  
cross between a wallah and a church, and  
so fails in being either. The height from the  
pavement to the top of the dome is two hun-  
dred and sixty-eight feet, and is mounted by  
a staircase of four hundred and seventy-five  
steps. On the platform of the porch outside,  
behind the columns, stand two fine groups in  
stone; one representing the "Prayer of Cleo-  
p" the other the "Prayer of St. Genevieve."

One passes for a final look at this fine build-  
ing, more to rehearse the terrible histories it  
perpetuates, than anything else. Here in this  
extensive area, just in front, a desperate mob  
of insurgents made their last stand behind  
their barricades, in the revolution of 1848;  
the headquarters of the rebels were fixed in  
the Pantheon. In the crypt, Marat, of infa-  
mous memory, was interred; but the infuriated  
people tore from their resting-place his re-  
mains, and flung them into the common sewer  
in the rue Montmartre. Mirabeau was also  
buried here; his body in like rejection was re-  
moved. That hard head "whose locks shook  
France when he nodded," found no quiet  
even in the grave.

## DON'T BE LAUGHED OUT OF YOUR MONEY OR YOUR PRAYERS.

THE late Admiral Colpoys, who rose to  
that high station as the result of his meri-  
torious exertions, next to be fond of relating  
that on leaving a very humble lodging to join  
his ship as a midshipman, his landlady pre-  
sented him with a Bible and a guinea, saying,  
"God bless you and prosper you, my lad;  
and as for the guinea, never suffer yourself to  
be laughed out of your money or your prayers."  
The young sailor carefully followed this  
advice through life, and had reason to rejoice  
that he did so; while thousands have unavail-  
ingly regretted that they have pursued a  
different course.

Hampton, Va.

## Hampton Tracts for the People.

Twenty numbers published.  
1. Health Laws of Moses. by H. W. Ludlow.  
2. Duty of Teachers. by E. W. Collingwood.  
3. Foretellable Diseases. by F. Armstrong.  
4. Who found James? by H. W. Ludlow.  
5. A Hampered Boy. by M. F. Armstrong.  
6. Woman's Work in Sanitary Reform. (English)  
7. The Lights of the Bible. by R. E. Armstrong.  
8. The Two Breaths. by Rev. Charles Kingsley.  
9. Cleanliness and Disinfection. by E. Harris, M. D.  
10. Our Jews. by M. F. Armstrong.  
Published by Putnam's Press, New York  
Edited and printed at Hampton Institute.  
For sale at 10¢ per copy. Specimens sent from Ham-  
pton at 10¢ a number, or 50¢ a set.

The Anniversary exercises of the  
Hampton Institute for 1892 will be held  
Thursday, May 25th.

Class recitations in the morning from  
8:30 to 12 o'clock.

Rhetorical exercises in the afternoon  
from 2 till 5 o'clock. In order to prevent  
confusion, admission by card to the latter  
is necessary.

All contributors are entitled to cards,  
which will be distributed early in May.  
Cars leave New York City, foot of  
Desbrosses Street, at 8:40 P. M.; arrive  
at Philadelphia at about 5:30 P. M.;  
arriving at Baltimore at 9 P. M.; thence  
by steamboat for Fort Monroe, arriving  
at 8 A. M. next day. Accommodations  
at the Hygeia Hotel should be ordered  
by telegraph; there is likely to be ample  
room. The School is two and a half  
miles distant; there are plenty of vehicles.  
A fine sea-going steamship of the Old  
Dominion Line leaves pier 39, North River,  
New York every Tuesday, at 3 P. M., arriv-  
ing in time for the exercises, making the  
passage to Norfolk in 24 hours. Office cor-  
ner of Greenwich and Fulton Streets,  
New York.

The Boston and Norfolk Steamship  
Company, E. Sampson, general agent, 53  
Central Wharf, Boston, has issued a  
circular, making special arrangements and  
terms to accommodate one hundred guests  
for a 52-hour sea voyage to Norfolk, con-  
necting by ferry with Fort Monroe, which  
is 15 miles distant, inviting only those  
who are interested in the Hampton work,  
and desire to attend its anniversary exer-  
cises. Fare for round trip, \$18. For full  
information, address Capt. Sampson.

In a report made during the past win-  
ter by Lieut. Francis Winslow, on the  
oyster beds of America, notably those of  
Maryland and Virginia, he says, speak-  
ing of that vast industry which is so im-  
portant a factor in the prosperity of our  
seacoast population: "The primary  
cause of the threatened destruction of this  
industry is the failure to protect the oys-  
ter beds."

Lieut. Winslow's personal observation  
of the Virginia and Maryland beds dates  
from the year 1878, and the results of it  
are published in a series of official reports  
presented by him to the Superintendent  
of the Coast and Geodetic survey. The  
facts which he presented in his able pa-  
pers of last winter are gathered from  
those reports, from a paper by Dr. Brooks  
of the Johns Hopkins University and  
from various works relating to oyster  
culture here and abroad. The authorities  
are as near final as is possible with our  
present facilities for the study of the oys-  
ter, and while within the space of the  
present article we cannot give the details  
necessary to a thorough understanding of  
the subject, we can, in a condensed form,  
give the exceedingly valuable results of  
Lieut. Winslow's work.

The first question which suggests itself  
is, of course, "What proof have we that  
our oyster beds are deteriorating?" Lieut.  
Winslow replies, "The deterioration of  
an oyster bed and its impaired fecundity  
may be known 1st, by the general appear-  
ance and condition of the beds and ani-  
mals; 2d, the ratio of 'young' to 'ma-  
ture' oysters will be abnormally large or  
small; 3d, the amount of debris in the  
bed will be very large; 4th, the number  
of oysters in the beds will be found to de-  
crease from year to year; 5th, unusual  
inhabitants will be discovered in the beds,  
or in general terms there will be marked  
changes in the fauna of the beds."

The localities exhaustively studied by  
Lieut. Winslow are Pocomoke and Tan-  
gier Sounds on the eastern shore of Ches-  
apeake Bay opposite the mouth of the Po-  
comoke River, and these were selected "on  
account of the immense extent of their  
oyster beds, and because they permitted  
the study of all the varying conditions af-  
fecting the oyster." There is every reason  
to suppose that the observations made  
upon these beds cover all neighbor-  
ing beds. Lieut. Winslow's own words be-  
ing: "While I am unable to say with cer-  
tainty that the beds of other localities  
than the one I have examined, have been  
overworked, yet I should infer that such  
was probably the case, and considering  
the surprising results of the investigation  
of a locality supposed to be the most pro-  
ductive in the country, if not in the world,  
the investigation of others cannot too  
soon be undertaken."

It is then true that the conditions de-  
scribed by Lieut. Winslow as indicating  
deterioration are to be found upon our  
oyster beds? His reply is that this is  
beyond question. Every fact, and he  
piles Ossa upon Pelion, corroborates his  
view. He says in detail: "1. On the old  
beds the shells are dirty, worm-eaten,  
green singly, or in clusters of twos or  
threes, with little sponges attached to  
them, and in many respects present an  
unhealthy appearance. 2. The ratio of  
young to mature is always either abnor-  
mally large or small. 3. The proportion of  
debris is enormous, in Pocomoke Sound  
amounting to as much as 75 per cent. 4.  
The number of oysters on the square yd.  
is in most cases decreasing steadily from  
season to season, and is never increasing."

Being then, apparently, forced to ac-  
knowledge that the glory of our oyster  
beds is departing, we naturally turn to  
look for the causes of this imminent mis-  
fortune, and find Lieut. Winslow again  
ready for us. One by one he eliminates  
the possible natural causes by series of  
experiments which our space does not  
permit us to follow, and arrives at the  
conclusion that "after reviewing all the  
natural causes which affect the beds,  
we can assign to none of them the destruc-  
tion of either old or young oysters, or the  
extension of the beds which has been co-  
incident with the diminution of the num-  
ber of the animals. Remaining then, as  
the only other operating cause, is the  
agency of man."

What is included in that comprehen-  
sive phrase "the agency of man," any one  
who is familiar with the shores of Virgin-  
ia and Maryland, knows only too well,  
and Lieut. Winslow's recapitulation mer-  
ely puts it into scientific language. "Dredg-  
ing," he tells us, is the principal means by  
which the oyster fishery is carried on, and  
its effects would theoretically be as fol-  
lows: 1st. It would extend the beds,

2d. It would destroy their fecundity by  
removing the breed oysters and destroy-  
ing their progeny."

When we ask if the facts bear this out  
he replies: "While the dredges are in the  
water, the mud, sand, sponge, grass or  
other debris brought up are separated from  
the oysters, and together with all  
oysters unfit for market, thrown back in-  
to the water. The limits of the dredging  
ground are not accurately defined, and the  
vessels frequently drag large numbers  
of shells and oysters some distance beyond  
the boundary of beds. The dredge, es-  
pecially when full, acts as a scrape, and  
carries before it much that would be col-  
lected in the network attached to it, had  
that receptacle been open. After "cul-  
ling" the oysters, or separating them from  
the old shells, those shells are thrown  
back again, (and with them many young  
oysters.) Should they fall on suitable  
ground, and any which is sufficiently con-  
sistent to support them is suitable, they  
form a small colony, which, by action of  
natural causes or the dredge, soon be-  
comes attached to the main bed, and the  
area of the latter is thus enlarged. The  
dredges are thus mainly instrumental in  
extending the area, especially by their di-  
rect action in raking down the beds  
and spreading the shells and oysters.

As to the diminished fecundity, the re-  
moval of mature brood oysters of course  
has its effect, and should this removal con-  
tinue, the fecundity will naturally dimin-  
ish, until there is virtually no reproduc-  
tion on the bed. But the removal of the  
brood oysters is not by any means the  
sum total of the effects of the dredging.  
Millions of young oysters, unfit for mar-  
ket, are carried off sticking to the shells  
of the mature oysters, and with those  
shells find a final resting place on the  
shell heaps of the packing houses. Nearly  
as many young are destroyed by being  
thrown from the dredging vessels upon  
soft or unfavorable bottoms, no care be-  
ing exercised in the hurry and press of  
work, to see that the young are returned  
to the beds or other suitable ground.

\* The evil of excessive fishery then ex-  
ists and, continuing, can have but one ef-  
fect. \* \* The failure of beds in differ-  
ent localities may occur at any time, and  
it is more than probable that those of the  
Chesapeake Bay will be practically ex-  
hausted before many years."

To point this warning, we have the ex-  
perience of England and France, where  
there has been a complete wreck of the  
oyster beds, only to be remedied by a to-  
tal prohibition of the fisheries for several  
years, and the legislation which they have  
been forced to adopt is probably the only  
thing which will save us. The results to  
be attained are, (to quote Lieut. Win-  
slow.) "The prevention of exhaustive  
dredging. The reservation of those beds  
the part of beds upon which there is a  
large number of young growth. The pre-  
vention of the removal of the young  
growth from the beds. The close obser-  
vance of the close-time, which should in-  
clude the outer limits of the spawning  
season. The cleansing of the beds before  
the advent of the young brood. The ex-  
posure of suitable "culch" when a bed  
has been long worked, and the destruction  
of star fish, drills—or other enemies that  
may exist on the beds."

As to the existing condition of our laws,  
Lieut. Winslow says: "In the locality  
which has been investigated, an inefficient  
law is entirely disregarded, an oyster  
guard exists, but pays no attention to the  
duties assigned, and the fishery is gov-  
erned by the demands of the market and  
the necessities of the oystermen." The  
remedy of course is with our legislators, or  
more accurately speaking with our voters,  
and what they should demand at once,  
before it is too late, is the "establishment  
of a commission to have charge of all mat-  
ters pertaining to the fishery—this com-  
mission to be composed of intelligent  
men, having special knowledge of the  
subject, and allowed considerable power,  
and to be so appointed and constituted  
that their acts will be influenced by no  
consideration other than those for the  
good of the beds." It is this and this  
alone which will secure the future of our  
oyster beds, and make them permanent  
sources of prosperity, and the subject is

worthy of more consideration than it gets  
from those who are principally interested  
in it.

The run of shad on the North Carolina  
coast is reported to be larger than it has  
been for years at this season. This is the  
result of the system of hatching which  
was begun several years ago.

## To the Editor of the Workman:

Your readers are aware that an effort  
is being made to secure the passage of a  
bill distributing a fund to the States by  
the general Government on the basis of  
illiteracy, to enlarge and strengthen the  
common schools of the country. The  
"Workman" last month published a  
table illustrating the urgency of such a  
measure. The question is frequently  
asked by members of Congress, and doubt-  
less by others, "Under what provision of  
the Constitution is found authority for  
such action?" The answer is: "Under  
the same clause which gave authority for  
and validity to the war measures by force  
of which the ignorant slave became a free  
citizen with the ballot in his hand." But  
it is said, "these were war measures, and  
laws are silent in the midst of arms."  
These war measures found their sanction  
in the fact that they were necessary to  
the life of the nation. *Salus populi su-  
prema est lex* is a maxim no less true in  
time of peace than in time of war—the  
remedies to be applied may be different;  
the right and duty of applying them is  
the same. The fact that armies were  
marching against the Capitol of the nation  
created an exigency which justified the  
extra Constitutional right of issuing an  
emancipation proclamation. No one who  
desired to see the nation live or believed  
that it ought to live, doubts that it was a  
legitimate exercise of power, because vital  
and necessary. For the same reason, what-  
ever measures are essential to the life and  
safety of the nation, the nation may adopt.  
Can any intelligent man say that the bal-  
lot in the hands of nearly two millions of  
men who are unable to read it, constitutes  
a danger less imminent to the life of the  
nation than that which called into requi-  
sition the war measures by which the  
slave was emancipated and our national  
debt was incurred? Against the mea-  
sures that would destroy its life, the Gov-  
ernment hurled the force of its loyal citi-  
zens and overcame them. Against the  
deadly ballot of the illiterate voter there  
is absolutely no defence. Under any  
theory of State rights, which is not suicidal,  
the Government can and must defend  
its life; but under no theory of democra-  
tic institutions may the voter be controlled  
or suppressed. Armed rebellion may be  
Constitutionally quelled by armed loyalty,  
but the bull-dozing and the ballot-stuffer  
are alike deadly enemies to republican  
liberty, no matter how great the danger  
they seek to avert. Safety cannot be found  
in suppressing an ignorant voter—the  
only legitimate remedy is found in edu-  
cating him.

These truths are indisputable. And  
now it needs to be said with emphasis  
and iteration that we have reached a point  
where danger from illiterate voters is no  
longer a matter of theory, or one that can  
with impunity be neglected.  
For a number of years the illiterate  
Negro vote of the country was largely  
under the control of one party, and what-  
ever damage it did to given localities, it  
did not threaten national interests more  
seriously than did the party that con-  
trolled it. Subsequently it has been so  
far suppressed as to relieve largely these  
localities from the evils of its ascendancy,  
and has reached national issues only neg-  
atively. But the time is already com-  
ing, in some States, and is rapidly coming  
in all, when both parties will resolve  
themselves into a committee of the whole  
to see that this vote not only goes into  
the box, but comes out with its full force  
upon every state and national issue.

Statesmen tell us with great truth that  
the voter needs his vote for his own pro-  
tection; that when all parties are anxious  
that he shall vote, and determined that he  
shall be protected in his right to do so,  
then is his safe, and not until then. This  
is a great truth, but it is only a small  
part of it. They should raise and answer

the further question: How is the State to be protected against his vote, and how is its safety to be secured while he is protected in his rights? And that question receives fearful emphasis from the facts just stated.

That the Government has the same right to send forth the school-master that it has to send forth the recruiting sergeant, and for the same reason, cannot be denied except by a solocism in logic and common sense too obvious to require consideration. That it has been urged to do so by many of our wisest and best Chief Magistrates; and that it has done so many, many times, from its very organization, is a mere matter of history, which ought to be so familiar that no one entrusted with the duty of legislating for its welfare, need ask for Constitutional power or repeated precedent to justify the action which is now sought. The last four Presidents have only repeated in urgent language what the first five had strongly urged, when they asked that the general Government shall take prompt and efficient action in providing for this general diffusion of knowledge as necessary to the safety of our institutions; and if Congress shall make liberal appropriations either from public lands, or from proceeds from sale of public lands, or from surplus revenues in the treasury, it will only repeat what has been done many times from 1787 down to 1862.

C. C. PAINTER.

Washington City, March 18th, 1882.

#### THE JOHN F. SLATER FUND.

John F. Slater, a manufacturer of Norwich, Conn., has decided to give \$1,000,000 for the education of colored people of the South, the fund to be put into the hands of trustees, under the laws of the State of New York. The trustees are to be Ex-President Hayes, Chief Justice Waite, President Gilman, of Johns Hopkins University, the Rev. Dr. Phillips Brooks, of Boston, Governor Colquitt, of Georgia, James P. Boyce, of Kentucky, William A. Slater, of Norwich, the son of the giver, and John A. Stewart, William E. Dodge, and Morris K. Jesup, of New York. Ex-President Hayes is to be the first president. Mr. Slater, in a letter explaining his gift and his aims, says:

"The general object which I desire to have exclusively pursued is the uplifting of the lately emancipated populations of the Southern States and their posterity by conferring on them the blessings of Christian education. The disabilities formerly suffered by these people, and their singular patience and fidelity in the great crisis of the nation, establish a just claim on the sympathy and good will of humane and patriotic men. I cannot but feel the compassion that is due in view of their prevailing ignorance, which exists by no fault of their own. But it is not only for their own sake, but also for the safety of our common country, in which they have been invested with equal political rights, that I am desirous to aid in providing them with the means of such education as shall tend to make them good men and good citizens—education in which the instruction of the mind in the common branches of secular learning shall be associated with training in just notions of duty toward God and man in the light of the Holy Scriptures."

The means to be used in the prosecution of the general object above described, I leave to the discretion of the corporation, only indicating, as lines of operation adapted to the present condition of things, the training of teachers from among the people requiring to be taught, if in the opinion of the corporation, by such limited selection the purposes of the trust can be best accomplished, and the encouragement of such institutions as are most effectually useful in promoting this training of teachers."

It is my wish that this trust be administered in no partisan, sectional, or sectarian spirit, but in the interest of a generous patriotism, and an enlightened Christian faith, and that the corporation should be formed and continue to be constituted of men distinguished either by honorable success in business or by services to literature, education, religion, or the State."

John F. Slater is a son of John Slater, who, with his brother Samuel, was a pioneer in the work of cotton spinning in New England. In 1806 the two brothers, with Almy & Brown, formed a partnership for the establishment of an extensive mill property at a point about thirteen

miles north of Providence, R. I., a village which has been known as Slaterville. About 1823, John F. took the leading interest in what has since become the famous Amoskeag Mills, of Manchester, N. H.

John Slater had three children, who are now alive, all born at Slaterville. John F. the present giver; William S., of Providence, president of the Worcester and Providence R. R. Co., and the Rhode Island Locomotive Works; and Elizabeth.

John F. Slater was trained to the industry in which his father and uncle were engaged, and in 1834 was sent to take charge of their mill at Jewett City, where he lived until about the year 1840, when he took up his residence in Norwich. Upon the death of their father in 1843, John F. and Wm. T. Slater, formed a partnership. In 1872 they separated, William taking the Slaterville property, and John F. that at Jewett City. A few years before this time, Edward P. Taft, of Providence, with three or four others, organized a company to engage in manufacturing on the Shetucket River, four miles above Norwich. The mill village at that point is now known as Taftville. In 1869 the corporation was reorganized with a capital of \$1,500,000, Mr. John F. Slater being one of the principal stockholders and president of the company ever since. The Pocomah mill was completed and the machinery started November 16, '71. Its one roof, nearly one-fourth of a mile in length, covers a larger cotton manufacturing business than any other in America, although there are two or three concerns which, in a group of adjacent buildings, do more than this. *Exchange.*

The Slater fund of one million dollars, to be devoted to the training of Negro teachers, is the gift of a representative New England man. Probably no charity has ever touched the Northern or the Nation's heart or sense as more wise and timely.

Since emancipation, New England has assumed peculiar charge over the manhood and development of the slave. More is yet to come from that quarter for this cause.

Its purpose, its grip in this matter, is characteristically determined. Wise and well-done work for the welfare of the "despised races" of America will not suffice. Such effort is watched studiously by many who will help it along, and finally crown it with adequate endowment.

Our Southern schools do not need full endowment just now; that would set them on one side; they would cease to be a living issue, and public interest and sympathy would take other directions.

But they need all the resources that private benevolence can bestow to build up accommodations for the steady increase of students and to maintain teachers. "Bricks and brains" just now is the demand. When the maximum is reached, the tendency will be to establish foundations at well approved places. We must not complain of a long probation.

The advance of ideas at the South was never so rapid as now. Bourbonism is fast passing away. The right of every man to himself, and to make the best man that he can of himself, by the use of his unimpeded energies, has overshadowed aristocratic notions. Schools of both races are fuller than ever before; note what Dr. Mayo says of North Carolina, in another column.

The part of the North is to send and support its best heart and brain and skill to lift up the destitute but deserving and determined youths of the South. Here Mr. Slater's gift applies. It will suffice for the free tuition which must be made practically free to Negro youth, and help in a measure those who cannot pay for board and clothes besides. If it shall yield say \$50,000 a year, it would aid 500 students, allowing each one, say \$50 per annum.

Fourteen years' experience at Hampton has shown the capacity of the average Negro youth to pay, by his labor, much over half his board and clothing bills, and that but little more than free tuition is

required for him. Help first those who help themselves.

The best work of Christian philanthropy is to create chances for men.

The Slater fund, by creating chances for 550 men a year for all time, will prove a good seed to our country. To make the teachers is to make the people.

This noble gift of a private citizen is an example and a reproach to our sluggish Congress, which is bound to it: the freedmen for freedom as much as to give it to them. We trust that the measure now pending to provide special aid for primary education in the South will not fail to pass, and to open a wide way for the thousands who are waiting for the light.

#### A VISIT FROM PRESIDENT ARTHUR.

On the thirteenth of last month, President Arthur made his first official visit of inspection to the Chesapeake National Soldiers' Home, and afterwards visited the Normal School, accompanied by Secretary Lincoln, with his little son Abraham, Hon. Rufus Ingalls, U. S. Quarter-master General, Senator Hawley, of Connecticut, Senator Edmunds, of Vermont, who has been boarding with his family in the vicinity of Hampton for some weeks, Hon. Maftig Maginnis, delegate from Montana, Commodore S. R. Franklin, U. S. N., and others. After seeing the students march into their dining hall, the Presidential party drove through the grounds, and visited some of the buildings, after which the school was assembled in the chapel of Lincoln Hall, and sang some plantation songs and glees for the entertainment of the distinguished visitors, and short, kindly addresses were made by the President, Secretary Lincoln, and Senators Hawley and Edmunds.

In introducing President Arthur, the Principal told the students of his well-known, brave championship of the slave, in the courts of New York, in 1855, and requested them, as a matter of interest to one who had thus proved his sympathy for their race, to make the same avowal they had once made to President Garfield, letting him know by rising how many of them had been born in slavery. Perhaps three-quarters of the school rose, a larger proportion than might have been expected by one who realized how fast we are leaving the war behind, and a touching sight to all who appreciated its meaning to them.

President Arthur said:

"Ladies and Gentlemen: I can stay with you but a few minutes, and can say but a few words. The question concerning your race to my part in which your Principal has alluded, was the question whether a slave owner could bring his slave into a free State and still hold him in slavery. A slave owner named Lemon wished to bring a slave into New York and he protected in holding him there temporarily, and then take him to Texas. The question was brought into the New York court, and there decided—No. I decided that the moment a slave was brought by his master on to free soil, that moment his shackles should fall off, and he should be free. That decision settled the question virtually for the whole North, and had its part, no doubt, in the chain of causes which brought on the war between slavery and freedom. I never was prouder of anything in my life than of a share in that decision. And now I am glad to see before me such results as these which have grown out of the war. I am glad that General Hawley is here, who will say something more to you."

General Hawley, thus called out, responded by saying:

"You are used, no doubt, to what we say at such times as this. I will only say that the thought which has been running through my mind as we have sat here, is, that all the people in this land are now absolutely free. You are absolutely free, and the only reason for talking about blacks and whites, as far as the law is concerned, has passed away. You own yourselves now. The time was when the law was nursing your race—now the time has come when you must stand on your feet, and do for yourselves. And that is the reason why I do we have sat here, is, that all the people in this land are now absolutely free. Go out from this to live up to its teachings. I should feel personally disappointed ever to hear of any graduates from here who failed to be worthy of these advantages."

The Principal replied:

"In this name of these young men and wo-

men and their race I answer: We owe ourselves—give us a chance to be ourselves, which now we have not. The nation has freed us—but in our weakness and ignorance we need its help to teach us to use our freedom."

He then introduced Secretary Lincoln, who was greeted with enthusiastic applause, and responded:

"One of the last things I expected to do here to-day was to say anything. I thank you for your reception, which I know was for the name I bear, the name of one who felt always a great interest in the colored race, because he felt that it had been long and greatly injured. It was the labor of his life to repair, as far as he could, that injury, by giving you the right to your own labor. As it happened, that right was given to you before he died, and that, as General Hawley said, is your path of progress. I hope you will all take it."

Senator Edmunds, being introduced, said pleasantly:

"Time flies, and I can but say ditto to all that has been said. I will only say further to you all—my young friends, Indians and all: in one sense we are not free—in one sense every one of us is a slave, and that is to be a slave to Duty, a slave to Virtue—to that law which would compel each one to do always, that which is honest, brave, and good. So, my young friends, of both races, when you go home to the prairies of the West, or the sunny fields of the South, remember this, and ever obey that master."

#### DEATH OF THE POET LONGFELLOW.

The death of the venerable and beloved poet Longfellow, so soon after the almost national celebration of his last birthday, has brought a sense of personal loss into homes high and humble, all over our land. He was the poet of the people. All the breadth of his culture and learning served to increase the range of his sympathy with common humanity, and his power of interpreting it to itself. If, as Tennyson beautifully says of him, he

"Sings  
To one clear harp in divers tones,"  
the tones are always those which echo in every heart. So his simple words and measures, never straining after effect, always have one. The very commonness of some of his verses shows their power. How many young souls have caught strength and inspiration from the Psalm of Life, and the Builders, and Excelsior, how many hearts have been soothed by the magic of this master—

"Whose songs gushed from his heart,  
As showers from the clouds of summer,  
Or tears from the eyelids start."

It is pleasant to think of our first martyred President Lincoln, cheered under the crushing burdens that almost overwhelmed his great soul, by the grand closing apostrophe in Longfellow's "Building of the Ship," that he heard for the first time from a friend; and how his deep eyes filled with tears as the lines were quoted to him—

"Thou, too, sail on, O ship of State,  
Sail on, O Union, strong and great!  
Humanity, with all its fears,  
With all the hopes of future years,  
Is hinging breathless on thy fate!"

"In spite of rock and tempest's roar,  
In spite of false lights on the shore,  
Sail on, nor fear to breast the sea!  
Our hearts, our hopes, are all with thee,  
Our hearts, our hopes, our prayers, our tears,  
Our faith, triumphant o'er our fears,  
Are all with thee, are all with thee."

There is no class of people in this country who should cherish Mr. Longfellow's memory more tenderly than the freedmen should. Like all the rest of the great poets of America, who, with Bryant, have begun to pass away from us, he has always given his voice for freedom and justice to the oppressed, and has happily lived to sing "the glad evangel of liberty through all the land to every inhabitant thereof," and the new song of love.

"So perish the old gods;  
But out of the sea of time  
Rises a new land of glory  
Where the glad evangel of liberty  
Over its meadows green  
Walk the young herds and sing."

"Build it again!  
O ye herds,  
Fairer than before!  
Ye fathers of the new races,  
Feed upon morning dew,  
Sing the new Song of Love."

At Hampton, the remembrance will always be fresh of the kindness which Mr. Longfellow showed to the Hampton students when they were brought up before the walls in the North. They will always remember with pride the story of their meeting the venerable poet, by his invitation, at the gate of Mount Auburn, in the dewy Sabbath morning, and standing with him round the grave of Charles Sumner, while they sang, "My Lord, what a Morning;" and then of their kind entertainment in his historic home.

One of the freshest of the many personal anecdotes of Mr. Longfellow which his death has brought to light, is the account given by a correspondent of a Providence paper, Apphia Howard, of how one of the most striking of the poet's sonnets came to be written. It is always interesting to trace back the crystallization of a great author's thought.

She says: "I found in 1864, on a torn scrap of the 'Boston Saturday Evening Gazette,' a description of a burying-ground in Newport's News, where, on the head-board of a soldier, might be read the words: 'A Union Soldier mused out,' and this was the only inscription. Knowing Mr. Longfellow's intense devotion to the Union, I thought it would impress him greatly. Carefully pasting the broken bits together on a card, I sent it to Mr. Longfellow. In a few days he acknowledged it by a letter which I did not at all expect, as follows: 'In the writing of letters, more, perhaps, than in anything else, Shakespeare's words are true, and

'The flighty purpose never is o'ertook,  
Unless the deed do with it.'"  
For this reason, the touching incident you have sent me has not yet shaped itself poetically in my mind, as I hope it some day will. Meanwhile I thank you most sincerely for bringing it to my notice, and I agree with you in thinking it very beautiful. After a while, it did shape itself in the poet's mind in the form of the exquisite sonnet beginning with the inscription."

The following is the sonnet, exquisite indeed.

A NAMELESS GRAVE.  
"A Soldier of the Union mused out,"  
Is the inscription on an unknown grave.  
At Newport News, beside the Salt-Sea  
wave.

Nameless and deathless; sentinel or scout  
Short change in skirmish, or disastrous rout.  
Of battle, when the loud artillery drove  
Its iron wedges through the ranks of brave  
And doomed battalions storming the redoubt.

Thou unknown hero sleeping by the sea  
In thy forgotten grave! with secret shame  
I feel a pulse beat, my forehead burn,  
When I remember thou hast given for me  
All that thou hast of life, thy veins, and  
And I can give thee nothing in return."

We regretted to see in the "National Republican" of Washington, of April 21, a reported interview with Secretary Teller, unconfronted, we believe, in which, after professing to do absolute justice all around, the Secretary is said to say: "And right here I desire to say that a large proportion of the friends of the Indians in the East, being ignorant of the character and condition of those people, are utterly incapable of presenting any practicable plan for their civilization. With the best intentions, these philanthropists would prescribe a policy which would be fatal to the Indian. For example, they would insist on land in severalty, which, if forced upon Indians before they are ready for such a change, would be fatal to them."

The best expression of Eastern sentiment is what it has done, not what it has said. They, (especially those in Boston) have given in the past four years fifty-five thousand dollars to the Hampton Institute, to help provide elementary English studies and opportunities for Indians to learn to work in the various departments of agriculture and the mechanic arts, for they believe, of all things, in a practical education with simple studies. For the Indian work as Hampton the government has given in all, thirty-three thousand dollars.

Any statement implying that they would at once scoop up and dump whole bodies of wild Indians down "upon lands in severalty," is a travesty. These "ignorant" people believe that some Indians are about ready for such a change, but that in general, the division of lands among them, along with citizenship, should be an objective point, definitely adopted as a public policy, and approached as rapidly as can be done. There are extremists both East and West. To affirm that "a large proportion of the friends of Indians in the East, being ignorant of the character and condition of the Indian, are entirely incapable of presenting any practicable plan for their civilization," would be more just, judging from the past, if it included the friends of

the Indians in the West also. What have they done? Is not the voice from the East for civilization; from the West for extermination?

The Secretary asserts his friendship for the Indian; he is reported as saying: "I am a friend to the Indian. I recognize his right to a home in this country and the means of getting a living and acquiring the arts of civilization. I am in favor of establishing and maintaining boarding schools at every agency. I don't think much of the plan of bringing Indian children to Carlisle or Hampton to be educated. I would have the common branches taught, but the most important education the Indians can have is to be taught how to work; practical industry is a great civilizer."

Where is practical industry taught with the common branches more thoroughly than at Carlisle or Hampton? The methods of these schools have been repeatedly stated in recent public documents. They do not seem, however, to enjoy the favor of the Secretary.

Secretary Teller's advocacy of maintaining boarding schools at the agencies, is to be most highly commended. There, by far the most of the work is to be done. They need aid more than our Eastern boarding men out there, working obscurely, but at a vital point of the Indian question; too much cannot be done for them. But Government agents as educators, or moral agents, are not likely, as a rule, judging from past experience, to be very successful. We say, missionaries for missionary work; government officials, for governmental duties.

Carlisle and Hampton are, however, doing a work not only for Indians, but are creating an enlightening, hopeful sentiment in the East, which, in return, has so far, given Hampton already more money than the Government has, to maintain its practical methods. Besides the Eastern philanthropists, many army officers of longer, larger and more thorough experience of Indians than our Western peers, have, from personal observation, declared that these schools have struck the solution of the Indian question. The philanthropists are not alone in supporting these practical systems by which they wish their faith and professions judged.

We are glad to copy from the "Christian Register" an extract from a letter in North Carolina, written by the Rev. A. D. Myro, of Boston.

Such general information on every Southern State would pull greatly to Northern interest in them, and, perhaps, trim down there some of the enterprise that now seeks the West. "Young man, go South," may be the watchword in less than ten years from now.

"North Carolina in a rough way may be said to consist of four States. A hundred miles back from its amphibious coast, the country is a vast pine forest not a hundred feet above the water, intersected by countless streams, with great rivers pushing up from the ocean, one of the most peculiar countries in the world, inhabited by a people of Negroes, and largely peopled by the sort of folk for whom mother Amy Bradley has been at work for the last sixteen years at Washington. Its half a dozen towns, like New Bern, Beaufort, and Wilmington, the largest in the State, are growing in a moderate way and, all along the coast, the great capabilities of the fisheries and 'truck-farming' are becoming apparent. For two hundred miles westward, the region overlooked by the capital is a country of large capabilities, varying from one to five hundred feet above the sea, heavily wooded, and capable of becoming a densely populated and most valuable agricultural empire. Then comes the proper Piedmont region, overlooked by Greensborough, Salisbury, and Charlotte, through which pour a dozen great rivers on their journey from the mountains to the lowlands, any one of them representing a water-power equal to half a dozen of largest manufacturing cities. This region in North Carolina, as in Virginia and South Carolina, is evidently the home of future empire. It is peopled largely from the Scotch-Irish and more energetic English and early German emigration, and represents a great future in the history of this old commonwealth. Beyond these the cycle, which in general, is a table-land of two thousand feet, towers above by the summits of the loftiest ridges of the great Appalachian chain. Altogether, North Carolina is five hundred miles in its extreme length from east to west, and, at its southern corner, two hundred and fifty miles in breadth."

From Greensborough to Wilmington is a section as great as from north to south. Down here on the banks of Cape Fear River, surrounded by a wilderness of marsh lands, its streets a shifting drift of sand, sleeps the little city of twenty thousand people, the most populous in the State, yet already beginning to carry the more rapid growth of the upland towns. But, here, you are out of the omni-

present mud, in a climate that through the whole winter is pleasant, with a lovely early spring, and such days in the middle of February as make it a luxury to live. Wilmington is pushing ahead in a moderate way, and is yet destined to an important position among the cities of our southern Atlantic coast. Here, our good friend, Amy Bradley, has done her splendid work, perhaps the best yet done in the South, because it demonstrates that the most hopeless of the "poor white trash," which is the dismal class of these States, can be lifted up by the power of a Christian education to a respectable, intelligent, and moral laboring class.

The peculiarities of character in the old Southern States are more strongly marked than in the new South-west. Indeed, until within the past twenty years, North Carolina was inhabited by half a dozen sorts of white people less acquainted with each other and more hostile in their prejudices than would seem possible to the populations of as many different American States. Even yet the State is greatly impeded in its progress by the absurd provincialisms that are rooted in the obstinate ignorance of great masses even of its white people, the illiteracy of the State being perhaps more alarming than any in the South.

But, with all these local variations, the North Carolina character is very sharply emphasized from the Virginian and the South Carolinian, between which it is sandwiched. Without the culture and mental brilliancy of Virginia, or the social poise and poetic imagination of South Carolina, the Old North State represents the same type of society as Pennsylvania in the North-east. Its people seem to be strongly endowed with common sense, practical power, and are good hearted and kindly to an astonishing degree. No one of the old States has been so terribly scarred by the ravages of the war as North Carolina. Tennessee, the most powerful of the South-western States, is really the child of North Carolina. Every one of her Presidents were born on the eastern side of the mountains; and, indeed, the four southern States, taken together, are nothing of whole patches of country in the north-west, have been overflowed by this torrent of emigration that for almost a hundred years has poured from the Old North State. North Carolina today reminds one of a homeless mother, who, at fifteen, began to "raise" her family, and send them forth to people new lands, and at sixty, when her children are set up in life, buys a new gown and cap, moves into a new house, and starts out for another thirty years' pull on her own account.

The three most striking social phenomena in North Carolina to-day are, first, the growth of liberal politics. The people of North Carolina never went out of the Union, but the politicians of the low country captured the State, and dragged it through the terrible five years of war, leaving it almost in ruins. But the people have steadily pushed on toward a conservative and sensible management of public affairs. Another presidential campaign may possibly land the State high and dry above the slough of sectional politics, and place it in that most valuable class of commonwealths which are to become the anchor of the Union for the coming generation. The second remarkable development is the temperance revival that for the past two years has swept through the country. We were reminded everywhere of the days of our boyhood in New England, and all the old scenes of the temperance reformation of that day are now being re-enacted in this State. Ignorance and "mean whiskey" are the twin demons of Southern life. Nine-tenths of the violence, and all manner of uncleanness that rife in this land, is the direct outcome of liquor among the vast swarms of low-down black and white population. The temperance pledge and the schoolmistress, vigorously worked for a quarter of a century, would lift up this State to one of the most prosperous and attractive of American commonwealths.

But more marked than either, is the great revival of public education that we found everywhere among the people. The old colleges and academies are all waking into new life, and are probably better in quality than ever before, though many are sorely pressed by lack of funds. Seminaries for girls, like the Peace Institute and St. Mary's at Raleigh, and secondary schools for boys, like Binghams' at Mehaneville, are among the most hopeful omens of superior education we have met in the South. But the most characteristic development is in the country towns and villages, where it takes the form of the village graded school. At Goldsborough, Raleigh, Greensborough, Wilson, and various other considerable towns, can be found a public school for white children, of remarkable vigor, managed by an expert, taught by the best methods, and thoroughly adapted to the class of the people. Many schools for colored children of the same sort are being established. Indeed, the great school man seems to be raging through the length and breadth of the State, and is carrying out his visit to a score of these places, where a group of public-spirited people were

at work persuading the inhabitants to throw up the average shiftless Southern policy of scattering the children of a community among a dozen inefficient private schools, and concentrate on one vigorous public establishment supported by local taxation. From these village schools will go out the teachers for the open country, and gradually the vast army of ignorance that keeps this grand old State in the back-ground will be lifted up into the light of the new era. No American State has greater capabilities for agriculture, manufactures, milling, fisheries, and a certain style of coast commerce, than North Carolina. Liberal politics, the temperance reformation, and the public school are "the tandem team" that will drag the old commonwealth out of the mud-hole in which she has labored, up into the broad highway of American progress and prosperity.

We are strongly pressed to spend the entire summer months in the State, attending half a dozen institutes for teachers that will be in session at different points, from the sea-coast to the heart of the mountains. No more attractive work could be offered to any man; and if Providence would vouchsafe strength after our seven months' tramp, from October till June, we should be strongly tempted to go in, and fight the campaign out on that line. But this is not probable. Human endurance has bounds; and these enthusiastic people of the South, in their new enthusiasm for education, make such demands upon strength and sentiment, that safety lies in beating a retreat through the summer and laying up ammunition for the sea-side or among the mountains for new efforts in the coming year. But nowhere in the Southland has our ministry of education been met with a warmer welcome, and no people have made a deeper impression upon our heart or seemed more worthy to be worked for and inspired for by every Christian patriot, than the deep-souled, sensible, and kindly folk of North Carolina. We still cherish the hope that we can see this magnificent old commonwealth in its summer glory, sail through its labyrinthine of romantic coast, behold its bright, sunlit fields at the season of the cotton bloom, journey through its beautiful upland in harvest time, and from the summit of Black Mountain feel ourselves on the pinnacle of that part of the Union which stretches from Colorado, two-thousand miles, toward the rising sun.

DIED.—April 13th, at Lynchburg, Va., of consumption, Sarah A. Lucas, a graduate of Hampton Institute, of the class of '78. She was a student there three years, a faithful student and conscientious Christian. She has taught for the past year successfully in Nelson County, Va. Her death in the midst of her usefulness will be mourned by her many friends in the school.

In another column will be found an interesting sketch of the corner stone exercise at the colored Normal and Agricultural School at Tuskegee, Alabama, which is superintended by two Hampton graduates, Mr. Booker Washington and Miss Olivia A. Davidson, the latter a graduate also of the Framingham Normal School in Massachusetts. The school was founded last year by the State which pays the teachers' salaries by annual appropriation. The enterprising efforts of the young superintendents to establish it on a basis of strength and practical usefulness by making it an industrial school in the spirit of Hampton, have met cordial response from both the colored and white citizens. The corner stone was laid by Hon. Waddy Thompson, of Alabama.

Mr. Washington, and Miss Davidson, will spend the summer vacation in the North in efforts to raise the funds necessary for their school building, and we very heartily commend them and their cause to the friends of Hampton and of such as Hampton's work.

On account of the removal of the Printing office this past month, this number of the *Workman* has been somewhat delayed. The office is now located on the first floor of the "Stone Memorial building, and is larger, better ventilated and better lighted than the old one in the basement of Virginia Hall.

HORSFORD'S ACID PHOSPHATE  
In Impaired Digestion.  
I have used Horsford's Acid Phosphate with success in cases of nervous prostration, wherein the digestion was more or less impaired; especially in those cases characterized by great prostration, with excessive sweating.

HOW A GIRL REMODELED HER SCHOOL-  
HOUSE. A STORY FOR DR. MAYO. "PULL  
MAMMA IN." LOCAL OPTION. A GOOD  
RECORD. ON FIRE TWICE A DAY. A  
JOINT LETTER. A SCHOOL AMONG THE  
MOUNTAINS.

## HOW A GIRL REMODELED HER SCHOOL HOUSE.

A STORY FOR DR. MAYO.

Dr. Mayo's lecture in our number is well illustrated by the following story of a young teacher's labors for her little kingdom.

S. C. Jan. 14, 1882.

Dear friend:

I am now teaching in this township. I came here the last of October, and opened school the first of November. I opened with three scholars. All that week the same three came. The next week I went with hopes of seeing more scholars, but I only had three new ones to come. I had several inclinations to be discouraged, but the thought of how some of the Hampton graduates work in Virginia, cheered me to do the best I could. I tutored on through that week with six little scholars, and at the end of the week I went to visit some of the parents. I asked the reason why they did not let their children come to school; the whole cry was that it was a hard year, and that they were not able to send their children to school.

I insisted upon them as best I could, to send their children with what they had, and they promised to do so.

On Monday morning I went to school, and found ten new ones. The next week more came, and now my school numbers seventy-seven scholars. My school house is constructed of pine logs. When I came here I found the house very open. I soon managed that however. I appointed a day to clean up around the school house. On that day we were to clean the house, nail boards over the cracks, mend the clay chimney, scrub the floor and sweep the yard.

That morning you should have seen the children coming up the hill to the school house, some with tubs, scrubbing brushes, hoes, boards and brooms. After prayers, we went to work upon the house, and soon finished it. Every crack was nailed up, and then we went to daubing, which was indeed very pleasant work. I think Mrs. — it would have done you some good to see how faithfully those children worked that day. We finished the work, and then dismissed school. Now my school house looks like a new one to what it did when I came here. The Trustees complimented me upon what was done, but I told them it was no more than my duty.

I needed seats in the house, and asked the Trustees to give me the benches, but they said they were not able to do so. Then I wrote to the parents of the children, whom I thought able to assist me, and eight of them answered. Then I had ten benches with two others that I had.

I feel very proud of my little school; perhaps it is because I had such a hard time in getting it to start. As a general thing, the children are very poor. They are not able to get the hooks and clothes they need. If ever a set of children needed aid, I think these do. I often wish I were able to help them; but I am not.

Remember me kindly to my teachers and friends.  
Hoping to hear from you soon.

I am yours truly,

R.

## "PULL MAMMA IN." LOCAL OPTION.

What can be expected of the children, where the mothers "aint no better." Well then, as Dr. Mayo says, and as often happens, the children must be brought into the better way by the teacher, and then they will turn about and "pull mamma in."

Co. Va. January 28, 1882.

My Dear Friend:

Our school began September 19th. We have quite a comfortable school house, but it is not large enough for the children of — I have the intermediate grade, and like it very well, though I thought, at first, that I could not possibly manage the children.

The parents seem very anxious to have their children learn, but the children are very, very rude. They do not believe that we should do unto others as we would have them do unto us, but as they do unto us; so if one boy strikes another, he generally gives him as good as he sends. I am sorry to say

that this is not only the case with the boys, but also with the girls. I have talked to them a great deal about it, and asked them if their parents taught them to fight. Some said, "no," others "My mother told me if any body struck me to strike them back."

Another day I was talking to a little girl about calling another bad names, and told her that I thought her mother would be ashamed of her if she could see her now. One little boy spoke up and said, "Her mother ain't no better."

Most of the colored people here are getting along very nicely, but, as in every other place, they have their stumbling blocks, and the bar-room is one of them.

Some of the citizens are trying to get "Local Option" here. Two of the colored ministers have taken hold of it, and are doing good work—the other minister has not consented to speak to his congregation about because he believes some one is trying to get an office.

There are a great many children here, but the Sunday schools are not well filled. I have a class in one of them, and am trying to do all I can to help them, but the people do not seem to take very much interest in Sunday school work. We have over two hundred children in school days, and I don't think half of them attend Sunday school.

While I feel that a great many of the parents are to blame for not setting their children good examples, some are trying to bring them up the best they can.

At first I thought my labor was all in vain, but now I find that the children are learning something, and their conduct is much better. Though the work is hard, I enjoy it.

Your truly,

## A GOOD RECORD.

An excellent graduate who has been teaching for several years, gives the following statistics of his work:—

Ga. February 20, 1881.

My school at present is in the city of Darien, McIntosh Co., No. 61, an average of 50 daily attendance. My scholars progress rapidly. I have taught upwards of 600 children since I left Hampton, and about 1300 days. I have been teaching ever since I left the school, and have been successful. Safely can I say, (tho' myself) that my scholars and patrons have cried because my time was up, and wanted me back again. I am a member of the 1st A. B. Church of Brunswick, Ga., and embrace the religion of our Lord Jesus Christ in April 5th, 1875. Thanks to my kind Redeemer. I have been trying to follow and keep my promise to Him, and the faith of which I profess, ever since I entered into the fold.

I am writing now very hurriedly, at 13 o'clock P. M. or night. I have none or little time during the day for communications. I want to come back and finish my School course at Hampton, (as I have no wife now.) G. R. Jackson is teaching in here. If I can't come to Hampton, October, 1882, I hope to enter Oberlin, Ohio, or Lincoln, Pennsylvania. Trusting to hear from you soon.

I am yours sincerely,

## ON FIRE TWICE A DAY.

An ardent young teacher—an undergraduate—is fighting fire with fire in a difficult station.

N. Y. 20, 1882.

DEAR GENERAL:

I received your letter soon after I had returned from Conn., and did as you requested me. After the people found me at home, they were very anxious for me to take a school. I was offered four schools; two by the trustees of District, and two by the people of two other districts, all of the same county I am living in. I accepted the one nearest to me in — District. I passed examination without any trouble, and have been teaching sixteen weeks; four more weeks and my school will close.

I have on roll sixty-five pupils, and my pay is \$25.00 per month. My school house is small and uncomfortable; the school board does not furnish anything in the way of school furniture, excepting one blackboard about three feet square. The benches I use are made by taking slabs, (that is the outside part that comes off a log when sawed) turning the bark side down and boring two holes in each end, and fitting round pieces in for legs. The school-house is an old frame building, without any plastering, and with plenty of vandilators; the stove is in very bad condition. I have to stop two and three times a day (generally) to put out fire; first the floor, and then the joists. This makes the fourth session I have taught school in this county. I taught three sessions before going to Hampton, and finding myself not qualified as I should be, caused me to go to it, with a view

of graduating for a school teacher. I was successful in making the Middle and was promoted to the Senior class before I left; but my mother's death may throw me out of graduating in '83 as I had expected. Soon as my school ends here, I expect to teach a five months' session in Westmoreland County, Va. They are building a new school-house, and expect to have it finished about the time I get through here. Hoping to hear from you when convenient.

I am yours respectfully, L.

## A JOINT LETTER.

Two of our most faithful workers who are at present associated in care of a private school, send in a joint account of their success.

Virginia, January 7th, 1882.

Kind friend:

We received your cards (containing a set of enquiries sent to all the graduates) some time ago, and take pleasure in replying to your questions. Mr. McNeil came here in Sept. last and assumed the principalship of Public graded school No. 2, in our town, and by some labor succeeded in having the school-house made comfortable for the winter, and procuring many other things necessary to the comfort of both teachers and scholars, with which things the school had not before been provided.

We opened school, after the completion of these necessary repairs, Oct. 31st, with 37 pupils, but the number now on roll is nearly five times as many.

We have three teachers, and the school is in a prosperous condition. The 2nd assistant teacher, is a lady graduate of the Richmond High School, and once taught in the public schools of that city. We have just received the "Southern Workman" in which is published an excellent letter to the Hampton graduates, from Miss Longworth of Philadelphia, whose annual address to them is always hailed with a welcome, and pursued with much interest. I should like very much to know her address.

Hoping to be kindly remembered by you and Hampton.

We are very truly yours, Mc N. and H.

## A SCHOOL AMONG THE MOUNTAINS.

One of our most thoughtful and earnest graduate teachers gives a very interesting account of his school among the mountains of Virginia, and of the state of the colored people in that region.

Co. Virginia, Dec. 29th, 1881.

My Dear friend:

Your cards have been received. I delayed answer until Christmas holidays, as I then would have more time, and could think more about them. We began our school on the 19th of Sept. 1881. None of the teachers of 1st year came back. I think it necessary or an advantage for a teacher to know how his predecessor has managed, it prevents abrupt changes; gradual changes are often preferable in keeping up the interest of the scholars, and establishing confidence in the teacher.

We had to get information on general matters from Superintendent, parents and children. It is well to hear these parties, but not to blindly trust them. We have a nice school house of three rooms, plastered, and with windings with weights; but it ought to have five rooms instead of three, considering the number of children that should come. I am informed by the Superintendent that money is lacking to make these useful changes. I have taken pains, from time to time, to make known to the officials its needs.

Our Superintendent is kind and courteous, as much as any I have met. While I appreciate his services, I do not fail to see important things that have been left undone.

Miss —, of '80 and Miss —, of '81 are with me. They are patient and hard-working, and so I am glad to be with them. I found the children bad in conduct, and careless in study. It appears most every one would say, we had a hard school to manage. I told my children at first, if they were good, I could be good, or if bad, I would be bad. That is, that I would rule by moral suasion if I could, by corporal punishment if I must. I had the latter to be the better ready. Many are taught at home to do unto others as they are done unto, and are allowed to mingle freely with bad children in the streets. Since we have been reeducated, I do not whip much. I am glad that they are now more interested in their studies. I do not attribute mentioned defects to other teachers, but to the pupils' surroundings; and perhaps what I say of them will be said by my successor.

The scholars of my room appear to have been well taught in reading and spelling, but in arithmetic and grammar, going through rules appears to have been aimed at, more than thoroughness. This is a graded school, in which history and other common-school branches are taught. Irregular attendance is a great drawback to its success. Some have to live in service during the time they come to school. So they come late and do not have much time for study after school. We have enrolled about 200 last some have stopped. I think we reported 164 this month. I believe I could get in many more if I had rooms and teachers. Our term is now more than half out. I like this part of our state. How different the products, the scenery, and I may say the people. One has to come West to find out the fullness of the geographical statistics that Virginia is one of the first tobacco growing states. Wheat is grown extensively, but little corn.

The town appears to lie at the foot of the mountains, but I find they are a few miles off. Most every where the eye looks, it rests on these "everlasting hills." The scenery is grand and beautiful. I do not think the colored people here differ much from those in Hampton. I do not see think the young men and women long for the higher education, though most can read and write. They do not save enough of their earnings. The place is far-seeing, right-minded, sacrificing and intelligent leaders. I think there are good people here, but I do not think many of them throw all their influence in the right direction. I cite as an example the Sunday schools, which are poorly attended, and their aims which are well attended. Society lines are not distinctly drawn. The actions of the good do not say to the bad promptly enough if you do that, you cannot go with me. Our Superintendent says that there is lack of society among us, and thinks that education so far does not appear to accomplish it; that is, form a society of the good and the bad. This is not pleasant if true, but it does not discourage me. The more fault there is, the harder we should work, and better lives we should live. I mean that this should be a stimulant to the few who believe in the future importance and glory of the Anglo-African.

We have three colored churches here: the Baptist, A. M. E. and M. E. Methodists. Each of us go to a separate church. I have not been able to get the old ones to come, and not very many young women and men. I hope to do something for local option movement in the state. I prefer total prohibition.

Our Superintendent did not get as many Hampton graduates as he wanted. He speaks well of the Institute and them. I hope the school is getting on well. I hope you will remember me to the Principal and the teachers who know me.

I am your friend, S.

## WHAT IT COSTS.

A gentleman was walking in Regent's Park, in London, and he met a man whose only home was in the poor house. He had come out to take air, and he excited the gentleman's interested attention.

"Well, my friend," said the gentleman, getting into conversation, "it is a pity that a man like you should be situated where you are. Now may I ask how old you are?"

The man said he was eighty years old.

"Had you any trade before you became penniless?"

"Yes, I was a carpenter."

"Did you use intoxicating drink?"

"No, oh no, I only took my beer, never anything stronger; nothing but my beer."

"How much did your beer cost you a day?"

"Oh, a sixpence a day, I suppose."

"For how long a time?"

"Well, I suppose for sixty years."

The gentleman had taken out his note-book, and he continued figuring with his pencil while he went on talking with the man.

"Now let me tell you," said he, as he finished his calculations, "how much that beer cost you my man. You can go over the figures yourself." And the gentleman demonstrated that the money, a sixpence a day for sixty years, expended in beer, would, if it had been saved and placed at interest, have yielded him nearly eight hundred dollars a year, or an income of fifteen dollars a week for self-support.

"Let me tell you how much a gallon of whiskey cost," said a judge, for try a case. "One gallon of whiskey made two men murderers; it made two wives widows; and made eight children orphans." Oh! it's a costly thing.—Dr. Richard Young.

In the English Parliament, some years ago, a member moved the appointment of a committee to investigate the cause of intemperance among the people. Another member arose, and said he thought he could tell them without a committee: it was drinking. This being a clear statement of the case, a clear statement of the cure will be, Stop drinking.

### HORSEFORD'S ACID PHOSPHATE

1. *Chlorophyll a* and *Chlorophyll b* were determined by the method of Lichtenthaler and Whistler (1973).

1. *Journal of the American Medical Association*, 277: 1001-1002, 1997.

Parker, with coat off and sleeves rolled up, and arms thrust into the mixture, was showing the natives how to pick it into the mounds, and when a little dry on the surface, to turn out the bricks and set them on edge to bake in the sun.

Preparations were also making to replace the crumbling, brick structure in which the mission family lived, with one of stone. The audacity? Not a curiosity, nor a team to draw one, nor a road on which it could be drawn. But Mr. Parker had one donkey; a huge of suitable stone was at no great distance; coral was to be found in the sea, and sand on the seashore. A dozen or more were constructed, rope traces and harness were made; his donkeyship duly initiated in the task of hauling, to which he took kindly; and in due time, with only this simple apparatus, the stone and sand and lime were hauled for a commodious dwelling, and would it be believed—for a large, stone church also.

[To be continued in our next.]

The following is from a private letter just received from a large hearted, clear-headed clergyman of San Francisco, who expresses the sentiment, not of a political leader but of the best thinking class, on the Chinese question.

SAN FRANCISCO, CAL.

April 24th, 1892.

Messrs Editors: I have just read your editorial in *Southern Workman* of April, on the Chinese question.

What you say of the Sandwich Islands is easily true. They are bound to be Mongolian. In less than a generation, I believe there will not be fifty white families on the island, unless, as you forcibly say, the United States shall adopt a positive policy.

But what surprise us here is that you and other intelligent people in the East cannot see that precisely the same result is impending over all the Pacific coast, and is just as irremediable, in time, unless the United States shall adopt a positive policy.

We have precisely the same conditions, the need of laborers and China the only ultimate source. You say "The Chinese can swallow the Hawaiians, but the Americans can swallow the Chinese." And in proof of it, you say we are 10 millions or more and the Chinese now here are only one five hundredth of our population.

Hence the inference. But you and the philanthropists strangely forget that it is not the whole of the C. S. against China, but the Pacific Coast against China. Now this is our peril. It is known everywhere that white laborers with their families and their higher needs, cannot at all compete with the Chinese.

Hence they will not come here from the Eastern States or from Europe. They cannot come and live. They know that. And they do not come. That is our first peril, the almost absolute exclusion of the Chinese from the families and civilized wants, and would go to build up schools, and churches, and households, and all the bountiful and helpful things of a Christian commonwealth.

It is still further result is that the laborers which we have will be driven away. It is as inevitable here as at the islands. They cannot compete with that barbaric horde in any of the industrial pursuits, and will leave us.

It is as certain as fate, unless the United States, adopt a very "positive policy." You and the philanthropists forget, too, that the moment it is settled that there is to be unrestricted immigration, the greed of selfish men will be all against us. The Capitalists here and the large land owners will have laborers. Unable to get them from the East, they must get them, as at the Sandwich Islands, from the West.

And they will. And because there is money in it, the steamship companies will do all in their power to swell the invasion. The first result will be, a few white men left as lords of the soil, and monopolists of the rail-roads and the great enterprises, with a Mongolian tenantry. This ultimate result will be that the Mongolian tenantry will gradually absorb all but the greatest enterprises—possibly those, and this whole western coast will become virtually Chinese.

You say there is no fear of an invasion, and cite the slow increase in Chinese population for the last ten years. But here you forget again that these ten years have been the years of the intensest opposition to the invasion which has served as a check, first upon the Chinese desire to come, and recently, upon the efforts of the lords of the soil and of capital here to bring them. Take away this opposition, let it once be known on either shore of the Pacific that it is not the policy of our government to let them come unhindered, and the tide will roll in upon us just as fast as room is made for them.

You see very clearly how it is at the Sandwich Is. Why can you not see it as clearly that it will be exactly so here? Nine tenths of the best men here see it so. And they are not ignorant men. They are not unscrupulous politicians. They are not haters of their fellow-men for their color. If the Chinese were coming here with their families, to become a

helpful factor in our Christian civilization, to stand on a level with other nationalities in all matters that pertain to the building up of social and civil and religious and educational institutions, in other words, to help us found a pure, and perfect a Christian commonwealth, we (the intelligent men) of the Pacific Coast would never say them nay. But they have no such purpose. They will do no such thing. And so we see clearly enough, that it is a question of the existence of a Christian civilization on this coast. We affirm that it is precisely the same problem as at the Hawaiian Is., only it will require a little more time to come to its final fatal issue. But it will certainly come, unless some positive policy hinders. I do not expect it will come.

There will be a positive policy, from some source. We do not believe the Massachusetts sentimentalism, and the Massachusetts cotton mills, will prevail always. Better sense will get possession of the powers that be, by and by.

Meanwhile we wait with a very intense indignation against the Republican party for its failure to its own promises.

E. G. BRECKWILL.

#### SCHOLARSHIP LETTERS.

The early responsibilities and exertions of the poor colored youth are in some respect a compensation for the lack of early advantage. While he is a child where the white youth of his race is a man, he is a man where the latter is but a child—that is in the experience of self-support. The Plucky Class is the one to succeed, whatever its color.

FROM AN INDIAN BOY—JUNIOR CLASS.

The writer, a boy of 17, of the Menomonee tribe, from Wisconsin, has been two years at Hampton, and knew English fairly well when he came.

Dear Friend:

I am going to tell you what I have been doing all the vacation.

We'll have been working all this vacation. I went to school only two weeks when Gen. S. C. Armstrong told the Indian boys that they could go to school all their vacation if they wanted to go to school, and after little while Gen. S. C. Armstrong said to the boys again that they would not go to school if they did not want to, and he told them that see if they wanted to go to work all the vacation if they work he will pay them eight cents an hour, and we went to work all the time and we made to extra hours a day, and we made sixteen cents a day, and made one dollar and four cents a week, and half of the money went in the tool money, that is when we go home the head man will buy some tools for us with that money which we earn during the vacation. Some of the Indian boys and girls were bored, not long ago and they said that take care of the boys when they work and some of those Indian boys earn some money this vacation time that man bought some tools for them, with that money which they earn this vacation and the farm boys had these tools each boys gotten these tools, the first get a hoe mko shovel ax and a hatchet, and some of the boys that did not work much at the vacation they did not get as much as some of them did, and some of them get just a hatchet and one or two boys get just a rake hoe and ax and there are only two carpenter boys they get plenty tools too, and only two tin smith boys, they get plenty tools too.

I think one of the tin-smith get more tools than any boy that work home, thin the boy that I think get more tools, this is his name Henry Fisherman and this boy get only an ax and a hatchet because he was sick for a long time that the reason he did not get as much as the other boys did, this is his name Ke-what, and Paman did not take shovel and spade because his trunk was so full he could not get his shovel and spade in the trunk, and he left them in the Indian work shop and they are the work shop now and all the boys that get taken did not get their rake handles home because there are so long they could not get them in their trunks and some of the boys said that they want to take the handles home and they said they would use the handles for their cane while they are traveling to their home and the man told them that they must get the carpenter to make a handle for farm boy when they get home, and they said all right and they went out, and before they went out some of the boys said that the hatchet that was given to them was very good to hunt rabbits with them hatchets and if any rabbit get in the log they said they will use the hatchet and cut the log and get rabbit out of the log and the day when they were going home they went to Virginia Hall and a man that taken care of the Indian boys he gave each boy an over coat and each one a little bag to put their come and something else that they could use them easy while they are traveling to their homes and after when they came back from the Hall they went to the Fort

Monroe to get in the boat, and I went with them and I carry a pocket for a boy that I like him very much his name is Tom Smith and after while we get to the Fort Monroe we sat beside the wharf and Tom Smith took his pistol out of his pocket and he show it to me.

I asked him to let me see it and he let me have it and I dropped it on the sand and he told me to go and get it and said if I get it for him he will pay me for getting it for him and I went down to the sand and when I came back I gave the pistol back to him and he said here I pay you for getting the pistol for him and he gave me only a cracker and I said to him thanks, and after when the boat came to the wharf when they got into the boat and when the boat leave the wharf and when they got up stairs they wave handkerchiefs to us and we do the same to them, and some of the girls that were not going home cried for some of their friend are going home and after when they leave we came back to the Indian Cottage we were very house very much because great many our friend are going home from us, and after little while about one or two weeks after when Gen. Armstrong came back from Dakota he brought some more new Indian students to Hampton Normal School, and after that Lieutenant Brown came and he brought some more new Indians and some of them had very long hair, and some of them had longer hair than some the girls, and the one day when they came here the man that take care of us wanted to have their hair cut but it was Sunday when they came here, and they did not cut their hair the same day when they came here it was Sunday.

Many morning a man came here to the school and get the new Indian picture, and after that some more Indian came here to school and they brought one half colored boy here and his name is Frank Blackhawk he can talk Indian and English too, and some of the new boys that did not know how to talk English and when we have prayer meeting with Mr. Gravette Frank Blackhawk sing for those boys that do not understand English, and when those boys that have been here three years when they were ready to go home they have two weeks to rest before they go home and while they have rest days General Armstrong told the boys that not going home; they may have a good time with the boys that are going home for two weeks and sense that time we never go to work for two weeks and evening while we playing ball front of the Virginia Hall and a man came there to get the picture of the Virginia Hall and while he getting our picture I put spectacles on and I put my hat on on my head and I think most of the colored boys like me and I like great many of them very much but some of these Indian boys here do not like colored boys very much, and these Indian boys that do not like colored boys try to fight with colored boys but some of the colored boys don't fight with Indians, and they don't attend what the Indian boys say. A little school from the Normal school in called butler, we went there to put new shingles on the top we use to go there every day to work during the vacation, and sometimes after when we get to work it is so hot so we could not work for all day, and so we did not finished it for long time we did not work very fast as we ought to, and about seven boys use to go to work there every evening and morning. I believe I have very good time during the vacation and I think the other boys had a very good time too, and last term I was in the Preparatory class but now I am in the B section of the Junior class, and I like to stay in the same class which I am now all the time because I think I learn great deal faster then when I was in the Preparatory class. When I first came here at the school, I come here just when the school close for vacation, and that vacation was very long time for the because I have never been here before and I use to be very homesick all the time and it make me sick for a while I got well very soon. I thank you very much for paying my to school here.

Yours Respectfully,

H.

FROM A BOY IN THE MIDDLE CLASS.

Dear Friend:

I have been requested by the Principal to write to you. I have selected for my subject a sketch of my life, thinking it would be the most interesting to you for your liberal contribution to the *Southern Workman*. In the year 18—, it pleased the cruel-hearted man to whom I belonged to separate me from my mother. I was not taken but ten miles from home. My mother said we were to go to see me every two weeks. I fell into the hands of a very hard task-master, who did

not regard God nor man. I remember hearing an agreement made to sell me again, but the man looked out on hearing that the Negroes would be freed. From that time until the year 18— hostility and starvation prevailed, such as the Negroes had never experienced before. After that time I went home, and my mother put me to work in a tobacco factory, where I stayed about four years.

In 1873, the first colored school that was ever started in that part of the country was opened. I went three months. After that my mother's health got very bad, and I had to stop and go to work to support her. I went to help support the rest of the family.

In the year 1874 we moved to Charleston, West Virginia. We thought by going there we would be able to save money enough to send one or two of the children to school. When we got there, we found the climate did not agree with any of the family but myself. I could not get work at my trade; so I tried several occupations, but did not accumulate very much. I went into the mines, and tried coal mining for a while. Just about the time I got learned I got hurt, so I could not work for two months.

Those two months I went to school, making in all five months schooling. My mother set me free upon these terms; if I would go to work and save my money, and go to school. I went away from home, and the first year I saved money enough to pay my schooling one year. I gave it to a friend to save for me, but he went away and stole my money.

At the same time as my brother went away from home, so I had to give a part of what I earned to my mother. At the end of the second year I did not have half as much as I had at the end of the first year.

In the autumn of 1879 I left home for Hampton Normal School. On my arrival I found that I did not have enough money to pay my way one term; but I said nothing about it. I entered the Junior class, and was promoted to the Middle class. I spent my vacation at Hampton working on the farm for ten dollars per month. What I have saved in vacation is all I have to pay schooling.

I am trying to prepare myself for a teacher among my people.

I am, sir, yours respectfully,

(Signed) F.

#### THE NATION'S OUSE.

The most carefully prepared statistics show that there are not less than three hundred thousand negroes in these United States of America; and this statement is probably much below the truth. Of these, thirty thousand die annually; one hundred thousand men and women are in prison; and every year two hundred thousand children are annually sent to the poor-house; five hundred murders are caused by drink every twelve-month; and four hundred suicides—four deaths to one, as proved both in England and the United States, is the awful proportion compared to the non-drinking population. Magistrates, chaplains, and prison keepers come forward with their statistics, and prove that not less than four-fifths of all the crimes have their origin in strong drink. On the same authority it is proved that dealing in the deadly draughts causes seven-eighths of all the pauperism that exists. It costs the United States \$50,000,000 a year to support pauperism and crime. At least two hundred and fifty million gallons of fermented and brewed liquors are made every year in the United States; of distilled liquors, eighty-five million gallons, and twenty million gallons are imported. Here we have the fearful sum total of three hundred and fifty-five millions of gallons consumed in our country, and at what direct cost? At a direct cost of \$700,000,000. This on the debit side, and on the credit side what does our government receive? A paltry sum of \$50,426,915, in exact figures. What then is the direct loss to the nation? Not less than ten dollars to every dollar received as revenue. By this waste the national debt could be paid in less than three years. But this is not all. Put \$700,000,000 on the debit side, —this in direct,—then you have only begun to reckon the real damages. Who can compute the loss from sickness, from squandered time and paralyzed energies, from property destroyed and taxes increased? Bring in the bill for indirect damages and put it on the losing side, and you have a sum total, the appalling aggregate of not less than \$2,000,000,000 a year, lost to this nation by this iniquity, licensed by government and tolerated by public sentiment.

We read that "righteousness exalteth a nation, but sin is a reproach and a curse," and we ask how long shall our government continue to license a business which poisons the body and destroys the soul? How long shall a government, claiming to be Christian, protect a business which lights the fire-brand of over property, that brandishes the blade of the assassin, that fills our institutions with pauperism, and our prisons with crime, which handicaps the entire society of our land in its race toward prosperity and liberty?

Rev. A. McElroy Wylie, in the *Safeguard*.

## CORRESPONDENCE.

HONOLULU, FEB. 17/04.

This is the Chinese New Year's day. All the cooks and Chinese servants desert at noon, and do not return for three days. The ladies of Honolulu are doing their own work, and social life is quiet. Just after I got up in the morning, the Fire Marshal came to my room and said there was great danger from the fire-crackers. So I leaped on a sofa and should be left off in the streets, on several prominent Chinamen. Their tables were nicely gotten up with sweetmeats, cakes, and fruits. Some had roast pig, cold ham, and various kinds of wine. All of them gave me tea. They were especially pleased to have a member of the Government call on them, as they said they considered it a great honor.

We called in a courtyard where a great many of them lived. I noticed many exploded fire-crackers on the ground. There were as many as forty Chinamen standing on the veranda looking into the courtyard. Suddenly they began to light packs of fire-crackers and throw them down. The noise was terrific, like the firing of a brigade of troops. More than forty packs were exploding at once. Every four or five seconds a large cracker would explode. The smoke nearly suffocated me. A pole had been run out from the roof, and to the end of it a string of fire-crackers ten feet long had been fastened. As they went off in the air they made a dreadful noise. Suddenly there was smoke on the roof, and the firing stopped. A piece of paper had caught on fire. A hose was passed up in a few seconds, and the fire was put out, and the crackers commenced again, and continued for some time longer. I was told that the first volley was fired in honor of my arrival. After we left, we met the two engines coming down the street, a native having seen the fire on the roof, and given the alarm. So the companies collected, rushed in, began to hitch on hose, pump water, etc., while the crowd gathered. I told the Marshal that the fire had been put out twenty minutes before, and the firemen were much disgusted, as they wanted some fun. I don't think they cared so much about the fire as for a chance to play water on the Chinamen. I called the boys down, but they were excited, and began to use the hose on all the stray dogs they could find.

In the evening I went to the new Chinese theatre, taking some friends with me. As I had granted the proprietor a free license for his New Year, he had tendered to me a box. The building is frame, without plaster or ornament. The audience are mainly the working Chinamen. The play consisted in beating a gong and howling. We were served with lemonade, cigars, and oranges. As usual the men took the female characters. The play was satisfactory. I think there were six actors altogether, and seven persons were killed in the course of an hour.

The Chinese usually have a *demon* in every play. The demon on this occasion brandished a wooden sword, and stared at every one in the most frightful way. Behind the actors and on the stage was the orchestra, consisting principally of a gong. An actor would howl, and then the gong would beat. After a moment's lull the gong would beat and the actor screech. Then the gong would beat and the actor howl simultaneously. It was evident that the unity of the Chinese drama consists in beating the gong. The Chinese audience sat with their hats on and smoked cigars.

Feb. 19th. Yesterday I lunched with the King at Wilkiki. The French Commissioner and his wife, with several others, were present. The day was delightful, and we sat on the grass under the coconut trees, listening to the roar of the surf. I saw a deed of conveyance by a native this morning, which reads: "In consideration of five hundred dollars, and of love and affection, which are worth altogether one thousand dollars, I hereby convey," etc.

Feb. 22d. I went to bed at 11 P. M., but was called at 12. The steamer was in with a case of measles on board. As President of the Board of Trade, I had to decide the question, whether the vessel should be quarantined or come up to the dock and land her passengers. So I got up, dressed, and went to the wharf. As usual, we did not know what to do, as measles is a fatal disease among the natives. But finally I ordered the steamer up to the dock, and directed the mail boat to bring the mails ashore, ordering the police to stand by and see that it all went straight. Then I went up to the Post Office and waited. The great bags came up and were emptied on the tables. As Minister of the Interior I am at the head of the Post Office. So I sat by and watched the distribution. Now and then a letter for me would pop out, and I would go off and read it.

Feb. 25th. Went to Fort Street Church, to hear the report of a missionary from Micronesia. He said that on one of the Gilbert Islands the natives were generally converted. He landed there once, and asked the chief how they were getting on. He replied, "All right; every man in the church but me; he chews tobacco, and we keep him in jail all time."

Feb. 26th. The King went to Maui last evening. All the Cabinet Ministers, foreign representatives, etc., received him on the dock. 9 P. M., a brilliant moonlight night. I have just taken a ride out on the Waikiki road. The head of Manoa valley was filled with clouds, and showers, thin as gauze, swept across the plain. The air was cool, and the coconut trees stood silent against the sky. I proclaim again that physical existence may be perfect in this pure air. The trade winds are blowing, just as the winds blow across the waters of Hampton Roads.

\* Yesterday morning I dropped into the police court. Three Chinamen were standing up, charged with selling opium. A lawyer said to me, "It is all arranged; they are equally guilty; you will deny it; the other will admit it; will be fined and sent to prison; the other two will escape; will pay the fine of the one who goes to prison, and will give him \$100 a month while he is there." I understand that this is a common practice. In several smuggling cases, we have discovered that persons charged with a particular crime have procured a man to admit that he committed it, plead guilty, and go to prison, while the really guilty escape, but pay a certain sum to the subaltern. I heard that a celebrated smuggler of opium in Hawaii kept several Chinamen on hand under pay, and whenever a raid was made on his house, one of the men was apparently in charge, and would be seized and sent to jail.

We have just discovered \$2,000 worth of smuggled opium. Several years ago a great quantity was brought in, by opening firewood stacks and inserting the opium there. I was this coming to a reception by the Kawahiau Female Seminary. The scholars are very young and quite nice-looking. The native parents were out in force, and took great interest. But the fate of the girls seemed to be inevitable. They learn to like like things at the school, and, as a rule, the native men whom they marry are inferior to them, and lazy, and cannot give them what they demand, so they inevitably fall back into the old Kanaka ways, and become worthless. The foreigner is always more attractive to them than the native Hawaiian, and they are ready victims.

Dr. L. gave me a splendid tea-party. A Chinaman has a wife and child here. He is converted, and wishes to join the Church. To abandon either wife or child he would be cruel; to keep both he would violate the law of the land. What shall he do? The foreigner is always more attractive to them than the native Hawaiian, and they are ready victims. A Chinaman has a wife and child here. He is converted, and wishes to join the Church. To abandon either wife or child he would be cruel; to keep both he would violate the law of the land. What shall he do?

March 12th. Steamer due to-morrow. I rode with R— up Naunau valley to foot the mule vint. We climbed up the side of the valley, so that we could almost look back into Kailua. 12th. Steamer at the dock; mail just leaving. The isolation ends for a moment. The curtain is lifted; it, and go back to our solitude in the Pacific. W. N. A.

## HOW TO TEACH A SMOOOL.

A lecture delivered to the students of Hampton by Rev. Dr. Mayo of Boston.

The first qualification in all teaching is knowledge. By knowledge we mean more than that to be gotten from books; we mean the subject to be taught.

It is necessary that the teacher be far in advance of the scholar. I have heard of an old Scotch woman, a teacher of the old sort, who when she came in her reading classes to a word she did not know, told her scholars to pass on, adding "doubtless it is the name of some king or monarch." In my early school days we used to have different teachers every winter. These teachers were usually not very well educated. There was one place about half way through the Algebra where they all seemed to stick. Year after year we commenced the book and proceeded as far as this unfortunate point, but there teachers and scholars went down together into a slough of despond, until we came to think that that part of Algebra could not be mastered. It is quite impossible for the teacher to retain the respect of the scholar when such a state of things as this exists.

But it may be asked, how shall we get the knowledge necessary to make a good teacher. Get all you can in your school days. Watch your teachers carefully; observe their methods; let no day pass without gaining some new idea. Washington had only three years of schooling. There still remain copies of books written in his own hand in which the substance of many others which he had read was boldly copied.

Do not suppose, however, that the time for acquiring knowledge is to be limited by your school days. Life is one great educational process, and if you are to be successful in giving out knowledge you must be continually taking it in.

Be sure that the knowledge you give is accurate. You should feel like a witness on a witness stand who is under oath to tell the

truth, the whole truth, and nothing but the truth. You enter discord into school or society whenever you make a statement that is not exactly true. I have a distinct remembrance of the leaders of the work in the small world in which I was brought up, as he sat fiddling away perched upon a dry good box. The sound of that violoncello of his haunts me still. See to it that you make no such discord in the mind of your scholars by inaccurate statements. It is a terrible thing to teach lies. Ignorant people will insist on shams. They will expect you to put your pupils over more ground than they can thoroughly master. Stand for truth. Saver try to make your pupils and their parents believe that you are accomplishing more than you really are.

Study the volume on the seats. As well might a physician try to prescribe for a patient whom he had never seen and of whose symptoms he had never heard, as a teacher try to teach scholars whom he does not know. You must know the character and habits of each one of the scholars on the bench in front of you, before you are in condition to do real good work with them. It will help you in this work, if you can visit the parents to see where Tommy eats and sleeps. Get acquainted with his mother. If you can only get her as your helper, you will accomplish a great good. You will never thoroughly understand your young pupil until you know what influences are about him during the hours of the day when he is not with you. You can help much in determining what those influences shall be.

Read children's books. There are some stories which always interest the young. Try to learn the art of telling a story well. Teaching is really telling stories. Such a book as Pilgrim's Progress might well be read to the children. You must learn to put truth in a way which will interest your scholars, and you cannot do better than to sit at the feet of the masters in the art of story telling. Study the art of teaching. You will of necessity make blunders in teaching at first. The only way to learn to swim is to swim, and there are some things which can only come to you by experience. But see to it that you never repeat your own mistakes. Learn from your failures.

Watch good teachers; try to discover wherein their power lies. Go to Institutes. Never let an opportunity pass of learning some new thing in regard to this art of teaching. Read educational books and journals. Some teachers say that they could not afford to take these journals. As well might a carpenter say that he could not afford to buy the box of carpenter's tools. They are a necessity of his trade. If he is to be a carpenter, he must have them, and if you are to be a teacher, you must have the tools of your profession.

Never be content with yourself. There is nothing more hopeless than a man satisfied with himself and his own acquirements. You heard the story of Thorvaldson the great sculptor. Standing before one of his great works of art he was seen to weep. Being asked the cause, he replied, "I can't do it any better." He felt that he could make no further progress because he could see nothing in his own work to criticize. Beware of your own condition when you see nothing which you wish to improve.

Teach the children to use their powers of observation. Most people miss half that is in this world, because they have never been taught to look. Many people have wondered at the names which Mr. Dickens introduces into his stories. They seem so wonderfully well fitted to his characters. Many suppose that they were invented by the author and that they had no existence in real life. This was not so. As Mr. Dickens walked through the streets of London, he was accustomed to notice the signs upon the stores and shops. Whenever he observed one that was peculiar, he put it down in his note book. It was in this way that he attained his wonderful stock of names. Teach your students to gain knowledge from all things about them. Help them to make the heavens and the earth their teachers.

Teach your children how to use books. A great many men never learn this art. They never get the most out of what they read. They take in the shell as well as the kernel. Two men take up a paper; in a few moments the one has drawn from his all that is valuable; the other spends hours over his and does not get as much as the other. What makes the difference? The one has learned to discriminate between what is valuable and what is worthless; the other reads with equal interest the advertisement of St. Jacob's Oil and the most important item in the paper. Teach your children to grasp that which is of worth and to throw aside the padding.

Most of all, make your children eager to learn. Save them out into this State of Virginia in earnest to find out all that is to be known. They may not become good mathematicians; they may have little knowledge of geography or history; but if they leave you, see to it that they are anxious to learn.

Awaken within them a thirst for knowledge. Arouse a longing for right. If you fail in this, all your work as a teacher will be a failure. They will soon exhaust the little stores that you have given them, and they will never gain more. As the train on which I was passing through a Southern State stopped at a way station, I occupied the time in walking up and down the platform looking at the body of men that had collected from the country around. A bright-looking boy stepped up to me and said "Mister, don't you want a man to work?" "Why, my boy?" I inquired, "why do you want to work?" "I want to cut out some money" was his answer. Send out your boys and girls anxious to cut out from the state of Virginia all that is valuable, not merely money but ideas, character, manhood.

## HORSFORD'S ACID PHOSPHATE

Brain Tonic.

Horsford's Acid Phosphate is cordially recommended by E. W. Robertson, M. D., of Cleveland, as a brain and nerve tonic, especially in nervous debility.

## Hampton Normal and Agricultural Institute

AT HAMPTON, VIRGINIA.

Incorporated in 1870, by special Act of General Assembly of Virginia, exempt from taxation. Devoted to the Education of Negro and Indian youth in Agriculture and the Mechanic arts, and as teachers of their respective races.

S. C. ARMSTRONG, Principal; J. F. B. MARSHALL, Treasurer.

Annual session from October 1st till the middle of June following.

Terms of admission: no knowledge of reading and writing, and of short and long division.

Tuition free to all, (provided by friends.) Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars a work required of those under 18 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The Institution is aided by the State, but is supported mainly by voluntary contributions. Besides State aid and Government help for Indians, the sum of \$30,000 a year, must be raised by contributions, to meet current expenses.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all.

The great need of the Institution is a permanent endowment fund.

The Hampton Institute is supported by, and responsible to, no denomination or society, and has no paid soliciting agent or machinery whatever, but depends directly upon the public.

It is earnestly Christian in its teachings and influences.

Present attendance, 464 students, of whom 90 are Indians; average age 18. Negro boys 216; Negro girls 158. Indian boys 62; Indian girls 28. All but twenty-five board at the Institute; twelve states represented, but chiefly Virginia and North Carolina.

## FORM OF REQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of ..... Dollars, payable etc., etc.

For further information address, S. C. ARMSTRONG, Principal, Hampton, Virginia.

## DOUGLAS OIL CAPSULETS

Have inaugurated a revolution among the drugs usually prescribed for diseases of the kidney and affections of the urethra. The many painful and distressing forms of these diseases are relieved more speedily, safely, and permanently by using the Douglas Oil Capsulets than by any other medicine. The highest medical authorities prescribe them, and Dundas Dwyer & Co., New York, prepare them.

## HORSFORD'S ACID PHOSPHATE

Intractable Dyspepsia.

I used Horsford's Acid Phosphate in a case of the most intractable dyspepsia I ever met with. The effect was most charming, and I am satisfied that it is a valuable remedy.

## At Home.

## TO GIVE IS TO LIVE.

The sun gives ever; so the earth—  
What it can give, so much is worth;  
The ocean gives in many ways;  
Gives paths, gives fishes, rivers, bays;  
So, too, the air, it gives us breath—  
When it stops giving, comes in death.  
Give, give, he always giving;  
Who gives not, is not living.  
The more you give,  
The more you live.

God's love bath in us wealth unpeeped;  
Only by giving is it reaped.  
The body withers, and the mind,  
If pent in by a selfish rind,  
Give strength, give thought, give deed, give self  
Give love, give tears, and give thyself.  
Give give, he always giving.  
Who gives not, is not living.  
The more we give,  
The more we live.

ANON.

## MRS. GARFIELD ON BREAD-MAKING.

"The Student," a little paper issued by the students of Hiram College, publishes a letter once written by Mrs. Garfield to her husband many years before he became President of the United States. If all women would follow her precept, their work would be lighter and their bread too. It is as follows:  
"I am glad to tell you that out of all the toil and disappointments of the summer just ended, I have risen up to a victor; that silence of thought since you have been away has won of my spirit a triumph. I read something like this the other day: 'There is no healthy thought without labor, and thought makes labor have been able to climb up higher. It came to me one morning when I was making bread. I said to myself, 'Here I am compelled by an inevitable necessity to make our bread this summer. Why not consider it a pleasant occupation, and make it so by trying to see what perfect bread I can make?' It seemed like an inspiration, and the whole of life grew brighter. The very sunshine seemed flowing down through my spirit into the white loaves, and now I believe my table is furnished with better bread than ever before; and this truth, old as creation, seems just new to have become fully mine—that I need not be the shrinking slave of toil, but its regal master, making whatever I do of my best fruits. You have been king of your work so long, that may be you will laugh at me for having lived so long without my crown, but I am too glad to have found it at all to be entirely disconcerted even by your merriment. Now, I wonder if right here does not lie the terrible wrong, or at least some of it, of which the women suffragists complain. The wrongly educated woman makes her duties a disgrace, and frets under them or shrinks them if she can. She sees man triumphantly pursuing his vocations, and thinks that it is the kind of work which makes him grand and regretful; whereas it is not the kind of work at all, but the way in which, and the spirit with which, he does it."

## SODA FOR BURNS.

A celebrated physician writes to the Popular Science Monthly that the only best application for burns, whether slight or severe, is a saturated solution of the bicarbonate of soda. Bicarbonate of soda is what is commonly known as baking soda. A saturated solution is a strong solution—as strong as can be made. Dissolve as much baking soda (not "baking powder" for this is soda and acid together) as the water will dissolve, and plunge the burned part in it if possible, or lay a soft rag (linen is best, but even soft blotting paper will do) wet with the solution, on the burn, keeping it wet. This not only takes the pain away but keeps and hastens the cure, and often keeps the blister from forming. So simple a remedy should be kept on hand in a family.

Foolish fear doubles danger.  
Never speak without thought.  
Richest is he that is least.  
Better go around than fall into the ditch.  
Fools make fashions and wise men follow them.

## HORSFORD'S ACID PHOSPHATE

Indispensable.  
I could not do without Horsford's Acid Phosphate in my practice. It is the best medicine I have tried in twenty-five years.  
Hendersonville, Tenn. H. J. WELLS, M. D.

## Health and Humanity.

## A MUSIC LOVING SQUIBBEL.

You told us once that hunters of seals sometimes manage to draw close to their game by whistling tunes to engage their attention. And now I have just read about a sportsman who, one day, in the woods, sat very still, and began to whistle an air to a red squirrel on a near tree.  
"In a twinkling," says he, "the little fellow sat up, leaned his head to one side, and listened. A moment after, he had scrambled down the trunk, and when within a few yards, he sat up and listened again. Pretty soon he jumped upon the pile of rails on which I was crouching four feet from me, sat up, made an umbrella of his bushy tail, and looked straight at me, his little eyes beaming with pleasure. Then I changed the tune, and clutched away he skipped. But before long he came back to actually seemed as if he were trying to pucker up his mouth to whistle. I changed the tune again, but this time he looked so funny as he scampered off, that I burst out laughing and he came back no more."  
Now that man had much more enjoyment out of his music-loving squirrel than I had shot him; and perhaps after this, you will hear the boys of your neighborhood piling up rails to sit on, and whistling to the squirrels who come to talk with you. And if they don't whistle well enough, send for me, for I can whistle nicely, if I am a fool.—*St. Nicholas.*

## MANLINESS.

It is related of the great English premier, Benjamin Disraeli, that years ago he acquired a fondness for an exceedingly ugly little cur, and upon being ridiculed by a friend with the suggestion that it was a waste of time, he replied, "I cannot be unlovely object, he replied, 'I believe the pup became no one else will. If he were handsome and had other friends he would not need me.'"  
—*Illinois Homestead Journal.*

## TOBACCO AND INSANITY.

A party of clergymen were discussing this subject, when the case of Rev. Mr. B.— was mentioned, a graduate of Andover, of high standing, and for a time very successful. "He had a mania," remarked one of the party, "who recalled vividly to mind, 'with his pale face, stained lips, repulsive breath, and quivering hand.' The abject slave of tobacco, he chewed negro-head tobacco, a match for any man who has not the iron nerves of an African goat or horse."  
He preached about three years with unexampled popularity and success. His health then failed, and no one knew the cause. A few months rolled away, and he utterly broke down, yet still so one knew the cause. In a few months more he became a maniac, relinquished his pulpit, and was as wild as the man found "cutting himself with stones among the tombstones," and as one knew the cause. He was then taken to an asylum for the insane, and remained twenty years! He there breathed a fatal atmosphere, paced the floor of confined halls, stared upon the outside world through iron gates, cursed himself, his wife and children, and in his wild ravings "deed damnation round the land." This day and night chewing tobacco as a fretted horse champs his bit.  
He once was pacing his cell as he had before, time year by year, when a change came over him. He stopped abruptly, and in a sort of soliloquy exclaimed, "What binds me here? His soul hursting with indignation, he cried aloud, 'Tobacco! Tobacco!' He walked backward and forward; then bursting into tears, he cast the last foul plug through the iron gates, and looking upward to God he said, 'O God, help! I will use no more.'"  
Now, we believe in no miraculous cure in this case. Mr. B. dropped his tobacco, and the sad and dark eclipse fled from his beautiful mind, and it came out from the horrible storms and tempests of insanity, clear as the sun and fair as the moon. He soon regained his health and vigor, again preached the Gospel of the blessed God, and after ten years of arduous service he died in peace, revered and beloved.  
Prof. Thayer's "Facts about Tobacco."

## HORSFORD'S ACID PHOSPHATE

In Debility, etc.

I have found Horsford's Acid Phosphate particularly serviceable in treatment of woman and children in debility and loss of appetite.  
New Orleans, La. W. H. HOLCOMBE, M. D.

## Teacher's Cable.

## WHAT IS TEACHING?

The *Sunday School Times* remarks: "Perhaps the best definition of 'teaching' which has been given is the 'causing another to know.' There is such a thing as teaching by example, unconscious teaching; teaching by the spirit we display or by the manner we practice; causing others to know, from what they see in us, that our way is desirable or that it is most undesirable; leading them in the path we pursue or impeding them by any other path than that. Teaching of this kind all of us are given to at all times. In this sense we all are teachers always. We are continually causing those about us to know the better way, or the worse. But it is when we say that we are Sunday school teachers; that we are engaged in Sunday-school teaching; that we expect to teach our class next Sunday; or, that we taught our class last Sunday. We have in mind, in such phrases, an active and purposeful service, rather than that unconscious teaching of ours which is the causing another to know or not. It is inevitable, whether we are aware of it or not. It is knowledge, and which he does not; that which we want him to know, and which we seek to have him know—which is 'teaching' in its technical sense; teaching in the sense in which we use the term, when we say that we have been teaching a particular lesson to a particular scholar or class. In this sense, 'teaching' obviously involves the threefold idea of a teacher, a lesson, and a learner; it involves knowledge on the teacher's part, and, at the start, the lack of it on the part of the scholar; also, an actual transfer of that knowledge from the teacher's mind to the scholar's, by the teaching process is concluded. Hence, to say that you have 'taught a lesson,' includes the idea that some one has learned that lesson; for unless there is learning by a learner, there can be no teaching by a teacher, and until the teacher has caused a learner to know a lesson, or a truth, the teacher has only been trying to teach—so far without success."

## Agriculture.

## THE VALUE OF ASHES.

Ashes constitute the best, the cheapest, and the most available fertilizer the farmer has at his command.  
Common wood ashes, when well preserved under cover, so as to be dry and unleached, and judiciously used, serve more fully than any other substance to answer the problem proposed by scientific agriculture in regard to the mixtures of saline substances most likely to be made generally useful as plant food.

The good effects which are found universally to follow the use of wood ashes attest this fact, notwithstanding that the ashes left by different varieties of wood when burned, vary with different circumstances. Wood is composed of cellulose, lignin, and in variable proportions, of carbonates, silicates, sulphates and phosphates of potash, soda, lime and magnesia, with some other substances in smaller quantity, yet more or less essential to plant growth. In fact, it is the truest embodiment of the mineral or inorganic elements absolutely essential to plant growth attainable. If the ashes have been leached or exposed to the weather, much of the potash and soda will have been removed, and their value will be diminished to that extent. A bushel of ashes, derived from burning the harder varieties of wood, will contain about four pounds of potash. The bark, leaves and twigs of trees give much more ashes than the trunks of trees and stems of plants.

Leached ashes—although less valuable, acting with less energy and effect—should be saved with care, and applied to the land in larger quantities than the unleached. Unleached wood ashes, mixed with pure ground bone, makes one of the most valuable fertilizers the farmer can apply to all the crops he cultivates. In England and Scotland, where the best results are obtained, the wood is mixed with the best effects on corn, wheat and root crops. The most marked effects of wood ashes, however, I have observed upon leguminous plants—lucerne, clover, peas, &c. A large amount of wood ashes, applied to the top dressing to orchard grass and timothy, the effects are also very good. Ashes, like lime, tends to destroy mosses, and when mixed with plaster, constitutes the best application that can be made to young clover early in the spring.

In view of the above facts, it is greatly to be regretted that so many farmers make no effort to preserve the ashes of their household for the injurious effects of the weather.

or, to apply them to their crops at the proper time.

L. Dana, in his admirable little book entitled "A Buck Manual for Farmers," treats of ashes, as well as of quick and hunus, very thoroughly and practically.

He says, in substance, Burning wood reduces its organic substance to two classes—salts and volatile salts. The last are largely found in the soot. The salts are formed of salts and silicates. These vary in quantity and quality, not only in different plants, as I have said, but in different parts of the same plant. The average quantity of ashes from 100 parts of such hard woods as dry oak, birch, hick, &c., 2.87; of pine (pinus abies), 0.83 to 2.87, yet less weight of ash than hard wood in proportion of .83 to 2.87, yet in equal weights pine ash affords four times more alkali than the ash of hard wood. To state the case differently, 50 pounds of hard ash yield to the leaching process 6.75 pounds soluble, of which 17.42 pounds are alkalies; 50 pounds of soft ash yields 25 pounds soluble, of which 17.42 pounds are alkalies. So I would urge the young farmer not to throw away his pine wood ashes, as his fathers have done, as worthless, but to preserve them with greater care.

Coal ashes are much less valuable. They contain from four to eight pounds of valuable matter in every 100, but are scarcely worth carting to any distance. They may be used, however, advantageously as a compost heap, with vegetable matter to insure porosity and the entrance of air.

The great value of ashes in agriculture depends upon its careful saving and judicious use. Used alone, on a dead, porous soil, its effects may be frittered away without profit; but with a certain proportion of organic or vegetable matter in the soil, its effects are immediate and permanent.

Of wood ashes, the grand old veteran of agricultural chemistry, Boussingault, says: "In general way, everything derived from plants that have lived must be useful to plants that are about to live, or that are already living and growing. The good effect of wood ashes on vegetation is known to communities the least advanced in civilization. The natives of Africa, on the river Zaire, prepare the ground, and place little piles of dry herbs along, to which fire is set, and upon the spots where the ashes are collected, they sow peas and Indian corn. These ashes are, in fact, the only manure employed."

The quantity of ashes applied to the acre must depend, to a considerable extent, on the character of the soil, and the crops cultivated. All the leguminous plants—beans, clover, peas, &c.—are great consumers of the salts in ashes, and ashes may be applied to them with a free and full hand. Mixed with gypsum or bone, I apply from two and a half to five bushels per acre, with marked effect—alone, often as much as ten bushels to the acre broadcast. The difficulty of procuring the ashes in sufficiently large quantities has alone deterred me from using larger quantities per acre. From twelve to fifteen bushels to the acre has been often used on light soils with great benefit, and from twenty-five to thirty on stiff, clay lands, with equally fine effects.

Southern Planter.

## THINGS WORTH REMEMBERING.

A correspondent of the Poultry Monthly says that poultry need a clean house well ventilated, but warm in winter; roosts kept free from lice by using coal oil on them once a week; a varied diet, not all corn, but wheat, buckwheat, boiled potatoes, mast, thick milk, &c. charcoal pounded fine and mixed in soft feed occasionally, is excellent and cheap; it produces health if the birds are out of sorts or scouring; it is also good in small pieces kept in their runs; parished corn or wheat is also good for a change. Look after the poultry personally, and do not trust all to the boy or man who, in most cases, cares not, or has no interest in them. Subscribe for the best poultry papers and keep up with the times.

ONE WAY TO PREVENT DECAY OF WOOD POSTS.  
The decay of wood embedded in the earth is difficult to guard against; but a simple precaution, costing neither money nor labor, will increase the durability of posts put into the ground by fifty per cent. This is simply by taking care that the wood is inverted, i. e., placed in the opposite direction to that in which it grew. Experiments have proved that oak posts put in the ground in the same position as that in which they grew, while their neighbors, cut from the same tree, placed top downward in the soil, showed no signs of decay for several years afterwards. The theory is that the capillary tubes in the trunks are so adjusted as to oppose the rising moisture when the wood is inverted.

# Whitman Chronicle

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. XI.

HAMPTON, VA., JUNE, 1882.

NO. 6.

## THIRTEENTH ANNIVERSARY OF HAMPTON INSTITUTE.

While there was no new cornerstone to lay at Hampton this year, and no heads of church or state to grace the occasion as in former years, there was no abatement of interest or evidences of success and progress in the exercises which, on Thursday May 25, closed the thirteenth year of the Hampton Institute.

A class of sixty was graduated—a larger number than in any previous year—consisting of twenty-six young women and thirty-four young men, among them, Hampton's first three Indian graduates.

The day was clear and beautiful; the crowd of visitors was smaller than last year, and the facilities for their accommodation greatly increased by the large airy halls of the new buildings. Kind letters were received from President Arthur and Governor Cameron of Virginia. The President had recently visited the school, and they were prevented by other engagements from attending the Anniversary exercises, as was also Secretary Teller whose presence had been hoped for.

Gen. Eaton, Chief of the U. S. Educational Bureau, was present, from Washington, also Col. Daniels, former editor of the Boston "State," and Miss Alice Fletcher, whose well known efforts for the Indian tribes among whom she has lived for purposes of scientific research, are now before Congress in the form of a bill for securing to the Omahas land in severalty, legal protection and educational privileges. Miss Fletcher spent several days at the school, to inspect more especially its industrial departments, in the interest of her western work.

The Boston and Norfolk Steamship Co. had arranged an excursion at reduced rates, extending to Baltimore; on their large and fast steamer D. H. Miller. A party of over a hundred had planned to avail themselves of it to visit the school, but very stormy weather on the day of sailing reduced the number. Among these were Rev. Dr. Cheever, of Worcester, Mass., Mrs. S. J. Burrows of Boston, associate editor of the Christian Register and representing also the Boston Advertiser and Boston Journal. Rev. John Harland of the Springfield Republican; Mr. Geo. E. Brown, of Boston; Rev. Mr. Bacon of New London Ct.; Prof. E. N. L. Walton, and Miss Walton, of Boston.

There were present also, Mr. John F. Hill, man of Philadelphia, a partner of the firm of Wamsutter and Brown; Miss M. A. Longstrech of Philadelphia; Miss Parsons of Constantinople; Miss Emily Huntington of New York; Hon. Josiah King of Pittsburgh, Ohio; Mr. Gordon of the same place; Mr. M. N. Waldron of New York; Rev. Dr. Bartou and Rev. Dr. Burrows of Norfolk, Va.

Of the trustees of the school were present, Rev. M. E. Strieby D. D. of New York; Mr. Anthony M. Kimball of Philadelphia; Rev. T. K. Fessenden of Connecticut; Judge Watkins of Virginia; Mr. Robert C. Ogden of Philadelphia; Hon. Lewis H. Stedder of Maryland; Mr. E. B. Monroe of Conn. and Mr. Chas. L. Mead of New York. Of the State Commissioners, Mr. Arthur S. Seger, Hampton, Va.; Mr. E. S. Hamlin, Newport News, Va.; Mr. F. S. Norton, Williamsburg, Va.; Mr. R. G. L. Paige, Norfolk, Va.; Rev. Wm. Thornton, Hampton, Va.

A large party from Norfolk came over to the afternoon exercises in the new steam Lary of the Old Dominion Line. A steam cutter was kindly placed at the school's disposal by Commodore Hughes, of the Portsmouth Navy Yard, and brought over some of its officers and their families.

Many of the principal citizens of Hampton, and Old Point, both white and colored, officers from Fort Monroe, visitors from the Hygienic Hotel, and some of the parents and friends of the students from Hampton and elsewhere, added to the audience.

The morning examinations of classes were the more satisfactory for having been preceded by three days of quiet written examinations of the Senior class on the studies of the year. Their papers on arithmetic, algebra, general history, civil government and political economy, English literature, agriculture, home industry and practice teaching had been submitted to a committee consisting of Rev. Dr. Ward of the New York Independent, Prof. and Mrs. E. N. L. Walton of Boston, Rev. Dr. Strieby of New York, and Rev. H. W. Fooks of Mass. Only Dr. Ward, Prof. and Mrs. Walton were able to serve on this com-

mittee, and they went through their arduous labor of love with the most conscientious fidelity. Dr. Ward counting wholly for that purpose though an octo remains to the Anniversary exercises. The report of the Examining Committee will be published at the North and we shall ask for a copy of it for our next number. Their general expression was of surprise and pleasure in the results of tests which they thought the teachers in their zeal had made rather over severe.

Some of the recitations of the lower classes also were attended with much interest; the classes in physiology, reading, the tonic solfa method of singing, (conducted by Mr. R. Hamilton, a graduate of the school, and one of the original band of Hampton student singers) and the "Kitchen Garden" class of little ones from the Butler School, who, in picturesque red turbans, and white pinafores, which they wore proudly, to have washed and ironed all themselves, went through the motions of setting their top-tables, and hanging out their Lilliputian wash, to the great entertainment and satisfaction of a crowd of spectators among whom was Miss Emily Huntington, Superintendent of the Wilson Mission in New York, and originator of this ingenious and excellent method of training little children in the habits and arts of house keeping. A fine portrait of our father, Mr. Daniel Huntington, one of the early abolitionists, hung in the room; her gift to the class, and the beautiful banners with which it was decorated, and all the apparatus used were contributed by friends interested in this work in the school.

The Indian classes attracted many visitors, as usual, and showed remarkable progress in English, while they did very creditably in arithmetic, geography and history.

The industrial departments of the School in operation, some till half-past ten, others till noon, attracted, as usual, especial attention. In the shoe shop, four Negro students, and two Indians, (Apaches, Pines, Shawnees and Sioux,) were making and repairing shoes. In the harness shop, four Sioux, and two Colored students, at work on single and double sets of harness; in the tin-shop four Sioux, one native Liverian, and one little white boy, a nephew of the Principal, as proud as any, of his good tin-cups. A Sioux young man is in training to be foreman of this shop. In the carpenter's shop, Colored and Indian students were at work—among the latter, a man of thirty, son of a Pina chief, whose own little son sits beside him in the school room, and works on the farm. They were making window frames and wash stands for use on the place. In the paint shop, one Colored student was at work, and in the steam saw-mill (the Huntington Industrial Works,) twenty-one, all Colored, were busy with their planes, making ashles, mouldings, lathe, flooring and packing cases. The knitting machines were also at work.

In the new printing office of the "Southern Workman," in the "Stone Memorial Building," the press, worked by colored students, was turning off the last sheets of the new catalogue. Two Indian young men were among the compositors, and a table was covered with creditable specimens of printing and binding done in the office, chiefly by student labor. The girl's Industrial Room in the same building, afforded ample room for the various mechanical, agricultural and liberal exhibits. Specimens of sewing by both Colored and Indian girls; shirts, dresses and various smaller articles. The tailoring department showed a handsome suit of the school uniform, in dark-blue cloth, with silver buttons. There were cases and piles of shoes, with the names of the makers posted on the soles; a thirty-five dollar set of double harness made by a Sioux Indian; a handsome set of steam radiators, labeled the first work of one Colored and one Indian student; neat wooden tables and wash stands, made by Shawnee and Sioux Indian students; apprentices, of from 3 to 18 months training. The tin-shop, and carpenter shop, made handsome goods. The wheelwright shop showed a excellent array of tools, old-chisel, and hammers, made by the Menominee Indian young men from Wisconsin, and just outside stood a blue farm cart, made entirely by their own unassisted skill. The agricultural and horticultural exhibit, ornamented though no large, boulders of clover and asparagus; seed corn, cauliflower, onions (and not in quite such juxtaposition,) strawberries, with flowers from the small greenhouse and garden.

There was outside an assemblage of the farm stock; Morgan and Percheron horses, pure Jersey and Ayrshire cattle and Cotteswold sheep, raised on the place. We must not omit the appetizing little exhibit of the girls cooking class, loaves of excellent bread, and dainty cake, one of them labeled as a combination achievement of the races.

In the large and airy hall above, the guests sat comfortably down at noon to a simple lunch, while the students were at dinner, after which all repaired to the chapel in Virginia Hall, to listen to the afternoon exercises, consisting of original essays and recitations by seniors and returned graduates, according to the following programme.

### PROGRAMME.

Soliloquy—"Student Meditation,"  
SARAH A. COLLINS, Ball, Md. Graduating Class.  
"My Home," MARY A. BOWEN, N. C. Class of '81.  
Declaration—"From Immigrant Wives of Jas A. Garfield," W. A. HAYES, Lexington, Md. Class of '81.

"To the Girls," SARAH KATZ, Norfolk, Va. Class of '81.  
Recitation—"Rock of Ages," EMILY L. TAYLOR, Norfolk, Va. Class of '81.  
"Indian Education," THOMAS WILSON ALPHE, Chief of Shawnee, Ind. Terr. Graduating Class.

Recitation—"Jane Compere," LUCY I. BOLDING, Burkeville, Va. Class of '81.  
"Our Race," JAS. M. RICE, Wythe Co., Va. Class of '73.  
"Head and Hands," MORRIS M. SENEWER, Petersburg, Va. Class of '73.  
"Our Relations to Local Opinion," VALDEICTORY, Geo. W. BARNARD, Clarksville, Va. Graduate's Class.  
Presentation of Diplomas to Graduating Class.

### Music.

The practice begun last year of calling back graduates, already at work as teachers, to do most of the speaking on the anniversary stage, is increasingly satisfactory. Even one year of earnest work in real life, after leaving school, makes a decided difference in the power of expression, and the ability to say something of practical interest. A very little Indian maiden in a pretty tableau in her recitation of Mrs. Sigourney's poem, "Indian Names."

The essays were marked by simple common sense. That by Mr. James M. Hicks, a graduate of '73, who, after teaching faithfully for six years, is now studying for the ministry at Howard, was not without originality and humor, and even eloquence, and was received with applause. The graduating class was represented only by its salutatory and valedictory, and one of its three Indian graduates. Their essays were all very good. That of the young Indian chief, which had received absolutely no revision, was naturally listened to with great interest, and by request of some of the guests, will be published in our next number. These three Indian graduates entered Hampton three years ago, with sufficient knowledge of English gained at the mission and agency school to enter the regular Junior class, and have been rapidly promoted, completing their course with credit; and learning, one the printer's, and the other two the carpenter's trade. One is a Shawnee, and one a Cherokee, from Indian Territory; the other a Menominee from Wisconsin. Their conduct and character have been worthy, and much is expected, from their influence and example among their people.

The music interspersed between the essays consisted of the favorite old plantation choruses, with some English glees and part songs by the choir, and the "class ode," the words of which were composed by one of its teachers, and the music by Mr. R. H. Hamilton, of the class of '76, director of the choir.

### PRESENTATION OF DIPLOMAS.

By Rev. M. O. Strieby, D. D.

In presenting the diplomas to the graduating class, the President of the Board of Trustees, Rev. Dr. Strieby, paid an eloquent tribute to the memory of the late Mr. John C. Whitin of Massachusetts, a most generous and lamented friend of Hampton and the cause which it represents, through whose liberal benevolence the Whitin Memorial Chapel was built in Virginia Hall. Dr. Strieby said:

"My young friends; in bidding you farewell in this beautiful chapel where we have so often met, it is proper that I should say to you a few words about the source of this one of

your privileges. It is a beautiful story that is told of an English King in the old time who, bearing the body of his beloved wife through his kingdom to its resting place by the sea, caused, at every station where he stopped on his long progress, prayer to be made and a beautiful cross to be erected in her memory—the last being it is said, Charing Cross, now in the heart of London.

This room is such a memorial cross, erected as a memorial of a dear and beloved wife, by Mr. John C. Whitin, of whom I know you have heard. I want to call your attention to his remarkable history—at first a poor boy, accumulating a large fortune by his industry and intelligence, and at last becoming himself its alumnus in behalf of the poor and the needy. It is especially in thinking of him and the spirit of his life that I have been so exceedingly gratified to have in listening to the noble sentiments you have expressed here today. This school is doing a noble work in educating the mind—in turning out teachers. It has been my boast all through the land, that over ninety per cent. of Hampton's graduates have become teachers. But I am becoming still more glad to think of the still nobler work it is doing, and that it is becoming recognized all over the land, and to see that you yourselves appreciate it—establishing the dignity and necessity of labor, in the elevation and progress of all men and nations. I want you always to remember John C. Whitin, and all the other noble men who, like him, have believed and demonstrated the value and the dignity of labor.

In the name of the Trustees and on the recommendation of the faculty, I have the pleasure of presenting to you these diplomas."

### ADDRESSES BY VISITORS.

The Rev. Dr. Bartou, rector of the ancient parish of St. Paul's in Norfolk, was introduced by the Principal, and made a brief but eloquent address, after listening to a spirited rendering of the favorite national song of his furburial, the "Watch on the Rhine."

"What can I say? Impressions so full—so varied—as have crowded upon me today, one ought to take hours to frame into words. I will just say this: A few years ago, it was said around here, 'Well this Hampton school is an experiment—we don't know how it will turn out.' I think today, we all say, in view of the noble efforts of the Principal and the teachers under his guidance, 'Hampton is a magnificent success—a glory to our people, and God grant that it may go on.' It is a magnificent success, when I see the young man here who three years ago came here from the Indian Territory, and hear him, standing on the stage today, utter sentiments so strong and manly, yet so tender and true; and when I see these others here, on their way to Congress may be, as one of them has said, and hear them utter thoughts so true and sensible, whose spirit we can all respect,—if they get to Congress, I hope they will still be teachers of practical common sense.—I think the domination of knowledge is one and universal. What is knowledge? It is the breath of the Almighty God. I see the image of my God in all their faces.

My heart rejoices that it is not the improvement of the mind only, but heart lessons that are taught here; and God grant that these lessons may be carried out and spread abroad by those who are sent from here. All through this country there is abundance of precious metal hidden in the earth; but it takes intellect, strength and skill to bring it out. In the mind of man are noble capacities,—be he white, black or red. The country owes its thanks to him who has done so much to develop them. There may be difficulties still before him, but I think he has conquered them all. I think there will be no more difficulties in the way of the Normal School.

Two hundred and fifty years ago, came to these shores, vessels from the old country. What was their mission? What their earnest hope and prayer?—For among them were men as zealous for God's work as any now. On bended knees, on yonder sand, they prayed: "Give us the heathen for our inheritance—Give us strength and light, to educate and convert these Indian nations. Poor William and Mary College, is a monument—almost ready to perish—that testifies to their earnest zeal. Many of them, and those who succeeded them, were agonized with the thought of so much honest effort used and nothing to show for it. God works in his own way. Could they now see how the same work has

fallen after centuries into as wise, as worthy, as earnest hands as theirs—and God he praised, so strong and so successful—how they would give God thanks. Then press on—fear no obstacles. In God's own way and time shall all see our dream realized, and the foundations laid deep and lasting for the brotherhood of man.

God speed this glorious school—God strengthen the hands of the Principal. God bless this noble work, and make us all good citizens here, and fit to glorify His name forever and ever."

The plantation song by the school. "Walk together children," was a fitting refrain to Dr. Bartin's eloquent finale, after which the Principal introduced Rev. Mr. Burrows, pastor of a prominent Baptist church in Norfolk. He said:

"One thought has struck me rather remarkably. We have here representatives of the three great races, which people and control this continent. I don't know when, if ever, they will be merged—it will be some time first. Each has different characteristics; excellencies and faults. I would like to make a speech on that, if I had time, but I have not. I have heard of this Institution—read of it, I have profoundly interested in it, but till I came on these grounds, I never knew the half. Such grounds and buildings—such resources for industrial training—such classes. One of these young gentlemen who has spoken here to-day, proclaimed himself on the way to Congress; he modestly said that the other members would mean him. And Dr. Bartin has endorsed the suggestion. Well, I have thought that they may need teachers in religion there as well as in common sense. I knew of two engineers over the states—I might mention their names, but I will only say that one was from the West, and the other from over here on the Eastern shore of Maryland—one of whom laid a wager that the other could not repeat the Lord's prayer. The other took up the challenge, and putting his hands together, began: 'Now I lay me down to sleep—and so bravely on to the end.' The challenger handed over the stakes—only saying: 'Well, I give up—you've won, but I'll be hanged if I thought you could do it.' (Laughter.) So you see they may need teachers in Congress, but as for me, I am adopting that last expression as my own, and saying: 'Well, General, I'll be hanged if I thought you could do it.' (Laughter and applause.)

In regard to these three races here represented, I say first, no people on earth have been more unjustly treated than the native inhabitants of this country. I have read with veins tingling with shame, the Century of Dishonor. I pray God that the future may do something to wipe out that stain.

Our colored friends, like all people under similar circumstances, have cultivated their imagination just in proportion as the other faculties of the mind have been kept in abeyance. This is in accord with the laws of mental and physical powers. What I wonder it, is that you sir, and your teachers have been able to suppress the excessive demonstration of this. In the essays of these young ladies we have been struck by the sense, Anglo-Saxon—plain common sense. No euphuism, no extravagance of rhetoric. They compare very favorably with white speakers we often hear. I will only say to these young ladies and gentlemen—I have been away seven years from Virginia, and have just come back to the state I love so much—I will say to them, that all far-seeing, thoughtful men in the South, do heartily appreciate and thankfully receive the aid this school is giving in educating this race in this manner.

I will say to the Northern friends here,—the first slave brought to Virginia, were brought in Massachusetts bottoms. You helped to fix this on us, and it is right that you should help us get rid of it—and we would help you more than we do, if we could. I am doing what little I can in Louisville. The church I am connected with, has thirteen schools for this object in the South. We are glad to cooperate with you, and we are thankful for your help. May God bless and prosper the work."

The exercises in the chapel were closed by the singing of the doxology, and the benediction was pronounced by Rev. Wm. Thornton, of Hampton. At five o'clock there was a dress-parade of the school battalion of cadets, under Lt. Geo. Le Roy Brown, U. S. A., Commandant, on the green in front of Virginia Hall. Steamboats and carriages were in waiting to take the guests to Norfolk, or Old Point, and soon, the gleaming glories of the sunset the throng dispersed; and another interesting day was closed in Hampton's history.

The progress of the school during the year may be judged from the thirty-third annual report, which contains the remainder of our columns, and will be found, we believe, of special interest proportionate to its length.

#### MAY DAY AT HAMPTON.

A visitor present at the Hampton school girls' last May-Queen party, was moved to make the following beautiful sketch of it. This flower festival has become traditional at Hampton, and while few might suspect the small economies which contribute to the beauty of the scene—the needle-work and laundry-work bestowed by the brilliant court in its snowy muslins, the magical transformation, worthy of Cinderella's god-mother, of strips of cotton cloth into white kid slip-pers—they are not without interest as suggesting how many simple ways there are to bliss."

Outside, a grey mist and the cool darkness of a spring night; inside, the brightness of flowers, music and merry voices. A strange little story of May, the poem of an hour, written for the eyes and sung for the ears of a fortunate few, who read and listen gratefully in the midst of an echoing past and the light of the future's promise.

Sometimes one dreams of such a scene as this, but time is not a dream—this great, bright stand stands solid on its foundation, and the crowd of dusky girls are veritable flesh and blood. It is Hampton's festival of flowers, the crowning of the May Queen. Through the open chapel door, come, two by two, the maidens, white robes of all them, and half in the glory of unnumbered blossoms. In wreaths and garlands, in great clusters, and masses of drooping color, on dark heads and snow white gowns, with fairly reckless magnificence are worn the flowers of a Virginia May; jessamine, marigold, the pink wild honeysuckle, hawthorn and laburnum, velvet panicle and pale forget-me-nots, tall lilies, white and blue, and everywhere the unspeakable beauty of unnumbered roses.

And the girls still come, each holding high aloft a wand of flowers, and the music rings out gaily as they range themselves on each side of the long, central aisle, the beautiful uplifted wands making arch after arch, beneath which no royal head need think it shame to bow. The music stops, softly and quickly enters the rose clad torch-bearer, singing as she bears her tall ivory wand with its starry lights, up the flower path to the throne, as yet empty, but canopied and wreathed with flowers. And after her, one by one, the harbingers of spring, each singing her message as she comes, till the space about the throne is filled, and at last the Queen comes, a dark brown Queen, crowned with the innocent gold of buttercups. Around her as she sits, gather her court attendants, before her stretches the long line of arching wands, at her feet sit two solemn little Indian maidens, the balms of the school, one, pansy wreathed and laden, the other shining in buttercups. One by one, are given to the Queen her royal emblems, crown, scepter, bow of roses, the cross of Pain, modest blossoms from the hand of loyal obedience—until at last the group about her tails softly back on either side, and through the vivid vista of the crocuses wands, come hand in hand, her girl subjects to do her homage.

A more brilliant picture, or a more suggestive, would be hard to find; simple in conception, simple in execution and accessories, but made radiant by the Heaven sent beauty of flowers. Form, color, perfume, are here in perfection, glorifying like crisp African curls and straight Indian tresses, and as the last couple in the gay procession, two little elves from some wild Indian camp, bow low before the throne, and the chosen King of the evening leads the Queen down among her lieges, the music breaks into quicker strains, and a murmur of delight runs from lip to lip.

In a moment the floor of the hall is covered with the pretty white figures and their dark coated fellow students, and once more the air is filled with laughter and merry voices. All the meanings that the lover's love's language, the deeds, the toil which have made all this possible, claim their place here—it is not every day nor everywhere that one sees a Queen so crowned.

The picture dissolves, the flowers are fading, but the light and the brightness remain, and one remembers that it is still dark outside.

#### CORRESPONDENCE.

FROM NORFOLK.

March 19th.—The Japanese Embassy has arrived. M. Nagasaki and his Under-Secretaries. The preparations for their reception were not made in time, and they were obliged to spend most of the day at the hotel. In the evening they went to Palama, and occupied one of Keokakalani's houses. I took them out and dined with them. I last saw M. Nagasaki, on the boundaries of the Japanese Empire, as we went out of the harbor of Nagasaki, in the midst of a tremendous salute. He was one of the officials sent to escort us out of the Empire. He speaks English well; has been in London ten years, and has worked his way up in Japan. He is perfect, except personally on the Mikado, and is his private secretary; goes with him about the country, and posts him up in foreign matters.

The Planter's Association met yesterday, and the "Planter's Labor and Supply Association" was incorporated. I presented it to the Privy Council, and the charter was granted.

March 22d.—To-day a field-day. At 11 A. M., reception of the Japanese Envoy. All the troops were out. My office was filled up as a reception room. King and staff in full uniform. Cavalry escorted the Envoy from his residence, and the soldiers were drawn up in government yard, presenting arms.

It had been arranged that the Planters were to be presented to the King at 13 o'clock, and were then to take lunch with him. Everything went off nicely, and at 2 P. M. the Planter's convention met again. I was invited to make a speech on the labor question, and did so; arguing strong efforts.

March 23d.—The planters are now organized, and there seems to be a feeling that some good has been done, that a step has been taken in advance. People here complain of the want of moral stimulus, but it seems to me, that for so small a place, much can be held in its favor. There is a large reading club, and a social science club, and a sewing society, and there is much here that furnishes food for thought.

The Planters yesterday passed a resolution in favor of the total prohibition of the sale of liquor in the Kingdom. As a matter of fact, they would prefer to go without wine or liquor of any kind, for their own use, rather than to be annoyed by drunken women. A prohibitory law will prevent the introduction of opium, and that is a good thing, as they had only seen each other before. I concluded that marriage must be encouraged, so I took the man's \$50.00 and gave him a year in which to pay the balance. So the two went off to the church and got married.

April 4th.—The King and I rode on horseback to Moanua, to look at a government fish pond after inspecting it, we went back to the house, where maids were spread on the deep, fine grass, under the broad moon-key-pod. As we lay there looking at the sky, the King said to me, "Southern Workman," my mother's letter relating to the time when she brought me to America. Then the natives began to talk about my brother B., and his skill in riding and dancing, and the lunch was served on the mats in native style. We had a curp, the first taken out of the pond, as they have been but lately introduced into the Islands. As I lay on the grass, with the soft trade-winds blowing down from the mountains, and the broad-leaved bananas and taros fringing the gardens, and a dozen tall coconut trees lonely in the sky, the King and his retainers idling on the ground, I again asked myself the question, by what course of events did I drop into this curious scene of tropical wealth. I did not know the question, but took a nap, sleep being most useful, while my answer is of no great consequence.

News has come that Congress has passed the anti-Chinese law, by which Chinese are excluded from California for twenty years. One can speculate wildly as to what the result will be. I have settled down to this view of the question, viz: that I have a right if I own the soil, to say what sort of a civilization shall exist about me, how my children shall be brought up, and that I have the right to protect myself from intrusion. The Chinese have the same right. Only in 1857 we violated the principle ourselves, and now we are insisting on the observance. It seems to me that the generalization that every man has a right to live where he pleases, and pursue happiness wherever, is too broad. We cast out bigamists from social life, why not cast out pagan Chinese bigamists? The great mistake America has made, is that she forced China to open her ports, and not to force her to close them. Nations are selfish, as the Eastern States of America are not opposed to the Chinese, the Pacific are. But the politicians must hold on to the California, so Congress goes for what will save the party, regardless of moral consequences.

Last evening, went to a musical concert at Palama, given by the Japanese Envoy. It was a nice affair, not too crowded—broad leaved flags—nice supper, and a fine breeze. The place belongs to Keokakalani, and yesterday water spouted in the artemis well they are sinking there, at a depth of 700 ft.

April 10th, 6.30. A. M.—Chinese boy brings me coffee and says "steamer in."

One transfers the intelligence of men to that which they make. It seems as if the steamer Flare, a great intelligence which makes periodical visits here. W. X. A.

March 27th.—The "Earl Dohsonie" arrived yesterday with Portuguese immigrants. I went on board early in order to see how they were cared for. The voyage from the Azores was over five months, but the people were looking well, and six babies were born on the passage. All were dressed in their best, the favorite colors of the women being red and yellow.

A curious coincidence has just come to my knowledge. The statue of Kanehameha, the work of Gould of Florence, was lost near the Falkland Islands while being transported to this country. The vessel was burned and sunk. Insurance of \$10,000, the cost of the statue, was paid. But after a time the cargo of the vessel was recovered, and the statue of the great warrior, perfect, excepting only one hand, was placed in front of a ship-chandler's store in the Falkland Islands. The captain of the "Earl Dohsonie," saw it, thought it would be a good speculation to buy it, and did so for \$500, and here it is in the hold of the vessel. The replica is now on the way out. I was asked to buy it for the government, and consented to do so, if I could get it at a fair price.

March 28th.—The crew of a vessel burned at sea have just landed here. They sailed in boats, 2000 miles, and did it in twenty days, eleven men in one boat, ten in the other. The boats were not more than 24 ft. long. When they arrived they had provisions enough for 8 days store. Each man was allowed one hard bread in the morning and one at night, 8 oz. in all, 5 oz. of corned beef and a quart of water. At the end of the twenty days, when they reached the coast of Hawaii, and could not land on account of the surf, and were told by the captain of a cutter that the steamer Like-life was around the point 20 miles away, these men double-banked their oars, and made the boats fly through the water. They reached the steamer just as she was getting under way. Each boat had one sail, and as they started in lat. 89° N. and 115° W. long, they had the trade winds all the time on the quarter, and made one hundred miles a day.

I have bought the statue of Kanehameha, for \$550.00. It will now be put up on one of the other Islands—Hawaii perhaps. Yesterday a Portuguese came to me and said he had just met a girl in the immigration Depot, and wanted to marry her. The passage money of a female is \$100.00. The man said he had only \$30.00 cash, and that to the depot and found the couple looking rather dejected, as they had only seen each other once before. I concluded that marriage must be encouraged, so I took the man's \$50.00 and gave him a year in which to pay the balance. So the two went off to the church and got married.

April 4th.—The King and I rode on horseback to Moanua, to look at a government fish pond after inspecting it, we went back to the house, where maids were spread on the deep, fine grass, under the broad moon-key-pod. As we lay there looking at the sky, the King said to me, "Southern Workman," my mother's letter relating to the time when she brought me to America. Then the natives began to talk about my brother B., and his skill in riding and dancing, and the lunch was served on the mats in native style. We had a curp, the first taken out of the pond, as they have been but lately introduced into the Islands. As I lay on the grass, with the soft trade-winds blowing down from the mountains, and the broad-leaved bananas and taros fringing the gardens, and a dozen tall coconut trees lonely in the sky, the King and his retainers idling on the ground, I again asked myself the question, by what course of events did I drop into this curious scene of tropical wealth. I did not know the question, but took a nap, sleep being most useful, while my answer is of no great consequence.

News has come that Congress has passed the anti-Chinese law, by which Chinese are excluded from California for twenty years. One can speculate wildly as to what the result will be. ## Thirteenth Annual Report

OF THE PRINCIPAL,  
For the School and Fiscal Year Ending  
July 1st, 1882.

To the Trustees of the Hampton Normal and Agricultural Institute.

GENTLEMEN:

This is the fourteenth year of the school. My report will consist principally of reports of officers and teachers.

Heretofore I have discussed the Negro and Indian questions in their general phases; with reference to race differences and peculiarities. Now, specialists in the several departments of the school will speak for themselves.

I present before the larger portion of the report of Mrs. Eunice C. Dixon, in charge of graduates department; it was organized last year, and is of increasing importance. The graduating class of this year numbers 60, making a total from the first of 486.

### REPORT ON GRADUATES.

BY MRS. E. C. DIXON.

Of the 389 graduates and 27 senior-undergraduates—those who left before the end of the third year—entered in the new "Record Book," males 280, females 140, total 420. I have learned that 326 have engaged in teaching, and that more than three-fourths of the whole, i. e. 319, have made teaching their vocation since they left the Institute; 3 are licensed preachers, as well as teachers. Over ninety per cent. have engaged in teaching. Of the whole number, 27 have died; 2 become insane; leaving 297 to be "kept track of."

Since October 1st, '81, letters have been written to all (not at hand) except 16, whose location I have not yet been fortunate enough to find. I have heard directly from 363, and indirectly from most of the others. Papers, magazines, &c., have been forwarded to them from time to time, for which many grateful acknowledgments have been received; 142 have been put in direct communication with Northern friends, who kindly keep them supplied with reading-matter.

276 have taught in Virginia.  
46 " " " North Carolina.  
14 " " " South Carolina.  
16 " " " Maryland.  
5 " " " New Jersey.  
5 " " " Georgia.  
4 " " " Alabama.  
4 " " " Louisiana.  
3 " " " Florida.  
1 " " " Tennessee.

1 has taught in Missouri.  
1 " " " Kansas.  
1 " " " Delaware.  
1 " " " Ohio.  
1 " " " Vermont.  
1 " " " Nebraska.

It may be gratifying to know that of the class of 41 graduates last year, 31 have taught since in Virginia.

90 of our graduates are reported married—in several instances husband and wife teaching in the same school.

153 report owning land or other property.  
7 own above 100 acres.  
18 " " " from 50 to 100 acres.  
4 " " " " 20 " "

15 " " " under 5 " "  
2 land and other property valued at \$3,000.  
3 at Lincoln University, Pa.  
17 " " " from \$500 to \$1,000.  
16 " " " " \$200 to \$500.  
6 " " " " under \$200.

13 are pursuing their studies at other institutions.

4 at Oberlin College, O.  
3 at Howard University: 1 Medicine, 1 Law, 1 Theology.

3 at Lincoln University, Pa.  
1 " Dartmouth College, N. H.  
1 " Willerforce " O.

1 " St. Augustine Inst., N. C.; Theology.  
1 graduated from Medical Department of University at Buffalo, N. Y.; is Assistant Physician and Surgeon at Wayne County Asylum and Insane Asylum, Lyons, N. Y.; 1 Missionary in Africa.

PRESENT OCCUPATION OF OTHERS.

Four-fifths of whom have taught an average of four years.

3 Bookkeepers.  
3 Clerks in Post Office Department.  
1 " " Banking House.  
1 " " Custom House.

1 Commissioner of Revenue and Assistant Postmaster.  
3 Office Clerks.  
10 Engaged in merchandising.

3 General housework.  
4 Carpenters.  
4 Seamstresses.

4 Waiters.  
3 Common laborers.  
3 Shoemakers.

2 On railway trains.  
2 Mining in Iowa.  
2 Care of a deranged parent.

1 Seaman.  
1 Tailor at Hampton Institute.  
1 Public singer.

1 Body-servant.  
1 Assists in care of Indian girls at Hampton.  
1 Compositor in office of Southern Workman.

1 Printer and Newspaper Reporter, at Washington, D. C.  
1 S. S. Missionary, for Amer. S. S. Union.  
1 Steward on S. S. "Ohio."

1 Constable and Carpenter.  
1 Keeper of Light-house.

Also recorded, are 45 under-graduates, all of whom have taught more or less since they left the Institute—the majority of them in Virginia.

Most of the graduates report Sunday Schools connected with their day schools, and some have formed temperance societies.

Their letters are generally encouraging. The following are quotations from them. One of the zealous little band of Hamptonians at the "Tuskegee Normal School," Albany, whose Principal is B. T. W. Shilbourn, of class '73, writes: "Surely this is a cause worth working for, and everything that can be done by me shall be done to make this school a success."

Another, who has charge of its primary department, writes: "I began school November 21st, with 30 scholars; the number has increased, until now—not a month—I have 70 on roll, with a daily attendance of over 60. I love my work more and more; my children seem eager to learn; to ask them not to do a thing is all that is necessary. One who cared to work for others at all, could not be discouraged. We never dream of discouragement; never speak of it; all our dreams, and thoughts, and talk are of success; success is our aim, and it will be our end!"

One who teaches in Augusta County, Va., writes: "There were four Hampton students here teaching when I came. The people in this part of the State make many inquiries about the N. N. and A. I., and four have promised to go to it next year. There is plenty of brain and muscle of both sexes here; some of the earnest ones ought to be put in the right position to make themselves, and to help others. They doubtless would become useful men and women to their race." From Botetourt County: "The people here seem waking up to the importance of education, and good teachers are in demand." Another writes: "My school was taught the three terms previous by a Hampton graduate of '75; so I found it in quite a good condition. I have a S. S. connected with the day-school; the children and some of the parents attend the S. S. quite regularly. I teach the Bible class. I teach in a church, and have not maps and many

other necessary things for teaching; still, I do not cause any complaint."

From Halifax County, Va.: "Teaching has been to me almost like being taught; my ideas about things are clearer and stronger; things come to me as I teach as they never did before. The pleasure, too, is afforded with the thought of helping others! Teaching makes me feel my deficiencies; gives me a better sight of my position. I shall never fail to acknowledge my lasting thankfulness to Hampton School for what she did for me."

Another writes: "This is my first experience in teaching. I have had a hard struggle getting up my day and S. S., but I like teaching very much. The people here have been neglected so long, that it makes them not to feel the good of an education. I hope they will be more thirsty for knowledge by the time this session expires." From Powhatan County: "I have been teaching some months, and have not got my pay yet; that troubles me; still, it does not make me lose my interest in teaching; as you know, I am a poor girl, and need my earnings. I came here to teach my people, and really I do think more of that than my pay; though I did want to pay my sister's schooling, and not depend on our old father. Another says: "I enjoy teaching very much, and am glad I can work for my people in this way. I have had many discouragements; my school house is very uncomfortable; it is in the wet weather; then there was no money in the treasury; twice I have had to tell my money order at a discount; yet, I have been elected and strengthened by the rapid progress my pupils seemed to be making."

From West Virginia: "I am doing first rate here; feel more encouraged as to the work among my people here now, than I ever have before." Another, from Hancock, writes: "I have several pupils fitted for the Middle and Junior classes at Hampton; a fine promise to go there the coming session. Education is what they need to make them good and useful men and women. I also teach S. S., and talk much to the people about their habit of drinking; they don't like to hear it." From Augusta County: "The work here, most of them have got out from one to ten acres of land, and put up small houses; but often their wives are idle, spending their time visiting, telling and hearing news, while the men can scarcely keep bread in their houses. From near Goldsboro, N. C.: "The people here are poor, but industrious. We have temperance meetings; the children all sign the pledge. Tobacco is freely used by both sexes. I have started a S. S. and a Temperance Society." From Wilmington, N. C.: "I am teaching one of the graded schools, have 100 in my room. There are five teachers in the building; Mr. Holt (Hampton graduate) is the Principal. I like teaching, though it is real tiresome; I think it is the hardest work one can do, but tire some as it is, I would not give it up. When I was what is to be done, I said I had begun before. I would like to take a peep at my old home, Hampton Institute. Thoughts of by-gone days arise in my mind to cheer me in my work." From Halifax County: "I came here with the anxiety to do all the good I could; to try to elevate and enlighten my pupils, and I have found plenty of work here to be done. I am sorry to say that I am surrounded by impudence, and I am tired of it. I had begun before. I would like to take a peep at my old home, Hampton Institute. Thoughts of by-gone days arise in my mind to cheer me in my work."

From Pulaski County, Va.: "Temperance and intemperance are strongly arrayed against each other here. There are four bar-rooms in full blast here. I have taken such a stand against intemperance that some of my strongest regular friends don't speak to me now." From another quarter, one writes: "Rum is the great enemy here, but not so great among the colored as the whites. In going to my school I have to pass two taverns, and I have not seen a colored man drunk."

From Surry County: "The people are very intemperate, and you can't get them to take an interest in the temperance cause. As far as the temperance work is concerned, I feel that I cannot do much." Again, from Camden, S. C.: "I find morality in a sad condition—old and young, men and women, indulge in strong drink." Another writes from South Carolina: "My school numbers 130 pupils; I have an assistant teacher. My night school of 15 young men, who work through the day and go to school at night, is doing well. They are thirsty for knowledge. My S. S. too, is flourishing at this time. I have organized a reading-room; so far, it works well. Religious papers or books, especially temperance reading, would be gladly and thankfully received. I am trying to do something. My correspondence with Hampton and her graduates encourages me."

From Orange Co. one writes: "I have a nice day and S. S. I am very busy. I am in my school; at first the people said if I didn't whip the scholars, they would soon rule me. I have had to work hard to carry my point. Now they say that the order is better, and the children learn faster than ever before. No graduate has taught here before." Another: "I teach

'habits and manners' in my school once a week. I got a first grade certificate, and get \$30 per month. The Superintendent seemed well pleased with the Hampton teachers."

From Nelson County: "On Thanksgiving Day I taught half the day; then we had a 'Thanksgiving Dinner'—it was 'I guess, like what they have at Hampton—but crackers, that Mr. B., of Boston had sent in a barrel, with some other things, for my school. Before dinner I talked to the children about the Giver of All Good; then asked them what they felt most thankful for. There were nearly as many answers as there were children. The school-room was crowded. They never had 'Thanksgiving Dinner' before, and they all enjoyed it, though the weather was cold, the house open, and our feet like ice. I think we all felt great thanks to Mr. B. for his kindness to us." Windsor, Va.: "I find a great deal of work here to do. There are many obstacles—the way—some are too poor to provide decent clothes and books for their children. I find teaching hard work, with poor wages. I am the only Hampton graduate in this county. Not many like to teach here because there is a political faction that opposes paying the colored teachers as much as they do the whites." Another writes: "I often lecture my little boys in school concerning strong drinks. I can't reach the old but through their young, which is the best; for I find they strictly regard my teaching at home. One little boy told his father a few weeks ago, not to drink any more rum, for the teacher said it was wrong. I learn that the father, through the influence of the child, has forsaken all strong drinks, and wishes to become a member of my society. Strong drink is the besetting sin of the people here. My S. S. is doing well. How nice it is to be a teacher! I wish to be called by no other name, but only to be a better one." From Augusta County: "I am sorry to say that the people here are very fond of their drink. I hope to speak to them on this subject soon. They seem anxious to have their children learn, which is very encouraging. Most of them own the spot they have their little huts on. This is a great contrast to the pleasant home I had at the North. Sacrifice must be made, to accomplish anything. I shall try, by the help of God, to do all the good I can."

From Albemarle County: "The aspirations of my scholars seem to be to gain all the knowledge they can; the more I teach, the more attached to the work I become. The County Superintendent shows a desire to have the schools conducted by competent teachers."

From Bedford County: "I have taught every winter, except two, since graduating in '71, but the short terms, small salary, and generally uncomfortable school-houses, make school-teaching a very discouraging business. The delay in paying the teachers is another annoyance; many are forced to sell their school-warrants at a discount of from 15 to 25 per centum. School-teaching is not a money-making business. Many of our teachers have been forced to seek other and more remunerative employment." From Charlotte County: "I have a school of 45, and we have a large S. S. here. There are prayer-meetings twice a week; quite a number of the young people have been converted. The people in this part are very ignorant and superstitious. The older ones will not fellowship with the young converts, unless they can tell some mysterious thing about hell and the devil. Our ministers are very incompetent. The teachers have very hard work to convince the people of their errors. I hope the day may come when we shall know how to worship as the Bible teaches." In conclusion, Mrs. Dixon says: "From the hundreds of letters received from them during the year, I might fill pages with quotations of a similar character."

### ACADEMIC DEPARTMENT.

#### REPORT ON MATHEMATICS, AND NATURAL PHILOSOPHY.

BY MISS J. E. DAVIS,  
Acting Lady Principal.

Students enter the Junior Class with a very slight knowledge of arithmetic, being able only to add, subtract, multiply, and divide any whole numbers. They come, as a rule, from country places, where their opportunities have been very limited. They have never been taught to give reasons for their work, and written examinations have been unknown. Their first papers are remarkable for poor spelling, and writing, and badly made figures; but there is a marked improvement in this respect as they advance.

Students are taught from the first to analyze examples. As they have little command of language, and small reasoning power, it is impossible for them at first, to make their own analyses. The teacher gives the explanation, and the student applies it to different examples. Unquestionably, this makes the pupil very dependent upon the teacher. The colored people learn faster when the instruction is oral than when they learn from books, and this is because they do not comprehend

realities; they write not for effect but to express themselves. Many of these letters you have read in the columns of the "Southern Workman" from month to month. The post graduate addresses sometimes delivered by our returning students, and their general conversation and hearing, show corresponding signs of growth in thought and power of expression. We are amply satisfied to go on with our work.

The Indian Students with a corresponding knowledge of English, seem to have some advantage over the colored in the power of using it. They are not tempted to its misuse by a musical sense certainly, and the love of display would be more restrained by self-consciousness and a sense of the ludicrous, with a consequent fear of ridicule. They seem to have a clearer, sharper habit of thought. But this may be in great part the result of careful English training from the first, with nothing to unlearn; as one of my race learns a foreign language from regular instructors more correctly than the lower classes of its natives speak it.

The lesson, both from the results and the difficulties of English-teaching at Hampton, is the imperative need and importance of the fully trained teacher in ever shifting it to better variety with a crackling veneering of Latin and Greek; the vital bearing it has on every department of school-study and life work.

## REPORT ON HISTORY.

BY MISS S. L. HUNTER.

The study of History has often served to fill the mind of the student with a miscellaneous collection of facts, which he was obliged to hold in his memory by main force, in order to bring them out, properly labeled, at a moment's notice; but this sort of thing does our students no good. Their verbal memory and memory for isolated facts are naturally remarkable, while their power to see the relation between cause and effect, purpose and result, needs a great deal of cultivation.

For instance, the teacher asks a class he is giving U. S. History: "Did the Navigation Act have a good or bad effect on the commerce of the colonies?" "Bad," the class will say. "Good," the other half. "Bad," and neither half will be able to give a reason for his answer. Then the teacher takes up the question in this way, step by step:

Q. To what country were all the exports from the colonies to be sent?  
A. To England.  
Q. In what ships?  
A. English.  
Q. Who regulated the price paid in England for the raw material?

A. The English.  
Q. Would the price be high or low?  
A. Low.  
Q. Who made the raw material into manufactured articles?

A. The English.  
Q. Where did the colonists buy all their manufactured articles?  
A. In England.  
Q. At a high or low price?

A. High.  
Q. What ships were they brought to the colonies?  
A. English.  
Q. Who made all the money on our exports?  
A. The English.  
Q. Was that good or bad for the colonies?  
A. Bad.

Then one-half the class is triumphant, and the other feels beaten, while really one is no better than the other.

This is a sample of the careful way in which it is necessary to begin, but before a class has finished one of the ordinary school histories, the majority have learned to do this analysis for themselves, and give a sensible answer, with good reasons to back it.

The chief difficulty in teaching History, especially that of the United States, is found in the text-books; for our students' knowledge of English, as a written language, is very limited, and there are always so many long words to be conquered in a history lesson, that its meaning is often quite hidden, until brought to light by the teacher. What these students, and all other students in the same grade of school need, is a history written in straightforward, simple English, and arranged logically and topically.

The English of Higginson's Young Folks' History is all that could be desired; but its story form makes it hard to use as a text-book. Barnes' History of the United States is remarkably well arranged; but it has too many long words, and too high-down English. Another book has a chapter beginning:

"Rays of light shot athwart the gloom that brooded over 'Valley Forge.'" Now "brooded" in the minds of our students signifies nothing so much as "hens," while "athwart" means nothing at all. So this sentence, like hundreds of others, becomes a stumbling block in the way of their getting at the meaning of the passage to which it occurs. The same passage, however, read

aloud by the teacher, who will naturally give emphasis to the most important ideas, becomes quite clear to them; and if she lays aside the book, and gives the same thing in her own language, they understand perfectly, and a week hence will probably be able to give it back to her almost in her own words. From this it might seem best to make the instruction entirely oral; but this would defeat one of our chief ends, which is not to put into their heads knowledge that is not to put into their heads to study for themselves, and find out the really important things which fit together.

They need to be taught to read—that is, to skip judiciously—so that they will not think that the number of men killed in a battle is of equal importance with the result of the battle. In reading a topic of the kind, they are always particular to give a certain number of men killed, and a date, but here their inaccuracy comes in, for usually both are wrong. In teaching them the history of a war, we try to keep constantly before them the causes, and the way in which the campaign is leading up to the result; then under each campaign come two or three of the most effective battles and the general result. This makes the outline, which is to be filled in with stories, unimportant, perhaps, in themselves, but illustrating the spirit of the times, and making the picture more striking.

The boys are especially fond of the Constitutional parts of our own history, while the girls take more kindly to the study of manners and customs, and to biographical sketches. In Ancient History, which is large, the boys are especially fond of the outline, but the girls come out when any likeness is discovered between the government of an ancient nation and our own.

In comparing them with white students, if we leave out the difficulty about the English, which makes it necessary for them to get short lessons, they seem to do quite as well in this study.

The study of color makes not the slightest difference. The blackest boy in the class may be a chance, or *color* *color*.

## REPORT ON GEOGRAPHY.

BY MISS A. M. BROWN.

So much has been written about the best methods of teaching Geography by the Professors and Geography-makers, that there seems almost nothing left to be said. One has only to follow the directions laid down.

In most schools the study of Geography is pursued for two or three years at least; while here at Hampton we must get all we can into one term of nine months.

It seems strange at first to see a class of students—fifteen, twenty, and sometimes twenty-five years old—just beginning to study Geography, who sometimes do not know east from west, and who never saw a wall map, or a globe before. I think it is more interesting to them because it is new, and because they are better able to appreciate it than young children.

The natural divisions of land and water are easily understood. Many of our scholars come a distance, and know most of them from experience. They like to mould them in sand, and to find out the miniature capes, peninsulas, bays, and harbors along the shores of the globe.

At first, map-studies and the globe are difficult. It is not easy to find on the globe or large wall map the places they had learned on the small maps in their books. One who had learned his lesson faithfully in the book—a lesson on the continents—went to the globe, and then to the map of the hemisphere, and searched for North America. At last he gave it up, and said he "was not yet sufficiently acquainted with North America to recognize it."

This difficulty is soon obviated by drawing maps—first on paper, copying from their books, and afterwards on the blackboard from memory. Not elaborate map-drawings, reducing everything to an exact scale, but a rapid, free-hand drawing—first, outlines, then mountain ranges and rivers, then political divisions and cities, or writing the mineral wealth, productions, and so forth. They like to make their own inferences as to climate, productions, commercial advantages of a country, also the slope of the land by the course of the rivers, the water-sheds, &c., having learned the general principles.

At first the Indians (there are a few Indians in these classes) draw better maps than the other students, but very soon some of the others, by practice, do quite as well, and are ambitious to excel.

After a few months, they will write a very good geographical account of the section of the country from which they have come. They are interested to find out about the comparative different countries, and people, their peculiarities, &c. They like to take imaginary journeys by land or sea, stopping at important places, and making purchases of what the prominent productions of the neighborhood.

I think, as a general thing, the boys are more interested in this study than the girls, especially in the government, commercial advantages, and occupations of the people.

The first half of the school year is devoted to learning about our own country, the laws which govern climate, latitude, longitude, and general information. After that we go to foreign countries, devoting the longest time to Europe. Long lists of names and statistics we have not time for, besides, they are soon forgotten.

Pictures are a great assistance, and they find that most pictures, whether of people, scenery, or plants, have something to do with Geography.

When the year comes to a close, they are just beginning to realize something of the world in which they live, and how much there is for them to learn.

## REPORT ON READING.

BY MISS MARGARET KENWILL.

DIFFICULTIES.

The first and greatest difficulty in the way of the colored student is his inability to name words. Coming to school for the first time at an age which, with the white pupil, is the close of school life in a majority of cases, the process of learning words so as to be able to pronounce them is a mountain of difficulty which at sight is surmounted in our white pupils. What the child learns by such gradual progress as to be almost unconscious of effort, is to the grown man a painful task.

The colored student has a pleasant, melodious voice, possibly flexible and capable of expressing a variety of emotions; moreover he loves to hear it, and there is no difficulty, as with the Indians, in inducing him to use it.

My experience in white, colored, and Indian pupils, that the vocal organs of the Negro are unsuited to distinct articulation, is incorrect. The difficulty lies not in facility but in a slovenly habit, a careless lax utterance, too altogether confined to the *colored* man in the South. I have found my classes capable of imitating any sound or pronouncing any combination of letters with great ease and readiness as often as there are some who cannot do so, but no greater per cent. than in white classes. Yet after having pronounced separately the sounds of a paragraph with perfect distinctness, they will often proceed to read it with a mumbling utterance scarcely intelligible. Such is the force of habit.

## METHODS FOR OVERCOMING THE DIFFICULTY.

I have tried various methods of teaching words, viz:

The word method as taught to children. Marking difficult words in the lesson for the following day, and requiring the class to study them as to pronunciation and meaning.

Pronouncing words separately through the paragraph before attempting to read it. Reading backward with careful pronunciation and articulation.

Pronouncing syllables separately through the words.

Writing difficult words on the blackboard, reading from the board and the book alternately, till the words are learned.

Phonic drill in difficult words, penmanship, committing selections to memory to become familiar with the words by frequent study.

Awakening an interest in the piece to be read, so that the student shall study it for the story and at the same time learn the words.

## HABITS OF READING.

Nothing is more desirable than that the students shall acquire a taste for general reading. I depend very much upon this for a means of getting over the difficulty with words, and have tried many devices to awaken an interest.

I have found it well to arouse curiosity in a lesson by telling the story in part and leaving the student to find the sequel by reading for himself.

By assigning lessons calculated to arouse enthusiasm, first reading the selection to the class. The colored student delights in oratory, and is not insensible to the beauty of verse.

By reading a variety of books aside from the usual text-book; for this purpose I have found nothing equal to the writings of C. C. Collins, as seen in "The Boys of '76," and "The Story of Liberty." We also read every month the Southern Workman, and the American Agriculturist.

## REMEMBERING WHAT IS READ.

To form a habit of remembering what is read, I frequently require the pupil to tell the story in his own words after reading the piece or paragraph, or one who has listened tells what another has read.

Sometimes I require the class to write out on paper or blackboard the story or substance of the lesson read that day or the day previous.

## PHYSICAL EXERCISES FOR VOCAL CULTURE.

Though the colored student usually is pos-

sessed of a strong, well developed voice, yet I find it profitable to give exercises for increasing its capacity, and flexibility as well as to increase the mobility of the face, especially the lips, to acquire grace and ease of carriage, to arouse the class and prepare them for a hearty, cheerful rendering of the selection.

In the Senior class I also introduce the study of gesture, for since the student will indulge in gesture, it is better they should be graceful.

## REPORT ON WRITING.

BY MISS A. F. BROWN.

The first thing to be done with a class of students in the matter of hand-writing is, in most cases, to get rid of a bad style. With the older student, even especially, this is not soon or easily done, as their style is formed and their hands are often quite stiff from bad work, making penholding a difficult task.

Many have overcome this in a great measure by persistent drill in the rudiments and exercises. The younger the learner, the more satisfactory the results. I see no difference, so far as my experience goes, in the ability of white and colored students to become good penmen.

The Indians are, almost invariably, good even the writers. This is due mainly to their being started in the correct way, and also to their talent for imitation and the suppression of delicacy of their hands.

The boxes of both races are, as a rule, the better writers.

The Spencerian Books and Chari are used, and the students are drilled in blackboard exercises and the setting of copies.

## REPORT ON SPELLING.

BY MISS ANNA E. WOODRUE.

One of the greatest difficulties the Negro meets in the correct spelling of words arises from his careless manner of speech.

These people for generations have so abused words—leaving off all terminations, ignoring entirely the "ed" or "s" of the past tense, using the present for the past and spelling accordingly, that in some cases it would seem almost hopeless to ever make accurate spellers of them.

I have noticed in many cases that they spell very much as they pronounce. Not having learned to read so long after they learned to talk, and having learned words only from parents or associates, who, in most cases, used a careless pronunciation, they have gone on copying these defects until words are so abbreviated and run together as to be almost unrecognizable.

It is the case with a student who comes under my care, who speaks of "The coat I under (used to wear) and spells as he pronounces.

The most successful method of meeting this difficulty, has been in requiring the student to first enunciate distinctly each word in the lesson—for, as he pronounces more clearly, he catches the true sound of the word, and spells more correctly.

The spelling lessons are always written, as this has proved to be the best method of imprinting words on the memory. And just here we aim to unite the spelling and the teacher writing on the blackboard, in a plain Spencerian hand, the new lesson, which the student copies. By this plan, he writes the new word for the first time correctly. The next day he writes the lesson from dictation. The improvement in hand-writing made in this way, is truly remarkable.

But just here his lack of observation and apparent inability to do two things well at the same time, are new difficulties. It has been said that "Seeing is one of the fine arts, and needs to be cultivated." This is peculiarly true with the colored student. He will often spell incorrectly on his paper words that are plainly written before him on the board; this is chiefly due to carelessness and long habits of inaccuracy.

I have often noticed that a student, after spelling words correctly in my class, will go to another recitation, where spelling is not the leading feature, and misspell the same words. I am not able to account for this, save that he thinks in his old defective language.

The Orthography will not be learned by them in a few lessons; these evil habits of years must be continually and persistently battled with until overgrown. Many of them experience the same difficulty in learning to spell that a foreigner does in learning our language, and we need not be discouraged if a people in whose hands books have recently been put, should get tangled at times to the maze of a language where so many words are pronounced alike and spelled so differently.

We must make allowance for the numerous words for the spelling of which there is no rule, and which we, having been accustomed to see correctly spelled, as well as hear correctly pronounced, seem always to have known.

To meet this difficulty, we aim to teach the meaning and practical use of words, calling

on the student for the definition of the word and the proper use of it in a sentence. A very interesting lesson is made in this way, while many amusing mistakes are met and corrected. While this part of the work is done in an especial sense to the teacher of language, it is quite necessary that the student have a clear and definite understanding of the word that he is writing, else how shall he know if he spelled *vain*, *rein*, or *vain*, and thus, while spelling is the leading feature of the recitation, a foundation is laid for the subsequent study of grammar and composition. By persistent labor, great improvement is the two greatest factors that will secure the correct orthography of a people who have so many years of careless slovenly to undo.

#### REPORT ON BOOK KEEPING.

BY GEN. J. F. D. MARSHALL, TREASURER.

Book-keeping has been taught the Senior Class from the first, by Thomas's Single Entry System, which, after careful examination of other methods, is thought to be the best. The object has been, not to teach an elaborate system, for which few of the students would ever have occasion, but to make them familiar with a simple form of accounts, such as they would be likely to find in their own business, and the best methods of making the different business papers in common use. The classes have been too large, and the time devoted to this study too short, for more than a very general and imperfect training. The work of the classes, however, has been efficient, and many of the students have shown capacity for higher branches of this study. The head book-keeper in my office is a graduate of the class of 1876, and has had no other training than what he received in the class, and has since had in the office. The School account books are necessarily intricate and elaborate, kept by double entry, and comprising separate accounts of all the departments of the School.

Two large farms, the Saw-Mill and Wood Working Establishment, Knitting Factory, Printing Office, Engineer Department, Indian Training Shop, the Sewing & Tailoring Dept., Shoe Factory, and other industries, with the Boarding Departments of the Students and Teachers, the various Donations and other income accounts, also the student's accounts, are all made up monthly, and a balance sheet rendered. These books are satisfactorily kept. Another graduate, with the same training, keeps by double entry the books of the Saw-Mill & Wood Working Establishments which are transferred monthly to the general books.

Visitors from Northern schools generally express surprise at the handwriting of our students, which they say is much better than that of the average of Northern schools; this is said of the writing of both Negro and Indian students.

#### REPORT ON THE "BUTLER" PREPARATORY AND PRACTICE SCHOOL.

(All day scholars, from 8 to 15 years of age.)

BY MISS L. E. BARNES, PRINCIPAL.

This has been, on the whole, an encouraging year at the Butler. The children entered promptly at the beginning of the term instead of struggling in a few at a time until Christmas, as they have done heretofore. We have had over three hundred children on roll, besides turning away many that belonged in Hampton. Average attendance about two hundred and eighty.

The school has always seemed to me to be a discouraging one in many respects. It is clogged up with a great deal of worthless material; many of the children are to be found pretty much in the same place they were years ago; they have arrived at a certain point, and there they seem to have stopped short. This is partly owing to the fact that many of them leave at the close of the county school, and before the next fall have forgotten pretty much all they ever learned. One encouraging feature this term, is the fact that the pay school is in every respect so much more satisfactory than ever before; it is better attended, consists of the most hopeful of the children who, with three or four exceptions, pay for their schooling by working in and around the building.

For the first time in three years, I feel encouraged for the future of the Butler, from the fact that the younger children seem to be a more hopeful lot; indeed, they are fast outstripping those who were in school years before them; this may be said to the credit of the Primary teachers, and proves the importance of starting the children in the right way.

There is a marked change in the amount of interest which the parents of the children have taken in the school this year, and the manner in which they have helped to carry out the plans of the teacher in cases of discipline has been very gratifying. Corporal punishment is not used in the school. We have tried the card system with perfect success; suspension is the most severe punishment, and has only been necessary in a

few cases. When obliged to suspend a pupil, I have each time written to the parents, stating the facts and asking them to call at the school and see me about it; in nearly every case they have complied with my request, and stated their desire to do everything in their power to help us in carrying out our plans. They have visited the class-rooms, and several times this year I have been stepped on the road by people whom I did not recognize, who wanted to know how their children were getting on in school, at the same time adding: "If they give you any trouble Miss Hyde, just let me know, and I will lend to them." The increase of the number of parents present at the festival recently, was very noticeable; several of them told me they had come to look after their children, and I think, considering the number of people present, that they were a remarkably well behaved crowd, and certainly a contrast to those of previous years; indeed, some of them spoke to me about it themselves. Just here I would like to say that I have found the Hampton teachers, of the greatest assistance to me in governing the school. This is the first term that the day scholars have been employed as teachers, and the result proves that, as far as possible, the Butler should be taught by day scholar graduates; they know the children and the influences surrounding them; their people are proud to see them teaching, and are encouraged by their example to try and get their own children to the same height, and besides this, they furnish what has always been the missing link between the parents and myself. That the colored people are beginning to see the importance of putting their children entirely under the influence of the Normal School, is seen in the fact that among our boarders this year are two pupils from Hampton, and I know of several cases in which the parents are planning to do the same when their children, at present at the Butler, shall enter the Normal School.

I wish very much that we could have a good night school; if we could get the people more under the influence of the Normal, it would do more than anything else towards the civilization of the children; school influence exerts so little when in opposition to the influences at home; and I feel sure from what I have seen of the people around here, that many of their misdeeds are due to ignorance; they would do better if they only knew more. I think there would be a change in the better way. If we could have our room lighted in a more pleasant way, so that we could ask the people to come once in a while, I think there would be a change in the better way. If we could have our room lighted in a more pleasant way, so that we could ask the people to come once in a while, I think there would be a change in the better way.

Colored children seem to me to be unmanageable, and the but more which they take in their lessons makes the task of teaching a very pleasant one; the boys are, as a rule, more brighter than the girls and more amiable. I do not find that shade of color makes to me they love that previous quickness and become more like ordinary white children. Colored children are very nervous and excitable, and have very little control over their feelings, and you can make up your mind that a colored child is pretty much what he seems to be. They are very easily influenced, but are not to be depended upon; they are affectionate and demonstrative, and the colored child is one another might well serve as a lesson to white children; they are not at all bashful, and their self-possession and confidence when called upon to appear in any public way is in strong contrast to the behavior of white children under the same circumstances. I do not think it is because they are conceited, either, but simply because they enjoy doing it.

As very few of our students have ever attended good primary schools, it follows that they are weak in those very branches which they are expected to teach. Before we give them methods, it is often necessary to teach them the thing itself first, and they get so interested in the facts that they forget to notice how those facts were taught. They are very imitative, and can teach well anything they have once seen taught, but they do not seem to be able to work things out for themselves or to invent new ways of developing things. They will teach by rote new methods, as just far as they have seen them used, then, as they say, they do not know what to do next, so from that point will teach as they remember; they were taught when they first began going to school; this would work well if their teachers had always been of the best, but unfortunately this is not so. Colored teachers talk too much; when they explain things they use so many words that the point of the explanation is lost altogether, and often send the very good idea will be completely hidden by their bungling way of putting it; they are inclined to put their teaching in the form of lectures instead of demanding action from the scholars, they have a very little system about arranging their work, they have likewise no idea of time—nine o'clock may mean five or ten minutes after or even half past nine to them. They do not get quickly from one thing to another but make long pauses between the dif-

ferent school exercises, and so give the children time to get out of order. If they would systematize their work so as to know exactly what they are to do next and then do it quickly, their school would be in better order and much time would be saved. They make very interesting teachers, are bright and animated in their manner, and keep the interest at all seasons of the children remarkably well; in cases of emergency they, like the children, appear to the best advantage. As teachers, I think the boys and girls compare very favorably, the advantage, if any, being on the part of the girls, who seem to have more tact and patience in managing the children. The best scholars, as a rule, make the best teachers, although there are occasionally cases in which some students whom we have considered rather below the average, will develop a really wonderful faculty for teaching.

Colored teachers have naturally more confidence in themselves than do young white teachers. And this is an advantage to them inasmuch as it inspires the children with the same confidence. They are not, as a rule, good disciplinarians, they are easily made angry, and are very little control over themselves when so; they use the whip to a shameful extent and do not believe that a school can be governed without it; they make a great many rules, but do not see that they are obeyed; they let little things go, and so, soon have large ones to deal with.

Here, as in their lessons, their worldliness is a disadvantage to them, if they would do more and talk less, their schools would be in much better order.

#### REPORT ON THE NIGHT SCHOOL.

BY MISS L. E. BARNES.

The night-class is composed of those young men and women who are unable to meet the expenses of the day school, or are not far enough advanced to enter the Junior class. The greater part of them came with absolutely no money, and without this opportunity, which Hampton affords them, would be unable to obtain any education. Many of them are older than the students in the regular classes of the day-school.

Their purpose is to prepare for entering the day-school the following year. To enable them to do this, the night-school is kept open from October to October. They work ten hours a day, learning the different industries on the place. Their earnings are put aside for them to pay their bills for board and clothing the following year.

Of the boys, 15 work on the farm; 17 in the saw-mill; 4 in the carpenter shop; 17 in the tailoring department; 1 in the blacksmith shop; 1 in the wheelwright shop; 1 in the printing office; 1 in the knitting room; 2 in the shoe-shop; 3 in the engineering department. There are 4 bakers; 2 night-watchmen; 1 painter, and 2 undertakers; 8 of the girls are employed in the laundry; 3 in the tailoring department; 1 as nurse; 2 as cooks, and 6 are living with families on the place. We began the term with 107 scholars and six teachers. There are now 73—32 boys and 41 girls. The ages are from sixteen to thirty. To do efficient work, it was found necessary to form four sections. One section of fourteen boys and six girls, studying for the Middle class, preparing for the Junior class, and one having in it eleven boys and one girl, who could neither read, write, nor cipher. There are now employed four teachers—two white and two graduates. The studies of the advanced section are arithmetic, grammar, American history, and geography; of the second and third divisions, reading, dictation, grammar, and arithmetic; and of the beginning, reading, writing, and arithmetic. From the last section, three have been promoted. One boy mastered the four fundamental rules in five months, learning to do examples in them with rapidity and accuracy. Two boys, who at the first of the term were put upon two months' probation on account of their difficulty in learning, were reported at the last teaching meeting as doing as well as any in the section. The lives of many of the students previous to coming to Hampton differ so widely from the life here, that it often takes them several months to fall into the ways of the school. The teachers of the night-school have more opportunity of seeing this sudden development of mind and character than those in most places.

The students begin their night work directly after supper. All are assembled in one room, where prayers are held, the boys taking turns in leading in prayer. After the roll is called, the scholars are divided into their sections, where they receive instruction until five minutes after nine; thus allowing them a little over two hours.

As spring has advanced, more hands have been called on the farm. To supply this need, several Juniors have left the day-school and joined the night-class. It has been very encouraging to find that most of the students of the advanced section compare very favorably with the day scholars.

With the night students there is no opportunity for outside study. All the work has

to be done in the class-room. The students are very responsive and orderly.

There has been no trouble in the matter of discipline. A simple word, or an appeal to their sense of right, has been quite sufficient. The greatest up-hill work that has been encountered has been the inaccuracy of the work before coming here. In many cases everything had to be undone before there was a chance of progress.

One can readily see the difficulties under which these students labor. After a pressure of ten hours' work, to hurry through supper, and then study for over two hours, requires much persevering energy. To be willing to undertake all this, shows the eagerness with which they seek an education, and the earnestness of their purpose. They have been termed the "plucky class," because of their endurance and perseverance.

#### REPORT ON THE HEALTH OF THE SCHOOL.

BY DR. M. M. WALDRON.

I believe that the average standard of health in this Institution, is equal to that of white schools of the same size. This is true in spite of the fact that congenital and educational forces from home many a colored pupil under physical conditions which would effectually prevent a white boy or girl at the North, from attempting a similar career of study. The striking differences which in sickness are said to appear between white and colored patients, are not necessarily due to any inherent race peculiarity, but may well result from a difference of education and environment between the classes of patients compared. I have seen white patients of the same grade, in the words of a city hospital, furnish parallels to nearly all the peculiar conditions and mental phases which are apt to be regarded peculiarly characteristic of the African.

Very many colored patients have a sort of physical inertia which retards recovery.

The power of nature over matter, in many cases an important agent in effecting a cure, is not to be relied upon in them. The colored patient generally succumbs to disease with a slight cold, and accepts the situation as one to be endured rather than overcome. It is largely to this mental deficiency that we may charge that want of recuperative power generally admitted in colored people. But while true of them, it is also true of whites of corresponding mental caliber. It is a fact, however, that the hygienic conditions under which the race has existed, have left to it a heritage of *serotinitis*. This inheriting weakness often prolongs what would otherwise be a short illness, and causes serious sequelae where there should be complete recovery.

The physical stamina of the race must improve with advancing intelligence and consequent better hygienic conditions.

As a rule, students who are not in sound health when they enter the school improve under its requirements of regular hours for study, exercise and sleep.

The health of the Indian pupils has been better during the present session than in any preceding one. Three students have been reduced to bed, however, in ill health. Two of these are reported as improving. The third has been recently sent. Two Indian boys have died from phthisis. One of these had been sick for several months, and died in October; the other was an advanced case of phthisis at the time of his arrival, was never able to enter school, and gradually declined until the time of his death. Several other students, both boys and girls, who were not in sound health at the time of their arrival, have steadily improved, and are now able to fulfill all the requirements of the school and industrial departments.

The rule that regular habits of life promote health, does not find an exception among Indian pupils.

The per cent of death among pupils, favorably with that at the Agencies, and, as a rule, our students improve in health during their school life.

Indian girls in the school are less subject to sickness than Indian boys, probably because from childhood they have been accustomed to more regular occupation.

The Indian boy at home, takes exercise very irregularly, tasking his physical strength to the utmost for a few hours and lapsing into inactivity for as many days.

Indian boys and girls are not especially different from other boys and girls in sickness.

Some are very stoical and brave, others are less so. All grades are represented. As a rule they bear pain with fortitude, but once overcome become despondent in regard to their selves, courage cannot be restored.

Hope is given up once for all, and they fall into *vetulus* to disease.

#### REPORT OF THE PASTOR.

REV. N. N. PRUSSELL.

In connection with the Hampton Institute, there is a regularly organized church, composed of the students and teachers of the school, and the families connected with it. This church is entirely unsectarian, and no attempt is made to draw away the students

from the churches to which they have belonged previous to their entering the school. The church building is known as Bethesda Chapel. It was used by the ministers for the worship of God, and is located in the National Cemetery, where thousands of them are buried.

Regular preaching services are held in this chapel once every Sabbath, when all the students are expected to be present, with the exception of those Indians who come from Episcopalian agencies in the West. These attend the Episcopal church in Hampton. During the past year, the congregation has so increased with the growth of the school, as to render necessary the addition of another wing to the building. The average attendance on Sunday morning has been about five hundred.

In the afternoon, a Sabbath school, composed of all the students, with the exception above mentioned, is held in Academic Hall, where the Pastor acts as Superintendent; and systematic Bible instruction is given by the teachers. A service is held in the evening, when the students are addressed by the Principal or the Pastor. The Indians meet by themselves in the evening, under the care of one of the Indian agents who has charge of the Indian department. The Indians who come from Catholic agencies are allowed to attend Mass in the morning, but are expected to be present at the regular religious exercises of the school. Many of the colored students from Baptist and Methodist churches, attend services of their own denominations in the afternoon.

There is a regular organization for Christian work in the school, and as far as possible the students are made to feel their individual responsibility in the matter. Committees are formed at the commencement of the school-year, which are held responsible for the specified work. There is what is known as a Reception Committee, made up of Christian students from each of the buildings on the place where there are dormitories. This committee is expected to report to the Pastor on the religious condition of each student in the school. Each member has an especial oversight of the building, or part of the building, from which he or she comes.

The colored people are of an eminently social and emotional nature, and in their religious training, much account has to be made of this fact. Their social meetings for prayer and conference, are an important factor in the work among them.

A prayer meeting committee is formed at the beginning of the school-term, which has especial charge of this department of religious work. They confer with the Pastor as to the best time and places for holding meetings; they choose leaders; they aid in making out lists of subjects for the meetings, which are printed and distributed among the scholars. They make suggestions as to the best method of conducting the meetings.

A prayer meeting for the whole school is held every Sunday morning. The leaders are chosen by the committee from the different classes, in order that all may feel an interest and responsibility. The girls have taken their turn with the boys in the leading of the meeting during the past year. They have been doing admirably well, and it has been found that this plan increases the interest of the girls in the religious work of the school. The leaders are informed of their appointment some time previous to the meeting, and are expected to prepare themselves on the subject given on the printed card. Some of the students are really gifted in prayer, and the discussion of religious subjects. This, with their power of singing, makes the service one of the most interesting of the day. The attendance has increased within the past year from between forty and fifty, to about two hundred. Many of the students are unable to attend on account of necessary duties. Strange as it may seem, an effort has to be made to prevent the students from being too formal in their worship. Having been accustomed, in many cases, to wildly emotional meetings, they feel at first, a sense of dissatisfaction with the more quiet manner of worshiping God. They soon, however, adopt what one of them called "the new way," and often go to the other extreme. They dislike to sing their old "spiritual songs," and thus an element of power is lost. Prayer meetings are held on Friday evening, where the boys and girls are by themselves. Although this is held after the evening study hour, when they are weary with a hard day's work, many of them are regular in their attendance there. Smaller meetings are held in the dormitories, where the younger classes are trained for work in the larger meetings, and for the same kind of work when they go out. There is, perhaps, no one thing which is more essential to their success among the people, than proficiency in this sort of thing.

Religious meetings have been held with the Indians twice in the week, during the past year. As many of them are unable to read enough English to understand the Bible, everything has to be made as simple as possible.

Rev. J. J. Gravitt, Rector of St John's Episcopal church, of Hampton, has held one service with them during the week, and has the Episcopal students for Bible instruction on the Sabbath. His real love for them, and his earnest work among them, have been of the greatest help in their religious training. As many of the students come from Episcopal agencies in the West, and are to return to them on leaving school, they are left under the care of the Episcopal church here. One meeting of the week is conducted by the Pastor, in which the Indian boys take part in prayer, and the reading of the Bible. They are very anxious to know the Scriptures, and to read the words for themselves. After several experiments, it has seemed best to have them each read a verse in the English Bible. It is then translated into Dakota. Prayers are offered in English, in Dakota, and in their own language.

A meeting is held by the Indian boys, who speak English, led by one of their own number, as a study evening, and in Dakota language during the week. The religious training of the Indians is intensely interesting. They have a longing for the truth; are very tractable, and seem ready to receive the truths of Christianity. They are thoughtful, and their questions often show that they think much of what they hear.

So far as possible, the students have been interested in working for others. There is always danger in an institution of this kind, where much is done for students, that they become self-centered, and forget that they are to live for their people. In order to call out their interest in their own people, living in the country about, a missionary society has been formed, and the students are called on to go into the Sunday Schools of the Baptist and Methodist churches of the place. In one of the Baptist Sunday Schools, where the students have been taking classes, attendance has increased since their coming, from between forty and fifty, to two hundred. These students make reports of their work at the meetings of the Association held on Sunday evenings—methodist churches are discussed, and thus they gain normal training in religious work which will be of service when they go out. About thirty have been thus employed during the past year.

Bible readers are sent out on Sunday afternoons to read to the old colored people, who long to learn about the Bible, but have never had any chance to learn to read. These students who go out, are instructed to report any cases of destitution which they find, to a committee appointed to investigate them, and to render help where it is really needed. Nearly five hundred dollars have been raised by the Association, for the help of the destitute people of Hampton. The boys have mended the cabin roofs and floors; and the girls have helped to carry food, bedding and clothing to those in need of them. Each member of the Sunday School is urged to do some small definite task for helping others. The last quarter's report showed that the sum of \$41.65 had been raised in the school. This goes to help one of our graduates who is working on the West coast of Africa. The next is to be given to aid in the religious work in connection with the school under another graduate in Tuskegee, Ala.

There is a temperance society in connection with the school, to which much of the students belong. Monthly meetings are held, where they are informed as to the progress of the cause, and methods of work are discussed. They have been much interested in the Local Option movement in Virginia. Considerable work has been done in Hampton among the colored people. The colored pastors have been invited over to the meetings at the school, and their cooperation secured. On a specified day, they all preached on the subject of temperance, and public meetings have been held, and the sentiment of the community aroused on the subject. Literature has been distributed, and between two and three hundred signatures have been obtained to a petition to the Legislature of Virginia, in favor of a general Local Option Law. In this work, Mr. G. C. Rowe, of Hampton has been very active and accomplished much good. It is hard to say what future there is for the colored race, unless a reform can be effected in their habits of drinking. It seems especially necessary that the students who are to be the leaders of their people, should be educated in this matter. Many of the graduates have formed temperance societies in the places where they have gone to teach.

Both Indian and colored students are inclined to be religious. They are naturally reverent, and anxious to know the truths of the Bible. To bring their religion down to the duties of everyday life, is no easier with them than with other people. It has been too much a thing of the customs, which, in many instances, had no very definite connection with their daily duties. There has been too frequently a divorce in their minds between religion and morality. One great object in our religious training is to show them the necessary connection of the two. There

is great cause for encouragement in this work, and the pure, straight-forward lives of many of the students and graduates, show that their religion is a reality. The total enrollment upon the record books of Bethesda Chapel, shows a membership of 206. 29 have been added to the church within the past year, 24 of whom came on profession of their faith in Christ. In some cases, where the sectarian feeling at their homes is intense, it has seemed best that those who have started out on the new life here, should not connect themselves with the church until their return to their own home, so that they might, as far as possible, retain their influence over their people. In order that I might come into closer connection with the students that could otherwise be possible, and thus gain a clearer insight into the workings of their minds, it has seemed advisable that I should take part in the regular class work of the school.

On Wednesday mornings, I make it a rule to speak to the students in regard to the Sunday sermon, to see how much of it they carried and what ways of promising truths were lost in attempting to learn it. The other mornings of the week, I have taken thirty minutes with the whole school for the discussion of

#### NEW ITEMS.

They are kept so busy during the day with their work and study, that they have little time for reading the newspapers. The most of them too, read very slowly, and are unable to distinguish between what is important and what is of little value. Yet it seems very important that as they go back as the educators of their people, they should have an interest in what is going on about them, and an intelligent understanding of the daily news that is being helped them in this matter, the more important items are taken up and discussed with them, and they are questioned as to what they have themselves read. A map is opened before them, and the teacher becomes a lesson in geography as well as history. In order to help in this work, two black boards have been placed in the halls of the Academic building; one, on the right side, and another on the left, where a bulletin of news is posted every morning. The boys are naturally more interested in politics than the girls. The debt question of the State of Virginia has been the subject of much discussion among them. It is hard to make them feel that they, as citizens, have any responsibility for this debt. Their main argument for scaling it down seems to be, that if they, or their parents, were slaves when it was contracted, they ought not to be obliged to have any of the burden of it. All nice questions interest them. They are strongly opposed to Chinese immigration, and are inclined to look with suspicion upon the influx of the Irish and other laborers into the Southern States. There is quite a strong feeling in favor of the exodus of the Negro from the South. Many regard this as the most effective way for the colored people to gain their rights. They take up the news items in their debating societies, and they become the subjects of discussion there. Many of them are readers of the papers, and they are all urged to subscribe for some weekly paper when they go out from the school.

#### CIVIL GOVERNMENT AND POLITICAL ECONOMY.

I have given instruction to the Senior Class in these two branches of study during the past year, the early part of the year being given to Civil Government and the latter part to Political Economy. I have found them much interested in both branches. We have studied together the different forms of government, and have taken up briefly the history of the origin of the Constitution. The most of our time has been given to the study of the Constitution itself. Written questions have been handed in and considerable discussion allowed among the students themselves. They have shown a rather remarkable amount of general information and knowledge of the History of the United States. They evince more maturity of thought on this subject than most classes of white boys of the same age. The subjects of study in the class have frequently come up for debate in their societies, and thus much interest has been given. They have found that their Civil Government has helped them to a understanding of the news items of the morning, and they have usually been very quick to apply what they have learned to the discussion of what was going on at Washington and Richmond.

In Political Economy we have taken up the discussion of labor, wages, money value and the tariff. Much the same prejudice has been overcome in their minds as in those of other people. They think much of the rights of the laborer and little of those of the capitalist. They look at the two classes as being opposed to one another. Their idea of money is quite vague. It is not at all clear why government with a printing press could not make all the money that is wanted. They seem to have a preference for free trade rather than a pro-

tection tariff. On all these subjects they show by their questions that they have thought and have naturally formed some opinion of their own.

#### PRACTICAL MORALS.

A part of the year I have had the Middle Class in the study of morals. Instruction has been given in common every day duties, in the relations of buyer and seller, and of employer and employee. It is hardly to be wondered at that these people, hardly twenty years out of slavery, should not have definite ideas in regard to rights of person and property. The same standards have not prevailed among them as in other communities. It is not always easy to make a boy understand that it is wrong to tell a lie, or to deceive, if his doing so may escape the penalty of a wrong act. The principle of doing only that good may come is firmly rooted in some of their minds. The idea of holding to a contract when one is a loser thereby is not easily understood. It is not that these students are not trying to do the right thing. They are; but their conception of what is right and wrong is defective, and there is for them an more important branch of instruction than this. It is difficult to make them understand that they have duties to other people. Having been so grossly wronged, their thoughts have been fixed upon their wrongs from others more than on what is due others from themselves. They talk much more of the rights of citizenship than of the duties of citizenship. In order to correct their wrong notions, regular instruction has been given on the rights of person and property, the origin of these rights, and how they may be violated. The subject of promises and contracts, of exchanges and the duties of citizenship, have been discussed. They have in skill in putting questions, and often get at the root of a matter in an unexpected way. They are, for the most part, open to conviction, and are eager to learn.

#### REPORT ON THE LIBRARY.

BY MISS R. H. LOTHROP.

The record of this year shows the following facts in regard to the books drawn by the students:

Of the boys, sixty per cent. have had books charged to them; thirty per cent. drawing one book; fourteen per cent. two books; two per cent. five books. Twenty-two per cent. of the whole number of boys have drawn U. S. Histories; two per cent. books of speech; five per cent. books on political subjects, twelve per cent. lives of public men; one per cent. poetry; nine per cent. romance; four per cent. religious books.

Of the girls, fifty-three per cent. have taken books; twenty per cent. drawing but one book; thirteen per cent. two books; one per cent. six books; six per cent. have drawn histories; five per cent. biographies; four per cent. poetry; forty-four per cent. romance.

Though the preceding gives a general idea of the number and class of books drawn from the library, it tells little about the reading done by the students. A large number of the students—belonging for the most part to the Junior class—take out many books, read them a little, and return them before they are due. While the number who take books, and renew them until they have read them, is very small, and belongs for the most part to the Senior and Middle classes, there are some students (nearly three per cent.) who are fond of reading, and read intelligently. Instead of turning away from a book whose title contains "Child," or "Young Folks," they are the reader to read it. But with hardly an exception, they came to the school with the taste for reading and apparently the habit also.

The great difficulty with most of the students in the way of reading seems to lie in the fact that books mean so little to them. They don't understand them—the words—the sentences. The want of English is the great obstacle, and yet had they the English, they would still find it difficult to read most books, as there has been so little in their lives to make intelligible to them much that lies behind the words. They need a *fact* literature, as it were, written in the simplest language. They will come eagerly to a book from which a teacher has told them some story, but are disappointed in finding that they cannot get from the book what they did from the teacher. They need to be taught how to read—that is how to use a book. One student after reading a few pages of the preface and testimonials of Uncle Tom's Cabin, thought it a most interesting book, which he didn't want to read. They need to be directed in their reading—to read regularly, thus forming the habit of it, and to be held responsible for the subject-matter to which they read. Though intelligent reading is with them a question of time and of development, much might be done in this way to help it forward.

The girls have a small but select library of their own in Virginia Hall, established by Miss M. A. Longstrech, of Philadelphia, from which they obtain books. This accounts, to some extent, for their not using the school library as much as the boys.

## INDIAN EDUCATION.

REPORT OF MISS ISABEL B. EUSTIS, IN CHARGE.

The total attendance during the year, has been 92, including 3 Seminole Negro slaves. There are at present 87 Indians in the school—27 girls, and 54 boys; 1 has died, 5 have been returned during the year to their homes for ill-health, and 2 have left for other reasons; 47, more than half the number at the school, are Sioux, from Dakota Territory, the tribe for whom Hampton's previous work has chiefly been done. Five more Indian students are expected soon.

The distinguishing feature of this year has been the return in their homes in the fall of a party of 30—25 boys and 5 girls—after 3 years' training, and the reception of a new party of 43—31 boys and 12 girls—gathered from the same Agency.

The effect upon the school of the return of these scholars to Dakota has been of great value. The remaining scholars have faced the fact of their own return. They watch the reports from Dakota with interest, and seem to be stimulated by the failures, as well as by the success, of their former comrades. The more accurate knowledge of Indian life, gained by those who took the party back, has been valuable from the light thrown on the work to be done, and the moral effect produced upon the scholars, who are now certain that the conditions of their old life are known.

The new party was carefully selected, and has proved of excellent material. Its members are, for the most part, physically strong. There are many minds among them surprisingly quick and retentive, and, in general, a determined, patient, and earnest spirit characterizes both their work and their study. They have made better progress in the schoolroom than any previous party. This is no doubt partly due to the wiser methods toward which our experience has led us, and largely to the earnestness, gentleness, and heartyness with which they accept the precedent of obedience to authority—a woman's, if necessary—which they find now well established in the Indian school.

The discipline of the school is a much simpler matter than before. A general balk in a class for no apparent reason, which was once a frequent occurrence, is now the rare exception. The excessive reserve of the Sioux, which places them at a disadvantage in competing with the Southern tribes, is counterbalanced by their retentive memories. The Pimas and Apaches speak English more readily, but have not gained no permanent advantage in any other direction.

The Indians show immediately an aptitude for independent study, which is remarkable. The new boys fresh from the plains, soon alter their hair has been cut, and their lakotas changed for white men's clothes, settle down to evening study with the more advanced scholars, working at the first words of the primer, copying sentences, or making simple combinations in number, for an hour and a half, without asking for help, and apparently without fatigue.

The health question must always be a serious one; but there seems no just reason to fear the results of the change to civilized habits under a wise supervision. The death rate at Hampton (3 per cent. per annum) is below that at the Agencies, 3.8 per cent. per annum, as appears from their official report. There has been a marked improvement during the year in the self respect and ambition shown by the girls, and a corresponding increase of courtesy on the part of the boys; though much is left to be desired in both directions. The new building for the girls, though still uncompleted, has been a strong stimulus to them.

The success of the education of our Indians turns on the conditions which await them on their return to their homes. We believe in their ability to stand in an ordinarily healthful moral atmosphere. The false conditions of life which exist in an Indian Agency, the difficulty of obtaining healthful sympathy or current of savage life, an almost superhuman attempt to breathe it. The boys have their trails, and can separate themselves from their old homes and their camp life. There is absolutely no position of dignity to which an Indian girl can look forward, after three years' training, with any reasonable confidence. There is nothing for her but to enjoy or suffer the present as best she may.

Should the United States Government ever find it possible to keep their treaty with the Sioux tribe, which provides for a school and suitable teacher for every thirty children in the tribe, the way might open for the solution of this knotty problem. Schools in the Indian camps, under judicious and vigorous supervision (such as are in a few cases already established by the missionaries), not unlike the log cabin school-houses to which our graduates go in the South, would give honorable work, full of instruction, to our best Indian girls, while the children idling about

the camp, in the hope of existing on our government rations, would be taught the first principles of industry and virtue.

With the deepest appreciation and gratitude for what is being done for our returned Indians by the teachers, missionaries, and few other good and wise men on the ground, we feel that if our scholars stand, it must be chiefly through direct help from a Divine Force, which can work without and against human infirmities, and that they will be acknowledged victors only by one who can read the secrets of the heart.

INDIAN REPORT OF MISS H. W. LUDLOW.

## THE TALKING CLASS.

For those Indian pupils who came with no knowledge of English—or next to none—all instruction in the language must be for a long time wholly oral, with the help of objects and pictures. The course has been developed by the necessities and circumstances of the case, and may be thus approximately and briefly described:

## First Year.

1. *Teaching by Objects.*  
Names of things: boy, book, etc.  
Ascription of qualities: tall boy, red book, etc.  
Pronouns: you, I, it, etc.  
Actions performed, asserted, and commanded:  
I walk. She walked. Walk.  
Actions described: I walk fast, etc.  
Objects or actions joined: Mary and Sarah. They ate out drunk.  
Position of objects or acts:  
The box is under the table.  
He jumped over the fence.

Classes of objects are naturally taught together, to aid the memory by association; as the parts of the body, the furniture in the room, the dishes or food on the table, the tools of a trade, times and seasons, etc.; and actions or qualities are predicated of things already learned, so that a constant review is kept up.

The object itself is used whenever possible. Toys and pictures representing them are employed in other cases. Dr. Peck's Language Lessons for deaf mutes we find very suggestive and helpful in this part of the course; also Prof. J. H. Worman's "Modern Language Series."

2. *English Games.—Open Air Studies.*  
All sorts of talking games, requiring the repetition of words and phrases, have been devised, and found very useful to keep up the interest. The class was often taken out for a walk, for the school hour, taking their lessons in the way in learning the names of natural objects.

3. *Phrases Taught.*  
Short dialogues memorized, and repeated daily between teacher and class, or various divisions of the class, have been very useful in giving confidence in speaking, by familiarizing the pupils with common expressions:—  
"Good morning. How do you do? I am very well, thank you. Will you take a walk with me? Where shall we go?"

## Second Year.

1. *Study of Pictures.*  
Cute chromo-lithographs, large enough for all to see, of some interesting or spirited scene, are now employed to develop the power of expression. Perhaps the teacher begins—  
"I see a horse." Some one is sure to take it up—  
"I see a horse; I see a man. Soon all are vying with each other to tell what they see. By and by they can answer questions. "Where is the man?" "He is on the horse." "What is the horse doing?" "He is running." etc. Another step is to tell what they think. "Where do you think the man is going?" "I think he is going to Hampton," etc. A still more interesting step is to imagine. Let us imagine the inside of the house: "There is a stove in the kitchen. A woman is cooking dinner," etc. The next step is to write some of the phrases given, in the form of a little story or description; then, to copy, and memorize them.

2. *Drill in Verbs.*  
In the last half of the second year, a vigorous drill was begun in the verbs—to think up, to talk, and—some necessity of expression, to see a horse. I see a man. Soon all are vying with each other to tell what they see. By and by they can answer questions. "Where is the man?" "He is on the horse." "What is the horse doing?" "He is running." etc. Another step is to tell what they think. "Where do you think the man is going?" "I think he is going to Hampton," etc. A still more interesting step is to imagine. Let us imagine the inside of the house: "There is a stove in the kitchen. A woman is cooking dinner," etc. The next step is to write some of the phrases given, in the form of a little story or description; then, to copy, and memorize them.

3. *Letter Writing* hardly comes within the province of a talking class, but has been of value to some extent, the letters being written on the board by the teacher, the sentences given orally by the pupils.

## Third Year.

1. *Natural History.*  
This has been of great value to the talking class, in furnishing interesting subjects to talk about, and exciting them to talk. The study of animals or prepared specimens have been used as far as possible, and Prang's Zoological series have been very useful. This study is just in line with the Indian's natural keenness of perception, and might well be further pursued with other similar studies.

2. *Further Drill in Verbs.*  
This exercise is carried on in alternation with other study, and with increasing interest to the class, as they discover its value in helping them master the language. The roots of the verbs are given them, under the, to them, more significant title of Chiefs—and they take pleasure in arranging under each "chief" his own followers, and helpers, and then giving them their places in sentences. All this takes much time and reviewing, but they have excellent results.

This exercise, and the Natural History lessons, run through the whole year.

## Fourth Year.

- Only two pupils—little girls—who began with the class in the first year, are taking the fourth. All the rest of the class, in the language, know some English when they came, entered at the second year, and for the other two, this is their first year. They could speak very well when they arrived at Hampton last October. The class being now so small, and so far advanced, can be easily handled, and has made very encouraging progress. This training has been chiefly in—

1. *Construction of English.*

For the first time in the four years, a book has been put into the hands of the talking class. They have used books, more or less, in other classes, especially, of course, in the reading class.

It seemed time to give them some systematic ideas of the construction of English, to keep them from errors, and give them a sense of the language as a whole. The results have been most satisfactory. The book used has been the one studied by the regular Junior class of the school—Reed & Kellogg's Language Lessons. It has been used with the teacher's discretion, omitting what seemed adapted only to native English speaking children. Enough analysis has been given to show the plan of English construction. There has been constant practice in sentence building, and the drill in the verbs has been continued as far as seemed needful. All has been taken with delight.

2. *Use of the Dictionary.*  
For the first time in our history, Webster's Dictionary has been given them—Webster's School Edition—and one of their most highly enjoyed exercises is to hunt up the new words they find in their language lessons, and look it up," they cry. If the definition itself contains a difficult word, as often happens, they look up that in turn, and with the spirit of Indian hunters, track the meaning through definition after definition till it is within their grasp.

INDIAN REPORT OF MISS LATHA R. TILSTON.

## GEOGRAPHY.

In Geography, the Indians seem to feel at home. It is almost a part of their life, and brings before them vividly the life and surroundings which are dear to them.

In their trip across the country, their interest is aroused, and their natural latent talent for observation quickened. They recognize with pleasure the meaning of the words giving their own definition—as for city "too much houses," or, for town, "too little people." Mountains, rivers, hills, lakes, and physical features are their daily loved friends, and they often come out of their shells, and tell of something particular among the mountains, or hunting on the prairies. These first lessons are accompanied with drawing physical features on the black board, and moulding in clay. Most of the boys are very well able to follow their imaginations, and draw remarkably well; others, at first, need a copy, and then every line will be exactly as set for them. A watch was the beginning of my class in geography. I drew mine in its size, shape, and at the same time teaching them "a good many make one minute," etc., took fully two months. When they learned "24 hours make one day," I showed them the globe for the first time, and they could sit perfectly still, heart of the rotation of the earth, with the months, seasons, and climates, etc.

After lessons on the zones, on which I used pictures of life in Alaska, our own country, and South America, I let them make a hemisphere, draw the lines for the equator and tropics; in each zone pictures of the houses, vegetation, and animals which they thought would be found there. They did very well, and one little man, of about 35, was so astonished at his own work, that I found him gazing at it with folded hands long after the bell had rung for dinner. In

the first part of the geography course, all that they get put to tell them, as they are not sufficiently advanced to read for themselves. But they listen attentively, and remember wonderfully, even the slightest detail. They will sometimes say, "Yes, I know that, too," and then add a little information to yours, but do not like to be asked questions; as for instance: one boy from Arizona was interested to hear of his own country, but when I asked him to tell me, he said, "Not now, I like you talk now," "some time you not talk, I tell you."

After drawing, moulding, and talking, I give them definitions, and committing these to memory is their especial delight. In doing this, words are given first, and recognized, then sentences made with them, and learned word for word. At first all read in concert, but soon their interest is strong enough to overcome their natural distrust of trying to speak English, and they are anxious to "say it alone, that good way." This drill helps them in English; and although hardly the method we would take for white children, it is what the Indian needs most. An outline map of lakes, rivers, canals, etc., is the first map used, and from this they go on readily to reading with words, moulding, and using map work, bounding, leading, and drawing with wonderful success. First, I follow Guyot's method of locating things in the room, and on the place, and have them make picture-maps of their own rooms, the school-grounds, etc. With all of these lessons they use the sand table.

INDIAN REPORT OF MISS JOSEPHINE RICHARDS.

## HISTORY.

American History seems viewed from a new standpoint when taken up for the first time with the Indian. It becomes a matter of speculation how the graphic descriptions of the Aborigines, with scapling knife and tomahawk (so entertaining to a white child), will strike the imagination of the Indian, who will relish the comments of the historian, often by no means flattering, on the tales of Indian warfare. In point of fact, however, they seem to take it all calmly, and say, "I am glad to hear of the war, but I am glad to see a smile; though it was with a pitiful, 'Oh, dear,' that a little Indian received an affirmative reply to her anxious inquiry—'And what they killed, and made many'—after reading the story of Mrs. Austin."

It is a branch in which their interest seems easily awakened. "O yes, I like very much," was the answer of one of the class when asked, "Do you like to study history?" At first the instruction was entirely oral, except that a few leading events were written on the blackboard, and copied into note-books by the pupils, and occasionally a review lesson was given by distributing written questions among the class to be answered orally. Later, a simple text-book, Quackenbush's "Primary History of the United States," was placed in their hands, and has proved very well suited to their capacities. Although they remember dates and names (when once they have mastered any difficult pronunciation) quite as well, perhaps, if not better, than white scholars, yet much questioning seems needful to elicit the facts of the lesson, as expressing themselves in a strange language makes it difficult to narrate incidents, or give extended details. At times, a paragraph has been assigned to be memorized, when some of them have succeeded remarkably well, one boy showing such zeal to take his book to the shop, that he might study while at work. It has been their custom to read over the lesson for the next day in the class, when brief names can be written on the board, and difficult phrases explained. Not long ago, reference was made in the book to a league formed by Indian tribes against the United States Government, and when the definition of league was called for, the answer came very promptly, "three miles," that meaning of the word having just been acquired in their reading class. A course of lectures on history by Prof. Warren, Principal of the New Hampshire State Normal School, proved very helpful, these being made the subject of the following day's lesson, and the class being examined as to what they could recall. In sketching the general plan of important battles in the Revolution, a sand table has been found a useful assistant. This war seems to be a favorite theme with them, and Washington their special hero. "An occasional attempt to question on some given topic, as improving to their English, as well as increasing their familiarity with the subject."

INDIAN REPORT OF MR. G. M. MACADAM.

## ARITHMETIC.

The Indians are divided into six divisions in Arithmetic, and although Arithmetic is exceedingly hard for the understanding of them, I term them encouraged by their progress in terms. They make mechanical combinations quite readily; but they find it hard to work practical problems, and reason in a language not wholly their own. Their own necessities carrying on two trains of thought,

when they their own "Arithmetic" much as has tainly I beg to tober, and and to work rules. I written board, the board thought then, and I worked them, and I Now we are work almost containing it work some one who a Junior Two multipl are ver well w I put that th enable tion, quickly as in that if you think thoroughly worked. INDIAN An li himsel racked be will an groe encourag by their progress in term. They make mechanical combinations quite readily; but they find it hard to work practical problems, and reason in a language not wholly their own. Their own necessities carrying on two trains of thought,

when the problem itself, if difficult, requires their undivided attention. They often say, "Arithmetic is very hard for me—very much harder than the other subjects." Still they try as hard as they can, and I know they certainly are improving.

I began with the "second division" in October. I gave them plenty of drill in working addition, subtraction, multiplication, and division. As soon as they learned how to work the most difficult examples in these written examples, which I put on the blackboard. At first every one refused to go to the board for any one reason. They thought that Arithmetic was very hard. I worked and explained the example to them, and they soon saw the connection. Now we are having a review, and they can work almost any example I put on the board containing the four lines. They do their work well and quickly. I am sure I have some scholars in my "second division" who, in another year, can make good Juniors, and who compare favorably with some of the Juniors now.

The "third division" have just completed multiplication and entered division. They are very bright, and some of them can think very well when their examples require it. I put their examples on the board in order that the English can be before them, and thus enable them to think. They can work addition, subtraction, and multiplication as quickly as the majority of scholars in school. But if you combine these rules, they don't thoroughly understand how an example is worked.

My "fourth division" are all "beginners" both in Arithmetic and English-speaking. They began the year by writing and reading numbers, and can make difficult combinations in addition and subtraction, and are learning the multiplication table.

#### INDIAN REPORT OF MRS. LUCY A. SEYMOUR. THE SEWING CLASS.

When I came to the Normal School, a little more than two years ago, I found seventeen Indian girls connected with the Sewing School. With one exception, they were to be cut and sewed. To most of them the sewing boxes were a task, and the mending of their clothes on Saturday was performed with reluctance.

Several of these girls returned to their Western homes last fall; before they left, they had cut and made a complete set of underclothes for themselves, and assisted in making their dresses. Nine of them remain here; these have cut and fit their own dresses; their sewing will compare favorably with any class of girls of their age.

At different times, there have been additions to their numbers. At the opening of the last term, we numbered twenty-eight. It has been surprising to see how the new ones have entered into the spirit of the school, and how much all accomplish, not only in sewing for themselves, but in making up bed clothes for their new building. The Primary class sew in the morning—the older ones in the afternoon. Several of the girls can sew on the "Double" machine—two quite skillfully. It is thought best to have most of the work done by hand, to lay a good foundation for machine work. They have improved, I rejoice to say, in willingness to help each other. Since October, one hundred and twenty-two dresses have been cut and made in part by them, with at least three hundred and fifty other articles. When we consider how unaccustomed they have been to industry, their youth, and the other demands on their time for school and house work, I think none will deny them a good measure of credit for industry and ability to learn. If, with our limited accommodations, we have done so much, it is to be hoped, that when we occupy our new sewing-room in the building which the generosity of our Northern friends are erecting, we shall be able to do more to fit "our girls" for usefulness in their future homes, and to help solve the problem of the elevation of our Indian sisters. I am happy to report that the health of the girls is much better than formerly. Only one has returned during the past term on account of ill-health. She was not strong when she came, and had but little ambition to rise above any trouble.

#### INDIAN REPORT OF MISS CORA FOLSON. In charge of nursing.

An Indian boy is very loath at first to confess himself sick, yet when his body may be racked with pain. He knows if he gives up he will be laughed at by the other boys, and be pretty thoroughly ignored even by his best friends.

When he is really ill enough not to mind derision, he is willing to keep quiet if he can do it in his own fashion. With most of his clothes on, he will wrap the blankets close about his head, turn toward the wall, and give himself up to treasured memories of home. He wants no dainties. If he makes

up his mind it is right to take white man's medicine, he takes it without making trouble. He is apt to have theories of his own on the subject, however. Many believe that one medicine of no matter how many compounds would do good, but two or three different medicines will produce a disastrous effect. One boy of delicate lungs refused to take our remedies, thinking they would kill him. He went home for a restorative from his mother, which proved to be about 1/2 oz. of pounded liquorice root, to be stirred in a pint of water, and a teaspoonful taken two or three times a day. Before it was gone, he confessed his conversion to our mode of treatment. Last summer, a little Pima boy 9 years old badly bitten by a dog, was brought in the night from a farm 5 miles away. The wounds had been filled with dirt, stiff dog hair, to prevent hydrophobia. For an hour and a half the child lay enduring the additional pain inflicted by drawing out the hairs, with and without a numbing. Once only I caught him down stairs, laughing cheerfully about on one leg.

The great difficulty in the care of the Indians is that they will not stay put. Left in bed on a warm summer night, at ten o'clock, twelve o'clock may find eight or ten rolled up in sheets asleep on the verandah. They appear to appreciate the theories on the effect of early morning showers on delicate lungs, when remonstrated with, and go in quietly to their rooms, and the next night do the same thing again. Many see and perceive the fact that they have mortal bodies, but are not for them, but the majority are perfectly reckless in this regard. A boy who has had hemorrhages, will take off his warm underclothing in winter weather, whenever the spirit moves him, or go all day in soaking wet clothing without giving the matter a thought.

Picking ripe fruit on the place being a forbidden luxury, the Indians anticipate the cooler, and eat most of it while it is green. An occasional mid-night war dance on a moonlight night in the lightest of clothing, has added a complication in the treatment of some diseases; and fraying the place from which a mustard paste has just been removed, hardly increases the chances of a patient's recovery from pneumonia.

They are on the whole, however, quick to see their faults when brought directly to their notice, and ready and willing to do what is required of them.

#### REPORT OF MISS MARGARET GUILLOU. Teacher of Cooking School: Indian and Colored.

Cooking classes, four girls in each, were begun in January, and weekly lessons of an hour and a half have been given to twenty Indian girls, ages varying from ten to eighteen years.

These classes have been, as far as it was possible to make them so, purely "practice classes"; that is, the girls have done the work themselves. As a rule, I have not found them very quick in learning; they require much drilling on any one rule before it is finally fixed, and repetition has been unavoidable. The girls vary very much in "knack" and "sense." Some are very quick, and the younger ones do better than the older ones, and I have found the new girls quicker, as a rule, than those who have been here a year or more.

All seem to like the work, and, for the time at least, are much interested in the result of their experiments in cooking. The classes have been drilled in the mending and baking of breads, the roasting and broiling of meats, the preparation of soups, stews, beef tea, gruels, &c. for the sick, as well as in the cooking of vegetables, eggs, plain puddings, omelets, &c. &c.

The work of the cooking classes has been for the most part turned over for use in the Indian Diet Kitchen; where those of the boys and girls considered to be in need of a fuller and more easily digested diet than that of the ordinary dining-room, have taken their meals.

Classes for colored girls were also commenced in January. Owing to their superior aptitude it was possible to have six in each class—and to follow a more exact course than was practicable in the case of the Indian girls. The course extended over a period of twelve weeks—each class of six girls receiving one lesson on an hour and a half each week. There has been opportunity been given this year to sixty girls to acquire some knowledge of the art of cooking.

The lessons have been "practice lessons" and the girls have prepared all the dishes ordinarily used upon a dinner or breakfast table; they have also had some practice in the preparation of dishes for the sick. They have been taught the use of weights and measures and their relation to each other, also to use a watch and work from the written rule as found in the ordinary cook-book or newspaper.

Some study, as much as time permitted, has been made of the proper use of foods and their relative value to man, as well as of their constituent parts.

I have found the colored girls, as a rule, very satisfactory pupils; they are quick to learn, and for the most part are neat about their work; they are anxious to learn as much as possible, many of them keep memoranda of their work, and speak of the use they intend to make of their knowledge when they go home.

#### INDIAN REPORT OF REV. J. J. ORAVATT. Pastor St. John's Church, Hampton.

Among the most hopeful features of Indian civilization is the religious work. The Christian teacher finds excellent material to mould, and little, comparatively speaking, to tear down; he has a foundation to build upon. There are no idols to be removed. Says one whose life has been devoted to work among this interesting people, "The North American Indian is the noblest type of a heathen man on earth." He believes in a Great Spirit, and realizes what others too often forget, the spiritual presence; hence he is reverent. It is easy to teach him "Thou God seest me." Shape this belief by Christian instruction, and you have done much towards the development of Christian character. He believes in the immortality of the soul, hence, when the gospel brings light and immortality to light, "the happy hunt no ground," he is not unwilling to receive it. He has a strong, quick mind, he thinks, consequently you can give him the principles of a religion and lead him to the rocks, food for thought. To him a picture or illustration suggests thought, and he follows it out.

The Indian has a profound reverence for the Bible, and he knows its word, and from it there is no appeal. Would you correct any irregularity in life? Then bring the Bible to bear upon him.

As a people, and as an untamed people, the Indians are remarkable for purity, honesty, and truthfulness. If guilty of wrong doing, they do not lie about it, but if asked, will make an honest, straight forward confession. These are some of the reasons why the Indian is a promising subject in the hands of the Christian Missionary.

Of course we do not think the Indians are saints, but we do believe that they have in them the stuff of which saints may be made. Never is the transforming, elevating power of the gospel more manifest than in the building up of Indian life and character.

#### INDIAN REPORT OF REV. R. B. FRISSELL. Chaplain of Normal School.

I have held one prayer meeting a week with the Indian students. As many of them are unable to read, and understand but little English, the best of giving them religious instruction is not always an easy one.

I have usually opened the meeting with singing of which they are very fond, but for which they have no special aptitude. I line out the verse and they repeat it after me, catching the sounds of the words as far as possible, but failing in many cases to reach the end of the line successfully.

These who have learned to read use their hymn books. Some little variations in the hymns they cling to tenaciously. They insist on saying "My face looks up to Thee" instead of the well known line "My faith looks up to Thee." There is a genuine earnestness in the choruses they raise, even if some times lacks in harmony and sweetness.

After the singing, we all rise and repeat together the Lord's Prayer, the new ones for a time using their own language; then set ourselves to the study of the Bible; taking up usually the incidents in our Lord's life, and those of his parables and teachings, which they can most readily understand. After trying several methods, it has seemed best to let each one of those who could read English take his or her turn in reading a verse. It is often after great trouble, and long effort that they reach the end, but it evidently gives them great satisfaction to have taken part in the meeting, and to have read a verse in the Bible.

When one has read the verse, they all repeat it together, and it is translated into Dakota; for the benefit of those who can not understand English. Each word in the verse is then explained, and the ideas conveyed to their minds by means of gestures, and in some cases with the aid of colored pictures.

At the end of the reading, they are allowed to choose some favorite hymn, after the singing of which the meeting is given into their hands, and they take part accordingly as they are able, in their own language or in English. One will pray in the deep guttural tones of the Dakota, another in the softer, more musical language of Arizona, and still another will struggle with the difficulty of the English.

Long pauses intervene, which seem rather to add to the effectiveness of the meeting than to take away from it. Then we all rise and sing "Praise God from whom all blessings flow."

The English speaking students have a meeting conducted by one of their own number,

and the Sioux have a meeting of their own in which they use the Dakota language.

#### AGRICULTURAL INSTRUCTION.

After two previous years of manual labor on the farm, the theory of agriculture is taken up in the Senior year. Elementary chemistry is taught in connection with "Waring's Elements of Agriculture." The elements composing the atmosphere and early parts of plants are carefully studied, and the gases are made and experimented with.

The "American Agriculturist," a monthly, is used as a reading book, in order that a taste for such reading may be formed, and students led to subscribe, hereafter, for such a paper. The contents of a text book are soon forgotten. Only as they can still habitually refresh themselves from current literature, will they be influenced by the best farming ideas, and adopt improved methods. They take a lively interest in agricultural topics. There is, however, no better teacher than observation. Their extensive and varied agricultural operations, are objective lessons which, in connection with practice through the entire course, serve to fix in many enlightened ideas in the student's brain.

#### THE STUDY OF MAN.

For the past six years I have taught the Senior class daily, from January to June, (except during three weeks absence in the spring) using as a text book "The Outline Study of Man," by Rev. Dr. Mark Hopkins, my former teacher, and this year his "Law of Love and Love as a Law," both of which are in some colleges. I have senior studies in some colleges. I have found it perhaps the most interesting part of my work. Dr. Hopkins's analysis is clear, his argument symmetrical and masterly, expressed in plain language, and so illustrated by diagrams that a plain man can comprehend it.

He says "I believe in no metaphysics which are not capable of being communicated in good English and of being understood by any man of good common sense."

My method is this: to read to and with the class the advance lesson, pen in hand, emphasizing the proper points, constantly stopping to let them cut the sentence, to test their attention; marking the most important sentences, underlining the word that is the key of the sense, passing over paragraphs that may involve the meaning, keeping close to the line of thought, and reviewing often and rapidly. The printed page then means something, and can be studied to advantage. The student sees ideas instead of words; a desert is changed to a garden. It is rather exhausting but very engaging work. By studying man the student is revealed to himself. He realizes what it is to be a person; that color has nothing to do with it; he comprehends the nature and the relative authority and the law of his activities and faculties, and what character consists in the philosophy of ends that make right and wrong intelligible, and what virtue means.

He finds a principle that gives unity to the universe, and places man in his true relation of kingship to it; he sees the proper ground of self-respect which he sadly needs, and has just so far, an antidote to the vanity which is his weakness. In finding what it is to be a man, he feels a new appeal to his better nature.

I believe in a mental gymnastic for students, giving them that which they at first can not do, and holding them to it. I believe in sometimes taxing the power of the best third of the class, leaving the rest to follow as they can. In the rudiments, we should keep every eye up, but on the heights one may go up, where but few can follow. I think Dr. Hopkins believes in this. He once told me that if but ten men in his class could take it all, he was satisfied.

There is, in some quarters I think, a tendency to give the Negro a higher education at the expense of a good grounding in spelling and geography, which is, however, no worse than the supercilious notion of some that colored youth should be restricted to the simplest rudiments.

After all, the teaching is not so important as the teacher. Personal influence avails more than words.

This total includes all who have attended school for one month or more. They represent 12 states, chiefly Virginia and North Carolina. Average attendance for the year, 440; average age, 17 1/2 years.

The rudiments, the three "R's," are taught daily throughout the three years course of study. Higher branches are introduced for the sake of mental discipline, but not at the expense of a ground work of elementary knowledge, which is the chief need of any race, and the mission of the Hampton Institute, through its graduates, to diffuse. Such work is exhaustive of skill and patience; its importance is not, I think, fully appreciated by those who most need it.

The foregoing reports of teachers treat of the studies of the school in detail. A good labor record has often saved one from being "dropped" as incompetent, while one brilliant in studies is sometimes sent away for inefficiency in the shop or farm.

The most remarkable executive man we ever had, graduated with difficulty; the plodding ones make good teachers.

Less than half who enter, graduate; numbers drop out, numbers are "dropped," of these, a part become primary teachers; the majority are benefited mentally and morally, usually going into industrial pursuits. Many are four and five years in taking the course, being compelled either to repeat one year, or stay out a year to earn money for personal expenses, or to do both.

Most of our students are from country regions; they represent the simple, sturdy portion of the race; its strength rather than its more polished city class, which is inclined, I think, to flinch from the ordeal of labor. The latter prefer schools where classical instruction is given, for which there is a remarkable craving among the colored people.

We have this year been overrun with Negro students, as never before. Total number last year, 321. Total this year, 412. Increase, 91.

Free tuition is provided by friends, who give \$70.00 a year for the purpose, on condition that a student shall meet his or her board bills, (\$10.00 a month, for eight and one half months), besides clothing, etc. amounting to, say \$100 a year. On an average, they pay in cash not over \$30.00 a year, apiece, working out the rest; this money comes from their relations, or from their previous earnings. The perfection of our industrial system is the hope of those youth, who, with earnest hearts and willing hands, care for an education. Giving a scholarship, (\$70.00) is helping one who helps himself; it does not pauperize but stimulates.

A small charity fund is distributed every year to needy students to help them with board and clothing. No one ever lost an education by reason of poverty alone. The meritorious aid a way or make one. Help comes at the point of extremity.

Until recently, the class enumerated above as "Night students who work all day," 108 in all, (averaging 90) had no existence. Owing, however, to the growth of our industrial system, and especially to the gift of the "Hamington Industrial

Works" and the "Hemenway Farm," this large class has been established. (See report on night school by Miss Day.) They spend one year at remunerative labor, studying two hours every night to fit for the Junior class, to acquire skill, and to save money to pay their way. Of their four years' course, the first is the hardest, but most profitable.

The standard of admission has not been raised, and cannot be until the primary schools shall be more efficient. Their annual sessions, except in cities, are from three to five months; their outfit is usually wretched, and the vast majority of teachers are incompetent. Better teaching is the crying need of the South.

Our students advance no further in mathematics, physical science, history, &c., than in former years; perhaps not quite so far; owing in part to the increased size of the classes, which it is hard to keep down to divisions of twenty-five in each; but there is a marked improvement in their breadth and culture. A school may grow as an individual does; its influence may become more and more felt; it is so here, I think. Traditions are established; there are never to be forgotten experiences; students sense things better and see more clearly the motive and wisdom of the school.

The influence of resident graduates is excellent; their success in the clerical and teaching work has been a surprise and cannot be accounted for on any popular theory of the Negro race.

The mingling of sexes, of both Negroes and Indians, in social, class, and table intercourse, has from the first been most satisfactory.

The mingling of races for the past four years has caused very little difficulty. They are mutually helpful in many ways. There can be nothing better for a wild Indian boy fresh from the plains, than to room for six months with a good colored student, who will, in that time, do more for his habits, manners, and morals, than all the teachers.

Indians do not keep out Negroes. The latter are limited chiefly by the number of annual scholarship subscriptions of \$70.00 and foundations for permanent scholarships for free tuition. There were in all, this year, a little over two hundred free scholarships provided for over four hundred colored students—a sad deficiency.

The Indian department, by dividing the cost of the school among more, makes the *pro rata* expense less; besides Indian labor is paid in cash, colored usually in labor, and thus strengthens us.

The mingling of study and of labor, which, as a rule, requires students to remain out of school an entire school day each week, besides Saturday, making four days of class work and two of industrial work, is a strain on the teacher, and somewhat, but not seriously, retards mental progress. In the long, daily evening study hour presided over by a teacher, the lessons of the next day are confined; only recitations are lost. But nothing essential in study is lost, and much that is essential to success in life is gained. Students are made more useful to themselves and to their people by their practical education.

Discipline is reported upon by Lieut. Geo. LeR. Brown, commandant. Docility and obedience from principle, are different things. As the student learns and thinks and develops, the former lessens, but the latter does not quickly follow. The docile races, when elevated, are found not to have much self-control or to be easily controlled. The principle of obedience, or the perception that leads to it, grows gradually; it is not learned like a lesson from books. Only when at work after graduation does the student fully appreciate school discipline.

I ask your attention to the account of students Court-martial, in the report of the commandant. Through this there is some wholesome self-government in the school.

The class that graduates this year numbers 60, (three of them Indians), the largest so far, and is full of promise. Its record has been excellent. The last class, that named itself the "bad class" for the fault found with it, has since done remarkably well.

The growth of students after graduating

has been marked. Real life, the dignity and responsibility of their vocation as teachers, develops them. They comprehend not only the discipline of the School, but also its meaning and value more fully, and happy relations are almost invariably the result. To foster them is a special care. Over ninety per cent. of graduates have served as teachers.

During the vacation of three and a half months, from the middle of June till October 1st, students are scattered, seeking either at their homes or elsewhere, remunerative work. A few are trying to find places in the North on farms or in families, and can be recommended. About one hundred and fifty remain on the place; the expense of going home being too great, on the one hand, and on the other their services being needed in the industrial departments.

## OF TEACHERS.

The more advanced classes are taught, in part, by graduates of Vassar, Wellesley, and Smith colleges. The Principal, Treasurer, and Chaplain, each have one class. Primary classes will hereafter be taught mainly by graduates from Normal schools, chiefly those of Oswego, N. Y., and Framingham, Mass. Their professional skill fits them for the rudimentary work. It is to be hoped that the various women's colleges will make more of the study of technical teaching for the educative influence they are likely to exert.

The culture, skill and character of those without professional training, have given a rounding out and completeness most important to those who are to lead their people.

A teacher is liable for class duty from 9 o'clock a. m. till 12 m., and from 1.30 to 3 p. m.; or for six periods of forty minutes each, besides taking turns in charge of the morning and evening study hours; the former lasting one hour (from 7 to 8 a. m.) and the latter two hours (from 7 to 9 p. m.). There is much time occupied out of hours in preparing lessons and correcting school exercises.

There are thirty teachers employed in the Academic department, of whom five are gentlemen.

## OF INDIANS.

For an account of the year's work, see Reports of teachers. The interesting fact of the year has been the return, after three years training, of thirty one Indians, five of them girls, to their homes in Dakota: one went to Indian Territory.

They were brought here by Capt. R. H. Pratt, in Nov. 1878, by order of Secretary Schurz, and returned Oct. 1st, 1881.

They are employed at salaries of from fifteen to twenty dollars a month, and ratios, as follows: Farmers and herders, 7; Teachers, 3; Carpenter, 9; Blacksmiths, 2; Office boy, 1; Issue clerk (for ratios), 1; Shoemaker, 1.

One is out of health, and one was killed by accident.

They are settled among the Sioux Agencies on the upper Missouri, thus: at Yankton Agency, six; four boys and two girls. These are favorably reported upon by the Rev. J. P. Williamson and Rev. Jos. Cook, missionaries. The former says: "So far they have all run well. I have not heard a slander against one of the number."

They attend church regularly; they are recognized as leading spirits among the Christian youth; their appearance is always creditable." He says "not one white boy in sixteen would do his work or teach as well as David Simmons."

The latter writes less favorably of the two girls who live in the camp with their mothers.

Five are at Lower Brule, of whom three had not been doing well. Major Parkhurst, Agent, has just written as follows: "All the returned boys from Hampton have 'come to time,' and are now at work. They were 'tired of doing nothing,' and concluded to come under the yoke."

Three boys and one girl are at Crow Creek; the latter keeping her father's store and accounts, but not under the best of influences. The two shop-boys, carpenters, are reported as "doing all that could be expected," and the teacher as "doing splendidly." They are exerting a good influence on the Indians around them.

Five boys are at Cheyenne River

Agency. One is an assistant teacher; the rest are mechanics. "All are doing splendidly," reports Major Loyd Agent. Mr. Kinney, missionary, writes, "Your boys are doing very nicely."

Two boys and one girl are at Standing Rock Agency. Major McLaughlin, Agent, writes: "Both the young men are doing well." A lady missionary reports that "The young men are (doing first-rate; they are quite conscientious workers, and have the respect of every one." The girl has poor prospects.

Five boys and one girl are at Fort Berthold Agency. The girl writes: "Hard out here to be good woman." She is doing well, however. Three of the boys give good satisfaction as workers; two have gone to school at Santee.

The late reports upon them are the most hopeful. Those who have separated themselves from camp life, and occupy decent rooms at the Agencies, have done the best. Girls cannot do this, and suffer in consequence. Forty new pupils from the same Agencies are here, and will, we hope, in two and one-half years reinforce them. Will they hold out? Their relations with the school are most pleasant; there is constant correspondence, and we hope to help them, even from here. A probation of six months is short, and not conclusive, but it gives ground for hope.

The new Indian girls' building, for which the name "Winona (Elder Sister) Lodge" has been suggested, is nearly finished, and will cost \$25,000. Probably it is the most complete provision ever made for such a purpose. Our thirty Indian girls will be increased to at least fifty next fall.

The Indians find a new pleasure in neat rooms. Twelve of the girls, placed temporarily in "Lexington Cottage," this year, under the care of a teacher, have taken great pride in its appearance.

Each boy has the charge of his own room, which is subject to daily inspection. Their natural taste for pretty things, combined with considerable pride, tends to keep their rooms in remarkably good order. Many of them are very prettily arranged.

Health is the weak point of the Indians, but the death-rate here (3 per cent.) compares favorably with that at his home (3.9 per cent.) By good diet and careful nursing, weakly ones have been built up. The death-rate, while serious, is not discouraging. As I formerly have reported, they hold their own. "They hold their own under favorable circumstances" is the opinion of the best observers of our Indian people.

Eighteen boys and seven girls spent three and a half months last summer, working among the farmers of Berkshire Co., Mass., with excellent effect upon the people as well as on the Indians. There is no better experience for them in respect to language, habits, ideas, and character. Another delegation is to be sent this year.

Our four years' work for Indians satisfies us that their progress is a question, not of capabilities but of opportunities. Universal education means peace and prosperity to the red man. Justice and humanity call for it, and common sense suggests that paying eight hundred dollars in three years for the education of an Indian is better than paying one thousand dollars a year for each soldier sent to fight him. Education may not always have proved successful, but what has the fighting done?

The Government has so far allowed us \$150 per annum for 68 Indians, who are on our hands the entire year.

We have kept from thirteen to twenty the current year, entirely at private expense, rather than refuse them an education, there having been no money at Washington for their help.

There is a special appropriation of \$167.00 a piece, for one hundred Indians, at Hampton, for the next fiscal year, commencing July first. This will pay cost of board and clothing; that of tuition, seventy (\$70.00) dollars per annum, must be sought, as heretofore, from the hands of charity. Private charity has already given \$55,528.14, to buildings for, and expenses of, Indian education at Hampton; the Government, so far, \$33,123-

04. Charity has been our main reliance and cannot probably be dispensed with. Carlisle school is allowed at the rate of \$25.00 a piece per annum for three hundred Indians, which, considering the cost of mechanical and school education combined, involving two sets of teachers, and keeping children the entire year, is reasonable. No white children in the country can get the same advantages at the same cost.

Success with Indians is quite as much a question of men as of money or of measures. It is an executive problem. Week and month officials in charge of our Indian wards, have checked their progress. There are a few good ones, but, as a rule, men worth three thousand dollars a year, can't be got for salaries of one and two thousand. The pay of Indian Agents is a practical prohibition of first-class men, and of the best results.

On reservations, where most Indians are, the Agent is the Indian's point of contact with civilization. From study, and from personal observation on the ground, I believe that the Agent, of all others, is the man to lead the mass of Indians up to the estate of full citizenship, which is the true objective point. Laws alone cannot do it; the Indian cannot govern himself; he is a child, and needs a father; not a savage, needing an executioner.

While civil life has supplied a quota of worthy men to the Indian service, I believe that the army contains a body of men better qualified than any other to settle the Indian question, not because they are officers, but because they are clear-headed, large-hearted, experienced, and trustworthy. No other men would be so likely to be permanent.

There are many others beside Capt. R. H. Pratt, of Carlisle, and Lieut. G. L. R. Brown, commandant at Hampton, who would make the best masters the Indians could have. The moral force of one first-rate officer would be more effective for the pacification of Indians than the physical force of a regiment.

There are Indians quite ready for citizenship, for whom civil rights and obligations, rather than paternal authority, is required. I refer to the mass of them; for whom the little educational work done seems nearly hopeless, while inefficiency and stagnation so generally prevail.

The foundation of the Indian's hope is in an improving public sentiment, which, happily, is being fostered by associations of people for that purpose, throughout the country, sometimes called "Sentimentalists," and by the presence of our students in the East. The sentimentalists on the Negro question were once laughed at; that has changed. Thinkers rather than "practical men" have moved the world.

Indians have a monthly allowance of from \$2.50 to \$5.00 for their labor, according to the time and value of it. It is not included in the above total with this they purchase a portion of their clothing. As a rule, they work them the use of money. As a rule, they work

half days, studying the other half, and have holiday on Saturdays.

Indian apprentices are slow, and, owing to ailments, not very regular; but they are neat, interested in their work, and learn easily.

The several departments are fully reported upon by their respective heads, to whose statements I refer you.

#### OF AGRICULTURE.

Number of colored students employed, 83. Earnings last year, \$6,025; to be increased this year.

This department has two farms, one of 190 acres, connected with the school, and another, 4 1/2 miles distant, of 350 acres, called the "Hemeway Farm," a gift, to which has recently been added, by purchase, another of 250 acres adjoining; both are well adapted for stock and grain.

The last-named, of 600 acres, is in charge of Mr. Chas. H. Vanison, a graduate, and is cultivated entirely by work students. On the former, Mr. Geo. Davis, also a graduate, assists Mr. How, the general manager.

Agriculturally the school is well appointed; nearly complete, with land, outfit, machinery, and stock. There remains only a debt of \$2,500 on the last purchased farm—half its cost. Brick-making and the wheelwright and blacksmith shops are in this department. See report of the general manager.

#### OF MECHANICS GENERALLY.

Total number of colored students employed, 82. Number of Indians employed, 61.

The recent completion of the Stone Industrial building, the gift of Mrs. Valeria Stone, of Malden, Mass., provides much needed accommodations for the following: the Printing Office, to which a small bindery has just been added; (five boys, two girls); the Knitting business (seven boys), which, owing to a glut in the market, has done less than last year, but has fair prospects; the Shoe factory, temporarily, (fourteen boys), which must be placed in a position to get a custom repair trade from the community; and the Girls' Industrial sewing and tailoring establishment (65 colored and 28 Indian girls), which furnishes opportunities for remunerative work, and also instruction of great value.

A green-house should be added to this department, which, in connection with a vegetable garden, would afford a useful training and some profit for girls, who need such practical instruction, and would be glad of the chance to learn.

The Hygeia Hotel at Fort Monroe, 2 1/2 miles distant, would be a market for the products of a green house.

The "Stone" building, being for the present only half filled with industries, I recommend the dividing up of two or three of its large rooms 70x100 feet, into temporary sleeping rooms for our young men, who, from the first, have been crowded from four to six in a room.

In a few years, all this room will be needed for labor classes, and a building should then be erected for boys on the site now indicated by an excavation near the office.

No part of education is more important than proper quarters. I prefer to have each student in a single room; no more than two should be together; solitude is civilizing.

The "Stone" was purposely built on a liberal scale to meet future needs, and will cost, complete with green house, steam and gas fitting, about five thousand dollars over the amount provided, \$20,000.

OF THE HUNTINGTON INDUSTRIAL WORKS. Colored students employed 38. Earned last year \$3,535.06.

Earnings will be increased this year. This consists of a saw mill and wood working establishment. The capacity of the mill per day is fifteen thousand feet of lumber. Every year a class of from fifteen to twenty destitute, ignorant, but earnest young men, enter the mill for one year of steady day work of ten hours. Of the most promising, a few are selected for a two years' apprenticeship, in the wood working shop in the second story. They are "work students" studying two hours every night, till they enter the regular course, and then are employed two days each week, studying four days throughout the three years' course, being able to save from one year of steady work at the

mill, \$60.00, to \$70.00 and in two \$140.00 for school expenses. They are the poor est class, but ask no charity.

About one fourth drop out for various reasons. Those who graduate are valuable men. The mill is doing a good business, preparing and selling building material of all kinds. It creates fine opportunities for young men to work their way, and may well be a source of gratification to its generous founder.

#### OF ENGINEERING.

Number of students employed, 13. Earned last year \$1,130.74.

and increasing. This branch has been established eight years, but has never had suitable quarters. It has piped all the principal buildings for steam, water and gas, connecting them by an underground system of steam pipes 1,500 feet in length, which works admirably; made three hundred bedsteads out of gas pipe; attends to ten boilers and four steam engines, and repairs machinery.

A gentleman has just offered four thousand dollars for a new brick work shop 80x40 feet, two stories, in which a bone mill and grist mill can be placed to great advantage.

We have long ground bones, but never satisfactorily, owing to poor machinery, and could save about \$35 a month by grinding our own meal.

Considering the probable growth of the shop, a suitable steam engine, boiler, lathes of various kinds, shafting, pulleys, drill press, planer, grist-mill and bone mill would cost ten thousand dollars.

Such a machine shop would add to the educational powers of the Institute, and provide much needed opportunities.

Agriculturally the Negro is going ahead, for he is the laborer of the South; he is buying farms at five dollars an acre, and covering the land with his small holdings.

Mechanically, he is losing ground, for there is no way for him to acquire the needed skill; the majority, however, are not adapted to mechanics. For all that, they are capable of producing an excellent mechanical class. The shops, North and South, are, as a rule, closed to them.

The present generation of colored mechanics were nearly all trained in slavery. I urge the increase of mechanical advantages here.

#### A WORKSHOP FOR INDIAN BOYS.

Since last year, our Indian apprentices have worked in a shed, a mere make-shift, lack of funds has prevented better things.

The following is needed: a building to contain a shoe factory and repair-shop, a harness shop, tin shop, blacksmith's and wheelwright's shop, substantially built. It would cost, complete, five thousand five hundred dollars. For this object the sum of seventeen hundred and fifty dollars has already been subscribed. It should be erected this summer; another winter in the present shop would not do.

Our Indian workshop is now making, for the Indian department in Washington, to be used in the West, two thousand pairs of shoes, seventy sets of double plow harness, and hopes to supply something more.

#### STEAM AND GAS.

The evidently ruinous cost of heating our large new buildings, compelled us to seek the most economical method, which was to connect six buildings by underground steam pipes, supplying steam from the sawmill, where the refuse sawdust slabs, etc., could furnish more than half the fuel required. This has been most successfully accomplished by Mr. J. B. H. Goff, engineer, at a cost of over \$13,000 for pipes, boilers, labor, and material, and 1,500 feet of large pipe.

A gas machine of 800 light power has been erected to relieve the distress, both mental and physical, which teachers and students felt for years for want of adequate light. It is just in operation. It has cost us \$5,000. The relief from the dimness and danger of kerosene is unspeakable. We have had through it several narrow escapes from fire.

The entire cost of gas, and \$10,000.00 for the steam works, was provided in a quiet way by unexpected and most generous charity.

IN GENERAL it may be said of the industries of schools which teach the trades in connection with studies, that, if given the building and outfit, and salaries of foremen, they will take care of themselves.

Our problem is to turn to account the labor payments of students, who, last year, earned \$24,898.37, being paid at the rate of from four to eight cents per hour. This year it will be more.

From their stand point it is fairly earned. From ours, at least one fourth of it, say \$8,000.00, is a direct drain on our resources. We give much employment regardless of pecuniary profit; the welfare of the student is made paramount; instruction is primary to production. The student learns, but the school loses.

This six thousand dollars must be had to pay for board and clothing. Shall it be received as a charity or a wage-money? The difference is wide. We choose the latter; though it would be easier to get it by an appeal to the benevolence in the name of poverty. We ask the benevolent to maintain a work that, within itself, takes care of the student and develops self-reliance and manual skill, and preserves his self-respect and dignity.

This is not the way to make polished scholars, but it makes men.

Last year's total charges to students (for board etc) were	\$30,679.96
Last year's payments by students:	
for labor	24,898.37
In cash	4,023.37
Aid in direct charity	2,150.99
Total	\$31,072.73

The surplus of students' credits is owing to the fact that the ninety work students, who attend night class only, working the whole of every week-day, are laying up their earnings by agreement, so as to have a fund from which to meet their cash payments when they enter the regular course. As students have increased, charity has decreased; as follows:

Session of 1878-9: 234 students:	
direct aid	\$2,452.10
Session of 1879-80: 293 students:	
direct aid	\$2,491.04
Session of 1880-81: 321 students:	
direct aid	\$2,159.29

Average students' labor is not up to that of outside labor. The student's chief ambition is for book knowledge. He works because he must; his muscles are not tough; life is not fully serious to him, for all its responsibilities are not upon him. There is a humanity in the school that he may unconsciously count on.

Mary, however, either flinch from work or break down under it. The way to make men is to train the head and the hand together. This is the most difficult, the most costly problem in education, but it pays. The better the product, the more it costs.

Whites refuse the offer that the Negro accept, because the former can usually get their education without manual labor. For the Negro there is no other way. His disadvantage becomes a blessing—a source of power.

#### IN GENERAL.

##### MILITARY.

The cadet organization of the institution has been the past year under the care of Lieut. Geo. L. Roy Brown, U. S. A., though whose wise and earnest efforts it has been much improved. Your attention is invited to his report, which is herewith forwarded.

##### CURATORS.

His Excellency, Gov. William E. Cameron, of Virginia, has appointed the following named gentlemen as Curators of the income annually paid by the State to the Hampton Institute, for doing the duty of a State Agricultural College.

CAPT. A. S. SEAR, Hampton, Va., MR. E. S. HAMLIN, Newport News, Va., MR. L. S. NORTON, Williamsburg, Va., MR. E. B. MAON, London Bridge, Va., MR. R. G. L. PAIGE, Norfolk, Va., REV. WM. THORNTON, Hampton, Va., The last three are colored. They are to serve four years from the first of last January: until January 1st, 1885.

Their duties are to investigate and report upon the use of the funds appropriated to the Institute, and they have the power to veto any use of it, but not to give any direction to it.

This body of gentleman, and our relations through Indians with the general government, have led many to suppose that this was a government institution. We have, many times the past winter, had to assure visitors that the school is a private corporation; doing duty for the state and general government, but with a self-perpetuating board of trustees under a charter from the State of Virginia; its income being chiefly from charity; and all its property from private benefactions.

EXPENSES.

To pay current expenses, requires, besides all received from public sources, the sum of upwards of thirty thousand dollars annually.

This is derived—

- (1.) From annual scholarships of \$70.00 each.
- (2.) From permanent scholarships of \$1,500.00 yielding \$70.00 each.
- (3.) By contributions for general pur.

From the former, is annually received about \$16,000.00; from the second source about \$2,500.00; from the third, from \$6,000.00 to \$10,000.00. The large sums recently given this school are mostly for its extension, by way of buildings, and result in increased expense for increased work.

An increase in the number of seventy-dollar scholarships, or the payment by individuals of a moderate amount, say \$50.00 or \$100.00 annually for its maintenance, would much relieve the exhausting work of securing the school revenue. No soliciting agent or machinery is employed; but considerable of my own time and strength is devoted to income, which I would be glad to expend directly upon the school.

**ENDOWMENT.**

Should not the Institute rest in part, at least, on a permanent foundation?

The sum of three hundred thousand dollars, at five per cent interest, would, I think, secure it for the future. The time for a vigorous effort in this direction may soon come. The success of such an effort would ensure finally a complete endowment. Meanwhile, the school by its direct dependence, is an educator of public sentiment, and public sentiment is at the bottom of all our social questions. It should not, however, always remain in the front rank of charities, but in time give place to those that the exigencies of progress shall push forward; never to be, I hope, wholly out of living relation with the thought and philanthropy of the day.

**SPECIAL NEEDS.**

For the coming year a considerable amount is required, as follows: already referred to above.

To complete payment on Farm,	\$ 2,500.00
To equip Machine Shop, Orist Mill &c.,	10,000.00
For Indian Work Shop,	3,750.00
To complete "Stone Building,"	5,000.00
To repay loan	<u>7,500.00</u>

A. W. CONSTABLE, PRESIDENT NATIONAL ARCHERY ASSOCIATION.

AIM FOR THE BULL'S-EYE.

[From "Harper's Weekly."]

## WHITTIER ON LONGFELLOW.

From the May Wind Awake.

With a glory of Winter sunshine  
Over his locks of gray,  
In the old historic mansion,  
He sat on his last birthday,  
With his books and his pleasant pictures,  
And his household and his kin,  
While a song as of myriads singing  
From far and near stole in.

It came from his own fair city,  
From the prairie's boundless plain,  
From the Golden Gate of sunset,  
And the cold woods of Maine.

And his heart grew warm within him,  
And his moistening eyes grew dim,  
For he knew that his country's children  
Were singing songs of him.

The joys of his life's glad morning,  
The pangs of his evening time,  
Whose echoes shall float forever  
On the winds of every clime—

All their beautiful consolations,  
Sent forth like birds of cheer,  
Came flocking back to his windows,  
And sang in the poet's ear.

Grateful, but solemn and tender,  
The music rose and fell,  
With a joy akin to sadness,  
And a greeting like farewell.

With a sense of awe, he listened  
To the voices, sweet and young;  
The last of earth and the first of heaven,  
Seemed in the songs they sung.

And waiting a little longer  
For the wonderful change to come,  
He heard the summoning angel  
Who calls God's children home.

And to him, in a holler welcome  
Was the mystical meaning given  
Of the words of the blessed Master:  
"Of such is the kingdom of heaven."

## SKETCH OF THE NEGROES IN AMERICA.

BY ORRA LANSHOUSE.

## PART I.

"How did the black folks get to this country, any how?" said my young colored domestic, after listening with much interest to a letter in the Southern Workman from a Hampton student in Africa. "If they were wild people in Africa, how did they come to be slaves in America?"

"Mamma said a tender-hearted little white girl, coming tearfully to her mother, after hearing the conversation of the colored servants, 'Is it true that the white people stole all the Negroes away from their homes in Africa, and treated them so cruelly, as Aunt Lucy says they did?' What shall we tell our children as the years go on and natural curiosity rises in their breasts, when they see two races, widely differing in appearance, occupying our common country?"

The sentiment of the North on this subject, formed by reading such books as Uncle Tom's Cabin, from the stories told by runaway slaves, and, above all, by the pathetic inseparable from a people held in bondage and wretchedly appealing with mangled hands to Christendom to set them free, rose to such indignation that the Abolitionists were willing to shed their blood, and risk the existence of the nation, to destroy slavery.

The South had for many generations cherished views exactly the opposite of this. The Negroes had been introduced into the country within twenty years after the first white settlement in Virginia. Notwithstanding the earnest protests of many thoughtful men, Great Britain had insisted that slavery should be maintained in her colonies, and gradually a mistaken idea of self-interest had blinded the southern people to any moral evil there might be in the system. The religious sentiment of the land was distorted to suit the slave-trade, and the ministers of Christ strove to teach the oriental customs of ages past in the New World and the nineteenth century.

This "conflict of ideas" resulted in the terrible Civil war, whose wounds cannot all be healed in our generation; but out of its blood and tears have come the freedom of the black man, and gradually, step by step, he is working his way to full liberty and equality with his fellow citizens of the Republic.

Now that the two sections of the country, and the two races which dwell therein, are drawing nearer together, the differences being fast forgotten, the prejudices fast dying out in the light of a better day, what lesson can we teach our children from this wonderful story of a transplanted race, brought hither in sorrow and pain, and kept for more than two centuries in slavery?

To understand this question fully, let us look first at the condition of the Africans brought to our shores. The majority of these

involuntary immigrants came from the western coast of the "Dark Continent," chiefly from Guinea. Many of them were prisoners taken by the chiefs in their wars with each other, and sold by their conquerors; some were children sold by their own parents, many others were stolen by brutal white men from Europe, who, until the present century, were unhesitating in their nefarious traffic. These Africans were nearly all savages—some of them undoubtedly cannibals. Tradition tells of a petition sent to the House of Burgesses in colonial days, entreating that the importation of Africans should be stopped, urging as a reason that in the disturbed state of the colony, the men were often called away to fight the Indians, and they feared to leave their homes lest their wives and children, left to the mercy of the cannibals who were enslaved on the plantations, should be devoured by them. Early Court records tell of the execution of a Negro slave for eating a white child.

The colored people of our day are not unnaturally sensitive about talking of their savage ancestors, but I have occasionally met with very old Negroes, who would relate with much amusement the tales told in childhood by their parents, of their recollections of Africa. One of these told me lately of a very old woman, still living he believed, who had herself been stolen in her childhood from Africa, and had often told him of visit her parents had paid to the village of a neighboring tribe, how her father and mother had talked when they came home of a very fat baby they had seen at one of the huts they had passed, how her father had gone out at night, and returned after a while with a mysterious bundle which proved to be the neighbor's plump baby, and was daily cooked by her mother for the satisfaction of the family. A Virginia lady told me not long ago that she had often heard her grandmother speak of some native Africans brought in her childhood to the plantation still owned in her family. These people were by no means savages in their habits, became very valuable servants, soon learned the language, and were fond of telling the white children, who were always a delighted audience, of the manner and content of the stately hunt whence they had been carried away captive. They dwelt much upon the dainties of that tropical clime, chief among which they counted "men's flesh." The human flesh they said, was tough and unpalatable, whether boiled, stewed, roasted or fricasseed it remained uneatable, but every other portion of the human frame was delicious, resembling, when cooked, a delicate and well-flavored jelly.

"Uncle Jack," said I, to a shrewd old colored man, whose ox-wagon often stops at my husband's store, as he carries wood to town for sale, "did you ever hear the old-time folks talk about eating people in Africa?" Uncle Jack is very jolly, and has a loud merry laugh. "Yah! yah! yah!" chuckled the old man. "Sho! I has many a time, dey all use ter tell us young folks, how dey use ter eat babies over dar." "Now Uncle Jack," said I, "was could do it?" "Lawsy no, mista," said Uncle Jack, assuming a deprecating air, as he reflected on the shocking tastes of his ancestors. "Why I uelber eat 'possum, muskrat, 'n' baby 'possum do look so much like a young child, when you done skin him an' fix him ter eat." All accounts agree that most of the Africans, when brought hither, knew nothing of the use of clothes, except the loin-cloth worn by natives in all hot countries. Some of them were tutored in fanciful patterns and figures over their bodies. To this day, some families of Negroes preserve the distinctive marks of their tribes, such as pulling out their eyebrows, and essays have been known of Negroes in the imbecility of age, who refused to wear clothing, and delighted to adorn themselves with stains produced from the juice of plants, and made ornaments of feathers, beads, etc., evidently going back to the customs of early life.

Bishop Meade, whose interesting work on the "Old Churches and Families of Virginia" tells much of the native Africans, speaks of them as "the gentlest race of savages God ever made." A venerable and intelligent lady, now probably "the oldest inhabitant" of this place, tells me that in her youth many Africans were brought here, just off the slave-ships. She says, "The Negroes came here savages, but they soon learned our language, and when taught to do many of them made excellent servants; the children always showed a great improvement upon the parents, and after two or three generations, I could not see any difference between them and other people, except in color."

In religion these people were usually heathens, possessing a belief in what we call fetishism or voodooism, which consists in a system of watercraft, conjuration, etc. Many traces of their ancient faith still linger among our colored people, and are curiously intermingled with the ceremonies of the Christian religion, which they have, as a race, fully adopted, and of which many of them are faithful disciples.

The very singular practice of joining hands and walking in a circle, with many convulsions of the body and a weird kind of singing, which they do when under strong religious excitement, and sometimes when one of their own people is dying, and they are permitted to aid the departing spirit in this way, is doubtless one of their voodoo rites carried into what is meant our Christian worship. There must surely have been a wonderful mingling of tribes and nations in the accidents of the slave-trade, and there are among as traders civilized countries, some of whom were Mohammedans in faith. Among this class of the native Africans was found considerable knowledge of domestic arts, as they are practiced among the more cultivated inhabitants of northern Africa. I have heard of little machines for spinning, closely resembling the ancient distaff, and a primitive loom, combs for the hair, rude musical instruments and from their native land.

I hope that no one will suppose that I write this account of the Africans when first enslaved by my forefathers, from any invidious or malicious motive. Travelers in Africa today tell us of just such people as the first slaves in America are represented to have been. The works of Livingstone, Du Chaillu, Stanley and other explorers, give accurate pictures of the Africans in their own land, and in reading these books, I often notice traits among the wild tribes, which I have observed among our Negro-Americans. Indeed, I sometimes feel as if I could distinguish a Kabye, a Mandingo or a Kaffir here, notwithstanding the intermingling of races, and the varied influences brought to bear upon them in this country.

An Englishman who had lived long in Africa, told me lately that, when he came to America, he was much struck with the amiable and intelligent countenances of the black people here, contrasting so strongly with the fierce and often brutal expression of the savage Negroes, to whom he had been accustomed; though many of them were fine powers of endurance. I know of no more interesting book on this subject than "The Dawn of Day in Africa," by Mrs. N. M. Scott, the ideal observation of a missionary lady, a Virginian by birth, whose early life had been surrounded by Negro slaves in Virginia, and who did work faithfully for Christian missions on the coast of Africa.

Such of the colored people as have had the advantages of education, and the number is by no means small in these days, know that the history of all races is marked by the same gradual development of a savage people into the highest condition of civilization and enlightenment. The most illustrious example in history is that of the Jews, a wandering and barbarous people, who, in striking analogy with the story of the Negroes in America, were transplanted from their home in western Asia to Egypt, which then led the civilization of the world. The Hebrews, like the Negroes, was enslaved, and suffered even a more cruel bondage than the African. To us, as to the Negro, this slavery was a school of training in many arts, from which he went forth, under the leadership of his great law-giver, with the possession of all the knowledge of the Egyptians. The whole world-to-day acknowledges its indebtedness for religious and civil influences to the Jews, and the first lessons of the Jews were learned in slavery.

The history of the English-speaking race, which in this age claims precedence of all nations in the arts of war and of peace, begins far back in that dim era, where the barbaric Britons, Angles, and Saxons, forest wanderers, clad in the skins of beasts, offered human sacrifices to their gods.

When an Englishman intimated to Disraeli the Jew premier of Great Britain, that Lord Rosebery had condescended in marrying Lady Rosebery's daughter, the learned Hebrew responded with a smile, "And yet again, when Rosebery's ancestors were savages in the woods, Rosebery's forefathers were scholars in the temple!"

The first record of the ancient Jews he traces the English and the Irish still unrecalled, and often causing bloodshed between the factions, even when they meet on alien shores, told that the Irish stole the children of the English and sold them for slaves, and an account of the selling of children in a prominent place of the realm.

If it were necessary, instances of the barbarous condition through which our race have gone might be multiplied for the encouragement of the Negro-American who, now that his people have passed through the successive stages of savagery and bondage, and entered the world of civilized civilization in a private citizen of our Republic, to the highest development permitted to humanity.

I think, however, that I have said enough on this point. Suffice it to add that change is the law of nature, and progress the destiny of man.

In the next paper I will endeavor to show that the white man of the south, who has so long suffered under the stigma attached to the slave holder, was not altogether unmindful of the responsibilities he had taken upon himself in assuming the right of tutelage of a heathen people.

## AIM FOR THE BULL'S-EYE.

Aim for the bull's-eye—  
Fit the arrow to the bow—  
Steadily—not a thought too low—  
So—let the shaft fly.

Aim for the bull's-eye—  
Not a hair's breadth either side,  
Or, the dart, diverging wide,  
"Shame!" will the crowd cry.

Aim for the bull's-eye—  
If the mark thou overshoot,  
Lo! the jeers all will boot,  
"Tried for—but missed—the sky!"

Give all the go by—  
All but the mark shoot—  
Ha—so these arrows sped  
Straight to the bull's-eye.

H. W. L.

## SUGGESTIONS ON TEACHING.

BY PROF. O. W. WATKINS.

(Notes of an informal talk to the teachers of Hampton Institute.)

Mr. Walton commenced by commending the spirit of trust and confidence which pervaded all the class exercises. He believed that nowhere could there be seen a better illustration of this essential condition for right mental activity among pupils. The students evinced a great interest in the work in and outside the class; they showed good habits of attention, and much readiness in expression.

The future aim should be to improve the students, as a whole, in the power of patient, critical thinking, in habits of careful observation, and in the power to generalize.

The speaker then stated some principles which must underlie successful teaching.

1. It must be based upon the knowledge of the mind.

Upon the ends to be secured.

The course of studies should be adapted to exercise all the powers of the mind.

When the child is young he should have a large practice in using his powers of observation; at this period he is to gain a knowledge of facts. This knowledge comes through the senses, and becomes the occasion for the knowledge of principles, and of classes, which is the study appropriate to the later or reflective period of life. The first kind of knowledge constitutes an elementary, the second kind a scientific, and the third a complete education. The pupil must have training in both courses of studies, and in acquiring every kind of knowledge. A complete course of studies including drawing, geometry, gymnastics, the elements of botany, astronomy, and zoology, with all the branches ordinarily pursued in the schools. This, for the reason that these are a necessary means to the ends of teaching. And what are these ends?

The first end is knowledge, the second end is discipline or culture, and the third end is a method of study.

The acquisition of knowledge is based upon a natural desire; the mind is thus constituted to acquire knowledge; reading and writing which are taught in the schools should not be considered as ends but simply as means to the end; the reading is to be taught as an instrument for acquiring knowledge; the knowledge should be kept in mind as the end; every lesson taught may be fitted by this going; the pupil acquiring some useful knowledge. For example, teaching the young learner to say "I see a cat," as an end, is wasteful; he had better have a plant before him, and having his attention directed to the object, upon the parts, as the roots, the stem, the leaves, or, having a ball, name its color, as red, its form, as round, and so on. Having used these words orally, he then may be taught the sentences, "The plant has roots," "The plant has leaves," etc., or "The ball is red," "The ball is round," etc. This will make the reading both intelligent and useful, which is not the case for the most part in primary schools. It is not by making such observations as indicated above, the primary pupil exercises his powers of observation, he gains useful knowledge; and, by introducing the elements of botany, mineralogy, and zoology, the child acquires the knowledge of these elements without loss of time, injury to any other branch of study, and with certainly great advantage to his future progress. Every study may be pursued in such a way that the mind will demand the underlying knowledge expressed in all words uttered. In geography, for another example, (continued on page 75.)

# Southern Workman.

**TWELVE PAGES MONTHLY.**

(Reduced to eight pages from July to October, four months.)

Printed on the Normal School Steam Press by students trained in the office.

S. C. ARMSTRONG, Editor.  
H. W. LUDLOW, Editors.

MRS. M. F. ARMSTRONG, Regular Contributor.  
MR. W. N. ARMSTRONG, Regular Contributor.  
MRS. ORRA LANGHORNE, Regular Contributor.

Terms: **ONE DOLLAR a year IN ADVANCE.**

Specimen copies sent upon application. To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent. A limited number of advertisements inserted at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1 column.	2 75	7 50	13 50	23 00
1-2 "	5 00	13 00	23 00	40 00
1-3 "	8 00	20 00	40 00	70 00

Special notice 10 cents per line.

Jobber risk from all parts of the country is solicited, and will be executed cheaply and well. Estimates given.

For further information, address J. F. B. MARSHALL, Business Manager, Hampton, Va.  
Entered as Second-class Matter in the Post Office at Hampton, Va.

## Hampton Tracts for the People.

**SANITARY SERIES.** Ten numbers published by the H. W. Ludlow. 1. Health Laws of Moses. by H. W. Ludlow. 2. Duty of Teachers. by M. F. Armstrong. 3. Preventable Diseases. by H. W. Ludlow. 4. Who found Jesus? by M. F. Armstrong. 5. A Haunted House. by M. F. Armstrong. 6. Woman's Work in Society Reform. by H. W. Ludlow. 7. The Rights of the Body. by S. R. Caldwell. 8. The Two Brothers. by Charles Kingsley. 9. Cleanliness and Disinfection. by E. Harris, M. D. 10. Our Jewels. by M. F. Armstrong. Published by Putnam's Sons, New York. Edited and printed at Hampton Institute. For sale in 64 places, specimens sent from Hampton at 6 cts. a number, or 50 cts. a set.

Subscribers are reminded that, from July to October inclusive, this paper is reduced to an eight page form, resuming in November the twelve page form.

## WORKSHOP FOR INDIANS.

Indian boys at Hampton are being taught trades as follows:  
fifteen to be carpenters.  
eleven " " shoemakers.  
five " " tinsmiths.  
five " " wheelwrights.  
three " " blacksmiths.  
two " " painters.  
two " " harness makers.  
four " " printers.  
four " " engineers.

Forty-five of these, (all but the printers and shoemakers, who work in well fitted up shops) are learning their trades in a temporary frame building, insulated to winter. Providing two large buildings, now about complete, for the accommodation of Indian girls and boys, has heretofore occupied our energies. Upwards of a hundred can now be cared for.

The cost of erecting a central two-story brick shop 25x55 feet, with two one-story wings, each extending from it in opposite directions seventy-five feet, to make room for the industries mentioned above, will be about \$5,500.00.

This can be divided by the number of work benches required, giving the pro rata cost of construction represented by each bench, which will be one hundred and fifty dollars. Work benches are needed as follows:

For carpenters 15; for shoemakers two at a bench 5; for tinsmiths 5; for wheelwrights 5; for harness makers 4; 34 in all.

The blacksmiths and painters shops, not to be arranged with benches, will cost, the former \$500, the latter \$300.

Thirty-four benches at \$150.00 apiece

will cost five thousand one hundred dollars, making the expense of the shop (including blacksmiths at \$500) five thousand six hundred dollars. Properly insured this will be a perpetual provision. The paint shop containing combustible materials will be built separately, at a safe distance.

There have been contributions to the shop as follows:

From a lady in Boston, for blacksmith shop \$500.

From a lady in N. Y., for paint shop \$250.

From a lady in N. Y. \$1000, which nearly supplies seven benches besides two shops, leaving twenty-seven now unprovided for. The chief industrial advantage we can offer to the Indian is a chance to learn a trade. Giving this is putting a rock under his feet; on it he can fight it out.

Indians who have returned from Hampton to their homes are saved by their trades which give them occupation and support.

The regular day's work in the shops is about the best refuge they can have from the influences of Indian life where idleness is honorable and industry is despised.

The shop will be needed next year for the increased number to be sent and partly supported by government.

Aid for the shop may be sent to the treasurer Genl. J. F. B. Marshall, or to the undersigned:

S. C. ARMSTRONG.

Hampton, Va., June, 1882.

## A NEW INDUSTRY FOR AMERICA.

Whoever introduces a new industry into a country is a public benefactor, like one who makes two blades of grass grow where only one grew before. Hundreds of empty hands will be set at work, and prosperity be brought to hundreds of needy homes, if the recent experiment of establishing silk culture in America proves a success, as it seems not unlikely to. It is all the better that the new industry is especially adapted to women, giving home employment thus to those who find it most difficult to obtain work, while yet they are often the most in need of it. The Circular of the Woman's Silk Association, of Philadelphia, organized only two years ago, lies before us, and contains very interesting statistics of the movement and its success. The Association has had an exhibition recently in Philadelphia, where specimen cocoons were displayed by twenty-six contestants, for prizes offered by Strawbridge and Clothier, a prominent dry-goods firm of that city; the first prize being carried off by an enterprising old lady, the aged mother of our American poet, the late Bayard Taylor. The greatest triumph of the Exhibition was the manufacture of the first American brocade, made from silk raised in fourteen different states of our Union, spun on a Yankee reel, and woven on a Jacquard loom, requiring three thousand six hundred needles to form the original and striking design. This elegant product of home manufacture, which is said to be one of the heaviest ever woven, is to be presented by the Association to Mrs. Garfield. New prizes are offered for the coming year, from \$10. to \$100, for the best cocoon raised by any resident of the United States, and the Secretary of the Association—Mrs. H. A. Lucas, 1328 Chestnut St., Philadelphia—is ready to furnish instructions to all who wish to engage in silk-culture.

It is but a few years since no one thought of ever wearing an American silk, any more than they thought fifty years ago of reading an American book. The Cheney Brothers and their followers have made American silks a rival of the best fabrics of France or Italy, importing \$15,000,000. worth of dress yearly for their manufacture. It would seem but a short and natural step to the home production of the raw material, when the silk worm and the white mulberry tree on which it feeds, thrive in every State in the Union. The leaves of the Osage orange, also, are found to be equal to mulberry leaves, as food for the silk-

worms, so those who have hedges of this pretty tree, need not wait to plant mulberry trees.

The great difficulty of course is to compete with the trained and inherited skill and the cheap labor of Europe and China. But with the incentive of the immense amount to be saved from the expense of importation and duties, what may not be expected from American ingenuity and enterprise? While success in the manufacture will require a degree of perseverance and knack which will keep the business probably from being over-crowded, all through our rural districts women and even children, will find it pleasant and profitable occupation. Nor will our adoption of the industry be any ultimate loss to the artisans of Europe, for wealth creates wants; it is not so far in this country between making silk and wearing it, and any thing that increases the general prosperity of one country, must help the laborers of all others.

## JUSTICE.

BY RALPH WALDO EMERSON.

Whoever fights, whoever falls,  
Justice conquers evermore.  
Justice after as before—  
And he who battles on his side,  
God, though he were ten times slain,  
Crows him victor glorified,  
Victor over death and pain,  
Forever.

## RALPH WALDO EMERSON.

But few years ago, when Bryant's grand old silvered head fell crowned with age and honor, we felt that the circle of our great ones was broken,—and now, almost in hand, Longfellow and Emerson have departed, and where are any to take their place and be to the next generation what these have been to the last? We seem already passing out of the golden age of American Literature; the new period will be one of more generally diffused light, but with no stars like those on our western horizon.

As Longfellow was the poet of the people, Ralph Waldo Emerson was the poet and prophet of the young. His influence upon all growing minds that came within its reach may be judged by the testimony of one of the greatest of them. Far as Emerson was from being a practical scientist, the philosopher Tyndall says of him: "If any one can be said to have given the impulse to my mind, it is Emerson. Whatever I have done, the world owes it to him." One loses much who does not read him in youth, before great truths have become truisms; seeking in his pages not formulated systems of doctrines, but just that impulse, and inspiration, and uplift. There is no doubt that he contributed greatly to the forming of the young mind of this generation, especially in New England. He was always young himself; progressive and fearless to a degree which carried him beyond even the most radical "Radicals" of his time, and almost round the circle to the point of orthodoxy. To a Howard student he once said "I have very good grounds for being a Unitarian and a Trinitarian too. I need not nibble forever at one point, but eat it and thank God for it, and earn another."—Or as his exquisite poem "The Forcemen" expresses it:

"Long I followed happy guides;  
I could never reach their sides,  
Their step is forth, and, ere the day,  
Breaks up their leaguer and away."

As to all great teachers, Truth was his divinity, followed with a devotion careless of consistency or appearances. He had a reverent love of Nature, a reverent faith in God and Immortality, a liberal, sympathetic soul, a hatred of all shams and all injustice, and a rare power to inspire his hearers or readers with something of his own spirit.

The young people of this newly rising race, whose fearless friend he was in its day of oppression would do well to read and re-read Emerson's Essays. They are almost always simple, and clear as light. Even his occasional obscurities you are sure are not affectations, but the effort to

give his thought more perfect utterance. He would have been the last one to write for mere word effect. He said himself

"To clothe the fiery thought  
In simple words succeeds;  
For still the craft of genius is  
To make a king in weeds."

One of his latest essays, "On the Use of the Superlative" is aimed to show the weakness of overstatement.

One great secret of his power over earnest young souls is no doubt his own faith in them. What such an one could read his words on "Heroism," and not feel a capability of being heroic.

"So high is grandeur to our dust,  
So near to God is man,  
When Duty whispers low, 'Thou must,'  
The youth replies, 'I can.'"

## THE TRUCKING BUSINESS.

The rapid development during the past few years of the trucking business in certain localities of the South, has a bearing on the future of agriculture in this country, the importance of which can as yet hardly be estimated. It is not alone that vegetables and fruits are raised in immense quantities for direct shipment to the Northern markets, but that the canning establishments which have sprung up like mushrooms, in all our agricultural districts, have created a distinct demand, and are offering a market at the very door of the farm house, for all produce which does not meet the requirements of Northern buyers, or for other reasons cannot profitably be shipped. Now when it is remembered that twenty years ago there were no facilities for shipping early or perishable produce, and that canning factories did not exist, it will easily be seen how great is the change which, in a quiet way, has taken place among our farming population. To one living in the thick of these new activities, it is almost impossible to realize the conditions of the not very remote past. Without at all considering the newer methods or the improved machinery which have of course affected agriculture here as elsewhere, it is most interesting to even a casual observer, to notice the special causes for growth and change in any given locality. If one could, for example, take a glimpse at the town of Hampton, as it stood twenty years ago, and compare it with the Hampton of to-day, how could one enumerate the changes? The Hampton of the old days it was not our fortune to know, except, as it may be said, at arm's length; the Hampton of June, 1882, is familiar, and it, and the subtle causes which are changing it, are worth more than a glance.

It is, in its development a typical Southern town; the changes which are going on within and around it, are the changes which, in a greater or less degree, are at work throughout the South, and they are all, it may be thankfully said, in the line of progress. Hampton is at present the commercial centre for a fertile district of tide-water Virginia, and the port of shipment for the produce of thousands of acres. All the Northern markets are east of access from here by steam or rail, via Norfolk or Baltimore, and early in April, the rush begins—asparagus, peas, potatoes, strawberries, cabbage, tomatoes, crowd each other fast; the water is alive with deep laden craft, the road from Hampton to the dock at Old Point Comfort shows a long line of dusty "Truckers" who have forced into their service every vehicle that can carry a barrel, every animal that can haul a crate. Telegrams flash back and forth over the wires; the air is thick with postal cards, on every side one hears, "How's the market this morning?" "Bottom out of potatoes yet?" "Maryland peas are in." "Not a barrel to be had," etc. while the pockets full of "returns" are not slow in emptying part of their contents into grocery and dry goods tills.

This morning, in the cool, fruits and vegetables are picked and packed, the telegraph gives the latest quotations from Boston, New York, Philadelphia, Baltimore, Washington; the grower chooses his market, and to-night the shipment is made, to reach, to-morrow, its destination and the hungry consumers waiting for it. The half completed railroad from Newport

## INCIDENTS OF INDIAN LIFE AT HAMPTON.

## NEW RECRUITS.

Four new Indian students—three girls and one boy—reached Hampton June 11th, from Indian Territory, under charge of Mr. E. B. Townsend, Special U. S. Indian Agent. Two more boys, one of whom was taken with measles on the road and left under medical care in Kansas city, came on afterward, making up the number to six. All but one boy—Pawnee—are of the Sac and Fox tribe. Mr. Townsend having been stationed among them for some time on special duty, became greatly interested in them, and desirous to give them the benefit that other tribes have had in Eastern training for some of their children. The result of his communications on the subject with the schools and with Government, resulted in permission to select thirty-one children, twenty-five for Carlisle, and six for Hampton, chiefly of the Sac and Fox tribe but including also a few Nes Perce, Pawnees, Ojibwa and Kaws, all told, fourteen girls and seventeen boys.

Those for Hampton are a pleasant, bright looking set, further advanced in English, with one exception, than most of the Indian pupils heretofore received. Their names, in description, as given by Mr. Townsend, are as follows:

Nellie Keokuk—age 16, Sac and Fox, pure blood, a princess by descent, and in feeling. She is a grand-daughter of the chief Keokuk, on the site of whose village the city of Keokuk in Iowa was founded, and from whom it was named. He was a celebrated chief of the Black Hawk band. His son, Keokuk II, Nellie's uncle and adopted father, is the most advanced Indian of his tribe, and, at the cost of some ostracism and loss of influence among his tribe, of whose five chiefs he is one, he has taken for some years a bold stand for civilization and Christianity. He is a faithful member of the Mission Church—Baptist—and delivers interesting addresses in English and English generally speaks no English—before the church and Sunday School. He wears the white man's dress, and is industrious, has a good home, five or six hundred head of cattle, wears a good suit of broadcloth on Sunday and will be a rich man if he is prospered. He goes so far as to desire compulsory education for his tribe, which, though it has a reputation for being semi-civilized, the Indians generally speak no English, and desire no other. His wife is a white woman of good character, who was the widow of another Indian husband of the Ottawa tribe. Nellie speaks English quite well, and has been, since March, at the Agency school.

Mary King, age 14, belongs to Sac and Fox tribe, but Ottawa in blood, and only one quarter Indian; the daughter of William King, whose husband is of full Ottawa blood, is matron of the boarding school established by Major Townsend at the Agency, and is a woman of a great deal of character and intelligence. Her half-sister, Nellie, is also of the Sac and Fox tribe, and is a woman of a great deal of character and intelligence. Her half-sister, Nellie, is also of the Sac and Fox tribe, and is a woman of a great deal of character and intelligence.

Charles Tatiah—(Indian name, Charles Tatiah)—age 20, Nes Perce. He has been to school at the Agency, and can talk English quite well, but is extremely reticent. He is a good boy, it is said, and is inclined to become a teacher or minister, in which event he will have to do more talking than he is at present disposed to.

Agent E. H. Bowman writes us of him: "He is our most promising pupil. His character is excellent. His personal influence has always been good among the pupils. We part from him with regret, yet glad that superior advantages are opening up for him. I think he will repay you by his appreciation and progress. I have recently had him in my surveying corps as flag and axe man in running our exterior lines. His good conduct and efficient work merited and has received the recognition of the Hon. Commissioner of Indian Affairs."

The two boys arriving later are: Antoine (Jockey), age 19, pure blood Sac, (or perhaps with some distant mixture of white.) Sac and Fox. He has been at the Agency boarding school a good deal, and talks English well enough to interpret. He is reported as having a good disposition and character; reliable and industrious; slow, but sure. He has been used to herding cattle, and wants to learn farming and the better care of stock.

Johnny Couto, age 12, pure blood Sac and Fox, nephew of Antoine. He is said to be a good, many little fellow. A year and a half ago he was taken from his blanket and forced to go to school. Naturally unruly, he had the first year quite a severe lesson in a serious accident resulting from an act of disobedience, and taking it to heart, has been ever since a different boy. He speaks a little English. It is proposed to teach him harness making. On his recovery from his measles, he came under the care of his uncle Antoine,

who is a very intelligent young man, from Coffeyville, Kansas, where he was left for medical care.

## CONDITION OF THE TRIBE.

Mr. Townsend gave some interesting statements concerning the Sac and Fox tribe. It numbers 443, and is about holding its own in this respect. It is chiefly supported by Government, receiving the annuity in cash and expending it for itself. The mission chapel under charge of the Baptist church has a congregation every Sunday of about a hundred, and is in a fairly flourishing condition. Its pastor, Rev. William Hurr, is a full blood Ottawa Indian, a married man, of good character and intention. The Sac and Fox tribe believe in a Great Spirit, and have a mythology of their own, in which they have quite an active faith.

Mr. Townsend says they have been having a "regular revival" of their own for some months. He was present, as a friend, at the burial of an old chief recently, and was invited to speak to the assembly. The funeral was in Indian style; the old chief was buried in a sitting position, surrounded by supplies of provisions neatly packed in baskets and tin cans. The saddle and bridle of his favorite horse were added, and then the horse itself was garoted,—an easy death the Agent says,—to bear his master on his long road to the Happy Hunting grounds.

The tribe has a school, with accommodation for fifty children, and containing now thirty-eight, about half girls, all boarders. There are in the tribe 125 children of school age—between eight and fourteen. It is taught for the present by two ladies of the Agency, Mrs. Mary Pickett, wife of a trader, and Miss Eva Gibbs, the daughter of another, these ladies having kindly consented to aid Mr. Townsend's effort in establishing the school, until the Agent's arrival. Five of the seven employees at the school are Indians, the matron, the farmer, the cook, seamstress and laundress.

Mr. Townsend gave last Christmas an entertainment at the nice brick schoolhouse, which he filled with blanket Indians, a hundred and fifty at the supper table, and a Christmas tree with gifts for all. He organized a weekly social club, which was regularly attended through the winter by about twenty-five of those who understood English, chiefly half breeds. The nature of the entertainment was determined by ballads drawn—whether to sing a song tell a story, read a poem or answer some question in geography, history or the like. At one of these entertainments, an Indian woman employed as cook in the Agency, read such a beautiful poem of her own selection, (which we give below,) that the Agent appointed her matron of the new school, and she is proving herself as excellent in energy as in poetic taste.

## SUNSHINE FOR A CLOUDY DAY.

BY MISS A. J. BROWN.

I was amused, and puzzled too, [I

One afternoon this week,

When Nellie came and asked me for

A box that would not leak.

I asked him, tho', how large a box

He wanted, and what kind.

"Oh, tin, or wood, or anything,"

"The biggest you can find."

I looked around, but looked in vain—

No boxes were in sight.

"Perhaps your papa'll find you one

When he comes home to night."

"Oh, no, he'll have to go down town

To see some other man."

"And—oh, my mamma, can't I have

Some tin tomato cans?"

I had to laugh, but told him yes,

He might take one or two,

Then followed softly after him

To see what he would do.

Down upon the door-step, where

The sun was shining bright,

He placed the cans, and then commenced

To work with all his might.

His little fat and chubby hands

Were both held open wide,

Then quickly closed, and fluttered o'er

The cans there at his side.

Could not see him grasp a thing,

Which puzzled me the more.

And so resolved to ask the child,

And stepped outside the door.

"Nellie, my darling, tell me what

You're putting in the cans,

And what it is you're gathering up

With those dear little hands?"

"Why, mamma, don't you see? It's sun—

I believe you call them rays.

I'm putting up some sunshine

To keep for rainy days."

"For sometimes Dad don't send us none,

Not even just a taste.

For days and days, and so I thought

I wouldn't let this waste."

"You darling child I how glad I am

I came and asked you this!

You are a sunbeam, little one—

Give me just one kiss."

And so I left him to his play.  
And closed the door once more.  
Was ever such a lesson taught  
To motherhood before!  
How seldom do we older ones  
Improve the many ways  
Of "putting away some sunshine  
To keep for rainy days!"

Why, there's a world of wisdom in  
That simple little speech;  
Ah, yes, how oft these little ones  
Beautiful lesson teach!  
And this is one we all should learn,  
And strive in every way  
To keep some sunshine in our hearts  
For every cloudy day.

Mr. Townsend spoke very strongly of the advantage of boarding over day schools at the Agency, and of the value of such schools as Hampton and Carlisle in stimulating the local schools as well as in giving a number of the children the advantage of Eastern training, removed from adverse influences, and in bringing the tribes into communication with Eastern civilization. There is little chance for industrial training at the Agencies, owing to frequent changes in its administration. It is not so bad to change teachers as farm managers and heads of industrial departments. He describes the country as interesting and the Indians generally holding their own as to numbers, with evident upward movement in industry, agriculture, stock raising and education. National growth in character is always and everywhere slow. He sees much encouragement for work among them. In his opinion, the railroad through the Territory will have on the whole a good effect on the Indians. They understand that they must soon be surrounded by civilization, and they will be stimulated to prepare for it.

## MEDICAL REPORT.

The report of the resident physician at Hampton on examination of the new students, on the second and third day after their arrival, is as follows:

General Armstrong.

Dear Sir:—

The four Indian pupils who arrived June 11th were examined June 13th and 14th, with the following result. The oldest girl is in sound health, has never had an illness, is robust in appearance. The full-blood Indian girl has no disease at present, but examination shows that her lungs are not strong. Her general appearance is excellent. Her delicate hands, however, indicate necessity for careful attention to her hours of labor and recreation, and to all means by which her general health may be guarded.

The third girl is nearly white. She is somewhat delicate in appearance, but seems sound in heart and lungs.

The Indian boy is apparently robust, but examination shows that he has had serious pulmonary disease. There is a marked depression below the right clavicle and expansive movements are much diminished in this region. Though there is no active disease at present, the natural strength of his lungs is diminished, and any new attack would probably meet with little resistance. Enlarged lymphatic also seen in the axilla, and the cervical glands of the right side are much enlarged.

The two Indian boys received June 16th were examined June 17th. One boy is just recovering from an attack of measles. He has a slight bronchitis, but is otherwise well. Both boys appear to be sound in heart and lungs.

Respectfully yours,

M. M. WALDRON, M. D.

OFF AGAIN FOR BEREKSHIRE.

The school closing on the fourteenth of June, on Monday of the next week, a party of twenty-eight—eleven girls and seventeen boys—was started for Berkshire, Massachusetts. As in previous years, places have been provided among the farmers of that good old county among the hills, for our boys and girls to get acquainted with Northern country home life, and improve in English and physical tone, while doing a sufficient amount of light work to pay their board and keep up their habits of industry. With but one or two exceptions, this is to all their first trip North, the party including most of the Arizonas and some of the Dakotas. Fifty-two remain at the school, those who went North last year, and the latter arrivals in all, 33 boys and 19 girls. They will work on the farm or at their various trades, during summer, from 7 to 11:30 A. M., and from 2:30 to 5 P. M., with an hour of school from 11:30 to 2:30 P. M., with Sunday holidays and picnics to vary the monotony of the summer. The boys will go out to the Hemmeyer farm, in squads of ten, for a change of scene and work. The condition of mind and health is generally good at present, and the prospect for the summer seems encouraging.

## PLEASANT NEWS OF ROSA.

We are extremely glad to publish the following good report of Rosa Pleats, the Indian girl for whom some anxiety has been felt since her return from Hampton to the trying circumstances of her Western life. The letter is from the missionary at the Agency.

St. Bennett, May 15th, '82.  
LIEUT. G. L. R. BROWN,  
Dear Sir:

I have had Rosa Pleats living at my house for nearly three months, and as her record at Standing Rock was not very good, I owe it in justice to her to report to you about her. Rosa has been doing very nicely, is quiet, tractable, neat and quick. Her room is a model of cleanliness and order, and she has learned to do a good deal of work very nicely, and is desirous of learning all she can. I really think she had no fair show at Standing Rock, or perhaps too much was expected of her, by people unacquainted with Indian character. We, expecting to find little, have found much to please and encourage us, and we hope to keep her a long time. The mission work prospers apace.

Yours, respectfully,  
H. SWIFT.

## FROM AN INDIAN AGENT.

Round Valley Agency, Creels, Mendocino Co. Cal.  
Dec. 30th, 1881.

Sir: I started an Industrial and Boarding school at this Agency this last fall, and hope to make it a success. We have 45 boarding scholars and 2 day scholars.

Have only 4 white persons in the school, viz: Principal, Matron, assistant Teacher and Seamstress.

All work in and about the building is done by the scholars and Indians of whom I pay 4 only.

Propose to have the boys raise all supplies, vegetables except wheat, and do all other work possible—also to learn trades, as it is possible to teach them.

The boarding school is a very great improvement on the old day school, in almost every respect.

These Indians are not the "pobled men" of the West, but those commandly called Diggers, and are very low (the lowest I have ever seen) in the scale of intelligence. Yet they can be taught. I find some trouble in finding teachers of the right kind. There are plenty who are willing to take Uncle Sam's money, and who think and say—"Any body can teach an Indian," but to find those who are willing to labor earnestly and faithfully to elevate the race into true civilization is difficult.

Wishing you great success in all department of your undertaking,

I remain your obedient servant,  
H. B. SHELTON,  
U. S. Ind. Agent.

## HORSFORD'S ACID PHOSPHATE

IN NERVOUS EXHAUSTION.

I have used Horsford's Acid Phosphate in nervous exhaustion, and in nervous debility connected with an overworked brain, and am satisfied that it is a remedy of great service in many forms of exhaustion.

St. Louis, Mo. S. T. NEWMAN, M. D.

## LADIES' INDIAN MEETING.

A Union Meeting of ladies was held in the parlor of St. George's Hall, Philadelphia, at 12 A. M., on the 17th of May, in the interests of the Indian Treaty Keeping and Protective Association, when, after an address by Mrs. A. S. Quinton, Secretary of the National Society, a Philadelphia Branch was organized. Representative ladies of the various denominations participated in the proceedings. Mrs. H. V. Dr. Harper was elected President of the new organization, Mrs. J. R. Jones, Secretary, and Mrs. C. B. Banes, Treasurer. The names of the Vice Presidents and the date of the next meeting will be duly announced in the *Register* and the denominational newspapers in the city. It is hoped that the women of the Philadelphia churches will join this organization and aid its greatly needed work. Leaders and information concerning this work can be had from Mrs. Quinton, at 1109 Girard Street, Philadelphia.

## HORSFORD'S ACID PHOSPHATE

IN CONVALESCENCE.

I have prescribed Horsford's Acid Phosphate in the convalescing stage of typhoid fever, and whenever an acid is indicated, nothing has been found equal to it.  
Plymouth, Ind. J. H. WILSON, M. D.

## LETTERS FROM HAMPTON GRADUATES.

## A SUMMER SCHOOL. TESTIMONY TO A SCHOOL SUPERINTENDENT. A READER OF EDUCATIONAL REPORTS.

## A SUMMER SCHOOL.

By the public school system of Virginia, some country schools have their session in the winter months, and others in the summer, giving a chance to some to teach the most of the year.

— Co. April 24, 1892.

Dear Miss H—

According to promise I write you, but instead of a card I shall write a letter.

I left home Saturday morning on the Accomack. I took the South Side train and arrived at 2—about two o'clock, there I met George T— and he got a mule and cart and carried me to the Superintendent's house. I was then examined, and received a first grade certificate, which pays \$30.00 per month.

The next day (Sunday) he got a man and the same vehicle to bring me here. It rained Monday, so I did not open school until Tuesday morning. Four scholars came that day, and the next, fourteen came.

I like teaching very much indeed, and I guess I shall devote my life to it.

I board in a log house and teach in one also. My boarding place is a large house 22 x 24; it has two rooms up and one down. I can lie in bed and see through the cracks what is going on outside, so you see we have an abundance of ventilation without the help of windows. By this time next week my school will be very large. George has fifty scholars; he needs an assistant, but there are more schools to be supplied yet. He is ten miles from me, and S—seven.

My hostess is a very pleasant old lady. She has no children living with her. I am two miles from the P. O. Mail comes and goes from here three times a week. My session will be four months. If there are any more graduates who want summer schools they can get them. I think Dr. Dole said there were five schools in need of teachers.

Please give my regards to Miss D— and Miss L—. Hoping to hear from you sometime,

I am,

Truly yours,

P. S. I opened Sunday School to-day, with a very fair attendance.

TESTIMONY TO A SCHOOL SUPERINTENDENT.

Our graduates' relation with the county Superintendents under whom they work are generally very pleasant; sometimes extremely so, as in the testimony of the young man who writes the following.

— Va. April, 22 1892.

Miss M. A. L.

My Dear friend:—

I have received the little "Rabbi Agur's School and its Four Teachers," some dialogues, etc., for my scholars, for all of which my scholars are joining me in sending to you many thanks. The boys and girls have gone to work in earnest committing the pieces. Thank you, I can make out very well with what you sent me. I was indeed surprised to see my letter in the "Southern Workman," but not at all displeased.

Any of the letters that I send you, are at liberty to use them likewise, if you think any good may result therefrom.

Our Co. Superintendent said to me this week, "I saw your letter in the Southern Workman, and was much pleased with it, it was all truth from what I know, and have heard of you." My Supt. don't live in my part of this County—but some twenty miles from me. I have only been personally acquainted with him six or seven years. He is a good man. He has raised the standard of our schools wonderfully—he is the right man in the right place. I heard yesterday, with much regret, that another man has been appointed to fill his place, though I hope that the new officer may be as much interested in the schools as his predecessor, especially in the colored schools. He has arrived to give us good teaching whenever he could get them. I feel thankful to you for your kind words and sympathy, therefore I feel much encouraged. Hope this may find you better than when you wrote. My examination and exhibition will take place in about two weeks time.

From yours respectfully,

T.

## A READER OF EDUCATIONAL REPORTS.

We are glad to "find place" for this brief but pleasant report from a faithful worker.

Accomack Co. Va., Jan. 21, 1892.

Dear General;—

Sir,—

As one having been trained by you in wisdom's way, for example as well as my precept, I feel it my duty to inform you of the work I am doing.

I have a school numbering at the present 85 pupils. It works very hard, yet I find more pleasure in it than anything I have ever done. I am teaching in the above named Co., near a little village. The people here are getting along very well, the greater part of them owning land, horses, and cattle. This is the second term I have been engaged in teaching. I find that teaching does not stop at the school house, those who have a start need to be taught the lesson of helping each other, then they cannot help themselves. This is the lesson I am trying to teach whenever I get the chance; as the northern friends helped me when I could not help myself, I feel it my duty to teach the same. I am greatly encouraged by the reading of Hon. Wm. H. Ruffner's eleventh annual report of the public schools of Virginia, stating the progress of the children in education. I hope that the colored people may put more confidence in each other and take up those things that will lift up the race.

If you can find a place in the Southern Workman for this please put it.

Yours respectfully,

G. E. B.

## GRADUATING ADDRESS

OF THOMAS WILCOX ALFORD.

By request of a friend and visitor at the recent Anniversary of Hampton Institute, we print below, the address delivered on that occasion by one of the three Indian graduates, a young chief of the Absentee Shawnee tribe of Indian Territory. It was in all respects an original composition without suggestion or revision from anyone, and is given unaltered.

DEAR FRIENDS:

It is with intense gratitude that I come before you this afternoon to say a few words, acknowledging my hearty thanks for the many opportunities of improvement and of obtaining an education which have been placed within my reach by the kind friends in the North; and yet with feeling of sadness and somewhat restlessness passing through my mind as I look and see so many friends around me whom I shall soon leave behind. But, when I think of the great work that is before me, it is more than right, yes it is my duty to go forth into the darkness of the world to bring others into light; that I should fulfill my responsibilities to the school and its demands of me. And besides, there will be great pleasure to meet my people whom I left nearly three years ago in the far West, to lead them out from the darkness of barbarism and ignorance into the path of peace and prosperity. There is a great deal of work that awaits for every Indian graduate from any school; because, there he is the only man who can have influence and sympathy; can be trusted by his own race which has been so corrupted by treachery and cheating in the hands of a civilized people. Although it has been said there were Indian graduates of Colleges, who were good business men, yet have they done so going among their people. While acknowledging this fact to be true, I answer that the American people have yet to learn that Indian education is just commenced. There are only a handful, and they need not expect them to increase, neither their labor to become noticed in the course of few years in the midst of thousands of wolves. Even the Christ's disciples, in spite of all their miraculous power from God, made their work effective only as the time went and as they increased in numbers. So the Indian must have time and chance to prepare in order to rise from his barbarism, and low stage of life to the scale of true manhood. He is in slavery. Slavery of vice, from freedom of voice in his own affairs, and from freedom on his own soil; worse than the slavery of the Negro a few years ago, which finally caused his freedom. He has been driven by force from place to place, and herded by the boys of Uncle Sam on all sides in that sad wilderness, where often the least of the field found no comfortable places to rest. And yet he is expected to make it up the best he could to appear in civilization. And he did, in spite of all these obstacles and difficulties, by his perseverance, endurance and patience, make some progress, and in some an upward gain in his education and justice. But who would call this a good way for educating the ignorant, of which the American people have pleased to call the method of civilizing the Indian. Not so. They know they cannot educate him up to Christian civilization and fight him at the same time. I don't mean to say that military authority is not necessary, for we know it is necessary in times of emergency or of war, but I do say that it is not necessary, and is not the thing by which to create and promote education and Christian duty. This is the found-

ation of prejudice that has long existed between the Indian and his white brethren, and from which is the greater source of trouble that has been from time to time inaugurated on the frontier. Like any other man, he is subject to feelings of respect for his friends when justly treated, but if wronged is compelled to retaliate. He has been mistaken for a man of worse character than he is; that even the army officers themselves saw that he is, like any human being, easily controlled, through what is called justice and right, by any person who understands Indian character. Therefore one educated and devoted Indian can do more good among his people in one year than a regiment of soldiers in ten. Although he has been subdued by soldiery and compelled, with humiliating terms, to sign and acknowledge the utility of a fatal treaty by a civilized people ever since the discovery of this continent, to some extent, up to the recent times, but what has been the result? It is obvious. In his heart remains yet fresh that stain of blood or injustice which will, if such method continues, forever cause trouble between him and the American people unless it is exterminated. I tell you, my dear friends, this is an expensive method of civilizing the Indian, which I am glad is fast becoming a thing of the past. But the American people themselves are not to blame for all this, for they know it. And I say, let it be forgotten; and let us look and press forward for the brighter day that are coming to our aid, and follow the new and cheap method of lifting the long down trodden up to a level standard of true manhood. It costs the government an enormous sum of money to support soldiers and their wives, the Indians, both doing nothing, simply dependent beings, while but a trifling sum will pay for the education of all the children of the plains. This method consists of the education of the brain of the use of the muscle, which is of special importance to this race. And whatever is applied, either in savage or in semi-civilized communities, has affected remarkable results.

But, my friends, this great work of lifting men up to a level standard of manhood must be continued; for it is just begun. Just beginning to be appreciated more fully by the people—that education and manual labor are the essential elements of true success in life. The Indian himself is ready to receive instruction of any kind, as he sees the effect of the power of his own people in their civilization, which is now rising and approaching rapidly upon him with strong, irresistible force, and will soon sweep over his reservation like prairie fire that consumes everything which comes in contact. He knows that he will be consumed unless preparation is made to meet the necessity of standing in the flames of civilization.

I am glad, there has been done, for the last few years, a great deal toward improving his capability for improvement. This will be sooner or later if there has not been partially proved that he is capable of being taught all knowledge which any civilized people enjoy. He has the equal faculties, for all learning, and only lacks chance and time, as I have said, to develop his powers of true manhood.

Above all, my friends, I am glad the time is coming when the Indian is earning ourselves with confidence in preparation to compete with each other in school, we shall come together with a Bible in one hand and a hoe in the other, prizing with brotherly love and interest to lift each other up to the same level as to fit ourselves for that great brotherhood of mankind.

## LETTER FROM DAKOTA.

Lower Brule Agency Dakota, April 20, 1892.

GEO. S. C. AMSTONG.

My dear General;

Your favor of April 3rd duly received. I am glad to hear from you at any and all times, and glad to write good news always, but I cannot do so and speak the truth.

This time I have mingled sorrow and joy for you and your pupils. Sorrow for some of the pupils and joy for you. For the past two months we have been passing through serious times at this Agency. Sickness has been among us as never before for a long time, and the voice of lamentation has been heard almost daily. Our school has been almost a Hospital since February 15th, there being from 5 to 15 sick nearly all that time, some of them very sick—of our number two have passed away, a son of "Bull Head," a chief; you may remember him, as one who spoke to you, and at the "talk" we had when you were here. He had been sick, was much better, was taken home for a visit on Sunday, took more cold, was returned to school and died within a day or two of his return. Early in February an influenza seemed to prevail throughout all the camps, that in the case of very young children (with the Indian mode of treatment) was almost invariably fatal—afterward came measles and whooping cough, and

these have had their run and taken quite a number.

Among the older ones, "Bear Bird," whom you will possibly recollect, as one who came over the river and took dinner at the Hotel, has passed away; this was a case of inflammation of the lungs, and from his careless and obstinate became fatal. He would not follow the directions of the physician, (the same with many whites) and has paid the penalty with his life. His son is among the "boys" who went from here with you last Autumn. I am not sure as to his name upon your list, it is either "Good Hunter" or "Tymacke," I think the latter. For a few days the weather has been more favorable, and fewer cases are reported, and we hope the worst is past. I am told a similar state of health prevails at Rosebud, Tanka, and some of the other Agencies. Now for the good part.

All the returned boys from Hampton have "come in" and are now at work doing much better. George still holds on his way doing well, needs but very little direction, and is very tractable, his faults are of the heart, not of the head, and when spoken to, is willing to amend. He has had almost entire charge of the school room for some time past, the teacher having been compelled to act both as teacher, nurse, matron and at times cook, as the white employees of the school have, one by one, been prostrated by sickness or fatigue.

Henry is doing well; improving in work, and is steady at something all the time.

Zelo was the first of the malcontents to give in after long and persistent trial. I told the three that I should never put upon them to do any more work, they could go just as they chose, but that my time was far too valuable to waste, as they apparently paid no attention to anything and to the school. After a few days Zelo came in and wanted to have a "talk," stating he was sick of doing nothing, and was willing to do as he was directed. I informed him that he could at once take his place in the shop if he wished, but he must conform to the rules of the school, and that unless he would I had no place for him. He said he was willing to do this, and would in all things obey, not only me but the master carpenter. He has been here since, at all times, and I have heard no fault found with his conduct or work.

James and Joseph were left, and they were at a loss what to do with themselves; they for a time hung around the shops, hindering the other boys, telling them they were fools for working, etc. till both carpenter and blacksmith said either the boys must keep out of the shop or work must cease. I sent for them, told them if they wished to work very well, the shops were open for them, but they must not longer hinder those who were disposed to work, and forbade them entering either shop except by permission from me, and if they did I would put them out. They walked from the office direct to the shop, and I walked on after them and put them out. Finding no other way open, they then applied for work, and were told the same as was told Zelo—plainly, firmly and kindly—and after a few days deliberation they "came under the yoke," and appear to be quite well "broken." I hope this will be the last time they will need correction. It was simply a matter of will. I have reason to think this some evil disposed person outside indicated them to this attempt at insubordination, with the hope that if they would make a little capital for themselves out of the matter, I must sincerely hope that I may be and live by a man that these boys, all of them, are doing their duty. In that state God has placed them in. As far as I can learn, all in the tribe fully endorse my action. I am equipped of almost daily about the absent boys.

"Bear Bird" came almost every mail day to hear of his son. "Dove" came quite as regularly and was always desirous of knowing if I had any news from "Mato." Please say to the boys that I sympathize with them sincerely in their trial. "Medicine Bull," "Spotted Horn," "Two Kettles," all in fact show much interest in the school at Hampton, and the school here. With fair weather we hope sickness may be checked and we go on our way prospering.

Please present my kind regards to Lieut Brown, excuse this long letter, and believe me,

Sincerely yours,

W. H. PARKHURST,

U. S. Ind. Agt.

## HOISFORD'S ACID PHOSPHATE

Is of signal benefit in cases of nervous prostration, the result of mental overwork.

## PATENTS

We continue to act as Solicitors for Patents, Caveats, Trade Marks, Copyrights, etc., for the United States, Canada, Cuba, England, France, Germany, etc. We have had thirty-five years' experience. Patents obtained through us are noticed in the REGISTERED AMERICAN. This large and splendid illustrated directory contains the names of all the inventors of the world, and is a very interesting and has an enormous sale. It is published by the Scientific American, 37 Park Row, New York. Read book about Patents free.

## HORSFORD'S ACID PHOSPHATE

Is the solvent, if you must take quinine. Dissolve the quinine in one-half a teaspoonful of Acid Phosphate, then mingle in half a tumbler of water.

We desire to call attention this week to the advertisement of Dr. J. W. Thomas, Jr. and Mr. J. Wesley Thomas, druggists of Norfolk, Va., the former of which is located at the corner of State and Cumberland streets. His stock is of the very best, and being a graduate of long experience, every one may feel satisfied of being well treated. His store is perhaps the most elaborate in the city, and his soda apparatus one of the most built, accommodating and attentive to his patrons, without preference or partiality we predict for him an abundant success.

The third drug store is a distinct establishment, and is located at the corner of Church and Calvert streets, and managed by the proprietor Mr. J. Wesley Thomas, a son of Dr. J. W. Thomas. Educated to the business he is a "Champion of the Old Block" and his store is a model of neatness, and we feel perfectly secure in our hands. We notice here also a magnificent soda apparatus, called the "Booster." Situated so far up in the city it looks like an oasis in a desert, and its name is well justified, for it is the best of its kind, and will drop into his tin. We cordially recommend friends in and out of the city to patronize these gentlemen.

## HORSFORD'S ACID PHOSPHATE

A SLEEP INDUCER.  
From my experience, I would say that as a nerve restorer in exhaustion, from any cause, and as a sleep inducer, Horsford's Acid Phosphate is of the greatest value.  
J. E. LOCKRIDGE, M. D.  
Indianapolis, Ind.

## AN EXTRAORDINARY OFFER.

There are a large number of persons out of employment in every county. Such is our want of employment, and we are willing to work with energy, can make from \$100 to \$200 a month, working for us. We want men made in our agents, according to their energy and ability, some making \$100, while others make as much as \$200 a month. With an article of great merit, that should be sold to the public, we have a great opportunity to show it cannot make less than \$100 a year, a large life, pushing man, working for the most that can be made, will make \$1000. We only want men in each county, and to him will give the exclusive right as long as he continues to work faithfully for us. There is no competition from any source, as there is nothing like it made by any other source. Persons leaving from \$20 to \$1000. Invest can obtain a general agency of from 100 to 1000. A State agent can get good workers to act for us, and such will obtain, not only a profitable business, but one that will be permanent and pleasant. We are not paying money, and request that those that think of receiving such benefits from us that they not write far, for we only want men who are willing to work for the profits of their energy and ability, let them hear it from us. We will mail our descriptive circulars to all out of employment, on receipt of 5 cent stamp. The first to comply with our terms will secure the counties they want.  
Address, RESINA MANUFACTURING CO.,  
16 Southfield street, Pittsburgh, Pa. 7-8-82

## NOT ON THURSDAY.

"I can't go with you on Thursday, it's my day for the child," he remarked to his friend, while standing in front of the Times office the other day. If he had stepped into the first drug store he came to, and bought a 25-cent box of Thermoline, he would have been able to make an appointment for that or any other day. Chills cannot stand before Thermoline.—Kansas City Times.

## EVE'S DAUGHTERS,

or Common Sense For Maid, Wife and Mother, by Marion Harland, Author of Common Sense, and other popular works. A beautiful practical work of a thoughtful woman with charming style and beautiful illustrations. It is a delightful reading, apart from the vivid questions which it raises. Royal 16mo, 64 pages, cloth, full gilt, \$2.50. Published by Scribner, John R. Anderson & Co., 25 E. 12th St., New York. Good Agents Wanted. 7-10-82

## THE HORSFORD ALMANAC AND COOK BOOK

Sent free. Rumford Chemical Works, Providence, R. I.

## A BOOK FOR EVERYBODY.

Roget's Thesaurus of English Words & Phrases.

The purpose of this work is to supply, with respect to the English language, a desideratum hitherto unattained in any language; namely, a collection of the words it contains, and of the idiomatic combinations peculiar to it, arranged according to the ideas they express, rather than in the alphabetical order of dictionaries.

A book designed to aid the English student at once in the acquisition and clearness of expression, by bringing to his hand a catalogue of the words of the language grouped under their proper categories, and handily arranged in families of near relationship; aiding at the same time that of all the ablest teachers, best suited to the thought, and helping to the best synonyms so as to guard against tediousness of the same word. We have for years had two copies of the method in use, and we speak that we know when we say that it is a great piece of wisdom for one who desires exactness and clearness of expression, to reflect the various words which it offers.—Congregationalist.

It has long been regarded as a standard, and as indispensable to the scholar. It has passed through editions after editions, and the original plan has been preserved, and is now issued from new plates under the editorship of J. L. Roget, the son of the author.

While the system and plan of the work, as presented by Mr. Roget, remains unchanged, yet it has been in many respects enlarged and improved by the every library table. Many new words have been added, some collected by the father and some by the son, and while we still regard it as a standard, we have had occasion to feel, the book may be regarded as a very exhaustive one. The very full list of words is, as usual, and it is one of the few books which we cannot afford to be without. As we have said, it is a standard, and there are no two in the critic and the scholar, and it is of the best of unqualified praise.

JOHN R. ANDERSON & CO.,  
25 E. 12th St., New York

N. Y.—This book will be furnished in exchange for any Standard School and Text Books in good order, which will be made known on application. 7-10-82

## THE HYGEIA HOTEL,

AS ENLARGED AND IMPROVED.

## OLD POINT COMFORT, VA.

Situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. Mails, landing only twenty rods from the Hotel, which is substantially built and comfortably furnished; has two Otis hydraulic passenger elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; water; rooms for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any hotel or any public building in the country. As a resort for the pleasure-seeker, invalid, or retiring place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests presents inducements which certainly are not equaled elsewhere as a summer resort or cold weather sanatorium. The during the cold weather over 15,000 square feet of the spacious verandahs (of which there are over 35,000 square feet encircling the house on all sides) enclosed in glass, enabling the most delicate invalid to enjoy the sunshine and fine water view without risking the slightest exposure. The climate of Old Point Comfort is unequalled for salubrity. Malarial fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years show an average temperature of 10 deg., 74 deg., 74 deg., in summer, 70 deg., 30 deg., 30 deg., in autumn; 45 deg., 44 deg., 42 deg., in winter; and 48 deg., 52 deg., 63 deg., for spring. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For its salubrity and nervousness, the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful and refreshing specifics of the Hygeia.

For further information address,

H. PHOEBUS, Proprietor.

## Hampton Normal and Agricultural Institute

AT  
HAMPTON, VIRGINIA.

Incorporated in 1878, by special Act of General Assembly of Virginia; exempt from taxation. Devoted to the Education of Negro and Indian youth in Agricultural and the Mechanic arts, and as teachers of their respective races.

S. C. ARMSTRONG, J. F. B. MARSHALL.

Principal, Treasurer.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all, (provided by friends).

Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars each, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State, but is supported mainly by voluntary contributions.

Besides State aid and Government help for Indians, the sum of \$30,000.00 a year, must be raised by contributions, to meet current expenses.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all.

The great need of the institution is a permanent endowment fund.

The Hampton Institute is supported by, and responsible to, no denomination or society, and has no paid soliciting agent or machinery whatever, but depends directly upon the public. It is earnestly Christian in its teachings and influence.

Present attendance, 464 students, of whom 190 are Indians; average age 18. Negro boys 216; Negro girls 158. Indian boys 62; Indian girls 28. All but twenty-five board at the Institute; twelve states represented, but chiefly Virginia and North Carolina.

## FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of ..... dollars, payable to, to, to.

For further information address,

S. C. ARMSTRONG, Principal,  
Hampton, Virginia.

\$75 A WEEK, \$12 a day at home usually made. Costly many Standard School and Text Books in good order, which will be made known on application. 7-10-82

# Southern Workman.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. XI.

HAMPTON, VA., AUGUST, 1882

NO. 8.

STREET SCENE IN JAPAN.

## THE IVY OF '82.

On the morning of May 26th, the graduating class, with an interested group of teachers and friends, gathered under the walls of Academic Hall, to plant the traditional ivy, which in years to come, destined, we hope, to keep green the memory of '82. Not many words were spoken, but not a few honest tears were shed, and hearty hand clasps given, for the occasion must always, even to the hopeful outlook of youth, be touched with sadness, and to those of us who have seen class after class depart, there is much suggestion in this last simple meeting. We have space only to give the poems which were sung and read, and to offer to the class of '82 the "Southern Workman's" congratulations and good wishes.

### IVY SONG.

BY MISS L. D. BILLET.  
Ain.—Auld Lang Syne.

Come let us joyful raise the song  
That lands our ivy-tree;  
A band of comrades, true and strong,  
Join voices and voices free;  
O'er ivy-type of strength and grace,  
Or love that clings and abides—  
So may our loyal memory turn  
To these famed halls and fields

Soon must we breathe a fond farewell  
To scenes and friends most dear;  
Time's winged feet pause not nor stay;  
The parting day draws near.  
Yet firm as ivy's tendrils bands  
The ties of friendship clasp;  
For time, nor change shall ever loosen  
Their early loving clasp.

Fair ivy vine inspired by thee  
We yearn to climb, to rise,  
Live while we live with loftier aims  
Aspiring to the skies.  
Be thou our living emblem still  
Of constant hearts and true.  
And crown with memory's fairest wreath  
The class of '82.

### IVY ODE.

BY MISS MARGARET KENWILL.

Good-bye, good-bye to Hampton,  
For our course is nearly done;  
We have labored hard together  
In the race that we have run;  
We have worked with head and hand,  
And have tried to understand;  
For we love our Alma Mater,  
The best in all the land.

Alma Mater, tho' we leave thee,  
We'll hold thee ever dear;  
With thou care for all thy children  
Whether they be far or near;  
Here we plant this clinging vine,  
May it ever be a sign  
That where'er thy children wander  
Far or near they still are thine.

Then good-bye to dear old Hampton,  
For these happy days are past;  
May her memory still live with us  
Fresh and green until the last.  
May our ivy climb and cling,  
Far and strong its branches fling,  
While the '82's of Hampton  
Loud and long her praises sing.

### IVY ODE.

BY MISS H. W. LUDLOW.

We plant to-day our ivy green,  
A tender plant and small,  
How humbly droops its lowly head,  
Beneath this massive wall.  
How shall it ever dare to climb  
Towards yonder lofty eaves,  
How can it hope this broad expanse  
To deck with shining leaves?  
Oh, shall we not the fragile thing  
To some warm shelter bear,  
And, safe from blasting storm and sun  
Nurse it with constant care?

No, comrades, fear not, nor despise  
The day of things so small,  
But plant with brave and hopeful heart  
Our ivy, by the wall.  
No weakling this,—from danger's self  
It knows some strength to gain.  
The days will come and go and bring  
Their sunshine and their rain;  
Downward the dry roots will run,  
Upward the stem will tend,  
And grateful take from earth and air  
The food that Heaven will send.

Upon the wall's strength taking hold  
With every slender ring—  
The furrow blow the winter winds,  
The closer will it cling,  
And, on some happy day of May,  
In spring time yet to be,  
We'll halt, above the topmost stone,  
Its banners floating free.  
One common stream of life will run  
To farthest leaflet seen,  
And all this bare and rugged wall  
"Stand dressed in living green."

Dear classmates, as we stand to-day,  
With drooping heads be glad  
The home that long has sheltered us,  
Our future all untied,—  
Oh, let us take our ivy green,  
Our teacher wise to be,—  
A lesson on each shining leaf,  
Of hope and constancy,—  
And whether east or west we spread  
Our branches,—all the time  
The firmer rooted in the truth  
The higher shall we climb.  
One common life where'er we stray  
Shall keep our friendship green,  
With loyal hearts to those dear walls  
Upon whose strength we lean.  
Our mother shall be glad of this  
Her child—her glory true,—  
And fearless ever be its leaf—  
The class of '82.

## STREET SCENE IN JAPAN.

A Japanese bazaar (that is a narrow street lined on both sides with shops) must be not only an amusing but a tempting place to foreign eyes and pockets. The endless succession of gay wares, silks, bronzes, ivory, lacquer, porcelain, etc. which are wrought by the cunning fingers of our Japanese brethren, must, when massed upon these long lines of counters, show such gorgeoussness of color, as we cold Western nations can only imagine. If we could endow this little gray printed picture with life and light, how full of beauty and novelty it would be to our unaccustomed eyes. We should realize too, perhaps, that while in the most essentials we younger nations have the advantage, there is still much for us to learn from these beauty-loving Orientals.

## THE AFRICAN RACE IN AMERICA.

## PART II.

BY ORMA LAMBORN.

The excuse which the white men of the South brought forward to cover all the crimes of slavery was, that it was our mission to civilize and Christianize a savage people. Right or wrong, this idea took strong possession of the dominant race in the Southern States, and faithful and persistent were the efforts made, in public and private, by the better class of slave-holders, to bring the idolatrous people among us to a knowledge of the gospel of Christ.

The large and influential organizations of colored Baptists and Methodists, with smaller but not unimportant Presbyterian and Episcopal societies, are full proof that the Negro race has been Christianized during the two centuries of its sojourn in our land.

Much of this good work has been accomplished by Missionary societies, and it is quite beyond my powers even to attempt an account of what has been done on a large scale by agents scattered all over the United States. I can only speak of what has come under my own observation, or has been handed down by tradition, and accepted with other stories of our predecessors, by the present generation.

When the Negroes were first brought to our ports, they were purchased from the slavers by the white Virginians as their wants suggested, and were usually taken at once into the family life of the white owners. They necessarily learned our language and customs, and were taught to labor, thus rapidly acquiring the civilization of the land to which they had been transplanted.

The Virginians have always been, "according to their light," a religious people, and I think there was among the slaveholders, certainly among those of the better class, a general desire for the conversion of the slaves. A place was provided in all Southern churches for the colored people, and churches built expressly for them were found all over the South. In this district, a wealthy planter, who owned many slaves, gave his Negroes a pound for a church and graveyard, with permission to build a church out of materials to be found on the estate. The slaves joyfully united in accomplishing the design. Each of them giving a certain amount of tobacco from his own little patch, to be sold with the master's crop, in order to raise the money needed for its completion. I am told that this church is still standing, and a worthy colored minister, once a slave of this planter, is now the pastor of the large congregation worshipping there. The Sabbath was generally observed as a day of rest in the custom to do all the house-cleaning possible on Saturday, to cook the Sunday dinner on that day, to black all the shoes on Saturday night, and in every way practicable to lighten the duties of the servants on Sunday. When it could be so arranged, the servants were required to attend family prayers, and it was very generally the custom for the white children, or some of the ladies of the family, to instruct the colored people on Sunday afternoon. This custom is continued in many families, and in some communities with a perfectly good effect. In Lynchburg, the Presbyterian churches keep up this Sunday-school for many years, and its influence is very evident upon its pupils through life.

Bishop Meade, who wrote a volume of sermons for colored people, still to be found in some of the houses of the ex-slaves, always took great interest in the spiritual welfare of the Negroes, and urged the people of his diocese to have the colored children baptized in infancy, and trained "in the nurture and admonition of the Lord." I have seen my mother, after the baptism of one of her own children, hold a little black baby in her arms while the Bishop baptized it, assuming the same responsibilities for it that she did for her own child. In her last illness, the communion was administered to her, with her slaves kneeling around her bed, and joining with her in the solemn oration. In the Bishop's historical work on Virginia, he describes a nephew of General Washington kneeling beside one of his old slaves at the communion table, and adding—"I wish our friends at a distance could have witnessed the scene."

It is told of the first Presbyterian minister of this city that he interested himself greatly in the conversion of a native African who lived near him, and was sometimes employed in his family. After long and faithful instruction on the part of the minister, his heathen neighbor was induced to accept the orthodox view of his white friend, and after much mental excitement, he declared his faith in Christ, and his hope of salvation. The African was fond of referring to this period in after life, and would say earnestly—"I was a heathen, I was a beast; I wished I was a dog; I was sorry I was a fella; but now I have found peace, and I am happy."

In the last few years I have made the ac-

quaintance here of a very respectable colored family, who, by a singular combination of circumstances, had been free for several generations. Indeed, the ancestors of Mrs. Prime, who was at one time our mayor's never slave, and her husband's parents were set free by their owners. Mrs. Prime told me that her grandmother was a native African, and that on her arrival in this country she received into the family of an estimable lady, who took much pains to train her to usefulness, and instruct her in the religion which she herself believed. When the African was grown to womanhood, her mistress told her that she had never considered her a slave, deeming slavery altogether wrong; but as she had come into her hands an untaught heathen, she had felt it her duty to fit her for usefulness in the land in which Providence had placed her. To protect her protégée she then provided her with free papers, and allowed her to live as she liked best. My informant had often heard her grandmother talk of the customs of her native land, and of her joy in being converted to Christianity. It is a little singular that our worthy tenant, though she evidently desired to be what she professed herself, a Christian, was most painfully under the influence of the African superstitions in regard to witchcraft and conjuration. I have seen her face distorted with fear at the suggestion that the wall had been "tricked." She attributed every kind of sickness to a spell wrought by some enemy of the sufferer, and was frequently made wretched by the jests of more intelligent colored people, her own son, a young man of some education, among the number, that "he nall had been drove for her," "something was buried in the ground she had to walk over," etc., and she finally left our house to get rid of her tormentors. I could not but attribute the power that lies in these malign influences had over my friend, Mrs. Prime, to the teaching of her African grandmother in childhood, and the fact that she had always been free, and had had very little of the association with white people which has done so much to dissipate these superstitions from the minds of better informed colored people.

What were called "body-servants" of the South had many advantages over the slaves, who were kept merely for plantation work, and had little personal intercourse with their owners.

Some of the waiting-men and maids, when possessed of good natural abilities, became people of fine character and bearing, and attained to the position of confidential friends and advisers in the families of which they were members. A story has come down to me of a maid-servant in my husband's family, who was greatly beloved and admired by the white people of a large connection, and her advice eagerly sought by the young members of the family. "Aunt Cicely," said one of those young ladies, when the faithful servant was very old, and was most affectionately cared for by her master's children and grandchildren, "how did you get to be so nice and ladylike in all your ways, so good and gentle, so different from some colored people, I cannot believe that you belong to them?" "My child," said her old friend, with quiet dignity, "if I am what you say, I deserve no credit for it myself—I owe it all to the teaching of your great-uncle, my blessed young mistress, whose eyes I closed in death. I had always attended her in life. I was given to her when we were both children, and she taught me everything that she learned. You know that she did not marry until rather late in life, and we were always inseparable companions. She had very beautiful hair, which I always arranged for her, and while I was combing her hair, she always read the Bible or some good book to me. I loved her better than anything on earth, and thought her perfect, and it has always been my aim to do just what I thought she would do."

One of the great evils of the slave system was the lack of any statute legalizing the marriage of Negroes; but this was to some extent counteracted by the custom of having the religious ceremony performed in the presence of witnesses. These weddings were the occasion of much merry-making on the plantation. The marriage would often be performed by the white pastor of the parish in the parlor of the mansion; the master or mistress would give the little away, and an entertainment would follow, to which the slaves of the neighborhood would be invited.

Recent action by the State and U. S. Courts have legalized all such marriages. A blind friend of mine, whose family owned many slaves, interested himself for many years in organizing Sunday-Schools for colored people throughout the State, and was many years a successful agent in this work. When in Richmond some years ago, before the war, he applied to Governor Wise for permission to work in the cause so dear to his heart in that city. The Governor readily agreed to his plans, telling him if any one interfered with him, to come to him at once, and added, that he allowed his servants not only oral instruction, but had them taught to read. Many of our prominent men approved and assisted in the effort to give the Africans religious in-

struction, though it was apparently inconsistent with the laws, and their public utterances. It has often been told of John Randolph, that when a lady asked him for money to send the Greek mission, he pointed to the Negro slaves at work in the fields, and said impressively—"Madam, the Greek is at your door."

In thus laboring to Christianize a heathen race, the slaveholders "battled better than they thought," and now that the story of emancipation has been told, it seems as though the teachers themselves had but half learned the lesson they essayed to teach, and having prepared the African for freedom, they should have set him free.

The Negroes, an amiable and assimilative people, discarded their idols as soon as they were shown "a better way," and gladly adopted the faith of those who held them in bondage.

Having been taught to know God, they put their trust in Him to lead them out of slavery, even as he had led his people of old. Patiently and quietly they waited his time, learning the arts of civilization, and becoming with each generation more enlightened; and at last, when the blessing for which they had prayed came to them, accepting it with joy, as bestowed by him, "who moves in a mysterious way his wonders to perform." The history of the Negro-American since he became a free man forms part of our national annals, and the analogy with the record of the Hebrew wanderers in alien lands has been continued. Though combined with much suffering for him and for his late owner, irreparable from the sudden and violent change in their relations, upon the whole it has been a record of progress.

When first liberated, the freedmen found himself a pauper, destitute and unprotected; like Jacob of old, "with but a staff" in his hand, he passed from servitude to citizenship; but in less than a score of years great changes have come to him. He owns property; he has the benefits of suffrage, education, and trial by jury, on which his race is represented. In many sections of the country he trades with his fellow-citizens. When he is molested in the enjoyment of these privileges he can appeal to the courts, and to enlightened public sentiment to protect him.

Some of the ex-slaves to me lately—"Step by step we have been advancing; first, we were given freedom, and then education, and then civil rights, and, I think, gradually we shall get all we need, or have any right to ask."

Everywhere that the Negro has had any chance to make his way, his first act has been to build a temple, wherein he may worship God who preserved him in bondage, and has protected him in freedom. In this he has always been gladly assisted by his old master. In the dreary years following the war, when our beautiful South was in ruins and sorrow and desolation cast their dark shadows over our land, thousands of dollars were given by the impoverished white people of the South to build churches for the ex-slaves.

This was done, because the old slaveholder rejoiced to see in the Christian American-Negro the good results of the work done by his forbears in transplanting a heathen and savage people from the Orient to Western America. "By ways we know not of," and in the highest and best sense, have been given "the heathen for our inheritance." It has been said that no race ever advanced so rapidly in civilization as the Negroes in America, and notwithstanding the painful associations connected with slavery, this intelligent colored people of our day must find in this thought some compensation for the sorrows of the past.

The lamented Henry Highland Garnett, late United States Minister to Liberia, affords a notable example of this remarkable progress. How wonderful must the dealings of Providence have appeared to this representative of the American people, the able scholar, orator, and gentleman, when he set foot upon that tropical shore, whence his ancestor, a savage heathen, had been carried away captive two generations before!

In every community of colored people are some families who display literary and musical taste, and already the list of Negro-Americans who have become prominent as teachers, preachers, editors, and members of other professions requiring intellect and culture, is much too long to be recounted here, and gives gratifying promise of what the race will accomplish in future.

The African in America, as savage, slave, and citizen, has had a wondrous career—often pathetic, always interesting.

He was our faithful servant for two hundred years—our dependence in peace, the protector of our families in time of war, and our bulwark as his owner is ended; by the will of God he is become our fellow-citizen. Let us truly accord him "equal rights," and, by "social toleration and social sympathy," render him the high privileges of manhood, and give gratifying promise of what the race will accomplish in future.

## AN INDIAN WEDDING.

The following account of the marriage of Etahleeb Dosmoos though rather late in reaching us, will undoubtedly be of interest to his friends in Hampton, where, it will be remembered, he spent nearly two years before joining Capt Pratt at Carlisle.

Carlisle, Pa., June 18, 1882.—In an article on Indian Education at Hampton and Carlisle, which appeared in one of our most popular magazines, some months ago, there was quoted a young Indian's account of his love affair. He said: "I do not think about the girl, but Laura she think she tell me she my wife. I bring her here Carlisle she study and sew. Now Laura's father dead since come here. Now I think all the time. I think who take care of Laura? I think by and by I find place to work near here: I work very hard; I take care of Laura." This young man was Etahleeb Dosmoos, one of the youngest of the Kiowa prisoners formerly confined at St. Augustine. A year ago Capt Pratt was forced in an emergency to use him as an assistant in the boys' department. He proved so valuable an aid that his services were continued in this capacity at a fair salary. He has been prudent and economical, and saved considerable money for his family. Meanwhile, the maiden of his choice, also a Kiowa, has gone on receiving the excellent training of the school. The engagement having been approved by her relatives, was of course sanctioned by Captain Pratt.

On Saturday afternoon they were married in the school chapel, which was beautifully decorated with flowers. The bride wore very simply attired in a brown chamois dress, with white lace at the throat and wrists, with white roses in her dark hair. She had five bridesmaids chosen from among the schoolgirls. Mabel Dosmoos, sister of the groom, Anna Raven, an Arapahoe; Antoinette Williams, Navajo; Lizzie McNaught, Creek, and Minnie White, Sioux. They wore their school uniforms, with crimson roses in their hair. The groomsmen were Almerine McCall, Creek; Joshua Given, Kiowa; Dan Tucker, Arapahoe; Ralph L. Eagle Feather, Sioux, and Ellis Kague, Kiowa.

## DISTINGUISHED GUESTS.

The most distinguished guests of the occasion were Secretary and Mrs. Teller, who had come for a two day visit to the school. The festivities were carried on the lawn, and the boys and girls were scattered about on the grass in many a merry group. In the evening a little entertainment of songs and speeches, the students were given in compliment to Secretary Teller.

The Secretary had declined to address the school because he feared the children would not understand him, but having been prevailed upon by the students to give them a brief talk, full of practical common sense, and expressed in language so simple that they all could understand perfectly, as was shown by the hearty and continued applause when he had concluded.

He told the children he thought they understood how important an education was; from what he had seen he believed they were all trying to get it. It was education that made the white men different from the Indians. Because the Indians have never been taught to work, every year of the government must pay out a great deal of money, many millions of dollars, to take care of them.

Captain Pratt had told him that some of the boys and girls were going home in a day or two. It would be better for them to stay at the school. It took a long time to get good education. Of course they could not get much of an education in three years; but when Captain Pratt brought them to the school he promised that in three years he would send them back, and now, if their friends were not willing to have them stay, they must go back. It would be best for them to return to the school, and if, after a visit home, any of them wished to come back, they might. They must tell their friends how much better it was to live like the white people. They must tell all the boys and girls how good this school was, and make them want to go to school too. He thought before long there would be many more such schools as Carlisle scattered over the different sections of the country. There were many places occupied by soldiers that could be used for Indian schools, and if the Indians were educated there would not need to be so many soldiers, because the Indians would not fight. The Indians had many friends now, and he thought there could be schools enough for all the boys and girls, the young men and women to get an education. When he spoke of education he did not mean only learning how to read and write, that was only part. Girls must learn to make clothes, to cook and all about housekeeping. Boys must learn farming and trading. The government wanted to help them to get an education. He closed by saying: "While I am secretary I will do all I can for you. If you will try to help yourselves I will do all I possibly can for you."

Subscribers are reminded that, from  
July to October inclusive, this paper is re-  
duced to an eight page form, resuming in  
November the twelve page form.

During the past month the anniversary  
of the attack upon President Garfield, July  
2nd, and the execution of his murderer on  
Friday, June 30th, have recalled with pain-  
ful vividness the horrors of last summer.  
While medical opinion is divided as to the  
sanity of Guitau, the public at large are  
in no doubt as to his responsibility, or the  
necessity of inflicting upon him the pun-  
ishment which human justice declares to be  
only fit punishment for such a man as he.  
For the sake of humanity at large, and  
our national credit in particular, it  
would have been better could the trial  
with its inevitably painful details, have  
been conducted in a quieter and more dig-  
nified manner, and the severe criticisms upon  
our judicial system, which have reached us  
from many quarters, are only too well  
deserved and ought not to be easily forgot-  
ten. Indeed, the tragedy which began a  
year ago, and has not yet ended, embodies  
for us a nation the sharpest of rebukes,  
the plainest and the bitterest of lessons.  
Guitau murdered Garfield, but what was  
the power that raised Guitau's arm, what  
the conditions that made so base a murder  
possible? Guitau was mad, a monomaniac,  
so, "Cranks"—what you will—but the facts  
are deeper than Guitau's unwholesome  
brain. Back of him, his miserable con-  
science, his shameless life, lies the responsi-  
bility of the nation, which means the respon-  
sibility of every intelligent man in the  
United States. It is something to think

of, and the more we think of it the more  
closely we shall find ourselves brought  
face to face with the fact that we can not  
set up one standard of honesty for our-  
selves in daily life, and another in politics  
and that pure and strong government is  
possible, only as it is the outcome of the  
lives of pure and strong men.

The remarkably favorable season up to  
this time has ensured the harvesting of a  
crop of winter wheat which promises to be  
the largest ever gathered, and has been  
equally favorable for the growth of spring  
wheat and the forcing of the corn crop  
which is backward and uncertain, the high  
prices of the spring market still ruling.  
On all sides the agricultural prospects of  
the country are very promising, and the  
threatened disturbances in Europe, (it be-  
ing an ill wind which blows nowhere), are  
on the whole encouraging to the American  
farmer, for anything like a general war  
would have the effect of creating a strong  
demand for all American productions.

The prospect of universally good crops  
has already affected the railroads, which  
during the winter and early spring, were  
apparently in a bad way, and signs in gen-  
eral point to a continuance of the univer-  
sal prosperity which the country has of  
late enjoyed. Now we do not wish to be  
classified among the habitual croakers, but  
we can not refrain from reminding our  
readers that the time to prepare for rain  
is while the sun is still shining. The  
temptations to speculation of all kinds  
during the next year, will be immense, and  
wise is the man who in the face of them  
shall hold to his legitimate business and  
safe investments, looking for moderate re-  
turns and small risks rather than big and  
sudden profits with the chance of equally  
sudden collapse. It must be remembered  
that the man who is earning only his hun-  
dreds can speculate as well as he who is  
earning his thousands or millions, and  
that the temptation and the chances of  
ruin are as great to the one as to the other.  
The fact which is so constantly repeating  
itself in the history of business, that after  
a period of great commercial prosperity  
comes a period of equally great depression,  
seems to mean only that the bulk of the  
community can not stand prosperity.  
They lose self-control, are unduly inflated,  
launch into speculation and extravagance  
of living, and are helpless when the resul-  
tant crash comes. It is a curious fact  
that the class which is most quickly af-  
fected by these changes, includes those me-  
chanics, operatives and artisans of all  
kinds, who work day by day to supply  
their daily wants. They are, as a rule, the  
most improvident, the most inclined to  
speculate upon a rise in wages, and the  
least reasonable in their views of the  
science of business, the laws which govern  
supply and demand, the stern facts which  
lie at the bottom of all commercial trans-  
actions. Ignorance and selfishness are as  
dangerous on farms or in factories, be-  
hind counter or in mills, as they are any  
where else, and seasons of great general  
prosperity, unless rightly used, do un-  
doubtedly increase the dangers from igno-  
rance and selfishness everywhere.

It is therefore that sober minded men  
understand that big crops and fine mar-  
kets, and rail road building, do not always  
mean true and permanent prosperity;  
something else has to be added to them,  
something else without which they are  
only the outward signs of "that pride  
which goeth before a fall."

On the evening of June 25th, the pack-  
ing house of Mc Menamin & Co. on Hamp-  
ton Creek, was almost destroyed by fire.  
The officers of the Normal school and such  
students as are left here during vacation,  
were, as a matter of course, glad to assist  
in the attempt to check the progress of  
the fire, though unfortunately their efforts  
were of little avail. Mr. Mc Menamin  
has thoughtfully acknowledged their ser-  
vices in the following letter, and desires it  
to be understood that he includes the col-  
ored students with the Indians, the latter  
being particularly mentioned only because  
they were easily do be distinguished in the crowd.

Hampton, June 30th, 1892.

My dear sir:  
I would be glad if you would public-  
ly thank in our name the Indian boys who  
worked so nobly to save our property from  
the fire Sunday night. We could not learn  
their names but doubtless they are known to  
the school.

Where our friends put forth almost super-  
human efforts to stop the ravages of the flames,  
the labor of the Indians was most conspicuous,  
no one going farther or risking life or limb  
more than they. Surely much may be ex-  
pected in the future from material that is so un-  
selfish, and I feel that your brightest hopes re-  
garding the Indian's destiny will be more  
than realized.

Very truly and respectfully yours,  
JAMES McMENAMIN.

Gen'l S. C. Armstrong.

The difficulty in Egypt which is at present  
occupying the attention of Europe, is only  
a repetition of the old story. In one  
shape or another—the "Eastern question"—  
the "Sick Man" has perplexed and more  
or less seriously affected European poli-  
tics for the last two centuries, ever since,  
in fact, Russia showed her desire to pos-  
sess Constantinople, and thereby make  
herself a great naval power. The ex-  
cessive over-taxation of the Egyptian people,  
is probably the immediate cause of the  
present outbreak, and has as usual been  
the signal for action on the part of Eng-  
land, who is always on the watch to guard  
this route to her East Indian Empire.  
The situation up to date seems to be as  
follows: Arabi Bey is at the head of a  
small army of Egyptian rebels, which hav-  
ing burned and pillaged the city of Alex-  
andria, and committed, it is said, the bas-  
est outrages, is now in camp awaiting  
attack. The English fleet commands  
the position, and the English and French  
Governments have decided upon the terms  
on which they will undertake to restore  
order in Egypt, one condition of which is  
that the Porte shall at once send troops  
to the seat of war. This condition is not  
likely to be responded to with alacrity, as  
the Sultan has not yet relinquished his  
ambition to have his Sovereign rights over  
Egypt acknowledged, and is naturally  
unwilling to put himself entirely under  
the control of English and British com-  
missioners. He will undoubtedly make  
every excuse for delay, and will probably  
desire to have his claims discussed at a  
new conference, but while it is of course  
impossible at present to do more than  
speculate as to the final result, it hardly  
seems likely that any general disturbance  
of the political equilibrium of Europe will  
take place.

## REPORT OF EXAMINING COMMITTEE

The following interesting and valuable  
report speaks for itself. We add to it the  
eight practical questions given by Prof.  
Walton in his private examination, the re-  
sults of which were, as will be seen, quite  
as satisfactory as those of the more extend-  
ed committee examination.

To the Trustees of the Hampton Normal and  
Agricultural Institute.

## GENTLEMEN:—

The undersigned, members of a committee  
appointed by your Board to examine the Nor-  
mal and Agricultural Institute, having attend-  
ed to the duty assigned, would submit the following

## REPORT.

The examination was commenced Monday,  
May 23rd, and continued through four days,  
inclusive of the exercises of commencement,  
which occurred Thursday, May 26th. Two  
days were occupied in inspecting the classes  
in their class-room exercises. These consisted  
of recitations and teaching exercises in the  
various branches pursued, one of which was  
an oral examination conducted by the Princi-  
pal in the "Outline of the Study of Man."  
The time not spent in witnessing these exer-  
cises was given to the examination of papers  
written by the Senior class, in answer to ques-  
tions submitted to the class in their several  
branches of study.

A portion of time was given to the inspec-  
tion of the industrial pursuits; these include  
black-smithing, carpentry, printing, tailoring,  
shoe-making, tin-plastering, harness-making,  
sawing and millwork, and farming for the young  
men; sewing, washing, ironing, cooking and  
general housework, for the young women.  
Every facility was given the Committee for  
making the examination. The utmost cour-  
tesy was extended by the students, by the fac-  
ulty, and by the executive officers on and all.

## NUMBER OF STUDENTS.

The number of students in the Institution  
is 501, colored 412, Indians 89. Of these 63  
are in the Senior class, all but 3 being colored.

## TEACHING AND COURSE OF STUDIES.

The more advanced classes are taught in  
part by graduates of Vassar, Wellesley and  
Smith Colleges; the Principal, Treasurer  
and Chaplain have each one class. Thirty  
teachers are employed in the Academic de-  
partment, of whom five are gentlemen.

The course of studies embrace all the  
branches usually taught in elementary schools,  
reading, spelling, penmanship, etc., and as  
the class advances, arithmetic, algebra, gram-  
mar, geography, history, book-keeping, rhe-  
toric, English literature, physics, chemistry,  
physiology, theory and practice of teaching,  
civil government and political economy are  
introduced. Besides these, the whole school  
has a regular exercise in the items of daily  
news, and all the male students have sys-  
tematic military drill.

It will thus be seen that little remains  
to give to the student at Hampton as com-  
plete a course of studies, if we except the  
languages, as is afforded by well endowed  
academies or Normal schools anywhere.

The Committee would suggest the practice  
of gymnastics for the female students and the  
study of the elements of the natural sciences  
and drawing; also in the advanced course, the  
introduction of plane geometry.

The methods of teaching witnessed in the  
classes were oral and objective. The teachers  
were uniformly self reliant, enthusiastic and  
inspiring. They showed great familiarity  
with the topics they were teaching, and a good  
knowledge of the minds of their students.

The students evinced a desire to learn; their  
habits of attention were excellent, and their  
ready responses showed that they had much  
facility in thought and expression. The In-  
dians were on the whole, rather reticent, but  
the more advanced of them have acquired  
much power in the use of the language.

A somewhat remarkable feature of the  
School is the mutual confidence between stud-  
ents and teachers. Nowhere could there be wit-  
nessed a better illustration of this most impor-  
tant condition for inducing in the pupil the  
right mental activity. The same good spirit  
prevails among the students in their inter-  
course one with another.

Such additional appliances for teaching and  
such minor changes in methods as seemed  
necessary or desirable, were freely suggested  
by the Committee to the teachers, at a meet-  
ing called at the house of the Principal.

## WRITTEN EXAMINATION.

The following tests were submitted to the  
Seniors for their written examinations:—

## ARITHMETIC.

1. I shipped to Boston 850 tons of hay,  
which my agent sold at \$2.50 per ton. He  
paid charges for freight \$500, cartage \$112.50  
storage \$65, and charged me 23 per cent com-  
mission on selling the hay. What sum must  
he send back to me?
2. How many men will build 60 rods of  
wall in 10 days, if 24 men can build 648 rods  
in 18 days?
3. What is the interest on \$3,426.84 at  
7 three tenths per cent, for 1 yr. 3m. 8d?
4. A grocer bought 13 bbls. of molasses  
of 63 gallons each, at 70 cents per gallon, and  
sold it so as to gain \$57.38. At what price  
per gallon was it sold, and what was the gain  
per cent?
5. Find the square root of 36 to two deci-  
mal places.

6. If I buy henk stock at 17 per ct. above par, what per ct. do I receive on my interest if the stock pays a dividend of 84 per ct. on the par value?
7. Find the cube root of 127010004.
8. Sold cloth at \$2.024 cts. per yard, thereby losing 124 per ct. At what price should I have sold it to gain the same per ct.?
9. What is the face of a draft on Boston, which can be bought for \$2500, when exchange is at 24 per ct. discount?
10. What will it cost to insure a house worth \$5,000 at 1 per ct. on 1/2 of its value, and \$1,000 worth of furniture, at 3-5 per ct. on 4-5 of its value, allowing \$1.00 for the policy.

## ALGEBRA.

1. Divide  $4x^2 + 4x + 1$  by  $2x + 1$ .
2. Of what does the square of a binomial consist? What is the product of the sum and difference of two quantities? Give an example to illustrate each formula.
3. Write the factors of  $4a^2b - 12abx + 9bx^2$ .
4. What is an equation? Upon what principles does transformation depend?
5. Given,  $18x - 4 = 11x - 8$  to find  $x$ .
6. A farmer spent 1-12 of his money for horses, 1-3 for oxen, and 2-10 of the remainder for sheep, when he had \$300 left. How many dollars had he at first?
7. Find that number which being increased by 2, the result divided by 2, the quotient diminished by 7, the result will be 20.
8. Find two numbers whose difference is 8, and if 1 of the less be added to 1-5 of the greater, the sum will be equal to 1-5 of the greater diminished by 1-5 of the less.
9. How many methods of elimination are there? Describe each.
10.  $2x - \frac{y-3}{5} = 4$  to find  $x$  and  $y$ .

(Substituted for higher class.)

8. A person spends 30 cts. for apples and pears, buying the apples at 4 for a ct., and the pears at 5 for a ct. He sells half his apples and a third of his pears at the same rate at which he bought them, and receives 13 cts. How many apples and how many pears did he buy?
9. Given,  $8x + 4z = 57$  to find  $x, y, z$ .
10. Divide \$60 into 4 such parts that the first increased by 2, the second diminished by 2, the third multiplied by 2, and the fourth divided by 2, shall all be equal.

## ANCIENT HISTORY.

1. (a) Describe the geographical positions of the region occupied by each of the following nations: Babylonians, Assyrians, Egyptians, Phoenicians, Persians, Hebrews.
- (b) Which two of these regions were remarkably fertile? Give the reason for the fertility of each?
2. Write opposite the name of each of the following cities, the country in which it was situated: Tyre, Ecbatana, Memphis, Susa, Nineveh.
3. (a) Give a definition of history.
- (b) If you should discover the ruins of an ancient city, name five things that you would look for, to learn the history of its former inhabitants, and tell what each thing would teach you.
4. (a) Who were the great navigators of ancient times, on what waters did they sail, and what articles did they bring home?
- (b) Name 3 different kinds of writing in use among the ancients, and tell by what nation each was used.
5. Describe the geographical position of Greece proper, and of her principal colonies.
- (a) What was the cause of the Persian war?
- (b) Under what two Persian Kings was carried on?
- (c) What would have been the effect in Europe, if the Persians had conquered?
7. (a) What were the two chief cities of Greece, and for what was each noted?
- (b) What war was caused by the jealousy between these cities, and which was conquered?
8. Under what 3 forms of government did Rome exist, and how did each come to an end?
9. (a) What was a Roman province?
- (b) Describe a Roman Triumph.
- (c) Name all the countries under the Roman rule when Octavian came into power.
- (d) Which of these had not been conquered by Alexander the Great?

1. What two kinds of matter do plants

contain?

2. Name the elements belonging to each kind of matter and state to what class of chemical substances each belongs.
3. Describe the most striking properties of oxygen.
4. Describe the most striking properties of hydrogen.
5. Give the most striking properties of carbon.
6. Name two fertilizing gases,—state how each is produced, and name properties of each.
7. In what two forms do plants obtain food?
8. How do plants obtain carbon?
9. How do plants obtain nitrogen?
10. How many classes of manures are there?
11. How is potash useful in agriculture?
12. How does clover improve the condition of the soil?

## ENGLISH LITERATURE.

A copy of the poem, Nausaught, the Indian Deacon, by J. G. Whittier, was presented to each student. After reading the poem, he was required:

1. To give in a few sentences, some account of the author.
2. To give, in two or three sentences, the story.
3. To make out a set of topics of the story.
4. To tell the story in full in prose.

## PRACTICE TEACHING.

1. Imagine yourself in a school-room without either chart or book—take some object and describe your lesson given to children who have just begun to read in books.
3. What can you do in order to make the children good readers at sight?
4. State your method or methods of teaching spelling.
5. Should children ever be taught their letters? If you think they should, mention a good time to do it.
6. Write a short article on the importance of teaching language in your schools and tell how you would go to work to improve the language of your children.
7. How would you teach a child to write compositions?
8. Describe a recitation in number, the lesson being on 10.
9. How would you explain the following example to a child?  $23 - 9 = 16$ .
10. What is the best way of securing order in a school?
11. What do you consider to be the qualifications of a good teacher?
12. In your experience in teaching this lesson what errors have you found most necessary to guard against?
13. Describe the opening exercises of your prospective school.
14. What do you think of the importance of developing the sense of sight? Can you suggest any methods of doing this?

## CIVIL GOVERNMENT.

1. What is government? Define Monarchical, Republican and Democratic governments.
2. Give some account of the origin of the Constitution.
3. What are the three branches of our government? What are the duties of each?
4. The House of Representatives: How is it composed? Who are eligible? How is the number of Representatives?
5. Senate: how composed? How chosen? When chosen? Who is the presiding officer? Explain the process by which a bill may become a law of the United States.

## POLITICAL ECONOMY.

1. What is labor? Who are the laboring classes? Show how all men are mutually dependent.
2. Explain the law of supply and demand.
3. What is capital? Show the relation of capital to labor. How are all men capitalists?
4. How is money a medium of exchange? Why is gold the best material for money?
5. What are wages? What determines the price of wages?
6. Explain the derivation of the word tariff. What is a protective tariff? Revenue tariff?

These questions prepared by the teachers being charged to the several branches taught in the Institute, were accepted by the committee as covering the ground of study. The results in the several branches, taking the class as a whole, showed the following percentage of correct answers:

Mathematics	34.8	Practice Teach'g	83.0
History	60.5	Civ'l Government	78.5
Chemistry	62.1	Political Economy	78.5
English Literature	62.5		
Total average, 61.4%			

Considering the length of time required to answer these questions, the wide range of topics embraced, the infrequency of written reviews in the Institute, the above results are remarkably good; they reflect great credit upon both the scholarship of the students and the modes of instruction pursued. The committee would suggest that brief written tests

be applied throughout the entire course of study.

Connected with the Normal Institute is the Butler school, which serves as a training or practice school for the students of the Normal. This school is in charge of the teacher of methods in the Institute, and affords a fine opportunity for training in the art of teaching. These each student spends a portion of his Senior year, not simply in observing, but in acquiring skill by the practice of his art. A "Kitchen garden," as it is called, has been introduced into this school, this consists of practices in the various duties belonging to housekeeping, such as sweeping, dusting, laying out and tending table, washing and so on. These operations are practiced under direction of the teacher, by all the pupils, sets of miniature utensils being furnished for the practice. Thus the ordinary exercises of the school are supplemented by training to those habits of order and neatness so conducive to comfort, culture and happiness in the home. This furnished, the student of Hampton graduates with an outfit which must place him in the front rank of the teaching profession in the sections of the country where he is called to labor.

Nor does his growth cease with his graduation. By a plan, so well known to the committee, peculiar to Hampton, the former graduates of the school take the principal parts at commencement; six of the exercises of this year were by graduates of the class of '73. '81, one was by a graduate of the class of '74. For practical wisdom and breadth of comprehension, these parts could nowhere be excelled by any class of students of equal opportunities. All were delivered with force and conviction, and must have convinced the most skeptical that the problem of the future of his race is solved when the colored man is furnished with an education and an equipment to examine the methods and estimating the results of the industrial education, which is a leading feature of the Hampton Institute. Enough, however, was seen that manual training, as a means of mental and physical training, is an essential. Each student is required to give at least two days a week to this department. Some are engaged in work about the campus, of which there are about 200 acres of tillage; others work at the various trades. The students make little days, but with the varied employments, little fatigue is experienced, and good health is the rule. Thus in addition to the knowledge and discipline received in the school proper, every student leaves the Institution with the ability to support himself by some useful employment.

The industrial pursuits are calculated to exercise the student's active powers or faculties, as distinguished from their passive powers or capacities. In this respect these pursuits supplement in a remarkable degree, the training received by the ordinary school processes. The complaint frequently made that the student is unable to do anything, when he leaves school, is too often true, with such complaint is not likely to be made, for it will not be true. This would be inferred from the nature of the case, but it is actually shown in the service the graduates are graduates of Hampton. The Treasurer's clerks are graduates of Hampton, doing their work with accuracy and despatch; the overseers on both the farms run by the institution are graduates of the school; the Over ninety per cent. of all the graduates have taught in the schools of Virginia or other States. One is principal of a Normal School in Alabama, while three fourths of all the graduates have chosen teaching as a profession. Others, not in schools, are filling positions of trust and responsibility; nearly all who teach report Sunday Schools connected with their schools, and some have founded temperance societies.

Thus it will be seen that wherever they go, the graduate teachers become the leaders among their people. And so through this and similar institutions throughout the South, the problem of good citizenship presented by negro suffrage is solved; give the colored man a good education and a fair chance, and he will surely become a good citizen and win for himself, and his race, honorable distinction. The figures in this problem are the slaves themselves; the solution depends on liberal education, and efficiency of management, such as is seen at Hampton.

Though the colored race has been chiefly considered in the report, and though the influence is less cumulative in the case of the Indian, from what is known, there is every reason to believe that admitted to equal privileges and charged with the same responsibilities, the same results are to flow to the red man. The committee heartily concur in the statement in Gen. Armstrong's Report—for the academic year just closed: "Our four years' work for Indians satisfies us that their progress is a question not of capabilities but of opportunities. Universal education means peace and prosperity to the red man. Justice

and humanity call for it, and common sense suggests that paying eight hundred dollars in three years for the education of an Indian is better than paying one thousand dollars a year for each soldier sent to fight him."

So the question what shall be done with the emancipated slave and the "savage Indian" is solved not by extermination, but by mental discipline, and a training of their powers to various forms of labor.

Respectfully submitted  
M. E. STRIBBY, New York City.  
J. M. WARD, " "  
HENRY W. FOSTER, Boston Mass.  
Geo. A. WALTON, West Newton Mass.  
Miss E. N. L. WALTON, " "

Subsequently the undersigned examined the class on the subjects of Arithmetic, Geography, and Language, submitting in each subject eight practical questions as follows:

1. ARITHMETIC. How many bushels of potatoes in a rectangular bin 10 feet square at the bottom and 24 feet deep, allowing 1/4 cubic foot to a bushel?
2. LANGUAGE. Write a telegram to some person at home, stating that you have arrived at New York, and naming the day you expect to reach home; also name the railroad by which you are to come.
3. GEOGRAPHY. (1) Name some country in about the same latitude as New England, which has a warmer climate than we have.

- (2) What are some of the causes that affect the climate of a country?
4. ARITHMETIC. Two bushels and a peck of seed peas were put up in bags, each holding 25 of a quart; how many bags were required?
5. LANGUAGE. Correct the following sentences, if incorrect, and parse "and" and "by".
6. GEOGRAPHY. Name a port to which vessels sailing from Boston go for (1) Sugar and Molasses, (2) Raw Hides, (3) Coffee.
- (4) Write any thing you know about any of these articles.

7. ARITHMETIC. A square lot of land was inclosed by a fence 1/4 mile in length. What was the length of one side of the lot?
8. LANGUAGE. Correct the following sentence, if incorrect, and parse "and" and "by".

9. GEOGRAPHY. Name the bodies of water upon which are situated (1) Boston, (2) Springfield, Mass., (3) Philadelphia, (4) Chicago.
- (5) Describe any of these cities.

10. ARITHMETIC. How many yards of carpeting 3/4 of a yard wide are required to carpet a floor 104 ft. long and 3 ft. wide, allowing nothing for waste?
11. LANGUAGE. Correct the following sentence, if incorrect, and parse "ought" and "whenever".

12. GEOGRAPHY. (1) Name three important exports of the Southern States.
- (2) Tell where they are produced and any thing you know about any of them.

13. ARITHMETIC. How many cans, each holding 1-15 pints, will be required to hold 7 gallons 2 quarts of preserves?
14. LANGUAGE. (1) What is the subject of a sentence? (2) Give an example of a simple sentence. (3) Of a compound sentence. (4) Of a complex sentence.

15. GEOGRAPHY. (1) Name five of the largest rivers of North America, and tell into what each flows.
- (2) State any thing you know about any of these rivers.

16. ARITHMETIC. If 2 boys can shovel a snow-path in 24 minutes, in what part of an hour can 3 boys shovel it?
17. LANGUAGE. Write a short letter to your father, describing your school and your work.

18. GEOGRAPHY. (1) Which is farther north, Albany or Paris? (2) Name in order the bodies of water you would meet in going from Albany to Liverpool.
- (3) Describe any of the above named cities.

19. ARITHMETIC. Find the bank discount on \$500.00 from July 15th to the 31st of August next following, the rate being 3 per cent.
20. LANGUAGE. Write a letter to a manufacturer, ordering goods sent you by some particular express.

21. GEOGRAPHY. (1) Through what zone does the equator pass? (2) How many degrees in width is this zone? (3) What countries lie mainly in this zone?

22. ARITHMETIC. Bricks are 8 in. long, 4 in. wide, and 2 in. thick. How many bricks will it take to build a wall 20 ft. long, 10 ft. high, and 18 in. thick, allowing 1/10 of the wall to be cement?

23. LANGUAGE. Correct the following sentence, if incorrect. (1) Each board of officers keeps their own accounts. (2) Make out a bill against your teacher for a hat, and receipt the bill.

24. GEOGRAPHY. (1) Draw an outline map of your own state, and locate your town, naming in order the towns which surround it.

The results were given upon paper, and showed an average of 61.4 per cent. of correct answers, varying less than 1 per cent from the results of the more general examination.

Geo. A. WALTON,  
Agent, Mass. Board of Education.

## INCIDENTS OF INDIAN LIFE AT HAMPTON.

A FRIENDLY COUNSEL.

A pleasant incident of a month ago to the Indian boys and girls at Hampton, was a visit of Miss Alice Fletcher, a lady who, as many readers of the daily papers know, was led, first by scientific interest and then by human sympathy and desire to do good, to live for months among the Indians of several of the Northern tribes, her efforts for them having taken form in a bill now before Congress to secure to the Omahas legal rights and protection and greater educational privileges. Miss Fletcher desired especially to inspect the industrial system of instruction at Hampton in the interest of her plans for her Indian friends.

Before she left she gave the whole Indian class a very pleasant talk, listened to with much interest, and likely to be very helpful, especially her kind advice as to what they should do to help their people—that they should send and carry home.

But we will let her speak for herself. All who heard her will be glad to have her good talk in a form they can keep, and it will thus do good to others who are to come.

## TO THE INDIAN STUDENTS.

"The last time I spoke to Indian girls and boys was on the Omaha Reservation, two months ago. I have lived among your people and seen how you live—I have been among the Yanktonais, and the Santees. I know how beautiful your home is—the pretty creek and the yellow bluff of the Missouri. I have been among the Omahas the last six months. I know your Willie Watson's friends there.

I know that your people all over the North, and the South are saying—"The path that our fathers walked—that is gone"—I know they are trying hard to learn the white man's way. Now my dear children, this is a very hard thing that your fathers and mothers have to do, and I want you to feel that it is your great pleasure, as well as duty, to help them do it. When I was among your people, I used to get the children all around me and talk to them just this way. I told them when I was coming to Hampton and Carlisle, and they, and all the people were very desirous to hear about Hampton, and Carlisle, and they will be to hear about you when I go back. So I am going to talk to you just as to them, and let me speak very plainly to you about what things you want to try to do to help your people.

## DON'T SULK.

Sometimes my Indian people out there get discouraged. I wonder if you ever get discouraged—want to stop working and studying, and have nobody speak to you, but sit off by yourself, or wrapped up in your shawl, a silent little bundle. Now I want you, the next time you feel so to say to yourself, "No, I won't do so; I will go and do something, and stand up straight." That is real courage. I speak of this because this is one thing that is very hard for you and your people to do, and that makes it hard for you. Suppose the sun should get sulky and not rise some morning. No—it rises and sets with untiring faithfulness. That is God's law. We have to try hard sometimes—white and colored people as well as Indians. I speak of it to you because in the old times, a man or woman could go off by himself to the top of some hill, and draw his robe around him, and wait till he felt like talking; but in organized society where every one has some work to do for others, one must go right ahead and do it. Suppose the cook in the kitchen should get discouraged and conclude not to get your breakfast some morning! No, in our new life, we all have something to do, and must do it whether we feel pleasantly or unpleasantly. So I speak because I know that in the future your people have got to overcome that trouble and learn self control.

## HOW TO WRITE HOME.

Another thing. I wish you to be careful about your letters home. Don't spend your time saying to your parents "I want to see you." They know you want to see them. They want to see you—oh so much—but they send you away for your good, and they want to see how you live here. Try to make little pictures in your letters of your happy, busy life here. And if you are a little sick one day, or don't feel happy, remember that tomorrow maybe you will be all over it, and feel happy again; but this letter with its little sad picture will travel all to-morrow and the day after, and the day after, and then another day, and another, before it reaches the nearest of your homes. Then you are all happy—all the trouble over—but then your mother gets it, and you make her unhappy for a long time. Remember then to write cheerful letters, and tell little things about your getting up, and how you get up when the bell rings, and how it always rings at the same time. How many have ever seen a clock in an Indian house!

[Only three or four hands were raised.] No, I know they don't have them. Tell them about clocks, about your three meals a day, how you walk two-and-two to meals. And, in each letter, tell some little thing you have learned, so that your father and mother and sisters and brothers can remember them, and you can help them on in the new way.

## WHAT TO TAKE HOME.

I'd be very glad if every boy and girl here could save a penny, and when you go home take a nice striking clock to set up in your houses. That would teach your people the value of time, that stands at the beginning of all progress. Tell them how you live by the clock here, and how it makes everything go smoothly, and gives time for doing so much. Then you can teach your little brothers and sisters how the hands go round—and what else can you teach at the same time? [Several responded, "How the earth goes round."] Yes, and you could turn out some little wooden bells and take them home with you to teach with. Try and collect real things of use to take home as presents instead of useless trinkets. I am going to take back with me a hundred clocks.

## LEARN TO LIKE VEGETABLES.

Another thing. I want you to try while you are here to learn to like the taste of different kinds of vegetables. I know most Indians don't like them, but they are so good for your health. You know how many Indians have little swellings on their necks. It would be better for them if they would eat more vegetables. So I want you every one, both boys and girls, to learn how to raise vegetables, and have a little vegetable garden

laid up in your house. Make the path straight each side with a string and stakes. Then dig up a straight flower-bed each side. Take home a trowel for that—then sow your flower seeds that you have brought with you, or set out the beautiful flowers you have at home. So your home will begin to be nice and orderly. I will tell you a pretty little thing the Germans say about this. They say "only the good spirit can pass over flowers." This is true. Nobody will put a foot on flowers; people will come to your house in a quiet orderly way. It will give you the blessing of the "angel of flowers." They will help cheer you when you feel tired. Your teachers can tell you many pretty things about how they live and grow.

## A SUMMING UP.

Now remember what you are to be sure and take home with you:

Striking clocks.  
Vegetable seeds.  
Flower seeds.  
Little Trowels.

I am very glad to have had the chance to talk to you about these things. I hope you will remember some of them; especially about your letters home, and helping your people when you go home. Think what things they have not, talk with your teachers about it, and take home all the little useful things you can.

## BLESSED PEACE MAKERS.

As soon as I can finish my work for my Omaha friends, trying to secure homes to them, and schools, if it please God to prosper my work, you will have some of my Omahas here, and I bespeak for them your help. And I hope that, after the long misunderstanding—the Indians of the white people, and theirs of them,—you will be the peace-makers; like the white-winged doves, to carry the blessings to them that you have gathered here by the sea."

SINAI AND THE PLAIN.

## RAS SUSAFER, THE TRUE SINAI.

BY CHAS. E. ROBINSON, D. D.

Along by the Walls of Meers, and so onward for a good distance in the wilderness route, the track is sand only. But before many days travel, as the way bends southward in among the mountains, it becomes gravel, and then rocks. The scenery is wild, hard and rough. The color of the upper hills loses its soft blue, and turns to coarse brown. Then the emaciated ridges tower all around us, shadowy, splintered, and gloomy. Unattractive vast ledges of rock, treeless, verdureless, rise in precipitous confusion on every hand.

## TENT-LIFE IN THE DESERT.

Not unlikely before long, we shall come upon an encampment of Bedouin Arabs. The dark tents, the uncouth figures, the military or rather brigand-air of these creatures, are not very reassuring, until one sees his impetuous Dragoman shaking hands with the sheikh, and so knows they belong to friendly tribes. It is most natural that we pause in immediate companionship with them, and pitch our tents in their neighborhood over the night; but we do it with some shrinking.

A thoughtful mind never ceases to be impressed with the romance and poetry of this

way of sheltering one's self in the desert. It is human life that constitutes the world of imagination and feeling. The mere planting of a structure of canvas and wood in the sand redeems that pathetic little area from the waste around it. While man is on the spot, that fragment of soil is populated and under civilization. The moment he departs, it lapses back into savagery again. And all this is done so quickly that the sensibilities are singularly moved. After a few days, one knows as never before what it means to be dwellers "in the tent of a night." And especially is it interesting to watch the morning manipulations of these wild children of the wilderness.

The Bedouin tents are quite slight. And with long habit these wandering people grow extraordinarily expert in handling them. It is but a passing moment's work, as it were, to pull up the pins, unloop the cords, and fold the sheet, winding it around the poles. Where curfew life was dwelling for the hour, now reigns solitude again. In the earliest cool of the dawn, they swiftly sweep themselves off the soil, and are gone—nobody knows where. Beautiful simile is that of the verse:

"And the night shall be filled with music,  
And the cares that infest the day  
Shall fold up like your tents like the Arabs,  
And as silently steal away."

## SOME QUIET POEMS OF DESERT BEAUTY.

For a few hours after leaving Marah, the scenery begins to improve rapidly. The hills become more picturesque. Crystals of gypsum lie in the gravel like sparkling stones. Great boulders are occasionally seen on the points of rock. Mesquite vegetation commences. And a veritable stream of beautiful water appears, cours-

ing through the refreshed plain. Wild mint grows along its edges; pretty blue forget-me-nots may be plucked in profusion, and make one think of home. Here, also, we gain our first sight of the acacia-tree, the shittim-wood, out of which parts of the tabernacle were constructed. Then there is the Juniper-tree, like that under which once Elijah lay down to die in his discouragement.

## MOUNT SERBAL.

The first kindling of real interest occurs at the moment, when, having surmounted a difficult declivity, we suddenly are confronted with a majestic view of Mt. Serbal. For many years, the early Christians considered this the true Sinai. It is certainly grand enough in all its belongings; in its outlines and height, as well as in its rugged sublimity. But later investigations have left no real ground for doubt that the Mount of God lies much further north, and down nearer the centre of the Peninsula than this.

And now the landscape changes into granite grandeur unparalleled. It is positively matchless in its scenery. The rocks, like terraces of stone, cyclopean in masses, almost close in on the narrow path. The steep and precipitous sides seem like the edges of some giant's quarry, from which colossal layers have been torn. And amid all this, man appears so small, and God so mighty, that the whole soul becomes subdued, suffused, and is hushed into humility.

Mt. Serbal consists of a vast separated bulk of granite, with at least five prominent peaks, divided by deep sepulchral ravines, in the slow wear and decay of ages. It seems inaccessible; but it has been climbed to the very summit. And it is said, as is always said by those who

(Continued on Page 87.)

## LETTERS FROM HAMPTON GRADUATES

THE CULTURE OF TIME AND TEACHING. TEMPERANCE WORK. ANOTHER TEMPERANCE WORKER. A WHITE SCHOOL TAUGHT BY A COLORED STUDENT OF DARTMOUTH. SELF-HELP. LAST WORDS FROM A FAITHFUL WORKER.

## THE CULTURE OF TIME AND TEACHING.

There are several good points in the following letter. The experience of the writer is a usual one with our graduate teachers. A mental growth comes after leaving school in the isolation which gives quiet for thought, and in the work of teaching, which brings old lessons into practical use.

— Va., March 3rd, 1882.

Dear Friend,  
I am proud of this opportunity to express to you my sincere thanks for the paper which you sent a few days ago. It was very interesting. I have read it all.  
I find that I can ponder over such things out here, with much more care and pleasure than I can in town. It is lonely, and when I let out school, I am at a loss what to do. Then, when I have papers, etc., lying by, they come quite handy. I have read several good books, etc., since I came here.

My school is growing daily, and the scholars are becoming more and more interested in their studies. I hope to have some prepared to enter the middle class at Hampton, after next session. Some of them are very anxious to go there. I am doing all I can to keep them encouraged.

My session will be out in three weeks. The parents (with myself) are trying to get another session. They don't want to give up the school now, when it is so near the end of the year.

Since I have grown native in the work, I feel as though I would be disturbed otherwise engaged, though at times it is very weary. I suppose when scholars have been to school before and are well trained it is different. Taking everything in consideration, I feel that I have done quite well. The scholars have progressed considerably.

When I came here, there were only one or two that could start about reading in the Testament; now I have twenty-five or thirty who can acquire themselves very creditably. Here, some, too, who can take an imaginary voyage around the world, telling about all the interesting places as they go. I have some in Arithmetic and Grammar, all of whom give pretty good satisfaction.

Since I began teaching it has served, in one respect, as being taught. A good many little things, such as present themselves in the every day practical life, and long since forgotten, come to me as they never did before. My ideas about things in general are strange; every thing seems to be presented in a different way.

The pleasure, too, that is afforded by the thought of helping others is of a kind that never disappoints. When I look about me and see so many on account of my feeble efforts bidding farewell to the shores of ignorance and barbarism, it brings on a pleasure which a multiplicity of words would fail to express.

Teaching makes me feel more imperfect, it gives me a better sight of my position in the intelligent world; pictures out my deficiencies, and enables me to better explain the common necessities of my race. I would that all the young people, who are competent, would step into the field and lay hold of this work. The grandness of it is better seen and known by the putting of one's own shoulder to the wheel. But for my friends at the North and at Hampton, I could know nothing of these things; hence I can never fail to still acknowledge to them my lasting gratefulness.

Your old pupil,

J. B.

## TEMPERANCE WORK.

Our graduates generally, both young men and young women, add temperance work to their labor as teachers. One writes as follows of her efforts. We hope she may still be able not to lose a day in her good work.

— Va., Feb. 20th, 1882.

Dear Friend:  
I received your kind letter, and was more than pleased and cheered by its contents. Your letters are always a comfort to me. I feel thankful that I can say I have enjoyed good health this term. I have been able to be at my post every day. Have not lost a single hour. And now the term will soon expire, which I regret very much, for five months are not long enough to satisfy any teacher. My pupils are all sorry they are to be turned loose so soon. Last Sabbath we had a Temperance meeting at the house, was crowded and after our speaking and reading, our pledge book was opened and nine signed their names

to the pledge. So you see we are still moving along slowly; though weak yet, we hope to be strong, and hope to see some good come out of it in a few years. We have been quite successful so far, only one or two having broken the pledge. The people here are getting up a petition to be sent to Richmond to try to have a vote in spring forbidding the distilling of whiskey in the state. A number of cities are giving them a helping hand. They brought their paper to me to sign, which I thought it would be a good thing if it could be swept out of every State and District, it is a curse to so many people.

I thank you for the pieces you sent me; they are in plenty of times. I have about three weeks to get ready. You spoke of pictures in your letter I did not get. I applied for another school in the county, but there are none vacant, so I shall be obliged to return home, without some great change. I would rather teach up to July if I could get employment. The weather is very bad to-day, so I could not have Sunday School. We have been getting along very nicely all the term, but I suppose the school will scatter.

Please accept my heartiest thanks for your kindness toward me this term. I shall give ear to your good advice and excellent teaching. I wish you much health through life.

I am,

Yours gratefully,

M.

## ANOTHER TEMPERANCE WORKER.

Another brave young worker writes thus of her efforts in association with the writer of the preceding letter. In each union there is both strength and pleasure.

— Va., Jan. 10th, 1882.

Dear Friend:  
I have wanted to thank you for the very welcome bundle of papers that I received last summer, while at Hampton, but have put it off until this week when I have, through the mail, another nice package. Please accept my many thanks for them all. I have found them very useful in my little school, which numbers 27. We sometimes walk 5 miles to meet with M. E. Smith's society. I have taught here for three years, where since I left Hampton. We are here, where the "harvest truly is great" and I hope we are doing much good.

I am engaged in a work that I love: the work of drawing out the young mind. I sometimes feel that my little help might be dispensed with. I am doing all I can to sow good seed, but am anxious to reap what I have sown. I still sow in hope, looking to Jesus for the result. I shall never forget the fervent prayer you offered in Virginia Hall in May, 1878. I often think of it when every thing is not so pleasant as I would like. My term here ends in about 3 months. I don't know yet whether the school will be continued.

Yours gratefully,

A.

## A WHITE SCHOOL TAUGHT BY A COLORED STUDENT OF DARTMOUTH.

Wouldn't such a statement as the following have seemed incredible even in Vermont, fifteen years ago?

— Vt., Dec. 31st, 1881.

Mrs. —:  
I received your postal a few weeks ago, requesting each one of the graduates of '79 to write a letter, stating what he is doing, and how he likes teaching, if he is teaching, &c.

I have just finished five weeks of school teaching at —, and have seen more to teach. I am obliged to teach winters to help me through college. I am a member of the Junior Class at Dartmouth. I have been especially blessed in my efforts to obtain an education, and the people here have been very good to me in every particular. I am the only colored person that ever taught a school in this district or hereabout. I taught this summer school last winter, and the people and children desired me to teach it this winter. I did not want to teach it this winter, because I had such good luck last, and so much praise that I feared that everything might not pass off so well this time. But so far, everything seems to go just as well as anybody could ask for.

I am the only colored person in the school-house. My school is the most advanced in the town, and one of the most advanced district schools in the State of Vermont.

The people pay more in — for teaching than in any other district in the county. I have the children of the very best families in the place. Mr. —, the largest manufacturer in town, a Southern man, who fought on the rebel side, and has been an officer of high rank, has three children attending my school. His brother is the man who hired me this winter.

I like teaching very much and think I shall

make it a life-work. I hope to return to Dartmouth College in February to continue my studies.

I take great pleasure in my school and labor to make it what it should be. I spare no pains, but work with all my might. My school gained great praise at a Christmas Tree last Monday night. I was very proud of them all.

Yours very truly,

W.

## SELF-HELP.

This young man who writes the following, is giving according to what he has received. In his night school, Sunday-school and reading room, as well as his day school, teaching his people the lessons learned at Hampton:

— S. C., February, 1882.

Mrs. —:  
Dear Friend:

In reply to yours of the 8th instant, I report: I am here doing what I can to make better the condition of my people. They need help, and they need it now, but the best way to help is to help to help himself. This is my object. I am teaching and I enjoy it. The circumstances under which I commenced were quite embarrassing, but now the dark clouds have disappeared; the sky is clear. My school numbers one hundred and thirty-six pupils. I have an assistant teacher. My night school of fifteen young men is doing well. The young men seem to be thirsty for an education. They work during the day, and go to school at night. My Sabbath school is, at present, in a flourishing condition. For the best of the neighborhood I have organized a reading-room. So far it works well. Religious books and papers would be gladly received and accepted for its use. Temperance literature would do much good. In short, I am trying to do something, and my correspondence with Hampton and her graduates gives me encouragement. How are the Generals and teachers? Hoping to hear from you soon, am,

Yours truly,

M.

## LAST WORDS FROM A FAITHFUL WORKER.

The last letter received at Hampton from a faithful teacher, who has gone to his Heavenly home, will be read with interest by her many friends.

— B., Va., Dec. 7, 1881.

Dear Mrs. —:  
You desire to know if I am teaching: I am, and have the same school that I have taught for four years, here in the village of —. It is a source of great pleasure to me. The children are making rapid progress. I have enrolled 90 pupils; average attendance 70. As soon as they can read well in the Fourth Reader, and have a pretty good idea of Arithmetic as far as division, I send them to the B — Institute (which you have probably heard of). It is about three-quarters of a mile from my school-house.

The school Board keeps me employed ten months during the year; but not in the same school. I have a term of five months in the country. My present session ends in about eight weeks, after which, I shall begin my other school. I have not rested from teaching longer than two months in any year since I left Hampton. I am trying to do all the good I can for my people. The Lord has wonderfully blessed, and given me great success in my work. There is nothing I enjoy more than training the young minds for usefulness. As my work may be classed among the many bricks that are being laid in the great building—the education of our race—I try to do it thoroughly.

I also teach Sabbath school, and find much pleasure in it. Of course my duties are a little heavier this year, as I have my household affairs to attend to, but fortunately my health is good, so that I perform them all with very little fatigue. I try to teach by precept and example, at home, at school and abroad.

I hope you and Mr. D — are well. Please remember me, to him.

Yours truly,

J. S. I.

## SCHOLARSHIP LETTERS

Most of our readers understand, perhaps, that a "Hampton Scholarship" is the sum of \$70 paid for a year's tuition of a pupil. The Hampton students pay, themselves, for their board and lodging—\$10 per month, paid on the average, half in work and half in cash, furnished by their parents at home, or by their own summer earnings; they also provide their own clothes and pay for their books. More than this

they cannot do. Doing this, their self respect is maintained by honest effort to the extent of their powers. The cost of their schooling remains to be met by contributions of scholars from Northern friends. Every student in the North writes each year a letter of acknowledgment to the friend whose contribution is assigned to his benefit. These letters, giving generally some account of the writer's life and struggles for an education, are often of much interest to the receiver, with whose consent, we publish a number every year, selected for their interest, and printed without alteration.

FROM A SENIOR.

Dear Sir:

I am glad of having the pleasure of writing you again, to express my thanks for your letter, benefactions, which have done so much toward lifting me higher in the scale of manhood, and fitting me for the duty which lies before me. I left school last year, being unable to finish, and went out to teach school. I was very glad to get into a place in which I could do something for my people and be myself. I soon found that studying and reciting lessons in school was the hardest work to be done. I opened school in Surry County, on the 2nd of March, last, on a term of five months. I taught six months, however, one month in a private school before my free-school began.

I met with many obstacles which tended to impede my designs; but I observed that something must be done to bring my people in as much light as possible; I therefore tried to encourage myself and went to work with alacrity in my well-ventilated—though not thus intended—log-school-house in the woods.

The first day, I opened school with thirteen scholars, by the end of the first month, I had about forty-five, and before the close of the term, I had enrolled fifty-three, a number I could not comfortably seat in my small and very trivial school-house. All of my surroundings were very poor, and especially my school-house. I tried to teach my younger scholars to read by the word method, but as I knew but little about it, I could not teach very well by it, yet I like to teach by it.

The children made quite a progress in their studies, as I think, and I was very sorry when I had to leave them, but glad that I was coming back to Hampton, to fit myself better for my allotted work. My school closed in July and I returned to Hampton, and worked at the Saw Mill until school opened.

I am now in school again, and hope this is my last term at Hampton. Whether I shall ever be able to go to another school or not, God knows. I always feel that these are my only and last school days; and I hope, and try to improve them to the best of my ability. I will tend to fit me that much better for my work as a teacher. I feel that I learned much by going off and teaching a while before I finished school. I can see much better what I need, and what is required in order to be a good teacher. I feel that "There is a battle to be fought, and a victory to be won" for my people, and I feel that I am one to whose care a part of the charge is given, and I, by the aid of an unseen Helper, shall do all I can to give a character to the slow-drodden and poor.

When I look at those, my dear class-mates, who have gone out to battle, equipped with all the honors and credentials, morally and intellectually, that this dear old Alma Mater could bestow, it fills me with an anxious sensation, wishing that my time would come quickly. It causes me to feel that I ought to be with them.

But just then, those true words of Longfellow's steal in and say: "Every man should patiently bide his time" in order to be successful, I therefore must wait.

Added to this, I can only say, that our school is much larger this term, than ever before.

Both the Black man and the Red man are aiming for higher and better motives. They seem to be rivals, yet without any feeling of envy. I truly believe they will rise if they continue the right course. I had the pleasure of seeing the King Kalakaua, of the Sandwich Islands, this summer; the first King I ever saw.

I cannot express my gratitude to you for your philanthropic contributions to this Institute, for the uplifting of mankind, but I pray for your success, and that God may keep you.

Very respectfully yours,

B. F. J.

A card for the ladies.  
Many ladies who are troubled with sick headache, especially at this season of the year, dislike taking any nauseous dose, which often makes them wretched. Instead of this, I have a favorite drink now with ladies are the Beldin's Seltzer Powders, which are as pleasant as lemonade, and are highly esteemed for Dyspepsia, Biliaryness, Sick Headache, &c. Try them. Only 5c each.

AS ENLARGED AND IMPROVED.

**OLD POINT COMFORT, VA.**Sited one hundred yards from Fort Monroe, at the confluence of the  
Chesapeake Bay and Hampton Roads, being the first point of land lying  
westward between the Capes of Virginia, about fifteen miles north of  
Norfolk and Portsmouth; all passenger steamers running to and from those  
cities touch at the pier, going and returning, with the U. S. Mails, landing  
only twenty rods from the Hotel, which is substantially built and com-  
fortably furnished; has two Otis hydraulic passenger elevators, gas and  
electric bells or Creighton's Oral Annunciator in all rooms; water, rooms  
for bath, including Hot, Sea, and closets on every floor, with the most per-  
fect system of drainage of any Hotel or any public building in the country.  
As a resort for the pleasure-seeker, invalid, or resting-place for tourists on their  
way to Florida or the North, this house, with accommodations for about 1,000  
guests presents inducements which certainly are not equalled elsewhere as a  
summer resort or cold weather sanatorium. Has during the cold weather over  
or 15,000 square feet of the spacious verandah (of which there are over  
en 35,000 square feet encircling the house on all sides) enclosed in glass, en-  
abling the most delicate invalid to enjoy the sunshine and fine water view  
without risking the slightest exposure. The climate of Old Point Com-  
fort is unequalled for salubrity. Malarial fevers being absolutely unknown.  
The record of the Meteorological Observatory for the past ten years show  
an average temperature of 60 deg., 74 deg., 70 deg., in summer, 70 deg.,  
59 deg., 40. In autumn: 45 deg., 44 deg., 42 deg., in winter, and 48 deg.,  
52 deg., 63 deg. for spring. The invigorating atmosphere and mild tem-  
perature being especially adapted to that class who seek the genial winters  
of the South and cool summers of the North. For sleeplessness and ner-  
vousness, the delicious tonic of the pure ocean air and the lullaby of the  
ocean waves rolling upon the sandy beach, but a few feet from the bed-  
room windows, are most healthful restoratives of the Hygeia.For further information address,

## LOCAL OPTION

This is a subject which I think should copy the attention of all thinking men of this State. Last year it was a matter for study and action in our sister States, and it will be brought up in Virginia this fall, and I hope that she may not follow the example of her sister States, but will rather take that of the cause will be lost. One unless there is more said and done. I think that has been. have never taken the stand, and hope I never shall, shall I have the right to say that I have been in the state of Virginia may do the same. The great trouble is that almost all the voters are ignorant, and they will not vote for a man who will never vote for a law to take away their own pleasure, yet they say that such laws ought to be passed for those who don't know.

Both the daughters are graduates of Harvard University, and since leaving school have taught in the public schools of the state; their vacations improving them in the art of their respective professions. They are conversant with music and literature and the practice many useful domestic arts. I have had no pleasant visits to the little flower-bordered cottages, always in the midst of the flowering season, in the tidy perter surrounded by flowers, books and pictures and musical instruments have marveled at the taste displayed in the adornment. Among the books, I have seen the encyclopedia, the dictionary, and given one of the encyclopedia to my friend, whose name she too decries to mention, and a work called "The

After the ceremony, I noticed one of the prominent physicians and other white gentlemen offering congratulations and good wishes to the bridal party. There was general interest and sympathy felt for the worthy couple on this important occasion, and the only remarkable I heard on the subject from other colored people, some of whom were fortunate, probably because less educated than the Kinkles, talked very spitefully of these "old issa free niggars setten them

Mrs. Kinckle introduced me to her sister, Mrs. A. B. Hooker, a mother of my Boston visitor, who was a slave in early life in Virginia, but had been a great deal of the world of late years, having lived in various Northern states. At the time she was employed in a boarding-house in Hartford, where Mrs. Hooker was staying. Mrs. Kinckle was much pleased to hear of a visit and a mutual friend in the same interesting lady. It was not a very suggestive and diverting to hear this slave speak in tones of affectionate familiarity of "Miss Harriet and Miss Isabelle," as she would have spoken of her own daughters, when Mrs. Kinckle said that the agency the "American Missionary Society" had created at New York for the freed-women to her present comfortable condition.

use it, and don't think that they should be de-  
ficient in any way. I have heard a number of  
quote Paul, "I will eat no more meat" etc.  
I was talking with a man not long ago who  
is a member of the church, and I asked how he  
was going to vote on the subject. He said he  
was going to vote for the prohibition law. I  
asked him why he was voting such a law, for  
he liked his dram, and if he thought that the  
prohibition law ever would pass in this State  
he would buy himself a barrel of whiskey and  
drink it. He said he would not do so. He  
said he would not do so. And this man is not  
the only man who would do so. Yet he  
don't think that all will go against it. Yet  
we see what a whiskey has done for the  
people. I am sure all lovers of humanity  
should come up with all their power against  
this great evil of the land. Nip the evil in the  
bud and let it be. Have you ever seen a  
man who has the idea of voting for  
any body, but now I could willingly ask the  
sisters of the Old Dominion to come over and  
help us, believing as I do that almost all of  
them would vote for prohibition. But as we  
are unable to vote, I ask them to use  
their power to make the men vote straight.  
Wives, talk kindly to your husbands and  
make them promise to vote for prohibition  
if they can. If they will not unless you  
urge them, then I ask you to vote for  
the prohibition law they need not call  
on you again. All teachers admit that the future  
of our race lies with the children of 19-49  
therefore I say every teacher should be  
a clear minded person and vote  
in this State. Every teacher should use all  
his power to have the great temptation removed  
from our boys; and we best temptations  
are the saloons and the drug stores. All of  
the temperance pledges will prove a failure to  
young till the law is passed. So preachers  
and teachers, do all you can to save your  
children and remember that the future of  
humanity when you are trying to put down  
the sale of whiskey. See what ruin is doing  
for the land to-day, and hear the cries of the  
poor women and children, from the streets and homes  
of this State.

Windsor, Va. July 1892.

On July 29th, Mrs. Jennie (Shelton) Conquest, contracted with the teaching in the face of many hardships during the severe winter of 80-81. She graduated in '76, and from that time taught regularly and with great success in the counties of Mecklenburg and York. Her marriage to Mr. J. M. Conquest took place in 1881. Her testimony concerning her school work comes to us both from her class-mates and her employees; and former say of her: "Her illness was born with that fortitude and resignation which characterizes the true follower of Christ and makes death sad only in that the service cannot remain longer to engage in the service for mankind. Only the one who knew her can feel her loss to the community of graduates." The superintendent under whom she taught, for five years wrote "She was always found the side of truth, right and duty."

Her teachers feel that she would have made a good worker, and the comparative suddenness of her death was made especially sad to all from the fact that it came so soon after her graduation.

The ties between North and South are  
becoming so closely interwoven, their  
relations to each other have changed so  
rapidly in the last few years, that it is no  
longer a matter of surprise to find the an-  
tagonisms of the past merging themselves  
in an identity of interest. Special illustra-  
tions of this come frequently under our no-  
tice and we know of no more valuable in-  
terests than that which is embodied in  
the attitude of the two sections towards  
each other in the matter of the establish-  
ment of schools. Nothing is more interest-  
ing in the history of the South during the  
last ten years than the origin and growth of  
such schools as those for colored children  
and youth at Tuskegee, Alabama, and  
Knoxville, Tenn., and for whites at Wil-  
mington, North Carolina, and Norfolk, Vir-  
ginia. The last two owe their existence  
directly to the generosity of a Northern  
lady, while the Normal school at Tuske-  
gee, and Miss Austin's school at Knoxville,  
show what can be done when North and  
South join hands. The former was estab-  
lished in 1880 by an act of the legislature  
of the State of Alabama, an annual appro-  
priation of \$2,000 for the payment of  
teacher's salaries was made, and since then  
about \$1,000 have been raised by friends  
at the North and the efforts of the stu-  
dents, \$500 of which have gone towards  
the purchase of a farm. The principal of  
the school, Mr. Booker Washington, his  
wife and two of the teachers are graduates  
of Hampton, and are meeting with encour-  
aging success in their new field of labor.

Miss Austin's brief account of her work,  
given in our present issue, bears witness  
to the energy and devotion of Northern wo-  
men, and to that gradual change of senti-  
ment which is transforming their wil-  
dom into wisdom.

unfriendly Southern neighbors into their  
best helpers.

The future of such schools as these is  
full of promise, for even though, as in-  
dividual enterprises, they may seem of com-  
paratively small importance, they are the  
straws that show which way the wind  
blows. The need of the South has been  
the opportunity of the North, and the ma-  
jority of Southerners already appreciate  
that it has been nobly used. In their  
turn and according to their means, they  
are taking up the work, and they bring to  
it an enthusiasm which seems to ensure its  
future. There is still plenty to be done, but  
the identity of interest is fairly estab-  
lished, and the Southerner of to-day is as  
ready as the New Englander, to acknow-  
ledge the claim of every child, white,  
or colored, to as good an education as the  
State can afford to give it.

We believe that there is food for  
thought in the following letter, which re-  
quires to be prefaced only by the expla-  
nation that Rosa Plecta is an Indian half  
breed who went through a three years' course  
at Hampton, and returned to her people  
in September, 1881.

ST. STEPHEN'S MISSION,  
Fort Sully,  
Dakotah Ter.

Lieut. G. Le R. Brown.

Dear Sir:  
Mr. Swift asks me to write you in  
reference to Indian girls who wish to go to  
Hampton, and begs you will give him as cer-  
tainly an answer as possible. Rosa Plecta has  
been with me for three months, and has given me  
complete satisfaction. If surrounded by good  
influences she will do nobly. She is quite  
anxious to return to Hampton for a while, and  
we are to have her to do so. It has occurred  
to us that if she were taught a trade, as the  
boys are, it would give her a certain position  
of superiority that would enable her to be a  
most excellent helper in our work. The Sunday  
school would be under her charge with my  
assistance. I would suggest that she be  
taught knitting, dress making, and also should  
receive lessons on a cabinet organ. I myself,  
consider it a mistake to keep the girls for so  
short a time and not give them a trade, as it is,  
when they come back they are about as far  
advanced as the girls in the mission schools  
here. If the girls were taught some one thing  
in a thorough manner they would be avail-  
able as assistants in the work of educating  
their people, even if they are not employed  
except in their regular domestic duties.

But a young Dakotah woman who is skill-  
ful, who can earn money, has more influence  
than a young man has.

Very sincerely yours,

M. A. SWIFT

There is no doubt as to the justice of  
Mrs. Swift's criticism, and the value of  
her suggestions. Three years is altogether  
too short a time for the training of a  
half wild Indian girl; something can be  
done, but truly it is only a beginning.  
The more intelligent among them can see  
this for themselves, and there is a terrible  
pathos in their entreaties to be kept in  
school or at least to be permitted to re-  
turn. The future is far more danger-  
ous for them than for the boys, and under  
the present system they are not so well  
prepared to meet it. The solution given  
by Mrs. Swift is the true one, but it  
costs money.

During the past month the school has  
received a generous and needed gift from  
Mrs. J. Milbank of New York city. The  
note accompanying it runs as follows:

"During our stay at the Hygienic Hotel last  
March, I attended one of the Sunday morning  
services at this Normal school, and was struck  
with your need of another piano. I am  
glad now to be able to present the school with  
one for use on these occasions."

It is hardly necessary to say that the  
new piano is as thoroughly appreciated as  
its need had been felt, and will add much  
to the pleasure of both students and teachers.

## CORRESPONDENCE.

Honolulu, June 14, 1882.

The Cabinet Ministers of this little king-  
dom have resigned, and an entirely new Cab-  
inet has taken their places. Three of us in  
a solemn manner gave up what are called  
"high trusts," and stepped down from the  
official pedestals upon which we were exposed  
to the gaze and criticism of the nation, that is  
of some sixty thousand men, women and  
children. However, a change of ministers  
in this little kingdom is a not uncommon  
event. It is quite the fashion here, as it is in  
Hayti, Mexico and South America. There  
have been eight Ministers of the Interior with-  
in the nine years. It reminds me of the Eng-  
lishmen getting shaved in a Paris barber shop.  
Hearing a noise in the street, he inquired of  
the barber, "what is that?" The barber went  
to the door, looked out, returned, shrugged  
his shoulders and replied, "it's only a revolution."  
and continued the shaving. Still, a  
change in the government is no small affair  
here. It may be like the disturbance of a  
small pond as compared with a great lake, or  
the raging of a canal as compared with the  
surging of the ocean, but it is a political com-  
motion, it is entitled to be respected accord-  
ingly. The Government of this kingdom is a  
very rickety affair, owing to many good  
and sufficient reasons. It expresses certain  
phases of a very curious problem, and is  
worthy of study by political students. The  
fact that the nation is Tom Thumb in size, does  
not make the principles concerned, or the evo-  
lution in progress, or the logic of events any  
less interesting. The smaller the painting,  
hardly larger than the hand, under the brush  
of a master, may involve as much skill, and  
demand as much study as the largest battle  
pieces by Verneet. As a study, the little  
Hawaiian whole is probably the most in-  
tricate that exists. He who will collect the  
facts truthfully, and treat them justly and  
philosophically, will make a valuable contri-  
bution to political history. The interest  
in the United States in this kingdom is  
wholly due to the geographical situation of  
the Islands, which are destined to be the  
commercial and perhaps military arena for  
the combat between the Anglo-Saxon and the  
Chinese. In other countries the political  
problems are with growing races. Here they  
are with a dying race. In the commercial  
and industrial interests of the world, the na-  
tives here are little more than a hindrance  
to their own fault. The country was theirs,  
but they chose to give it up to foreigners,  
for their own free will; they have parted  
with their birthright, and now the largest  
part of the property of the kingdom is in the  
hands of the whites, the Americans, the Eng-  
lish, the Chinese, the Portuguese; at the same  
time, owing to the constitutional guarantee  
of universal suffrage, the natives hold po-  
litical power by an enormous majority. For  
many years this was a matter of little con-  
sequence, as the natives willingly submitted to  
the superior wisdom and skill of the whites,  
and trusted on their holding all of the high  
and responsible offices. But times have  
changed. The younger natives, growing up  
with a partial education of the best, which  
is always dangerous, and with little education  
in character and industry, which is fatal, have  
come to the conclusion that as they have the  
political power they may as well use it. Just  
now they are making their first decided at-  
tempts to use that power. It is said by some  
that this is the result of evil influence by un-  
principled white men. This is not true. The  
native is working out the conditions of his life.  
He is unthrifty and idle. Therefore he is just  
one of the prosperous white men. He finds that  
he holds the political power, and proposes to  
use it. He considers himself competent to hold  
any office, and therefore ought to fill every of-  
fice. He no longer respects the intelligence or  
the wisdom of the white. The natives instead  
of recuperating, are dwindling away. They  
make no effort to wrest their decayed or-  
ders are increasing in the kingdom, but the He-  
walian takes no steps to hold his own. The  
Chinese, thrifty, intelligent, law abiding, e-  
qually if they do not out number the adult male  
Hawaiians, but they hold no political power  
whatsoever, and are at the mercy of the natives.  
If self government is good for the idleness, it  
is good for the industrious Chinese. If  
there must be consistency, either the native  
must give up the ballot, or the Chinese must  
have it. The result will be an inevitable con-  
flict of races. It can not be prevented; to ig-  
nore this does not destroy it. It exists, and it  
is only a matter of time, as to when the con-  
flict will begin. There are many persons here,  
who do not see this, just as there were many  
persons, counted even by the millions, in the  
United States, who did not see that the great  
conflict of the civil war was bound to come;  
that it was the irresistible logic of events.  
But here, as there, the vast majority will not  
believe it till it does come. The average com-  
mon sense of any country does not look beyond  
its own nose. Even an actual crisis never gives  
men wisdom. It fuses them, strikes out a  
common idea, utters a solemn music to which

they all keep step, and makes them follow  
leaders who have fixed their ideas and have  
founded resolutions. But the average commu-  
nity has only an average wisdom, and that is  
a sorry affair. I have not been connected  
with the Hawaiian Government for nearly  
two years, and have watched the process of  
political evolution with the deepest interest.  
It was the dream and hope of those who took  
this little race out of paganism, to make it take  
rank with the civilized and Christianized na-  
tions of the world. I desired to see that accom-  
plished. But one must deal coldly with facts,  
and accept the inevitable disposition which  
they make of themselves. The stability and  
respectability of the Government is due solely  
to the conserving influence of the whites; take  
that out, and you have Hayti and San Dom-  
ingo, and a renewed paganism. The Hawaiian  
nationality is already a failure, and a sad one.  
I know that some few think otherwise. The  
new Minister of Foreign Affairs has an abiding  
faith in a reformed nation; give him all the  
conditions requisite, and there would be hope.  
He sees the danger which comes from Euro-  
pean friction, and would support the Euro-  
pean with Asiatics. But commerce and trade,  
and rich sugar lands deal harshly with the-  
ories. He must deal with affairs as he finds  
them, and the brown race which he is trying  
to lead, can not and will not cooperate with  
him, though he have the wisdom of a god.  
He is treating with a people who are without  
character, and they will fail him. These Is-  
lands, are a place for a high order of national life,  
but the elements are now wanting to form it.  
The geographical situation will subject the  
inhabitants to forces which will develop cu-  
rious results, as the Americans and Chinese  
close in for their great commercial and in-  
dustrial struggle which comes in the next future.  
The Hawaiian, out of his own foolishness, has  
put himself in antagonism to the Anglo-Saxon,  
and it does not need much historical knowl-  
edge to predict the result. I do not mean to  
say that the Hawaiian does this deliberately,  
knowingly or maliciously. He does it be-  
cause he must act according to the habit of  
his childhood and his education. He is  
to be pitied for his ignorance in striking a-  
gainst the whites; what makes the situation  
peculiarly interesting is, that the small white  
community which must deal with the political  
questions, is, in spite of a most unfortunate  
want of a common idea, singularly intelligent,  
and comprises a larger proportion of educated,  
travelled, and well informed persons than any  
community of the world. The Hawaiian, with  
his strong philanthropy for the native race is  
beyond question. A community with less con-  
science, would have put the Hawaiian under  
foot years ago. But it is confronted with  
novel questions, and in its conservatism, it  
hesitates, and fears to act. The prosperity of  
the Islands is great. The Reciprocity treaty  
with the United States is making such rich,  
rich men who are making money don't prob-  
ably themselves about serious questions  
which can be put off. Here as elsewhere men  
act, though they do not say, "after us the deluge."  
As a purely commercial affair the treaty  
with the United States works well, be-  
cause it gives to the world some thousands of  
tons of sugar every year, which would not be  
produced if their treaty did not exist, and all  
the wholesome products of the country are sold  
unkindly; what the gain is socially and polit-  
ically is about to be thoroughly discussed by  
the American Congress. That it should be of  
the greatest advantage to the United States,  
lies largely within the control of the white  
people. The political history of these Islands  
is singularly interesting, as it is the experiment  
of the strong races putting themselves along-  
side of the weaker Polynesian race, and sub-  
mitting to the complete political power being  
in the hands of the latter. Wherever the  
stronger races have gone, they have crushed  
and dominated. The English have never per-  
mitted a weaker race to govern them. They  
attempt to crush it out and then put over it a  
weak, benign rule, which is the best of govern-  
ment under such conditions. If it were not  
for geographical situation, I should like to see  
these Islands under British colonial rule. Here  
every effort has been made by the foreigners  
to build up a Hawaiian nation. The great  
Powers have never hurt them, only scratched  
a little now and then. The whites have done  
much for them, given them the Anglo-Saxon  
jurisprudence, and the best of political ma-  
chinery. Great respect has been shown for  
the native dynasty. Wisdom and justice could  
not dictate a more humane policy than that  
of the whites. It glitters like a diamond in  
the crown of the Anglo-Saxon. But the Haw-  
aian can not appreciate this. The whites have  
his culture, his thought and his character. His  
is spoiled. As he pays no attention to his  
physical condition and allows his blood to be  
come saturated with foul disease, without at-  
tempting to clean it, so he is a political  
matter, and he disregards those virtues  
which make communities safe to dwell in. He  
calls himself a patriot, but refuses those duties  
which patriotism demands. He has usually  
abandoned his true, warm friends. Men  
like Dole, and Castle and Parker, born here,  
though of American descent, willing workers

and probably will be divided at the next session of Congress to become generally two states. Jintown is the expected capital of the northern part as Yankton will be of the southern. The proposed division is a natural one. Northern and Southern Dakotas are really separate. The railroad lines run east and west, none north and south. The state may be considered as settled up to "Jintown" which is about one third of the distance from its eastern to its western boundary. It is able to bear a dense population, being adapted to agriculture up to here, 100 miles west of Jintown. West of this point the land is not all so good.

We are off again "out on the ocean sailing" as it were, for the feeling of being out on sea grows upon one. One's car is a totally different thing from what it was between New York and Chicago. There is a mere more or less disagreeable conveyance from which one hops for release as soon as possible. Here one's car is one's home. We ramble from end to end, chat with fellow passengers, sit on the platform out side and gaze on the fascinating distances (the end of the rear car is the favorite resort) read, write or nap, anticipate the next meal, and sleep at night. The prairie about is rolling, undulating, picturesque, I think, then the dead level, the sea of green grass as far as the eye can reach, has an air of solitude; to leave the car would be to be left in a terrible loneliness. It is like flying through space. Here is an empire, the east is its civilized outpost or fringe. The lovely resorts of New England are well enough for purposes of rest and change, but in this region one is feared and expanded at the same time. One feels as nothing in the presence of these vast spaces, but is broadened, enlarged by the contemplation of them and the thought of their infinite possibilities. Every American should traverse the plains of the west for the knowledge and expression of it, as well as for a new pleasure. The knowledge will make him interested in and patriotic over the future, and earnest to expand the west. To give direction and character to the civilization of the West, is perhaps the deepest concern of the good people of the land.

One understands that their qualities of the Indian better from seeing his prairie home. These qualities are unknown to those who want him, to whom he is an obstruction and a danger. Western people smile at the suggestion of nobility in an Indian. Yet because of the qualities have seen in over four years educating of wild Sioux and other Indian youth, I had much rather teach them than any Western school that could be offered. The people who roam for ages over these plains, learned from the firmest above and from the earth beneath, a simple conception of a Great Spirit, probably the finest savage religion in the world. Under such expansive influences of nature, fetichism or polytheism could hardly exist, they were educated by it as we are. Such surroundings and all the conditions of their life created a type of mindhood totally different from our own and the two types mutually misunderstood and were mutually hostile as they approached each other. The Indian had rights but no power, except to have two words of advantage of the white man; the latter had might rather than right on his side, and might rather than right has settled the relation of the races. As sure as there is moral order in the world, the West, however much it may be improved, will suffer from wronging the Indian. "Practical" man do not see this; to say it is to be "sentimental." The prevailing sentiment out here about Indians is not helpful. The only prospect of a fair chance for the Indian, no far as I can see, is in the earnestness of Eastern people in the matter, combined with the few but wise and experienced friends in the West, who know better than anybody, the best methods of dealing with the Indian.

#### RISMANCK ON THE MISSOURI.

After four nights on the cars, going to bed in a comfortable hotel was a luxury. Now one breathes the fresh, bracing air. It has a quality unlike that of the East.

This town has a charming situation, in plain, built, and does not, like some, rival London and Paris, but it has two hotels and a delightful street of respectable abodes. There is a rather a neat look, but its air is its glory. We feast our eyes on the distant hills. To day the thermometer is 80 deg. in the shade, and it is hot but not debilitating. We have been out all day inspecting the great bridge across the Missouri, in charge of Mr. George Morrison, chief engineer, who kindly conducted us on this river, and made a most difficult account of the ice problem. The engineer put his granite pier where he wishes them to stand, and makes this mighty river divert its course and dig a new channel to suit his pleasure.

The problem is more than one of bridge building. It involves a knowledge of hydraulic and of geology.

The Mississippi starts from a number of level lakes and winds its quiet way till its clear flowing waters mingle with those of the turbid, rushing Missouri. The latter takes its rise among the disintegrating mountains a thousand miles above here, and literally brings down the Rocky Mountain peaks in the form of silt and distributes them all the way from Dakota to the outer delta of the Mississippi river. It is 800 feet higher here than the Mississippi where we crossed it. The Missouri is a river with a work and a purpose, it is forever loaded with all it can carry of mountain material, dropping it where it runs in quiet eddies, and making itself a building power of vast importance in the construction of our continent. It is like no other river. With all its muddy mixture, its waters are considered the most wholesome of the western rivers, and are drunk with zest as they are dipped from the turbid stream.

S. C. A.

#### INCIDENTS OF INDIAN LIFE AT HAMPTON.

Even vacation is quite a busy time at Hampton. Recreation is found in change of thought and employment, not in idleness. Nearly thirty of the Indians are among the Berkshire hills in Mass., where they not only see what is civilized, but they also have an insight into what is at the basis of all civilization—the Christian home. Being thrown upon their own resources they learn to use their English. In every way this experience is invaluable to them. About three weeks here during the summer, and are changed from School ground to the School farm. They go in squads of ten and spend two or three weeks in the country, not in loitering, but they work regularly on the farm. A few days since, I saw them hoeing beans and cabbage as faithfully as any one could. Thus they learn not only theoretical but practical farming. This country experience is helpful to them in many other ways: the work whets their appetites, and they then learn to eat vegetables, a very important and yet a difficult lesson for them to learn. Those at the school devote an hour and a half every day to study under a competent teacher. Their evenings are all taken up. "Every thing of a proper kind is done to amuse them. They have and enjoy their games. Thursday and Friday evenings the sessions first closed, one of the boys was missed from service, and when asked the cause of his absence, he said "I was vacationing." He did not go to prayers." He was asked if he stopped evening because it was vacation. He saw the point, and is now always in his place. The religious exercises are kept up regularly during the summer. There is very important. Apart from the good which results from all earnest services, claiming God's promise and blessings, it is helpful on natural grounds. It gives them food for thought, and keeps their mind from other things. It is also good in the way of discipline: they are thus held on the ground and are kept from wandering about on Sunday. Persons ignorant of the Indian mind and character would be surprised to see the quickness with which they grasp principles and the ease with which they draw nice distinctions. This is one very hopeful feature about the work with them.

They also have their hours for work in the Industrial Department. Their attitude for this kind of work is very striking.

Several different tribes are represented here, and they have little difficulties occasionally though not so often as white boys or as one would suppose. With them however the case is greatly aggravated because so soon as mad they begin to talk at furious rates each on in his own dialect unknown to the other; hence they can imagine all kinds of things.

The Indians are gaining in English all the time. A few days ago a boy who came to Hampton last October entered the Principal's Office to get something. Not feeling quite sure of his English, an officer asked in English what he wanted; he replied in English, "I want stockings." Not long since several boys were taken to a Church Convention for a two fold purpose—to let them see the body in motion and to awaken and increase an interest in them on the part of the Convention. They interest grew, and a desire was expressed to hear the Indians talk. One of the boys who had been here about three years could speak quite well, but as neither had been at school for a short time, the teacher thought he had better make a mistake and have it interpreted, but he said in a manly way, "I speak English." He did make the attempt, and the Convention gave them a vote of thanks for the good talks they had made. Indeed their efforts were favorably compared with what white boys of a like age could do. It is very hopeful and encouraging to get them to use English.

(Continued from May No.)

#### REMINISCENCES OF MISSIONARY LIFE IN THE SANDWICH ISLANDS.

BY EDWARD BAILEY.

The house in which the people now met, was a simple affair—its floor the ground, drawn with grass; but it was well filled on the Sabbath, and a goodly number assembled there also on Wednesdays, the day on which it was customary to perform the wedding ceremony.

The people came frequently in companies to be married. They were used to stand up in a row and their hands were joined—it being no small affair to get them all joined by the right hand, and to avoid misplacing the couples. Wedding garments were not plenty, but one red uniform coat made its appearance weekly, and did duty for its fortunate lessee, making him the envy of his fellows who, perhaps, could not muster a single article of foreign clothing (at this unfamiliar ceremony). All kinds of occurrences varied this weekly performance. One woman changed her mind, and when the question was asked "Will you have this man, you now hold by the hand?" after some hesitation, said distinctly, "No!" and was marched off by a constable to pay the penalty of breach of promise. Her astonished spouse in blank amazement.

A man who had defied the first jacket he ever wore, for the occasion, was made to take it off and turn it right side out before the ceremony proceeded.

Speaking of dress—it must be remembered that tailors were scarce, and few among the people had skill to cut and make clothing. They were used to the old cast-off clothing of foreigners, or very shoddily made articles procured on board whale-ships—anything being a thing into which one could squeeze. A woman would be seen with a very tall fur hat, and a very old, and far too large pair of boots, without any other addition; while another, sweltering in a thick oil-skin coat, would come to the conclusion that foreign clothing was best of all.

The women who wisely adopted the loose, flowing dress—holoku—could not procure them from foreigners who did not use them, and learned to run them together for themselves. But a clean garment was rather an exception; they were usually never washed till they were worn out, or were washed without soap, which left them of a dingy tint, and uncertain surface.

One day I crossed over the key in a canoe to a tongue of land extending out on the south of Kaneohe, where is a limestone formation which has been elevated from beneath the waves to six or eight feet above them. Dr. Judd went with us. Kumuhohe—not he of historic fame—took us over in his canoe. When we were part-way over, at Dr. Judd's suggestion, he dove to the bottom and brought up sponge &c. for our inspection. Not a little skill was required to perform this feat without capsizing the canoe.

The strenuousness of the situation could not but result to mind the contrast between our present surroundings and the familiar objects we had left. At this distance of time, it is remarkable how firm an impression those scenes made on the mind. The noble form and pleasant faces of Kumuhohe are as fresh in memory as if the occurrence was of yesterday, instead of forty-four years ago. The children of those who were then children, are now bearded men.

I know not if any one had the longing which I then and for many long years afterwards felt, to see something right. Every thing seemed to be improved. A few years' experience somewhat modified that feeling as it became clear that a few things could not be bettered. Taro is cultivated to-day no better than it was then, and is no less the staple food of the country—the prince of vegetables.

But the roads—there were none; paths lay unimproved where people walked. Then, and for many years afterward, no obstacle was removed from the way which could be easier one got over. So far as I know, American missionaries alone commenced improvements on roads, and were at the sole expense of so doing. I mean those roads which have proved permanent and useful carriage roads. Kahakili built a paved way at enormous cost of labor in Hanalei, Kauai, which laid straight over "hills and dells," with a perfect nonconscience that there was such a thing as grading, and Honolulu built roads which were really useful, but I believe that it was suggested to him by missionaries.

It was not for many years that the people appeared to see for themselves that a road was all a good thing. Many places were quite impassable, and a small amount of labor would have and afterwards did put in good order.

The native huts were often dirty and dilapidated. No wonder Mr. Bingham when he first landed innocently remarked to the Captain who was with him: "I suppose these are the houses for the goats."

There was no order or system comparatively speaking, so far as natives were concerned, in any kind of business.

Their old customs were many of them, still rigidly observed, but they would not tally with a new and better state of things. They were like the use of the bow and arrow against artillery.

It being now possible for me to go to our station, at length we returned to Honolulu and took passage for Hawaii on the brig *Pera*, Capt. Lapham; and it was stipulated that we should be landed at Kohala if possible. Capt. Charles Brewer was a passenger on board, and sometimes took a spill at the wheel, relieving somewhat the miserable management of the vessel. It was a long, tedious passage.

The attempt to land at Kohala was a very feeble one, and seemed made only to comply with the letter of the agreement, for the vessel did not go near to the landing,—if indeed it went in sight of it. So we were landed with our household furniture, twenty miles off at Kewahine. The animals of all was sent in the way our goods were handled, it seemed to afford great pleasure to injure them as much as possible. We were miserable ones—that was enough.

Once on shore at Kewahine, our troubles were not at an end. There were five of us: Mr. Bliss with his wife and infant child; and my wife and self. We had a little dry food with us, but no water fit to drink, and no means of cooking. However, Mr. Bliss went about half a mile to an establishment of foreigners, to see if he could get anything to help us, and the rest of us managed to kindle a fire and make tea, and boil a little rice, and make poi in a pail cover, and thus get together something to stay our hunger. We waited a long time for Mr. Bliss, but he did not return, and our hunger became so intolerable that we decided to eat such as we had. It proved afterwards that Mr. Bliss had been invited to stop and eat supper with the foreigners, which he did, and got a good, warm meal.

We might have done better had we known it, for Mr. John Young, one of the two foreigners, allowed by Kamehameha I, to remain on the island, and the father of John Young, the sometimes premier, was John Young, once Governor of Maui, lived near by, and would no doubt have helped us. It being late in the evening when Mr. B. returned, we were obliged to stay over night in the little house built by Mr. Lyons of Waimea, on the shore. Next morning we started off to the hills for Waimea, 12 miles distant, with an elevation of 2700 ft.

It was customary in those days for ladies to be carried in a palanquin—a sort of sedan chair, suspended from a pole borne by two natives, and I presume that our wives went up to Waimea in this manner, but memory has let go her grasp of this among other things, and I only remember how the way seemed to stretch out and become hot but interminable, as it still has the habit of doing, while we ascended mile after mile, the often steep hills. If memory serves me, we were met on our way up by the one horse of the station, but it was too lame to be of any use.

In due time we reached the cool, delightful plain of Waimea, and were received into the hospitable dwelling of Mr. Lyons who was stationed here. Mr. and Mrs. Knapp of our company, were also located here. But it was now a house of mourning. Mrs. Lyons, who was sister to Mrs. Bliss, died, during our general meeting at Honolulu.

At that time the forest came within a short distance of the village of Waimea,—now it has receded for many miles, leaving a bare, grassy plain.

There were not many natives living in the place; they preferred living near the shore, both for warmth and convenience of fishing. Large herds of cattle fed on the plain or among the forests, attended by more than half savage white men, who practiced cruelties on the cattle too bad to be told. It is these herds which have been the cause of the destruction of the forests, which is still going on.

Soon after our arrival at Kaiman, Mr. Lyons, Mr. Bliss and myself made the tour of Kohala, that we saw comes might be acquainted with the people, and make arrangements for taking up our abode there.

I think the whole journey was performed on foot. Mr. Lyons preferred walking and so did I; but I became exceedingly weary. It was too much, but at that time was scorned fatigue. At this distance of time it is easy to see how several valuable lives might have been prolonged by more moderation in taking hold of the work. Mr. Knapp entered his work among the schools with great energy and broke down at once, remaining a layman for a few years, and died. The same might also be said of several others. Mr. McDonald, Mr. and Mrs. Locks, Mr. Andrews and Mrs. Castle, all died within a very few years.

(Continued on Page 99.)

## LETTERS FROM HAMPTON GRADUATES

LITTLE ENGLAND. AMERICA IN AFRICA.  
IN ORDERS. GRATEFUL FOR PAPERS.

## LITTLE ENGLAND.

Little England is the old "colony" name of a district lying on the west side of Hampton Creek, opposite the Normal School. Here a little school house was built a few years ago by the combined efforts of the colored inhabitants and some of their white friends. A Hampton graduate gives the following story of her little school, there.

Little England, Va., Dec. 31, 1881.

Mrs. — Dear friend: A few Sundays ago, Miss —, who teaches in our Sunday school, told me that you wished me to write and tell you about my work here.

I have taught here nearly two terms. Last year I taught eight and a half months. The first month of the year I taught at the Normal School, which was aided by Mr. B. — and Mrs. A. —. The children paid ten cents a week in work or cash, and the above named lady and gentleman paid the balance and furnished the fuel.

Mr. B. and Mrs. A. met the people at a meeting which they held to decide how they should run the school at the close of the county hall, which should be signed by the parents, children and teacher. All the children that could not pay ten cents, signed a due bill. At the end of every month I took these bills to Mr. B. or Mrs. A. with account of the cash received, and they jointly paid the balance, making my salary the same the county paid.

My second term began the second of October; so far my work is very pleasant; though my school is not so orderly as I could wish.

Both last term and this, we have had a very nice Christmas tree. Last year it was given by Mrs. B. and Mrs. A. This year Mrs. B. is not here, so Mrs. A. gave it alone; it was quite a large tree. There were twenty-three children, and each got a present beside a bag of candy and an orange.

The people here are very kind and pleasant, and the most of them seem anxious to have their children go to school. A few of them seem careless and think more of work than anything else. Nearly all of them have names of their own; some of their houses are cold and uncomfortable, because they are not able to finish them inside yet.

Last year there was a great deal of suffering among old people and little children. But for the missionary society at the Normal school, many of them would have suffered severely. But this good society with their timely gifts of food, fuel and clothing, relieved many of the most needy during the hard weather. This year the weather has been mild, and there has not been much suffering so far; I know of but one case in my neighborhood.

Ever since I graduated, I have worked in the Sunday schools. I first taught in the A. M. E. church in Hampton, then I took the day school here; since then I have taught here. This term I am teaching night school for the larger boys. I can't say much for that, for most of the boys are careless; they seem to want to learn, but don't care to take pains. I spend most of my spare time, (which is very little) in visiting and reading for the old people and those who are sick.

I am, yours truly, B.

## AMERICA IN AFRICA.

A young man who has done good work among his people in the North, gives an interesting picture of their prosperity, and sees in it the hope of Africa.

New Jersey, May 15th, 1882.

Kind Friend:—

Again the pleasant duty devolves upon me to write you in reply to yours of recent date. I was glad to receive yours, in fact I am glad at all times just now to receive news from "the outer world." The long mornings and afternoons give plenty of time after deducting that necessary for my studies and other daily duties, for the perusal of letters. Saturday last I and I took a joint by railroad eight miles into the country to visit the leading colored farmer of this section. It would have pleased me to have looked upon those broad acres of wheat on one side of the road and of clover on the other. Nearer the spacious brick dwelling was a large field of corn, the sprouts of which were just discernible. Directly in the rear of the house and to the right of the barn was a thrifty apple orchard. There were five horses and two mules. In the pasture with the horses

were colts aged respectively two and five weeks.

A bright boy came up driving before him, with the assistance of a pure blooded shepherd dog, between fifteen and twenty milk cows whose milk is forwarded daily to a Philadelphia milkdealer. In a barnyard could be seen sheep, but as a fine steillon was standing in a stall with open door near by, I did not pay much attention to them. This animal received the prize at the County Agricultural fair. In the barn among other implements and machines were a combination reaper and self-binder, a threshing machine, and improved cornsheller. I could not reflect upon the words of that eminent divine who not long ago said to the effect that Africa might be forever annihilated and the world would be no the loser thereby.

Tie true that Africa of to-day has no laurels in literature, science, or art, yet a thrust from such a source seems quite unnecessary.

America has not lost but gained by coming in contact with Africa, and Africa in turn is to receive an awakening from America. Even now the encircling gloom is receiving faint streaks of the dawn which shall usher a day when the lustre that emanated from the land of the Pharaohs, from the cradle of ancient love, shall become more splendid through the achievements of African-Americans. Our people have a work to do and are doing it. I am preparing for the closing exercises of my school which will be held upon the second Friday in June. Every thing just now is like clock-work, and I consider this the successful year of my teaching.

Very respectfully yours, P.

## IN ORDERS.

An under graduate who left Hampton to study for the ministry in the Episcopal Theological School at Petersburg, writes thus of his ordination to the diaconate.

Virginia, March 20th, 1882.

My dear Teacher:

I am sure you are acquainted with the fact that I have been presenting my studies in the P. E. Theological school in Petersburg, for the last three years. I was examined in Richmond on the 27th ult, and was ordained to the diaconate by Bishop Whittle on the 9th inst. I will insert a few sentences from the Index *typicus* before he affixes my ordination. "James S. Russell, very worthy and respected colored citizen, will be ordained to Diaconate's orders in the Episcopal Church on Thursday morning next at 11 o'clock, at St. Stephen's Church in this city." Ac.—10th, INTERESTING SERVICES. ORDAINATION OF COLORED MAN TO THE DIACONATE. St. Stephen's Church was crowded yesterday morning at 11 o'clock to witness the ordination of the colored citizen, Mr. James S. Russell, of this city, to Diaconate's orders in the Episcopal Church. Morning prayer was read by Rev. J. H. M. Pollock and Thos. W. Cain, two-colored Deacons trained here.

The sermon was delivered by Rev. Thomas Spencer, Rector of St. John's Church, on Matt. v. 16, "Let your light so shine before men, that they may see you, and glorify you father which is in heaven." The candidate, Mr. J. S. Russell, was presented by Rev. Giles W. Cook. The Litany and ante-communion service were read by Bishop Whittle, who afterwards asked the usual questions, and ordained the candidate. The Gospel was then read by the newly ordained Diacon, and a collection was taken up for the building fund of a new colored church in Lawrenceville, where he will begin his labors. Rev. Mr. Russell is a native of Virginia, and has been a student in the Theological Department of St. Stephen's School, under Rev. Thos. Spencer's direction, for three years. He passed a highly creditable examination. He is the fourth colored man ordained to the ministry in the Episcopal church in Va.

I arrived here on the 16th, and am very well satisfied thus far. In the Master's vineyard there is plenty of work to be done; and especially in this part of it.

This is a small village, yet abate can boast of Episcopalians, Methodists, Baptists, and "Zion Union." The white Episcopalians are very kind to us and give us the use of their church until we can build one. A church seat has been paid for and a little money is in hand for the building fund. We earnestly pray that God will put it in the hearts of some dear friends who love the cause of Christ and his church to aid us in this our great necessity. The membership of our church numbers only eighteen at present, but there is a prospect of several others joining. These people are in earnest about this work and are willing to do all they can. I believe they are true and devoted Christians.

I often think of your kind instructions given in the Sunday School, and particularly because I have in my possession a copy of Brownson's *Colored People*, given me by you. I had hard work to perform in school and so I did, yet there is harder work to be done here, still I have enlisted in the Master's

cause and hope to be ever found at my post, doing gladly and willingly the work assigned me.

Please remember me kindly to both of the General, to Miss M., and the rest of the teachers that I am acquainted with.

I enclose you will find 15 cents for which you will please send me the April and May Nos. of the Southern Workman. I expect to subscribe for the paper when I come down.

I hope the school is rapidly progressing.

I am sincerely your friend, and old pupil, R.

## GRATEFUL FOR PAPERS.

Much good has been done in the last year by regular distribution among our graduates of papers from our reading room and contributed by our friends. One grateful recipient thus acknowledges them.

Virginia, January 18th, 1882.

Dear Mrs. D.

I have to thank you kindly for the package of papers sent me. Besides imparting a valuable lot of information, they will help me to while away many an hour that would otherwise be idle.

I have been teaching here ever since October, and so far, find it a very agreeable occupation. I can roll forty scholars, and am glad to say that their attention to studies, and prompt attendance, as well as good behavior, are indeed commendable.

The parents have been extremely kind to me, even very much interested in the question of education, and do all in their power to forward it.

When I went to the Supt. of Schools for this county to be examined, I was informed (and it seemed strange to me) that I was the first teacher from H., that had come under his surveillance, and that he "had long wished to see some of their teaching." It is needless to say that I have tried to do justice to dear old Hampton and its teaching.

Please remember me kindly to Gen. Armstrong, Gen. Marshall, Miss M., and all of my former instructors.

Sincerely yours, H.

## SCHOLARSHIP LETTERS.

"Scholarship letters" are written yearly by the pupils at Hampton, in acknowledgment of the \$70 contribution to the school from Northern friends which meets to defray part of their year's tuition. The following specimen of these may interest other friends in their "short and simple annals."

FROM A YOUNG WOMAN IN THE JUNIOR CLASS.

Dear friend:

It is with much pleasure that I write again to thank you for your kindness to me in paying up my scholarship again. I have been in Hampton one year, and it has been the happiest year of my life.

When I look back over the past, and see what I once was, and what I am now, I cannot but be thankful enough both to the Lord and all the kind people He has caused to be interested in me and in my people.

I will tell you about my vacation. Our school closed the 10th of June and I left on the 11th. There is a young girl in my class whom I love very much. I could not bear to go away and leave her to stay here all summer, for she could not go home, as she lived in Georgia, and it cost her as much to go home as one year's school does. So I thought it would be better for her to get winter clothes with than staying here all summer. I knew we would both be happier together than apart. She is a very nice girl indeed, and I love her more than I can tell. As I was saying, we left school the 11th of June. We only have one boat a day and it leaves here in the morning for Norfolk, so as we had to go in it and take the New York steamer which leaves at six o'clock in the evening. We got to Norfolk about ten o'clock, so had the rest of the day to spend as we liked. There was several of our teachers and students going up with us. The teachers thought it would be nice for us to see the Navy Yard in Portsmouth, so we had not seen it. Portsmouth is right opposite Norfolk, so we had only to cross the ferry. We saw a great many interesting things, but the most interesting was a man of war lying in harbor; we went all over the vessel, and I never saw so many curious things in my life before. We spent the day very pleasantly indeed. We went back to our boat about five o'clock, thinking we would start promptly at six o'clock, but we did not, for there was so much freight to be put on board that they did not start until half-past eleven o'clock.

But we did not mind that, for we spent the evening very pleasantly singing and telling stories. We arrived in New York about six o'clock Monday morning. We went home with one of our school mates and stayed with her two days, and the next to Newark, that is my home. We were there two weeks with the lady whom I lived with before I came to Hampton. Then we went to Irvington and staid one week, from there we went to Asbury Park, where I go every summer to earn money to get my winter clothes with. We went on there on the 1st of July and stayed until the first of October. Our summer was a very pleasant one indeed; we had to work very hard, but we did not mind that for we were with such nice people that it was more of a pleasure to work for them than not. We went bathing and boating every time we had the time, and I don't think there was any thing we enjoyed more than the bathing.

Several of the boys whose homes are in New Jersey came to see us while we were there, they enjoyed their visit as much as we did, for Asbury Park is the prettiest place that I ever saw, it is right on the sea coast, and there are two of the prettiest little lakes I ever saw. The Park is right between them, the one on the south is called Wesleyan lake, and the one on the north is Sunset lake. Wesleyan lake is filled with pretty little boats of every kind, and they are lighted with Chinese lanterns, and there are lamps all around the lake, and when they are lighted up it looks just like fairy land. Sunset lake is filled with little islands, the largest one is called St. John's Island, there are several houses on this island where they keep all kinds of things to sell. As I said before, we were there until the first of October, then we went back to Newark to get ready for school. We sailed for Norfolk on the eighth of October. We had a very pleasant trip. We arrived in Norfolk about nine o'clock Sunday night, we did not leave until 11 o'clock morning.

We could not go to Hampton till three o'clock in the afternoon, so we went to see two girls that graduated last year, and whose homes are in Norfolk; we spent the day very pleasantly with them, and at three o'clock we started for Hampton; we got there just at dark, and a few minutes before tea time. I was very glad indeed to be back to school again. We came here on the 10th of Oct. and went in school the 11th. I think I told you I was a Preparatory last year. I have been promoted to "A" section, Junior Class. I have to study very hard in order to keep up with my class. My studies are Arithmetic, Grammar, Geography, Spelling, Reading, Writing, Natural History and Vocal Music.

We have a Missionary Society in our school for the benefit of the old colored people living around Hampton; they appoint different ones to go and read for them as they cannot read for themselves. I have been appointed, and enjoy it very much indeed. Some of the people are very glad to have us, and others do not like it so well. My regular work is to clean Miss G.'s room, and I also sew in the girls' Industrial room on Wednesday, and when I have time I help Miss M., our housekeeper. I think I have told you everything that I thought would interest you, so will close with many thanks for myself and all my people.

Respectfully, J.

Miss Dora Brockert and Mr. A. H. McNeill, both of the class of '77, were married in Norfolk, Va., on the 10th of July last. The Southern Workman unites with their classmates in trusting that this step may "divide their sorrows and double their joys."

## HORDSFORD'S ACID PHOSPHATE.

VALUABLE MEDICINE.

DR. H. PARMELEE, Toledo O., says: "I have prescribed the 'acid' in a large variety of cases, and have been most fully satisfied that it is a valuable addition to our list of medical agents."

## Not Too Cheap To Be Good.

"It's too cheap to be good" — not a bit. "Thermaline" is cheerfully acknowledged by the thousands who have used it to be the best medicine for colic they have used, no matter what the price. A physician says, "A 25-cent box of Thermaline cures a patient after he had taken over \$3 worth of quinine and pills." Quinine is so dear as to be almost beyond the reach of the poor.

We give special prices on Printing and Binding to our best customers, to cover freight charges. — Correspondence solicited. N. B. STRAIN, Proprietor, Hampton, Va.

VOL. XI.

HAMPTON, VA., OCTOBER, 1882

NO. 10.

## EXCURSION OF FIVE POINTS CHILDREN.

One of the most beautiful forms of modern charity and one which is the logical outcome of the philanthropic experience of the world, is the work which is being done for poor children; those little waifs and strays of humanity, who, in the past, have been disregarded except as they come under the jurisdiction of the law. We have learned that the only real check upon crime lies in preventing the formation of criminals, and therefore the wisdom of modern philanthropy is concentrating itself upon the children. Instead of punishing those who are already guilty, men are trying to save those who are still innocent, and our illustration for this month shows one of the ways in which this is being done.

In most of our great cities, summer excursions are now given to poor children with their mothers. They are taken for the day to some pleasant country place, are supplied with good food and proper amusement and are accompanied by watchful and experienced care takers, who do all in their power to make the day a bright spot in the memory of their charges. The good, both physical and moral, which results from these excursions, is very great, and where they are prolonged, as is frequently the case, into a holiday of a week or month, the effect is really incalculable.

Such a scene as this picture of a "Five Points' excursion" represents, makes one hopeful for humanity, for it seems typical of what we hope to be humanity's future. Out of the darkness and filth of these vile city dens, the children are lifted into sunshine and pure air, they have at least a glimpse of what life may be made in God's beautiful world, and who can tell what inspiration may come from it!

## AMONG THE COLORED PEOPLE.

No. 2.

GRANNY.

Some years ago, a very old colored woman, a mere bundle of rags and tatters, bent nearly double, and supporting herself with evident difficulty upon a long stick almost as pole, came to my husband to rent a house. She professed herself abundantly able to pay rent, and in answer to questions as to means of living she stated that she had three children, a grown son, who gave her part of his earnings in consideration of her washing and cooking for him, a married daughter whose husband was a thriving mechanic, owned property, and was evidently considered the wealthiest member of the family, and lastly "a single darter" that had three children—the three children being intrusted to the old woman's care, while their mother went into service. Mrs. Drusilla Denison, as she called herself, though she was generally known as "Aunt Drusy" or "Granny," was always particular in speaking of her children to distinguish them from her two daughters, and I learned at last that there was a long standing feud in the family, growing out of their relative positions. The married daughter, whose only child was a grown son, was willing to give her old mother a home on condition of her breaking off all connection with the disreputable sister and her children. This proposition "Granny" always positively refused to accept. She admitted all that was alleged against her "single darter," and acknowledged that her own condition would be greatly improved by going to the home of the married daughter. But she clung to the children, a mongrel brood, declaring stoutly that she "had raised them, they were her own flesh and blood, and she could not and would not part with them." Even when the married daughter, moved by the old woman's tenderness for the children, and the beauty and winning ways of a little curly haired brown skinned maid, had offered to take that one child as her own, and provide comfortably for the old woman, if she would break off from the "single darter," and the rest of the offending offspring, Granny stubbornly refused to listen to any plan which could separate her from her nurslings, and the well-to-do and respectable daughter had departed in great

wrath, vowing that she would henceforth wash her hands of the whole tribe.

I regarded one would be tenant with curious interest, while she was engaged in the discussion of her ways and means, which resulted in her renting a small cottage with three rooms and a small garden.

The old woman was evidently of some race quite different from the type of Negroes common among us. Her skin was smooth and soft, very black, but of tint and texture altogether unlike the sooty hue usually seen here. Her hair, heavily curled, long straight nose and thin, finely curved lips, belonged rather to the Greek than African features, and there was about her head and neck a certain weird look, to which sharp glances shot from beneath long narrow eyelids and arched brows greatly contributed. Her whole appearance suggested the idea of some ancient sorceress such as in ages past among uncivilized people or even now in heathen lands, might cause all disasters which chanced to befall her neighbors to be laid at the door of this venerable dame.

Having concluded her arrangements about the house to her own satisfaction, Mrs. Denison placed a short pipe between her lips, settled the remains of a man's hat over the skulls of a dinky cap, grasped her stick firmly, and calling to two or three dirty children of all colors and kinds who had been playing in the mud at some distance to follow her, she suddenly rose to a majestic height before my eyes. While I gazed at her in astonishment, she now in her old age, might cause all disasters which chanced to befall her neighbors to be laid at the door of this venerable dame.

While I gazed at her in astonishment, she now in her old age, might cause all disasters which chanced to befall her neighbors to be laid at the door of this venerable dame.

While I gazed at her in astonishment, she now in her old age, might cause all disasters which chanced to befall her neighbors to be laid at the door of this venerable dame.

July to October inclusive, this paper is re-  
duced to an eight page form, resuming in  
November the twelve page form.

## PASSION IN POLITICS.

Political debate, like theology, is usually bitter and aggressive. Whichever men are called upon to consider what the well being of society demands, as expressed in political affairs, they pack up and stow away their reasoning powers, and give full play to their feelings, become angry, vituperative, jealous, unkind, and unfair. The average politician and citizen who thinks on political subjects assumes at once that he is himself a person of immaculate virtue, and profound wisdom, but his opponent be considered a creature of infinite meanness and depravity. Why is it that men lose their heads in these matters? This is not a new thing in political discussions. In the days of Washington there was the same disposition to vituperate an opponent. "Father of his country" was called a traitor, a sneak, an ignorant fellow, by the newspapers of the opposing party, and men like Hamilton, and Jay and Morris were covered with abuse. There is, to day, the same tendency to foolish, wild talk about an opponent. It has become almost a mania. Lawyers are roundly paid by their clients to abuse the other side, but in political matters all men are judges themselves of the right and the wrong, and should be cool, temperate, careful and slow in their judgments. A man is thoroughly trusted in private life, is honored for his commercial and business integrity, but the moment he enters into politics his friends and townsman who do not agree with him, believe and call him a fool and a fraud. This man who once respected him begin to throw mud at him. There is no charity in political thought. Every candidate

on the stump says "if you elect my opponent, the country will go to the dogs." But it must always happen, that some opponent is elected, and somehow the country does not go to the dogs. Every Whig predicted that a Democratic administration would ruin the country, and every Democrat said the same thing of the Whigs. The Republicans and Democrats say so of each other now. The Roadrunners of the State of Virginia, the Democrats and the Republicans predict that if the other parties gain ascendancy in the State, ruin is sure to follow. But ruin does not follow. Men till their farms, and merchants trade, and ships sail, and children are educated, whichever party is in power. The great interests of the country will not be put in danger by any political party. The people will insist on safety to life and estate, and as for the rest, they are quite willing that politicians may squabble over minor matters. A great law-abiding people can not easily be ruined. Reforms are always needed, but the country is not "going to the dogs" because they are not adopted at once. At bottom, all men have the same interest in the State, and no man will advocate a policy which is sure to ruin him.

In no place is political discussion more "heated" than in Virginia. All the methods of warfare known to modern science are used. Even the duelling code, which is supposed to modify the use of language, has lost its control. Hot shot are flying in every direction. If the newspapers state the truth, there is not a candidate for office in the state who can be trusted, and we are left to wonder why the candidates are not in jail for the numerous crimes they are said to have committed. Over the state there is rolling a deluge of vituperation. The curious ridiculous aspect of the case is that each candidate spends much force of brain and muscle in addressing crowds of fellow citizens, but these crowds are made up of his own adherents, and the cases of instant conversion are uncommonly few. Now all this political excitement is a bad thing for the Negro. He may well be wholly at sea, if his experienced and educated white brethren can't agree among themselves, or fall to beating each other. However, as the Negro is in politics and must take some stand, it only remains for him to consider well what is said, and make up his mind. "Come and let us reason together," is a good maxim. "Come and let us wrangle together," is a bad one, but the one which the politicians propose. The result is that everybody is wrangling, few are reasoning calmly, and the triumph in an election, is more like that of a prize fight, than the calm decision of matters which affect more or less the well being of the state. There are two sides to every question, and the first lesson of political wisdom is to recognize this, and it cannot be recognized by men who lose their tempers, and denounce each other.

## EDITORIAL CORRESPONDENCE.

BAD LANDS, MONTANA TERR., Aug. 7.

Breakfast on the Little Missouri River, on the line between Dakota and Montana, where the Bad Lands begin, and continue for over two hundred miles. No pen or tongue can describe their wildness. A dervish of our party, who has been in Egypt and Palestine, says it is thoroughly the atmosphere and effect of the Orient, and regrets that he delayed so long in seeing his own country. The Missouri suggests the Nile; the sunsets especially are Eastern. This is like a new world, nearly two thousand miles from home and increasing the distance every hour, we seem to have broken away from ordinary life and entered on another sphere. There is a strange wildness in the hills that roll or stop short in an abrupt step, revealing their structure. They are piled together in most striking confusion, such as volcanic action might create; there are undulating grassy fields abruptly ending at the feet of suddenly towering hills, where, stratified fronts look gloomy and stern. Nothing could be harder to describe; there are no standards of comparison. There is abundant grass, an occasional stream, and in every direction reddish brown ranges of hills constantly shooting up into conical points, zigzagging over the country and presenting a sharp, irregular outline that gives the region a curiously strange look, as if the Creator had

left the work half done, meaning, perhaps to return some day and finish it. It is all a good grazing country. Wild sheep and antelope abound.

Montana, Idaho, Wyoming, Colorado and part of Nebraska and Nevada are a mineral and grazing, rather than an agricultural country. The conditions of a grazing country are 1st, a climate in which the grass will cure itself during the summer heat, providing dry lay for the stock for seven months in the year. 2d, a surface so cut with valleys and gulches that cattle can find refuge from the "hizzards" that destroy whatever life is exposed to their fury. 3d, a water supply.

Cattle cannot winter on an open prairie. Generally agriculture and grazing do not go together. Dakota is agricultural, but cattle can only winter on her river bottoms where irrigation is practicable. This is true of all the grazing states, but crops from irrigation are much surer than ordinary crops. It is said that at least one out of five wheat crops is a failure. With irrigation, there is no failure, but its area is limited. Cattle are a comparatively sure investment, but the security varies in different places. It costs about \$1.00 to raise a thousand pound steer from a calf, this includes cost of herding, etc.; food costs nothing; the rate to Chicago is \$7.50 a head. A thousand pounds of Montana beef is 10¢, and costs a little over a cent a pound, it brings from four to five cents on the hoof, or about eight cents at. It costs in New York or Boston, on the table, from 25 to 35 cents a pound. Raising is more risky but a pound of meat is more profitable; yet the cattle raisers have had terrible losses in bad winters, sometimes a third of their herds. Buffalo grass and bush grass are the food of the country, the latter grows in bunches, not in a compact mass, and is much the best for stock. The grasses stand from six to fourteen inches high, and remain green till about midsummer, when they become cured and turn to a yellow color. Making an excellent hay under the summer sun and dry fall weather; a wet fall is ruinous to this hay.

The broken, rough country where this grass grows, is not only suitable for stock because of the shelter of its ravines, but because the snow is carried away from the exposed points by wind, leaving the grass uncovered. Cattle will survive a death in a level region, though they learn to paw away the snow with their hoofs to get at the grass.

## A NEW COUNTRY.

Mr Geo. S. Morrison, engineer of the Missouri Bridge at Bismarck, said that he came to this region much prejudiced against the South Pacific railroad, but has become convinced that the continental road would open up a new and important area as this. It was from its local trade into the great markets of America and England grain and beef to feed their millions. The rail over it is full of interest and comfort, "cars are good, and officials polite and accommodating. The observing traveller is constantly interested and impressed. Another year the trip will be even more desirable because of the completion and perfection of the road.

We are now on the banks of the Yellowstone River, along which we travel for miles, the wild, weird Bad Lands follow us. The climate of Montana can hardly be surpassed, for the greater part of the year it is pure and glorious sunshine, healthful and invigorating. Occasional extremes of heat and cold are felt, but in this dry, pure air, one does not suffer much. The Fargo "Argus" thus overflows over western weather.

"This is the perfect summer day; day of the prairies, far reaching and splendid; day of the cloudless skies, the broad world overarching, day of the kindly sun, burning, majestic, life giving. It is the day of the southwest breeze; gently they fan us and kiss us with the sweet, enrapturing kisses of coolness and warmth interblended. Over the prairies they come, bearing the perfume of blossoms, of the silk of the tassel corn, and the gold of the waving wheat-folds, and the odors of pastures and woodlands. The sweet, melodious breezes, welcome to all and a blessing, lifting the tresses of youth and smoothing the brow of the aged, with the balms of the air, and waving us on, and over the world they are going, to the waiting, the sick and the mourner, to the happy and the far away. Great are the days of the prairies; broad and vast, and wonderfully deep, far beyond stretching and falling into the clear horizon of azure and opal; wondrous the skies far above us, bending majestic as over an ocean, the earth in their wide grasp upholding."

Stories of fabulous profits are in circulation. So and so bought a few acres of land for a trifling sum, and within five years sold it for \$10,000. It is now worth thirty times that. Land in frontier towns is sometimes at the highest prices. The very air makes men speculative, for it has an effect upon the nerves that often makes it too severe for women. Men

and children are said to thrive better than women who often complain of headache and neuralgia. An English gentleman on our car, out on a hunting expedition after a short talk with a young ranchman, has arranged a partnership of English capital and American brains.

The government land grant to the Northern Pacific is of all value, judging from miles of "Bad Lands" along our way, which continually interest us by their artistic forms. Ancient castles, extinct volcanoes, crumbling towers, meet the eye and look like the real thing. This is the dough of creation, an unbaked part of the earth. It is literally cooking now, for in every direction, the black strata of lignite are smouldering, and will in ages become coal. It now has about five per cent of the heating power of coal and it is the fuel of the country, requiring stoves made for the purpose. An addition of one-fifth Pittsburgh coal makes it burn well.

All day we sped along on the banks of the Yellowstone, which keeps fall flow and width as we ascend towards its source. Without a tributary it winds its muddy way through a barren, silent region for many hundred miles. At long intervals there are settlements, as when being Miles City, a town of about 3000 inhabitants, where we had supper. The beef steaks are excellent in this region. Montana potatoes are marvelous.

## NOODLING IT.

Wednesday, Aug. 9th. Passed last night at Forsythe, where we "piled in" at the rate of four to one small room. This was the beginning of roughing it. Yesterday, at Fort Keogh, a military post, now garrisoned by six companies of the Fifth Infantry, Gen. Whistler, commanding. Here we had the pleasure of meeting and making kind friends. Fort Keogh is fitted for a regiment, having extensive and well built wooden barracks and some fifteen excellent buildings for officers' quarters, each one a double house, besides numerous smaller houses and outbuildings all bordering on a fine prairie ground. It was hard to realize where we were when sitting in a tastefully furnished parlor with ladies in graceful attire—charming homes amid the Bad Lands—"Indian wood his dusky mate, and the wild fox dug his hole unscared." It was a pleasure to meet among others Capt. Henry Horn, who, for three years was commandant of cadets and military instructor at Hampton Institute.

Among the many attentions and kindnesses of our visit, was an entertainment by the Fort band, of twenty five instruments, which, after guard mount in the morning, marched in front of our quarters and discoursed exquisite music; they played with unusual taste and feeling, and sustained their reputation, which is second to none in the army. The accomplished and ingenious leader has arranged an Indian campaign to music. It begins with the "reveille" solo on the cornet, then the "long roll" on the drum, "horns and snare" with other familiar bugle calls, interspersed with brilliant effects by the whole band. Then came a perfect imitation of an Indian war-song with its weird, peculiar cadences. It was strange to lift up our eyes to the wild, barren hills about us, and listen to the flowing harmony that charmed us. A hand at a distant outpost like this is an unspeakable comfort to the garrison. Keogh has the reputation of being a lively post, for the officers and their families, thrown upon their own resources, especially before the railroad reached them, entertained themselves with concerts and theatricals as well as by hunting parties and expeditions to points of interest.

These "forts" are not in the least fortified. There are no earthworks nor sign of defensive arrangement. They are merely a neat, orderly collection of buildings, around a central square. This is the first summer idyl of the history of Fort Keogh when the troops have not been sent after Indians. The country is so settled, so solid and inextinguishable the advance of civilization, that the red man is falling back helpless and submissive to his fate. Heretofore, winter and summer, officers and men have been constantly on the alert, marching at midnight or midnight when it was 20° or 30° below zero, on campaigns of one week to two months, in the inglorious work of fighting Indians. It takes more nerve for Indian fighting than for ordinary warfare; it is extraordinary in its physical strain and hardship, in the prospect of mutilation and torture, and the frequent case that the Indian is never dined in spite of it all, but perhaps the severest strain is upon the officers' families. The devoted women who follow their husbands to the far frontier outposts, undergo fatigue and inconvenience such as they laugh at afterwards, but which are inconceivable by those who live in comfortable homes, and added to this is the anxiety of waiting news from the absent who are fighting an enemy who has no mercy and gives no quarter.

ritual change, the relief and benefit of new scenes and new mental activities and experience consequent upon observing them and becoming interested in them. Then, for those who will give time and opportunity for the scene to make its appeal, time for their minds to respond to its influences, there is something deeper and higher than this. There is a quickening and uplifting of the higher powers of the mind, an awakening of the imagination; the soul expands and aspires, rising to the level of a new and mighty companionship. Self respect becomes more vital.

It is easy to write too much and too particularly of all this, for such experiences and feelings, like all the higher moods and activities of the soul, have something shy and elusive about them, and it is not often best to try to describe them. And Niagara itself, in its sovereign dignity and perfection, shames and silences all effort at description or eulogy. It is to be seen, felt—not talked about. And as the weeks and months pass while I dwell here, by the very shrine of this awful beauty, this veiled and shrouded grandeur, I become more and more unwilling to write about it, and can well believe that if, one remained here long, all attempts at expression regarding it would appear inappropriate and futile, and that silence would seem the only true tribute.

#### INCIDENTS OF INDIAN LIFE AT HAMPTON.

A short time since the School had two distinguished Indian visitors, Pn-lo-wah-ti-wa the Head political chief and Nni-utchei the chief ecclesiastical leader of the Zunis. They were from Mr. Cushing's party who came to visit the East and of whom we have had interesting accounts in Scribner's Magazine for August.

Their dress was very elaborate and adorned with plumes, and silver buttons and hangings. Each one wore silver ornaments worth \$100. They seemed to be very intelligent, and were evidently impressed by what they saw at the School. Their manners were good and graceful. Learning that the students were not allowed to smoke, they would not light their pipes until they had asked an officer's permission. Very striking was their mode of greeting. They take a friend by the hand, pass the joined hands to the friendly smile first, then to their own, and breathe prayer or blessing upon them.

Robt. McIntosh, one of the students here, talked with them in sign language, and evidently enjoyed doing some of the honors of the School.

Another important event is the arrival of five new students and one whose position in the School is not yet defined, as it is difficult to find a class for him. He may prove to be a chief. This is Hampton's first experience in training married people in homes. Miss Fletcher brought from Omaha two families, in one of the families there is a fine looking baby of 18 months. In order that his future career may be watched, we give his name, Edward Stabler. He is said to be like all babies the world over, and speaks a language understood by the inhabitants of Babel.

The father, like all other fathers, is proud of his child, and the mother likes to have notice taken of it, but is more stoical.

Lucy Le Flesch is the sister of Bright Eyes, and, according to custom, retains the maiden name. It is a curious fact that the husband takes the name of the wife. All except the baby, have made a beginning in mental work and are teachable. Lucy is more advanced than the rest. The men are at work in the carpenter's shop, having made choice of trades. The women can sew a little, but are not experts in taking care of rooms. They prefer to put the sheets on the outside of the bed, and blankets in the place of sheets. They are willing to learn however.

The health record has been unusually good this summer. Interest in the studies is well kept up. Those who have chosen to work all day and attend the night school are doing very well. The teachers report special encouragement from the fact that the older ones are striving to gain self-control to overcome sensitiveness.

The reports from the training shops are excellent. The work during the vacation has been more of a general character than ever before. The carpenter have made additions to the Commandant's house, the Engineer's house, 20 rooms in Stone building for dormitories, and have made wardrobes and tables for the Indian girls' building.

In the Tin-shop, over 7,000 pieces of tinware have been made for the Indian Department since the 30th of June. In addition to the tin work done on school grounds.

The harness shop has completed its contract for the Interior Department, and is now engaged on ordered work.

A fine set of coupe harness has just been finished for a lady in Newport, Rhode Island. The printers have been busily engaged at the new building for Indian girls. It has

been painted and kelsoned in tints throughout, in part by the Indians.

The manager of the Industrial Shops says their progress is more marked than at any time during their stay here. Much less time has been lost from sickness and other causes. There is also a stronger disposition to stick to trades.

All the contracts for the Interior Department are completed, and 55 cases nicely packed have been shipped to the different Agencies.

It is a good thing to have this work sent home, it pleases the parents and stimulates the children here.

We take pleasure in welcoming a new subscriber to the Southern Workman, a subscriber of whom one who knows him says, "Such as he are beacon lights along the narrow path." Ke-o-kuck has a daughter at Hampton (who bears her father's name), and is therefore especially interested in the school. We publish herewith the note accompanying the subscription.

Sac and Fox Agency, I. T.

Pub. Southern Workman.

Add to your list of names for this place. Ke-o-kuck, a Sac and Fox chief. Other members may be more widely known, but no living man is entitled to more praise than Ke-o-kuck. Undescribed he feels the more keenly the necessity of it for his people, and having embraced Christianity his constant effort is to bring others to the light.

E. B. FENN  
Agency Physician.

#### CORRESPONDENCE.

Editor Southern Workman:

M. and I have lately been visiting some of the Chinese schools, and I think you will be interested in our experience. Our wanderings led us first up some old rickety, winding stairs to school for boys, kept in "Chinatown" by a row, heavily laden of great energy. Two rooms are set apart for the school, and here some fifty boys are gathered, from early morning till night. They are very irregular, as many of them are obliged to work, this makes the teaching hard, but Mrs. B. picked up some of their language which greatly assists her. In the afternoons the teacher is a Chinaman, who uses his own dialect. In answer to my question as to how they managed with the different dialects, the reply was that the Chinese in San Francisco have formed a general dialect which all can understand. The rooms were clean, with good chairs and desks, and ornamented with Scripture mottoes. The primary English branches were well understood and English spoken distinctly by those who had been scholars from two to four years, and this in spite of the limited and interrupted time allowed them for school. One boy, Kon Sng, seemed quite bright. He is fourteen years of age, and being fatherless has been given by his mother to the teacher with whom he lives. In her house he has learned to cook and make dine pastries, and has earned out of school hours some \$200, which is in the Savings Bank to be used for his future advancement. His present schooling costs him nothing and he hopes to be educated for a preacher or physician. When asked in the course of his lesson for the definition of "wife," he replied, "a companion for man." This was encouraging from a member of a nation which despises women. The life of this boy is such that Mrs. B. considers him almost if not quite a Christian.

The girls in the school are few in number, as they are subject to ridicule and reproaches from their countrymen when on their way to school. They are kept in a separate room from the boys, except at recitations, when they are classed together in order to break down the national prejudice. They are more irregular than the boys, because they are required to do more work at home, and because of a prejudice against educating women. To overcome this difficulty Mrs. B. visits some fifty Chinese homes to instruct the women and children. The scholars here are all dressed in Chinese costume, with clear, bright faces and polite manners, though frolicsome and playful like all children of their civilized or heathen nations that I have ever seen.

From this place we went to the Chinese boarding school for women and girls. The matron, who received us most cordially, is very intelligent and pleasant. She is a native of Persia, who left her native land with a brother and went to China as a missionary. Her brother's health failed and when they came to this country, he died in this city. She was left alone and very poor, but her valuable services were secured for this work, where she is doing much good. She speaks five or six languages, and has a slight and very pretty accent in speaking English. A Chinese woman, Mrs. Cam Ching, assists in the culinary department, where all the scholars work in turn,

having run away from her husband on account of his cruel treatment of her. She has a little child, Ah Gling, who sat in my lap, and sang to me, "I am a Christian, I am a Christian." Some one gave her her doll and said "Hush, my dear, lie still and slumber"; her little voice turned up and she sang, not only that but all the hymns the girls had sung for us. The "Baby" as she is called, is one of the brightest children I ever saw of her age. Her little almond eyes were full of good expression. The girls all had sweet, sad faces, and some of them were far enough advanced to answer question that I asked them. One girl played on a hand organ, while others sang sweetly, and one repeated the story of the prodigal son. The house was neat and orderly with simple, tasteful decorations. All the women remain in this home family until they are married to Christian Chinamen, or go out to service in some good family. They never go out, except when attended, and on Sundays have not only some gentlemen with them but also have police protection to guard them from the anger of their former owners. Sometimes the Chinamen come to the house in great fury and threaten the inmates. Mrs. H. told us that one of their scholars, married to a Christian Chinaman, and living in San Diego, always remembers them on holidays in some tangible way, at Christmas she sent five bags of potatoes, and on another occasion \$5.00. We left this place with many happy impressions and could write much more, but fear you would weary in reading as I do in writing. I would gladly send you some of these bright children to Hampton to add another nationality to those you now have. If I a longer purse I should say, let me send some of them to be under the care of our efficient teachers. Perhaps a kind Providence will somehow accomplish such a thing. We have been visiting the schools for white children in some of the worst parts of the city, and surely it seems that there is no need to cross any ocean to find missionary work.

C. C. ARMSTRONG.

#### Hampton Normal and Agricultural Institute

AT  
HAMPTON, VIRGINIA.

Incorporated in 1870, by special Act of General Assembly of Virginia, exempt from taxation. Devoted to the Education of Negro and Indian youth in Agriculture and the Mechanic arts, and as teachers of their respective races.

S. O. ARMSTRONG, Principal; J. F. B. MARSHALL, Treasurer.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all, (provided by friends.) Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in labor required of those under 19 years of age. The first year is probationary. Nonn under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State, but is supported mainly by voluntary contributions. Besides State aid and Government help for Indians, the sum of \$30,000.00 a year, must be raised by contributions, to meet current expenses.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all.

The great need of the institution is permanent endowment fund.

The Hampton Institute is supported by, and responsible to, no denomination or society, and has no paid soliciting agent or machinery what, ever, but depends directly upon the public. It is earnestly Christian in its teachings and influence.

Present attendance, 464 students, of whom 90 are Indians: average age 18. Negro boys 216; Negro girls 138. Indian boys 82; Indian girls 28. All but twenty-five board at the Institute: twelve states represented, but chiefly Virginia and North Carolina.

#### FORM OF REQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of ..... dollars, payable to, &c., &c.

For further information address,  
S. C. ARMSTRONG, Principal,  
Hampton, Virginia.

\$72 A WEEK, \$12 a day at home easily made. Costly Output free. Address Tarr & Co., Augusta, Maine.

HORSFORD'S ACID PHOSPHATE  
DR. E. W. ROBERTSON, Cleveland, O., says: "From my experience can cordially recommend it as a brain and nerve tonic, especially in nervous debility, nervous dyspepsia, etc., etc."

#### THE DEPOT.

Having opened a Store in connection with my business, I am on hand at all times to furnish.

PURE PAINTS AND OILS,

PUTTY, GLASS, VARNISHES, ETC.

A good selection of

BRUSHES of all kinds.

Painters' Supplies & Artists' Materials.

AGENTS FOR

JOHNS' ASBESTOS MIXED PAINTS

SHEATHING PAPER, ROOFING PAPER &c.

Also for JOHNSON'S DRY KALSOMINE

and FRESCO COLORS.

A fine assortment of

WALL PAPER & SHADES

of the latest patterns

Paints Mixed and Glass cut free of charge.

All orders promptly attended to.

Thanking the Public for their generous patronage in the past, I shall still endeavor by strict attention to business, and low prices, to merit a continuance of the same. Call on

PRACTICAL PAINTER.

At the Depot, opposite F. A. Schmeil's Store,

HAMPTON, VA.

Close connections with Old Point Comfort and Newport News.

shared with the children Granny's food and care. The blinds had been kept closed to shut out a little of the cold, and in the dimly lighted room the pinched faces of the old woman and children looked weird and ghastly. Poor old Granny was shaking from head to foot, and when I reproached her for not letting me know her condition, she began to talk in a wild incoherent manner, giving a confused account of her troubles, and evidently trying to screen her children from blame. I found that the eldest girl, who had been in the habit of bringing her grandmother's rations, had had no shoes, and as the old woman would not send her out in the snow barefooted, and their other means of supply had all failed, they had been almost without food and fuel for several days. The colored people around them had let them have some wood when the snow first came, and a kind neighbor had killed the pig and salted it down to keep it from starving, but few families near them were prepared for such a severe snow storm, and they had been forgotten in the general disturbances.

After despatching a boy with a message to my husband for some supplies, which speedily arrived, and seeing the children, much cheered by the sight of the food and fire, much comforted, I seized the occasion, to urge the wretched old woman, whose convulsive shivering was painful to witness, to give up this miserable way of living and go to the daughter who was able and willing to provide properly for her. "Why, aunt Drusy," said I, "you would be a great deal more comfortable in the city almshouse. The people there are very well cared for every way." "I know it, I know it," said the poor old soul, shaking in every limb as she spoke, "but I can't give up dear children. My own children was took away from me when they was little, and I jes' got my two darters back, after a 'rendred. Old master wanted away my two oldest boys, for dey was half grown, an' all my other children, 'cept my boy that was married now as' gone to his wife, was vided out 'mong master's children, when he died an' took out back (West) an' I done know whar' none ur'en is cep't dis one boy an' my married darter an' my single darter, an' dese here little children is jus' like my own flesh an' blood, jes' what my own use-ter when dey was dey and laid in my bress an' sleep' with me, an' I can't give um up. If I die, I'll die with em by me."

Soon after this episode in her chequered career, Granny's "single darter" found employment in a wealthy family at some distance from us, and decided that it would be more convenient to her to remove her mother and the children to the same neighborhood, so we lost sight of them.

Poor old Granny, ignorant, degraded, ragged and dirty, but with a tender, motherly heart, and perhaps had she lived in the light of a better day, she and the children, whom she loved not wisely but well, might have been different. The last boy that she heard of, she was still living in squalor and wretchedness, still taking care of the children of her "single darter," who had added two or three more to the number of Granny's charges, and still obstinately refusing to leave them for the comfortable home offered her by her married daughter.

#### NATIONAL AID FOR PUBLIC SCHOOLS.

The National Educational Assembly that has just been held at Ocean Grove, New Jersey, Aug. 8th and 9th, under the conduct of Rev. Dr. J. C. Hartzell, of Louisiana, was a meeting of much more than ordinary significance. The audiences were very large, and the majority of the states and territories were represented by prominent men, engaged in or deeply interested in the subject of popular education. A majority of the state superintendents of education in the country sent letters, as did many others. The sentiment of all was that the education of the illiterate masses of America, is an immediate and imperative duty in which the national government should help.

The opening address by Hon. John Eaton, U. S. Commissioner of Education, on Friday morning, was a powerful argument to show that the nation is the only factor adequate to the work of educating the 6,000,000 of illiterate ten years of age and over in our midst. The family, the church, the state must do and are doing grandly, but still the work demanded is so great that the national government alone can meet the demand. The address gave the key note to the whole assembly.

At one session the subject of discussion was—"Our Illiterate Masses." Dr. H. B. Waite, Washington, D. C., of the Census Bureau, presided, and addresses were made by Gen. Baile, of New Jersey, Dr. L. R. Fiske of Michigan, and Prof. Caldwell of Tennessee. Dr. Hartzell illustrated the location of the illiterate masses of the country by shaded maps as shown in the latest census report. Three-fourths of the nation's illiterates are in the Southern states, where are only one-third of the nation's population; fifteen hundred thou-

sand of the two million illiterate voters of the country are in the same states. Thirty-two per cent. of all the voters in the South cannot write.

In his opening session Capt. Pratt, of the Indian Training school, Carlisle Pa., spoke of education among the Indians. He believed that the use of common sense and money can educate the rising youth of these children of the forest, into intelligent and practical citizens. This sentiment was also expressed to the Assembly by Hon. H. M. Teller, Secretary of the Interior, in a letter. The lecture of Rev. Dr. Sheldon Jackson, on Alaska, was a vivid portrayal of the neglected condition of the nearly 100,000 people of that region, as well as a description of the marvelous extent and resources of that country.

Wednesday was given to the general study of the forces at work and yet needed to educate our illiterate masses. In the forenoon, "Education in the South," was the theme. A large number of letters and statements from representative men in various parts of the South were given, all showing the great improvement in educational facilities in the South, and the vast amount of work yet to be done, and requiring national aid to do it. Dr. Haygood of Ga. was to have spoken for the South, but sickness in his family prevented his attendance. For the first time the work of the Northern churches in the South since the war, was brought out. Rev. Dr. M. E. Strieby of New York represented the Congregational Church, Rev. Dr. J. M. Gregory of Illinois the Baptist Church, Rev. Dr. R. H. Allen of Pennsylvania the Presbyterians, and Rev. Dr. J. C. Hartzell of Louisiana the Methodist Episcopal. The churches of the North have spent in the South more than \$10,000,000 since the war. More than 15,000 students are in their Southern schools of higher grade. The Methodist Episcopal Church has developed a membership of over 400,000 in the South, fully half of which is among the white people of that region, and nearly half the 6,000 Southern students of the same church are white.

The closing session Wednesday night was given to the study of National measures now before Congress. Hon. H. W. Blair, U. S. Senator from New Hampshire, gave the principal address. The enthusiasm of the assembly continued to the end, the all absorbing sentiment being that the Church and the State and the National Government, each in its sphere, must at once unite in immediate and adequate efforts for the education of all classes of the nation's illiterates in every section.

The sentiments of the assembly were formulated in a memorial to Congress.

#### NATIONAL EDUCATION COMMITTEE.

The chief practical result of the assembly was the organization of a National Education Committee, to supplement the efforts already before Congress, and to continue these efforts until that body passes a bill giving from the National Treasury, eight or ten million dollars annually, for a few years, to supplement the public schools of the various states and territories; the distribution to be made in proportion to the number of illiterates in each state as shown by the census of 1880.

The chairmen of the committee are Blair, Simpson, of Philadelphia. The associate chairmen are the State and Territorial superintendents of education in the United States; and the secretaries are the official representatives of the various church societies engaged in the national work. The Executive Committee is as follows: President, Rev. Dr. Strieby, of New York; Treasurer, Hon. J. O. Wilson, of Washington; Secretary, Prof. C. C. Painter, of Tennessee; and Rev. Dr. Hartzell, of Louisiana, Rev. Dr. Allen, of Pennsylvania, Rev. Dr. Gregory, of Illinois, Rev. Dr. Twine, of New York, Rev. Dr. Curry, of Virginia, Rev. Dr. Haygood, of Georgia, and others.

The location of the committee will reside at Washington until the work of securing national aid is accomplished. The work of stimulating and directing public sentiment through the press, and by petition, will be systematically inaugurated and carried forward, in every section of the country.

#### SECRETARY TELLER ON NATIONAL EDUCATION, ESPECIALLY AMONG THE INDIANS.

The following letter from Hon. H. M. Teller, Secretary of the Interior, will be read with interest:

DEPARTMENT OF THE INTERIOR, WASHINGTON, August 1, 1883.

Rev. J. C. Hartzell, D. D. Ocean Grove, N. J.

DEAR SIR:—I have your letter inviting me to attend the National Education Assembly to be held at Ocean Grove, August 8th, and 9th. I regret that I can not accept your kind invitation. The object of the Assembly as you declare it, "to help stimulate and direct the public sentiment of the nation in favor of enlarged state effort, and tempo-

ry national aid in public school education," meets my hearty approbation, and I shall be pleased if I can contribute in the slightest degree, towards the attainment of its object. The great mass of the people must depend on the public school system for the education of their children. An efficient public school system extending to all the states and affording equal facilities for education to all classes of children free from rate bills, cannot be too highly prized. In some sections of the country the states are able and willing to support such schools by taxation on the property of the state. In other sections the states are not able to do so, and I fear not willing, unless stimulated by aid from the general government.

I recognize it to be the duty of the state to provide for the education of the children within its borders, but if the state neglects or refuses so to do, I think it is clearly within the power of the general government to provide such school facilities. But fortunately there is no state in which no provision for public education is made, and therefore the occasion for the exercise of this power does not exist, except as auxiliary to that of the state. I believe that in all the states the sentiment in favor of educating the children is so strong, that the action required by the general government would be simply to make and wisely disburse proper appropriations, so as to encourage and stimulate the states that are least able to carry on the work by themselves. To do this without seeming to discriminate in favor of certain states, such appropriations ought to be based on the degree of illiteracy as shown by the last census. If a system of public schools can be maintained for ten or fifteen years in any state, there will be no danger of its abandonment. An educated community will demand suitable educational facilities for the education of all classes of children. So we may reasonably hope that the appropriation from the national treasury need not extend beyond a period of ten or fifteen years.

The attention of the Assembly will doubtless be directed also towards the education of the Indian. The difficulties that surround their education are very great; but I do not believe that they are insurmountable, notwithstanding the fact that nearly all efforts made in this direction during the last two hundred years have proved failures. I believe, however, with the changed condition of the Indians, that is by placing them on reservations, that they can now be made useful citizens if the government will make ample provision for putting the children in properly conducted schools,—schools not simply teaching book knowledge, but educating them in the ways of civilized life.

The Indian requires education in the practical affairs of life; he must be taught to work as well as read; his hand must be educated as well as his head. With additional labor schools established within easy communication with the tribe, yet not near enough to allow the influences of savage life to counteract and undo the work of the school, we may hope to repeat on a large scale what Capt. Pratt and Mr. Armstrong have so successfully done at Carlisle and Hampton. Labor is, and has ever been, the great civilization of the human race, and whenever we become a laboring people, we are free from civilization and usefulness to society. Heretofore we have confined our efforts to the education of a few, hoping to make such persons full citizens if the government will make use of teachers and exemplars to their savage brethren; but experience has demonstrated that a few well educated youths could not withstand the baneful influences of savage life, with which they were at once surrounded on their return to their tribe. We cannot hope for the speedy civilization of the Indian unless we can extend our educational efforts so as to include the great mass of Indian children. To do this now, as the Indians may be located on reservations easy of access, is only a question of "appropriation" and the cordial support of the administrative authorities.

Very Respectfully,  
H. M. TELLER.

**QUININE SUBSTITUTE.****THERMALINE**

The Only 25 Cent  
AGUE REMEDY  
IN THE WORLD.

**CHILLS & FEVER**

And all MALARIAL DISEASES.

From ELIZA THOMSON, Pastor  
of the Church of the Disciples of  
Christ, Detroit, Mich.—"My son  
was dangerously ill and entirely prostrated from Chills  
and Fever. Quinine and other medicines were tried  
without effect. Mr. Craig, who had used Thermaline  
as a tonic, advised a trial of Thermaline, which was  
done, resulting in his complete recovery within a few  
days."

AT ALL DRUGGISTS, OR BY MAIL, 25c PER BOX.

styles and prices, including new Revised Edition with  
both OLD AND NEW VERSIONS SIDE BY SIDE for  
comparison. Address: The Revision Fund, 706  
Chester St., Philadelphia. 10-32.

**THE HYGEIA HOTEL,**

AS REBUILT AND IMPROVED.

**OLD POINT COMFORT, VA.**

Situated one hundred yards from Fort Monroe, at the confluence of the  
Chesapeake Bay and Hampton Roads, being the first point of land lying  
westward toward the Capes of Virginia, about fifteen miles north of  
Norfolk and Portsmouth; all passenger steamers running to and from those  
cities touch at the pier, going and returning, with the U. S. Mail, landing  
only twenty rods from the Hotel, which is substantially built and com-  
fortably furnished; has two Otis hydraulic passenger elevators, gas and  
electric bells or Creighton's Oral Annunciator in all rooms; water; rooms  
for bath, including Hot Sea, and closets on every floor, with the most per-  
fect system of drainage of any Hotel or any public building in the country.  
As a resort for the pleasure-seeker, invalid, or resting place for tourists on their  
way to Florida or the North, this house, with accommodations for about 1,000  
guests presents inducements which certainly are not equalled elsewhere as a  
summer resort or cold weather sanitarium. Has during the cold weather over  
15,000 square feet of the spacious verandah (of which there are over  
35,000 square feet encircling the house on all sides) encased in glass, en-  
abling the most delicate invalid to enjoy the sunshine and fine water view  
without incurring the slightest expense. The climate of Old Point Com-  
fort is unequalled for salubrity. Malarial fevers being absolutely unknown.  
The record of the Meteorological Observatory for the past ten years show  
an average temperature of 60 deg., 74 deg., 70 deg. in summer; 70 deg.,  
59 deg., 40. In autumn: 45 deg., 44 deg., 42 deg. In winter: 48 deg.,  
52 deg., 63 deg. for spring. The invigorating atmosphere and mild tem-  
perature being especially adapted to that class who seek the genial winters  
of the South and cool summers of the North. For sleepers and nervous-  
ness, the delicious tonic of the pure ocean air and the lullaby of the  
ocean waves rolling upon the sandy beach, but a few feet from the bed-  
room windows, are most healthful soporifics of the Hygeia.

For further information address,  
6-83. H. PHOEBUS, Proprietor.

**A TRIAL OF THE BALTIMORE JOBBER**

WILL CLEARLY SUBSTANTIATE SIX SPECIAL POINTS OF EXCELLENCE.

1st—It is the easiest running press made. 2nd—It is as strong as any press made. 3rd—It is

NO. 11.

THE A. B. C. OF THE GOSPEL.

## VIRGINIA CHILDREN: BEFORE THE WAR.

BY ORBA LANOHRNE.

In the Summer of 1850 we moved from the Shenandoah valley to a beautiful estate upon the banks of the Potomac. Children as we were, we could not but be impressed by the great difference between the country we had left and that in which we now found ourselves. In the valley the number of negroes was small; many of them were free, and the social aspect was much less affected by them than by the large element of sturdy Germans, who refused to own slaves, carried on farm and household labor themselves, and gave tone to the prosperous and thrifty community. In our new residence, the climate was milder, the soil more fertile, vegetation for more luxuriant, the earth seemed literally swarming with slaves, and everything wore an easy, indolent, smiling air, to which we were quite unaccustomed.

In the valley three hundred acres was deemed a large farm, and few persons owned more than a score of negroes, while in the district to which we had removed the planters counted their acres by thousands and their slaves by hundreds.

We had always seen the servants comfortably clad, usually in the stout fabrics woven by the industrious housewives of the country, and now for the first time we beheld little negroes arrayed in a single scant garment, while their elders, except the house servants, who were often greatly pampered by their owners, had only the coarsest clothing and that generally in tatters.

In one of the first visits we paid, the sight of a black boy two years old tumbling about the lawn in a yellow cotton shirt, sent my sister and myself in haste to our mother's side—after a while I ventured out alone to look at the beautiful cherub, but was still more shocked when I encountered a girl nearly grown, walking round in a dress ill-fitting to her, while the wicker was apparently quite undisturbed at the condition of her toilet.

The abundant hospitality of country life, where most of our neighbors were in affluent circumstances, with no market for the surplus of small products, was promptly displayed to us, and as soon as it was known that we had reached our new home too late to make a garden, great hampers of delicious fruits and vegetables were constantly sent us. Every body within ten miles called on us, and my mother was soon overwhelmed with invitations to dine or spend the night, and to our great delight the children were usually included in these invitations.

The visit which made most impression on my childish mind was a day spent at Col. Moncreux's beautiful home, which lay along the bank of a noble river, and was over the shade of the most lavish hospitality.

Here, as in other Virginia communities descended from the F. F. V's, "everybody who was any body" counted the most distant ties of kindred, and the whole soul and genial colonel assured our welcome into the charmed circle of which he was one of the leaders, by announcing the relationship of our family with his own, and insisted upon our coming frequently to his house; my mother, however, was literary and domestic, bore these honors meekly, and often assigned the cares of a large family as an excuse for declining the cordial invitations. This was always a source of deep regret to us children, and we were accordingly much elated when on a fine August day morning, my mother announced that she was going to spend the day at Col. Moncreux's and would take with her my elder sister and myself. Our route lay through "fertile vales and dewy meads" for six miles, all the land between our home and the Moncreux estate being owned by three planters, and in a high state of cultivation.

A silvery stream, now tiny as a shining thread, now spreading out into a rushing river, crossed and re-crossed the road many times, and we greatly enjoyed the ride.

Our visit was an occasion of a great dinner at Col. Moncreux's, where all the country-side were invited to meet some ladies from Richmond, who were spending the Summer at Letha, the Colonel's fine plantation.

The house seemed full of company when we arrived, and though very cordially received we felt somewhat abashed at sight of the fine ladies and gentlemen who surrounded the parlor, hall and porches. Col. Moncreux had three grown daughters, one of whom though only eighteen had been married a year. The three sisters were constantly together and were all of the same style—tall, slender and delicate-looking, with languid, refined manners. They were dressed exactly alike in white muslin, with much flowing blue ribbon attached. Mrs. Moncreux was stout and elderly-looking, with a kind, motherly face, and always wore rather a weary air.

The house was literally covered with pictures from ceiling to floor; and as the Colonel was fond of collecting specimens of miscreants, insects, plant life, there were many interest-

ing and curious things to look at.

After the family and all the visitors had spoken to us kindly, Mrs. Moncreux called a servant to look for the children, and told us we could go into the yard and play with them, a permission of which we were glad to take advantage.

Having seen the fine, grown up daughters of the house, my sister and I were almost as much shocked at the appearance of the little girls to whom we were now introduced, as we had been at the naked young black monks on the neighboring plantation.

The two Miss Moncreux, whom we were told to call Jenny and Kitty, had apparently never worn bonnet, shoes or stockings, and only resembled their elder sisters in having white dresses. Their hair, naturally light, was sunburned to a dull ashy white, their faces by the same agency had become a rusty red, and their feet, hands and arms displayed the like unlovely hue. Their eyes of a pale lustreless blue stared at us for a moment, and were then erected in awkward embarrassment.

Each of these children according to the universal custom of the country, had had a slave girl devoted to her service from her birth, and the white child was literally inseparable from her dusky playmate. The Negro girl slept on a pallet beside the cot of her little mistress, kept close to her side by day, and though the white child was supposed to take her meals at her father's table and the sable hand maid to eat hers in the kitchen, no attention was paid to this rule if it happened to suit the children to eat from the same dish, and it often chanced in case of ill-health with the white mother, that they had been nourished at the same breast.

We had always loved our little black playmates, and lived on very intimate terms with them, but our mother had been careful to limit this association to our hours of recreation, and we had been kept strictly under the eye of our good old mammy in the nursery, so that we regarded with curious interest the close attachment between Col. Moncreux's little daughters and their sable companions. Each dusky damsel followed her young mistress like her shadow, and seemed never to be an arm's length from her. During the long day that we spent at Letha, Kitty, who frequently gave way to bursts of temper, fell into a passion with her maid Sabina, and drove her from her blows as heavy as her little hands could bestow. The Negro girl crept mournfully towards the house, where her appealing face at once attracted attention, and being explained by Sabina, one of the elder sisters came out, slipped Sabina for making Kitty angry, scolded Kitty for ponting, and tied the two children together with a long cord, and Sabina ran towards the negro quarter, and Sabina was constrained to follow, the two children raced through the lawn, and were soon shouting and laughing over their compulsory union.

After our first astonishment at the appearance of our new friends, we began to play amiably together, and though we found Kitty and Jenny extremely ignorant and uncouth, very ill-mannered, we willingly followed them into their usual haunts, and being carried from one end of the large and handsome estate to the other.

When wearied with our ramble, our young hostesses proposed to return to the house, and asked us to aid them in looking for "Julius." They led us through garrets and cellars, and at length accompanied with merry laughter, they had discovered the object of their search.

We did not know who "Julius" was, and shrunk back alarmed when an angry voice and a vigorous pair of heels issued from an old boghead. The voice asserted that we were all "ugly devils," and this courteous salutation was answered in the same style by Kitty and Jenny who, whenever excited, used language shocking to ears polite. Calling on us to help them, the girls upset the barrel and tumbled out a dirty little sun burnt boy, who proved to be the youngest heir of the house of Moncreux, though, to the uninitiated, he might have passed for a cow boy.

After the grown people had dined, the table was re-arranged and the children summoned to the dining room, where a sumptuous repast was set before us. The eldest, hopeful of the family, DeJomette by name, now appeared, and having been lately stung by bees in addition to his share of the sunburn so lavishly displayed by the rest of the party, his appearance was even less prepossessing than theirs. This young gentleman scrambled, fought, and wore in attempting to appropriate the West India preserves and other delicacies on the table, and the dignified dining room servant finding remonstrance useless, summoned the married sister from the drawing room to restore order. The young matron came at once, made a vain effort to restrain the children, who were all in a tumult, and then, to the great amusement of the guests, she turned to box DeJomette's ears, threatened to whip Jenny and Kitty, who were eating out of the dish of fried chicken, and lectured her nearly brothers and sisters generally. DeJomette returned her attack upon him so roundly, that she became terrified for the fate of her maids and ribbons, and fled from the scene.

Col. Moncreux was very anxious for his

friends to adopt his method of bringing up girls, and recommended it on all occasions. He insisted that most ladies were delicate because too tenderly reared, and he left his daughters entirely to the care of the servants until they were twelve years old, permitting them to run wild with the little Negroes, and forbidding his gentle wife to interfere with his plans in any way. The children were the coarse "domestic" used for the slaves, unless there was company in the house, never had any shoes or stockings except in very cold weather, and were not taught, trained or restrained in any way up to that time. Then they had a governess, were dressed in the height of the style, learned music and dancing, a little later were sent to boarding school, and at sixteen were fairly launched into society.

My father was always fond of experiments, and rather inclined to adopt the Col's theory, but my mother had seen the elder Miss Moncreux, and had heard our accounts of the children and would none of it. Certainly the genial Colonel was unfortunate in securing health for his daughters, as four of the five sisters we then saw for the first time have long been dead.

About two weeks after this dinner party, a servant on horse back rode up to the porch where my mother sat reading, with her children clustered around her, and dismounting handed her a paper with bands of crepe drawn through its folds. This was a notice that the funeral services of Kitty, daughter of Col. Moncreux, would take place at 11 o'clock next morning. The servant, in answer to mother's startled and distressed inquiries, stated that the little girl had seemed quite well a few hours before her death, had eaten immoderately of green fruit, and after violent spasms had, as he expressed it, "ceased to very sudden."

We set out for Letha soon after breakfast on a morning, but the roads were heavy from recent rains, and when we reached the house, the neighbors, to whom the notice had been sent over large district of country, were just leaving the house for the grave.

All about the place we changed from the gay scene of our former visit. The lively guests had disappeared, the blinds were closed, the house wore an aspect of desolation, and Mrs. Moncreux, overcome with grief for the loss of her child, was too ill to leave her room.

The sister, who had spoken so sharply a few days before to the child now lying in her coffin, uttered piercing shrieks as the body was carried from the house. The neighboring hamlet did not afford a hearer, and as Col. Moncreux kept several carriages, one of them was arranged to carry the child's remains to the grave. When the procession was about to move, Sabina, the dusky companion, who had never before been separated from little Kitty, and had clung to the body from the time the breath left it, having suddenly burst into a stupor of grief, gave vent to a loud, wailing cry, and breaking away from the older servants who vainly tried to hold her back, sprang into the open vehicle, and shed herself upon the coffin uttered heart-rending screams.

Finding that we were somewhat late, we returned at once to our carriage and took our place in the funeral train now winding slowly along the green fields to the family graveyard on the edge of the estate. When we reached the enclosure, the coffin had been lowered into the grave, and a clergyman who wore the robes of the Episcopal priesthood, stood under a noble oak, with bare head and extended arms, and said in a loud and solemn voice, "I am the resurrection and the life," said the Lord.

We had never before heard the burial service of the Episcopal church and never witnessed a scene like this.

At the funerals we had attended in the valley, the villagers were wont to accompany the dead to the cemetery in the outskirts of the town, but here only the family with their friends and servants stood beside the grave of our little playmate a few days before. The scene was most impressive, and as the clouds fell upon the coffin, with a dull heavy sound, I realized for the first time, the uncertainty of human life, and threw myself sobbing into my mother's arms.

## THE A. B. C. OF THE GOSPEL.

The Salvation Army is the stirring name chosen by a remarkable organization of chosen Christian workers, formed in London some years ago. Its founder and leader, "General" Booth, as he is styled by his "troops," reminds one of Oliver Cromwell in the sturdy vigor of his faith and the blending of military ardor and Christian zeal. He believes in "aggressive Christianity," in "compelling them to come in" and under the inspiration of his genuine and of their common faith in the work, his "army" has gained great success in lines where little has been accomplished by others. Its methods are pe-

culiar and specially adapted to those lines of work among classes hitherto almost untouched, the lowest, most vicious classes of the cities. It has regular army organization, and now has about four hundred and fifty officers and nearly half a million soldiers, from whom at any time a company may be ordered into action. Their weapons are prayer and the word of God, their martial music, psalms and hymns, and their hingles, the uplifted voices of the street preacher and exhorter.

They have two hundred and thirty-one stations in various towns, but their headquarters are in London. Every evening the regiment there marches through the city, stopping here and there to sing or pray or preach. Those who are converted, of whatever age or sex, relate their experience and "speak for Jesus." By these methods, many who never went into a church in their lives, or heard God's name except in blasphemy, learn the good news of the Gospel of Christ, and hearing, believe and turn to him. The methods are not such as would attract the cultured and refined, but the results accomplished where they are least likely to be looked for, are so evident that we cannot refuse to believe that God's hand is in the work. Whole streets in the very worst parts of London, where it has been dangerous for a respectable person to penetrate in the daytime without the escort of a policeman, have been reclaimed to quietness, and the voice of prayer and praise has taken the place of loud profanity and noisy lawlessness. The Established Church of England with all its regard for order and form, has officially recognized the usefulness of the Salvation Army and adopted some of its methods in working among the same classes.

In the scene represented in our picture, it would seem that the Salvation Army had hung one of its banners upon the outer wall, and the passers-by are beginning to be attracted.

## TO THE CHILDREN OF AMERICA.

The Longfellow Memorial Association has been organized in Cambridge, Mass., to provide a suitable Memorial to the poet near his old home. There is a piece of land opposite the house in which he lived, which was kept open during Mr. Longfellow's life-time that he might have a free view of the Charles River and the hills beyond. It was in a room looking out upon this favorite scene that he wrote *Excelsior*, *The Children's Hour*, *Maidenhood*, and other poems which has made his name dear to the young, and the Association aims to buy the land, lay it out as a garden, build there a memorial to the poet, and keep the place, so ordered by association, forever open to the public.

The contribution of one dollar or more makes one an Honorary Member of the Association; but in order to give the children throughout America a share in this memorial this Association invites contributions of ten cents. In order that it may be made easier to collect and forward these gifts, Teachers and Superintendents are requested to act as agents. For every ten such subscriptions a package of ten memorial cards will be mailed to the address of the sender in order to be distributed to the several contributors. The card contains an excellent portrait of Mr. Longfellow, a view of the house in which he lived, one of his poems, in a facsimile of his handwriting. It is also thought that a package of these cards may sometimes be found an acceptable and appropriate present from teachers to scholars.

Contributions should be sent to John Bartlett, Treasurer, P. O. Box 1590, Boston, Mass. Single cards, will not be sent.

10—Our Jewish.	by M. F. Armstrong

Published by Putnam's Sons, New York, edited and printed at Hampton Institute, for sale at both places. Specimens sent from Hampton at 5 cts. a number, or 50 cts. a set.

Subscribers are reminded that, from July to October inclusive, this paper is reduced to an eight page form, resuming in November the twelve page form.

The opening of the school year at Hampton Institute is again marked by unusual fullness of numbers and promptness of entry. The increase over last year would be as great as that of the last over the year previous, if the increase in accommodations could keep pace with the applications for admission. At this time last year, the school numbered 461, and the full enrollment of the year was 501. It now numbers 506, and 12 more Indian girls are expected. There are but three more Indian students at present than there were last year. The increase is therefore in the colored students, and no before, it is chiefly in the class which most needs such opportunities—the night class for work students—young men and women who by working all day and studying after hours, through perhaps a year, carry themselves through the rest of their course on their own earnings, and acquire an education in manliness and self-dependence worth far more than the lessons of books.

The examinations for admission, like those of last year, show an increasing amount of good work in the primary schools, though by no means any occasion yet for advancing the school course at the expense of its elementary work. On the contrary, a letter of indignant surprise lately received from a County Superintendent, upon the failure of several Hampton graduates to pass his examination, is a reminder that with all its efforts, the School's danger is in its foundation work, and here its greatest force will continue to be directed. The addition to the corps of teachers gives three especially trained to this work in some of the best Normal Schools of the North, one at

Oswego, one at Framingham, and one under Prof. Warren at Plymouth, New Hampshire.

The pressure of the school's increase has been partly relieved by the completion of the Indian girls' building, Winona Lodge, of which an account is given below. It will, some time, we hope, be full of Indian girls, for whom it was built, as Virginia Hall was for colored girls. Meanwhile, as the latter hospitably entertained its Indian sisters the last two or three years, Winona Lodge lends some of its, as yet, superfluous accommodations to colored girls, and a few have been put there for the present. The pressure on the boys' dormitories is similarly relieved by the Stone Building. This will eventually be all occupied by industries as they grow. Meanwhile, two stories, each 70x40, have been divided by temporary partitions into rooms accommodating about seventy. Thus, for the first time in a long while, the young men are comfortably lodged instead of being crowded and scattered in the barn and other inappropriate quarters.

A good frame building, finished without plaster, 24x50, has been put up on the Hemmway farm, to accommodate twelve work students, two in a room, and giving a good school and dining room, a kitchen and a washroom. It is plain, but neat and not at all inharmonious with the picturesque house of colonial times with which it is connected.

The Indian Training Shop will be removed this year from its present makeshift quarters to its own building, 40x60, of brick made on the place, now going up on the school grounds, on the corner of the roads to Hampton and to Fortress Monroe, a fine position. It will contain the shoe-factory, harness shop, and eventually in a wing, the carpenter shop and paintshop, and will give facilities to both Indian and colored students to learn these trades.

The generous contribution of Mr. Moses Pierce of Norwich, Ct., of \$4000 for a Machine shop, for making shafting &c., repairing engines, boilers and other machinery on the place, and what outside custom it may receive, is taking form in a brick building 40x66, near the Huntingdon Industrial Works.

Gas has been put into Winona Lodge, and the Stone Memorial, and will be put into the Library and Office building this winter, but not into the smaller rooms of Virginia Hall probably before next year.

This represents the present condition of things at Hampton Institute, and we are looking forward to a year of busy and we hope fruitful work, with the help of God and his stewards.

The increase of the School from three hundred to five hundred students, (four-fifths colored) has required the erection of seven large brick buildings (including Academic Hall, destroyed by fire); class rooms, dormitories, and other rooms for Indian girls and colored boys; an office, a girls' Industrial building, a saw-mill and work working and a machine shop, all of which have already cost \$140,000. Gifts, including \$29,000 insurance money, have amounted to \$129,000. Finishing, furnishing, heating, lighting etc., has created a floating debt of \$12,000. Full completion of them all will cost \$3,000 more.

No more large buildings are contemplated.

Our special effort this year is to raise \$15,000, to perfect this many-sided establishment, and \$10,000 more for working capital.

Feeling, feeding and clothing four hundred Negro students who, last year, paid \$5,179.13 in cash and \$31,530.56 in labor, requires resources, both of buildings, outfit, and working capital.

The annual report of the school for its fiscal year ending June 30, 1892, is just printed, and will be sent to all contributors. The Treasurer's report contains a full account of receipts and expenses; of profits and losses for the year. Large amounts have been received for special purposes; for running expenses there has not been an increase corresponding with that of students and of annual cost.

Free tuition is indispensable to and deserved by students who work two full days each week, besides all summer, to pay their bills.

For our 400 colored students, there is, judging from last year, a prospect of 230 seventy dollar scholarships.

For our (soon to be) 100 Indians the prospect is better.

Four years ago, one cold November morning, nine Indian girls huddled around the steam-pipes in the colored girls' building at Hampton. They had tattered red shawls pulled over their heads, and held across their faces. They sat in dejected attitudes, and made no response to the advances of the teachers, who would gladly have led them out of their sullenness and home sickness, had they known how. It was the first party of Indian girls brought to Hampton—the few who could be spared from the Dakota tribes for education at the East. Unwilling to work, and unable to speak English, with little self-respect and no ambition, it was not long before their names became synonyms for all sorts of shiftlessness, and any disorder and impropriety in the building, was freely laid to their charge.

WINONA.

A month ago, another large party of Indian girls gathered in the corridors of Virginia Hall to bid good-bye to the building that had sheltered them hospitably and long. The scene was full of spirit. The rain poured in torrents outside, and the wind swept roughly around the walls. The girls' faces were bright with expectation, and they made the old home merry with laughter and gay good-byes as they broke camp, shouldered their bundles and pitchers and lamps, and, with a joyful shout, went out into the darkness to take possession of the house which was to be their own.

The meaning of the new building to the Indian girls that night! Its meaning for Indian girls through all the coming years! We wish such things could be told.

We called it "WINONA LODGE"—Elder Sisters' Home.

As we sat together in our own dimly lighted chapel and hushed our merry talk, to ask the Divine Presence to be with us in the rooms, to walk with us about the corridors, to lead us from the weakness we had chosen to strength in His obedient service, we seemed to see a crowd of imploring faces looking up to us, and dusky hands outstretched, begging us, their Elder Sisters, to begin life in purity and order and love, with willing service in the place to which they were coming in future years to learn the meaning of the new word home.

Darkness and silence fell upon the building, clouds of mist and rain shut it in, but angel wardens seemed to guard it and make it light and minister with their joy over the accomplished work.

Years of instruction could not do for the Indian girls what a building of their own has accomplished immediately. They feel its influence in the dim morning twilight, as they get up for their early breakfast, and close the doors quietly, and soften their voices and go lightly down stairs that they may not wake others.

It puts their rooms in order for the day, and sweeps out the corners of the corridors, and clears the windows.

It makes the girls glad-hearted and merry when scribbling day comes, and down on their knees with brush and pail, they sing over the work which once they dreaded. It keeps them in gay good-temper even when the careless workmen truck and over the big hall, and they know it must be scrubbed again before the week is out.

Long seams are sewed better and more patiently in their own sewing-room, and the study-hour is more quiet and earnest.

The good-wishes of all the builders dance in the girls' feet when they come back in the evening, and forming a ring around the pillars in the big hall play-room, "Sail away, sail away," they sing, and the music of their own merry voices; and like a benediction the spirit it falls upon them as they go softly into the chapel and sing out after another of the sweet hymns they love, before they say "Good-night."

God grant its memory may abide with them in the coming years, when the conflicts and sorrows of womanhood are upon them, holding them to live of self-respectful service, lifting them to the joyful surrenders of self-sacrificing love.

Each girl's room was provided by a gift of three hundred dollars from friends, chiefly in New York and Boston. Some of the rooms were made memorials of relatives or friends whose names will appear and whose picture, if sent, will be hung on effect. The pro-rata cost of the hospital department, two thousand dollars, was contributed by two ladies of New York, as a memorial to their mother, one of the best known and most liberal friends of the needy of all races, in all lands.

The building will accommodate sixty girls;

thirty-two now occupy it and twelve more are expected this fall; it is most substantially built of brick, and has cost \$30,407.80. The sum of \$27,128.03 was contributed for its erection. Putting in steam heat, gas fixtures, bath-room, laundry, etc., has, with a small deficit on the building account, cost a little over \$3,000.00. For this amount we ask the friends of the Indians.

## EDITORIAL CORRESPONDENCE.

CROW INDIAN AGENCY.

Montana Territory, Aug. 13th, 1892.

The 16 mile ride from Stillwater on the Yellowstone up to Crow Agency at the foot of the Bear Tooth mountains, was a memorable one for the grandeur of the view as one approached, for the beauty of the narrow valley and winding "Rocheud" river and the picturesque of the Indian wigwags, wild naked horsemen, and flocks of ponies.

Our party of thirteen was kindly received and most hospitably entertained by the Agent in charge, Major H. J. Armstrong. The Major is the grandson of a man who, stolen by the Wyandotte Indians in his early youth, became an Indian in every sense, but married a white woman.

He assumed charge Jan. 1st, 1892, and is the tenth agent appointed to this place since 1868—ten agents in 14 years! Of course there had been, with this changeable policy, no progress. Scores of agencies and tens of thousands of Indians have been cursed with this vacillating policy. Good men are not to be had at the low salaries offered. Indian civilization would have been accomplished almost had first rate men been secured at the start, by adequate salaries.

Millions for any jobbery that will secure the re-election of Congressmen, but starvation wages for men competent to lift the Indians to self-support and manhood.

There are good Indian Agents, thanks to the disinterestedness of some men.

There are 3500 Crows. Originally the number was much larger, but small pox and war have made great havoc among them. Now the births are said to outnumber the deaths. Their territory was fixed by treaty in 1867 bounded South by the State line of Wyoming, East by the 107 deg. Meridian, and North and West by the Yellowstone river, including six and a quarter millions of acres, of which about one and a quarter millions all, between the 110 Meridian and Beaver river on the East, and the Yellowstone on the West, was sold to the government for \$750,000, payable at the rate of 30,000.00 a year—the proceeds having been ratified at the last Congress.

This was purchased on account of its valuable mineral lands. The Indian is fortunate to sell them, for all the powers of earth cannot keep him in possession of them when the white man once finds them out.

The North Pacific railroad has agreed to give the Crow Indians the sum of \$25,000.00 for a strip 400 feet wide along the Yellowstone, wherever the road runs on their side of the river.

The Agency is situated near the western extremity of the reservation, where there is very little land suitable for permanent settlement where the Indians can now be stationed, and also on lands so near and similar to the mining lands already sold, that they are likely to contain mineral wealth and to be pounced upon by settlers. A hundred miles to the East, on the Big Horn and Little Big Horn rivers there is a large quantity of fine farming and grazing land, now being surveyed, enough for the entire tribe.

There seems to be the best of reasons for removing the Agency office of the entire body of Crows to that part of their territory to be assigned to permanent homes. In that case perhaps another million acres of the western part of their reservation could be sold, thus helping them, with their other funds, to purchase cattle and establish themselves on a self-supporting basis, all of which is apparently precluded; the only obstacle being the constant changes made at Washington through political influences.

About 2700 of the Crows are "Mountain" Indians; the rest are river Indians; all speak the same language. The former are more manageable, temperate, and more disposed to industry and education. They hardly touch whiskey, and eschew even cigars, preferring cigarettes for their midday; they don't use vinegar or any strong condiment—natural bear testotlers.

The river Crows, until within eight years, lived 300 miles to the Northeast, on the Missouri river; they are wilder, drink more, and are harder to civilize. The Indian's description of a good man is that he has "a good heart." The Mountain Crows have the best hearts.

Hardly one-tenth of Montana is suitable for agriculture. It is a land not of bread but of beef. It is pre-eminently adapted to the Indians—to their successful survival of and adaptation to civilization, for a grazing region is indispensable to maintain our population

General Terry's solution of the Indian problem is in one word, *coward*. By existing laws, the Secretary of the Interior is authorized to issue a certificate or grant of the following to each Indian head of a family:

100 acres of farm land.  
100 " " grazing land.  
80 acres to each additional member of the family. To make this worth anything to them, there needs, and I believe in a provision that the property shall be inalienable for the space of 25 years. There is, however, some difficulty about this, for when I was at Crow Creek Agency in Dakota last fall, the lands had been divided, but satisfactory deeds to the Indian could not then be obtained.

Major Armstrong's idea is to settle all the Crow families on independent ranches. He offers to build a house for each family, provided the Indian *pater familias* will fence in not less than ten acres of land to be cultivated. To carry this out, he begins at the bottom. He found that almost nothing had heretofore been accomplished by way of practical education—there were at least no signs of it, excepting a garden of about 20 acres; which Indians had tended under his predecessor. Since last January he has laid out and fenced in 75 acres of land, which are irrigated by a ditch from the Rosebud river. The 75 acres are divided into 24 portions, each one of which is assigned to a head of a family. We walked through the enclosures, found quite a variety of crops growing, potatoes, beans, carrots, turnips, cabbages, corn, and even lettuce.

We found Chief Plenty Coos, (Lots of Scalps) and his wife Maggie, picking summer and other squashes to slice up and dry for winter use or to eat right away—much fruit is thus put up by them. Others were weeding crops. Of the eight Indians in all who worked the tract, but before he had worked before in their lives. Major Armstrong called the most thoughtful men together, talked to them as he would to wait, showed the wisdom and ultimate necessity of learning to take care of themselves. They readily agreed to do what they could. On his summons they came to the fields, with wild, kicking ponies, that never had been harnessed before, knowing nothing about harnessing or plowing.

Each one was helped by the Major personally, and by his assistants, to harness his horse, to himself, so that their ground was plowed and cared for, the Agent working daily with his own hands, helping and teaching the Crows to make their crops. The seed fell short. Each one of the twenty-four families that had a portion of this seventy-five acres will this year, if allowed, be placed on a well selected homestead of the hundred and twenty acres or more, according to the size of families; houses will be built, if they will fence in ten acres. Having already cultivated two acres they can next year cultivate ten. This will leave their families; they will probably increase their farm area from year to year, but their principal profit will be from cattle. They now have considerable wealth in ponies, which are not very satisfactory from their being constantly stolen by other Indians, and the Major hopes to persuade them to sell them and put the proceeds into cattle, which are far more profitable. This, and the \$750,000, from sale of land to government, and the money due from the N. P. railroad, will give them means for buying enough cattle to give the entire tribe a start. They can cut and sell hay, for which the demand is steady and the profit high. Already quite a number of Indians have given in their names to have one of the twenty-four lots next year.

This is a capital plan; a most sensible school of agricultural practice. An Indian whose traditions, pride of ancestry and social surroundings all impel him to tie off and let the squaws labor, in his advancing years shames the ideas of generations in response to a common sense appeal, and goes to work with his own hands—learns in a year's time under instruction, to make crops, take a ranch, next year fence in a little farm, and settle down to an improving condition. His place at the farm school is taken by another and so it goes on, till within ten years the Crows might all be self-supporting. They cost the government last year \$92,000. This year only about \$77,000 are given. This is too large and sudden a shrinkage, for they are not yet ready for it. As I write, Chief Dog Eye and Plenty Coos stalk into the Major's office where I sit, arrayed in all their glory for the council this evening. They smile "How" to each other cordially, they fumble around for cigarettes; motion violently for tobacco and pipes, but I don't take the hint, but offer some of the Major's cigars, which they make faces. Dog Eye finds my walking cane, my constant and much endeared companion, asks me by motions to give it to him. I say "Bravo!" gain time and may make the issue, for I wish to keep my cane unless the old fellow will sell me a good buffalo robe. Dog Eye looks wonderfully like the pictures I have seen of Daniel

Webster. His head is sunken, his face is strong and kind, his long hair falls to his shoulder; he is sitting fanning himself with an eagle's feather, unconscious of this pen portrait. He has on a splendid buckskin coat or robe, gorgeously ornamented, and leggings after the Indian style. His coat is open and exposes a magnificent bear chest. Meanwhile Plenty Coos—the taker of many scalps—prowls into the Major's bed room, finds and lights a pipe, and comforts himself and his brother warrior.

The government only agreed to feed the Crows for four years from 1880, but has continued to support them ever since, costing about \$100,000 a year, but has begun to cut down. Now the game is decreasing. As outside means of support decrease, that from government is cut down; the Indian is not far enough advanced in civilized arts to take care of himself. He gets hungry—desperate, believes he is wronged and is in the mood for bad work.

The Treaty of 1881, which allowed the Crows to hunt outside their reservation on unoccupied lands, has until recently been a most important factor in their support. But the lands are rapidly being up, and they can ill afford to have \$30,000, less from government this year than last; squeezing at both ends is too much; trouble is inevitable if this process goes too far. The Indian is an Indian long after he is outwardly civilized. That means that he will long retain his power to resent injustice by violence.

From the Agents' memorandum book, I took accounts of the men who had worked this year on his model farm of seventy-five acres. Old Onion, Old Dog and Wolf Sinner were chiefs who had never worked before, so were Frank Eyes and Plenty Coos. Other converts to the ideas of labor were Estate-all-over-the-world, Boy-that-grabs, Bull-all-the-time, Crazy Sister-in-law and Dead Bull. The two latter men of unusually violent temper, the Some Indians are kind and troublesome. Spotted Horse said he would kill some of the working Indians. Crazy Head said he wouldn't work for \$3500 a day. These represent a faction of the mostly young "buckles" Indian dandies: "Old Spaniard" won't work because he is too old. These are inflammable; not easy to control—a minority, but able to do mischief, ready to incite people, especially if their wrongs are real. The squaws are often on the wrong side, ridiculing the men who work, discouraging the very ones who would lighten their burdens. Ridicule is as severe an argument among Indians as among other people.

The greatest difficulty of a good Indian Agent is with settlers; for instance, a man took a contract to supply a certain amount of hay, depending on the tools and labor of the reservation to cut it for nothing; the Agent of course to get some personal benefit from it. The Agent declined to do such work; the contractor lost money, and is forever the enemy of the Agent. A white man married a Crow woman, expecting to have the usual right to live on the reservation, and get a chance to sell whiskey to Indians. He is put off the reservation and declares war against the Agent. White men wish to cut timber belonging to the Indians, get their supply of hay from Indian lands etc. Preventing such things makes it hot for the Agent.

Serious charges are made against him in Washington through political channels; the delegate or representative must respect the appeal of his constituents, pressure is brought to bear upon the Interior department and the faithful Indian agent is discharged. There will be no peace for an Indian Agent who does his duty when whites are trying to get him, depending on his tools and labor of the reservation to cut it for nothing; the Agent of course to get some personal benefit from it. The Agent declined to do such work; the contractor lost money, and is forever the enemy of the Agent. A white man married a Crow woman, expecting to have the usual right to live on the reservation, and get a chance to sell whiskey to Indians. He is put off the reservation and declares war against the Agent. White men wish to cut timber belonging to the Indians, get their supply of hay from Indian lands etc. Preventing such things makes it hot for the Agent.

The Crows are severely tried by the Blackfeet and Piegan Indians, who live on a reservation some 150 miles to the north, but march into the Crow country, and run off their ponies; some white men assist in this business. Not less than six hundred ponies have been stolen this year from the vicinity of this agency. In our conversation with the leading Crows, this was their principal grievance, their horses were stolen, and the Major did not allow them to pursue and recapture. The Agent has an Indian police, and would not hesitate to attack and kill any horse thieves found on the reservation, but has no right to leave it.

General Terry has stationed troops at Stillwater, and other places, to check these raids, great protection hereafter will be the telegraph line, which, by prompt reports, will prevent Indians from crossing the river.

Government pretends to redress the wrongs of Indians, but when it takes an act of Congress to pay for a stolen mule, the redress

comes rather too slowly. It should, by right, pay for the mules stolen by the Blackfeet.

Saturday morning, we made some calls on the chiefs, who most courteously returned our calls before dinner time, and so had a free lunch. We visited the log houses of "Iron Bull," "Fringe" and "Dog Eye." Thinbilly, the greatest of the Crow chiefs, was absent on the hills, mourning for a friend he had just lost, whose body now lies on a scaffold which I can see from the window at which I am writing.

When a friend dies, the Crows put on mourning garments made of skins tanned on both sides, and cut joints of their fingers. Women gash themselves across their foreheads, and let the blood run and clot for days without washing. They go with a knife and whetstones into the fields or on the hills, and whet their knives and cut themselves, and whet and cut again. The entire day time, for weeks, is spent in mourning tents, which are made of the most ragged material, they wear the meanest garments they can put on; going home at night. We met children carrying food to a mourning father on the hills. We found Iron Bull in a noble old man, the deepest thinker and leading theologian of his tribe. We shook hands all around as usual, for hand-shaking is peculiarly an Indian institution, and soon drew out his ideas of God and of creation.

Six of us stood around his bed, while the philosopher lay, half clad, half sitting up, leaning on his elbow, and spoke with a manner and an action as effective and graceful as I ever saw.

He said that the Indian believed in four gods—one was a woman, and had the care of the lodges, and of the food and stock. One, the supreme God of all, named *Wah-ne-wah* (Old Sky One), because he was everywhere, and nobody could see him. Another was the Creator, and another knew everything. These gods sent the rain, and the four gods arrived. At last they sent a green necked duck to dive down, and it brought up some mud in its mouth, which the Creator took in his hand, blew it four different ways, and the four elements came. Then man was made of clay at first blind, but his eyes were opened, and he saw everything—the mountains and rivers.

Indians prayed not daily, but as circumstances changed; for good crops, for the safety of their friends and children, for the return of warriors from battle.

Before battle, one marches around the camp four times, singing an incantation; then all pray.

They pray only to the one god. A red cloth is hung out in their cultivated fields, and several of them—to express the same god. When this is done, the poor can have the cloth.

Their children are taught not to lie or steal. The dead go to a river, where they have all the buffalo meat they can eat, and a better time than they had on earth. Some go to a heaven above. His ideas about the good and the bad were much mixed. All men are punished in this life. If a man steals or lies, he is sure to die soon. Good and bad, he thought, take different ways after death, and come together again. He didn't want the white man's religion—didn't want the white man among them.

There is a singular tradition among the Crows that their ancestors once lived in a warm climate where there were alligators. They often allude to this in opening their speeches, but there is no record of it.

#### AN AGENCY EXPERIENCE.

Chief Dog Eye gave to a white man, Stewart, a mule in exchange for a mare and colt, which he (Stewart) bought for a ride and fifty cartridges, from an Indian who did not really own the mare and colt. The owner claimed them from Dog Eye, who gave them up, and then asked for his mule. Stewart refused even after Dog Eye had got back and given to him the rifle and cartridges which he had given to the Indian for the mare and colt. Dog Eye vented his mule. What could he do? Nothing.

There is no law between the white man and the Indian, nor even between Indian and Indian. Here is one great evil in the Indian situation—Law is needed more and more as the West fills up and the white crowd among the Indians.

Among themselves, the Crows, and Indians generally, are very peaceful; their clans or villages, under one chief,—of from fifty to one thousand people—are most kindly to each other. The young men seldom quarrel and fight with each other; law is hardly needed. They in war with each other, but that is chiefly between men of different clans. They are peaceful and gentle—much more so than the whites in their community life.

The Crows, especially the mountain Crows, have "good hearts." Agent Armstrong says he could not ask for kinder, pleasanter, better hearted people, and believes that better people in this respect are nowhere to be found. They hate each other a good deal, but not lose their tempers. No sharp word or

severe epithet has nearly the power of "you have an friend." This charge makes trouble. The friend of an Indian to whom this was said, tore to shreds the wigwam of the man who said it.

The crowing wrong done, in the estimation of Maj. Armstrong, to the Indians, is moving them against their will. His own people, Wyandottes, who were settled in Ohio, had good farms. Some had brick houses, and it took ten different formal Commissions from the government to cause them to remove to the Indian Territory, where they now are. It was finally accomplished by bribery and by whiskey. It was a rank outrage on a desertion, well meaning people. The Major fears a repetition of this cruelty, as the country shall bill up.

He is working with wisdom and energy for lands in severity, almost at once, for a tribe that is one of the most ignorant and backward of all. He is not an Eastern philanthropist, but a practical, intelligent man, and knows what he is about and will succeed if allowed to carry out his ideas. But in the background is the shadow of a break-up or change at the instigation of politicians, who can, sooner or later, accomplish their purpose.

#### CALL FROM A CHIEF.

Thinbilly, chief of all the Crow chiefs, has one hundred lodges, about eight of all ages and sexes in each lodge or tent. Before the small-pox came among them he had two hundred lodges. Now the number of births exceed the deaths. He thinks the best thing for Indians is to settle on ranches, and raise stock. He likes horses, particularly well, and likes to have cattle, because people steal his horses.

Thinbilly rose up, shook hands all around, and said: "I am once poor, but look at me now. I was chief of the Crow nation. I have done as the white man told me: I shake hands with them. I trouble no white man, but do what the great father tells me. I wish you would try to stop the Northern Indians (Piegan) from stealing our horses. Look at us; our country is small, not as big as it used to be. I wish white men would not hunt on our reservation. I wish more rations for my people, because much of the time they have nothing to eat. [Agent Armstrong says that only beef and sugar run short, other articles are plenty.]

"I and my people who work on farms are ridiculed by other Indians who don't work, because we have such poor houses; we wish better houses to live in. I told President Grant when in Washington that I would take his advice and settle down to work. I am doing as the President told me to do. Some of my children are frolicking and some are at school. Our trader is stingy; we want one who will give us more; unless he trades better he will give us less." [Agent Armstrong here remarks that the remedy for this complaint, which is very general, is to allow competition among Indian traders. The monopoly which now exists at each agency is an evil.]

"I like Major Armstrong, and he likes me. I have been sick, and would like some good medicine from the States. Indian medicine can't help me. Some good salve would cure me."

The chief then turned to the Agent, and asked about a hot-baited horse that he had lost, which the Agent agreed to find if possible.

"I wish to have all I am entitled to, and the best part of our lands to settle on. I don't like this place for our agency, for the frost comes and kills our crops. I don't know much about farming, but this is a bad place for it, because the rocks break my wagon and plow. I trust Major Armstrong (strong arm in Indian) will choose the best places for my people."

"The whites are disturbing our country, taking the timber off." [Major A. remarks that General Hatter, (White-Hat in Indian), has driven off many intruders already.]

The old chief shakes hands all around again, then says: "I wish to be friendly with the Whites. I wish to eat with them and have them eat with me."

"About four days ago my brother died, so I do not wear my good clothes. I am mourning on the hills; but I heard some gentlemen came from the East, and I came to see them."

"That's all I have to say. If I talk too much I may tell lies."

"I wish I could not come and see you, because I felt like crying all day, I am hungry now and would like some dinner."

A. C. A.

#### HORSFORD'S ACID PHOSPHATE.

##### A NECESSITY.

DR. C. O. FILES, Portland, Me., says: "Of all the samples of medicine sent me during the past dozen years it is the only one I have ever found which has become a necessity in my own household."

Philadelphia, Oct. 10th, 1882.

Gen J. F. B. Marshall, Treasurer:—

"I have the pleasure, in response to the appeal for books, to forward by express, twelve copies of Friend's publications, for which send to me a separate acknowledgement to the 'Representative Committee of Friends, of Philadelphia.'"

Particular interest will attach to Wm. Penn's works, in connection with the Bicentennial of his Landing in Pennsylvania, to be celebrated next week, and the works of Samuel M. Jannay should be in your Library, for the reason that he was a Virginian and a good friend of the slaves and the Indians.

About one hundred and twenty-five years ago John Woolman travelled through Maryland, Virginia and Carolina, preaching against the holding of slaves, and through his efforts, in large part, the Society was early cleared of this iniquity.

In listening to a recitation of a class in Political Economy at Hampton, I was reminded of Wm. Penn's statement "of the end of all government, viz; to support power in reverence, with the people, and to secure the people from the abuse of power, that they may be free by their just obedience, and the magistrates honorable for their just administration; for liberty without obedience is confusion, and obedience without liberty is slavery." (See Life. fol. 188.)

The people of this Commonwealth have not yet learned this lesson, or we would not be liable to riots like that at Pittsburg.

Please send me a copy of the last annual report.

Respectfully,

H. GAWTHROP.

From the *Boston Transcript* of Sept. 18th, we copy the following notice of the death of the mother of Gen. Marshall, Treasurer and Assistant Principal of the Hampton School.

During the winter that she spent here a few years ago, she became personally known to many of us, and we can therefore better understand how great the loss will be to her children and friends.

It is needless to say that our truest sympathy is given to those to whom she was nearest and to whom her place can never be filled.

"The death of Mrs. Sophia Marshall in the town of Weston, on the 17th inst., at the age of ninety-five years, removes from our community one of its noblest and most useful members. Placed for social and religious annals. The grandfather of Mrs. Marshall, Rev. Samuel Woodward, was the second minister settled over the parish in Weston, in 1751; her father, Rev. John Marshall, was settled in 1800, and his pious career covered a period of thirty-one years. With mind clear and active to the last, Mrs. Marshall loved to look back and relate events in the history of our early days. Her father's recollections of the persecutions of those remote days added a charm to her conversation which only those who knew her can appreciate. Truly, equally with old age, she retained the vigor of youth, and a cheerful disposition, and the love, veneration and respect with which the declining years of her life have been surrounded, served to keep all her faculties for each other's service as lively as in youth. Her arrival at her age in this, that while she loved to dwell upon events of the past, she never lost her interest in the present, and she showed a keen interest in the progress of the general public in church and state; her eminently social qualities, her charity and strong religious faith, combined with her wonderful

energy, have made her name a household word throughout our section of country. To the clergy of New England, Mrs. Marshall was well known and highly esteemed. Through her ancestors and large family connections she was one of the few remaining links in the chain connecting us with the early religious settlement of Middlesex County. Mrs. Marshall was married in 1813 to Thomas Marshall of Boston, a son of Colonel Marshall of Westton, an officer of the Revolution and a friend of Washington; Mr. Marshall died many years ago. Mrs. Marshall leaves two daughters and one son, General Marshall, who is connected with General Armstrong in the management of the Hampton School in Virginia."

IN MEMORY OF GARFIELD.

The following note with its enclosure was received soon after the last anniversary of President Garfield's death, from one whose interest in Hampton's work has found grateful and generous expression before.

Sept. 19, 1882.

*My dear friend;*

It is the day sacred evermore to the memory of "Saint Garfield," and kneeling at his shrine, I drop into your hand the

I wish it were one thousand instead of one hundred dollars—I hope each year to consecrate this heart-breaking day to his memory in this way."

The contract of Hampton Institute with the Department of the Interior, to furnish 2000 shoes, 75 double sets of plough harness and 7000 pieces of tinware for Agency supplies, having been completed, the following official report has been received upon the character of the work. This has been done by Indian Commissioner James H. Felt, in the shoe shop, nine Indians and three colored; in the harness shop, four Indians and one colored; in the tin shop, five Indians and one colored. The colored workers attend the night class and work all day; the Indians have worked half of every school day, and all day in the summer. The contract for shoes was from March to September, and the harness and tinware all the remaining period in the school, and much custom work both for students and families on the place and some outside orders. The contract for tin ware was received the 20th of June and was completed Sept. 1st—in addition to the tin work done for the school. The contract for harness was from March to September, but the work was finished in June, because of the fine weather. The harness lady in Newport, Rhode Island, the heads of the departments speak well of their student employees.

## DEPARTMENT OF THE INTERIOR.

Office of Indian Affairs.

New York, October 5th, 1882

GEN'L. S. C. ARMSTRONG;  
Hampton N. & A. Institute  
Hampton, Va.

Sir,

In reply to your letter of the 4th inst. asking to be informed as to the quality, workmanship and general character of the shoes, harness, and tin were furnished by the School under your charge, for the Indian Service, I have to state that the various Inspectors report the goods in question to be of good quality, and while not as finely finished as those of the same character furnished by regular contractors, are well and strongly made, and for actual service, are fully equal to any purchased by the Department.

Very respectfully,  
E. SEWARD, *Clerk in charge.*

FROM TUSKEGEE

Those of our readers who know of the brave enterprise of our Hampton graduates, Mr. Brookier T. Washington and Miss Olivia Davidson, also graduate of Framingham, Mass., at Tuskegee, Alabama, will be glad to read their latest report of their success and encouragement. An interesting feature of it is the breaking down of sectarian exclusiveness, to stand shoulder to shoulder for the common cause.

NORMAL SCHOOL.

*Tuskegee Ala. Oct 15 1882*

DEAR WOMAN, Pittsburg, Aug. 10c, 1938

In our last letter we gave you an account of our closing exercises and of our hopes and plans for the summer. A pamphlet published later gave a more explicit account of our arrangements. We are now in the process of making and approximate cost of a building which we felt was essential to the continuance of the work successfully through another year. The estimated cost of the building, as named in the pamphlet, was \$10,000. We have now found that we need something beyond this, being about \$4,650. Of this sum, as said, we had received at the time of closing school, \$1,000. During the summer, we are glad to be able to tell you that we succeeded in raising the balance of the money for the building. The money for paying for the building is provided for. It is furnishing throughout is to be paid from within exception of two of the girls' rooms kindly furnished by a friend, for whom our

Owing to some unavoidable delays in the work, the building was not ready for occupancy when school opened, so we were compelled to seek our old quarters in the church and shanty again, but the work on the building is now being carried rapidly forward.

and we hope to go into it the first of the coming month. As we are very, very much crowded in our present quarters, we shall all appreciate the privilege of having pleasant and commodious quarters the remainder of the year.

School opened the 4th of Sept. with quite a full attendance, and the number has increased each week, until now the number of pupils enrolled is more than double the number enrolled within two months after opening last year, and we have applications from many who desire to come in, later.

During the summer a number of the most advanced students taught school in this and adjacent Counties, and reports came to us from many of these pupils of the really superior work done by these students as compared with that done by others who had not had the year's training.

Mr. R. S. Penott, a young man from Washington, D. C., graduate of the High School, and afterward teacher of vocal music in the public schools of that city, this year takes the place filled by Mr. Cardwell last year, in the departments of music and geography.

I think in a former letter we mentioned the fact that the denominational spirit is very strong here, as shown by the fact that the public schools have been divided along the lines of the separate denominational churches. The Baptist children attending the Baptist, and the Methodist children attending the Methodist school. This year, however, we have been able to unite the children from our farm to the union of the two schools as a training school for the Normal. Miss Snodgrass and Miss Lucy Smith, another Hampton graduate, have charge of the school. For the first time in many years, I suppose, the children of the two denominations met in school together. We hope for much good in the way of influence upon both parents and children as a result of this. The number of children in the school are in, number more than three hundred, and the Normal School will number one hundred, so that by Christmas we shall have one hundred in fully attendance of public schools in Normal. I think that is a record for four hundred! When we realize what the work of these students is to be, how necessary it is for them to be well fitted to go into this work, and how important it is for them so far in the future their influence for good or bad may extend, can we doubt the importance of the work before us?

You shall hear from us again in future. I am, as ever, most warmly for yourself and friends, I close.

Yours

D.

MARRIED,—on Wednesday, Oct. 18th, at Bethesda Chapel, by Rev. H. B. Frisell, Geo. J. Davis, to Charlotte F. Smith, all of Hampton Institute.

This wedding of Hampton students within Hampton grounds—the second of the kind—was an occasion of great interest to all who witnessed it. The storm of many weary days abated, and the sun poured out its full prophesy of blessing upon the happy pair. As they stood in the chapel under the "marriage bell" and beneath the way-side flowers that friendly hands had twined, and spoke "the most living words of life," many wished that they might find the future full of wayside flowers. Flowers, music and sunshine, a pretty bride in creamy cashmere wedding gown, veiled in soft illusion and crowned with lilies of the valley, a handsome groom in a magnificent tuxedo, bridesmaids and groomsmen, made as pretty a wedding scene as is often witnessed. The ceremony was performed according to the Episcopal service, the bride being given away by her brother Mr. Geo. Smith of New York, who was also first groomsmen. Her bridesmaids were Miss Lovey Mayo of Hampton and Miss Mary Smith of Hampton, and the other groomsmen was Mr. Frank Banks of the Institute—these three all graduates of Hampton.

After the service the newly wed received the congratulations of their friends and teachers at the house of General and Mrs. Marshall, whose parlors were beautifully decorated with autumn leaves and flowers, while Chinese lanterns and a young moon combined to get up the aesthetic effects outside. A number of very useful and pretty presents were collected in one of the parlors, and a handsome bride-loaf made by a "Friend" who had given the bridegroom his first lessons in the new life of freedom, crowned the pretty refreshment table. Hampton says "Bless you my children."

FROM "FRIENDS."

We acknowledge, with many thanks, the receipt of a donation of books for the Library of Hampton Institute from the "Representative Committee of Friends of Philadelphia," also "Selections from the Life and Writings of William Penn," from Miss M. A. Longstreth of Philadelphia, and take pleasure in printing the letter, accompanying the former with its interesting information and kindly expressions.

## LETTERS FROM HAMPTON GRADUATES.

GOING AHEAD. A SCHOOL-HOUSE IN THE WOODS. A MOUNTAIN SETTLEMENT. CHRISTIAN WORK—NO BIBLES. HELPMATES.

## GOING AHEAD.

We are glad to receive this pleasant report from a graduate of '73, who in four years of faithful teaching has found time and courage to keep up his studies to such purpose. We congratulate him on his success and wish him the continued fulfillment of all worthy ambitions.

## WILLIAMSON SEMINARY.

Easthampton, Mass., Sept. 18, 1882.

## MY DEAR GENERAL:

I have purposely delayed acknowledging your very excellent letter of commendation with the other of encouraging words, thinking that you would be interested in hearing of my success.

As a proof of New England's high appreciation of you and "Hampton," immediately upon the receipt of your recommendation the principal wrote that he would be very glad to have me. I arrived on the 5th inst.

Although I had studied Latin and Greek a few months, I entered the Fresh Division, and shall try to prepare for college in two years. This division is especially preparatory for advanced students in the English studies. It commences Latin, taking it ten hours weekly during the first term. My other study is Algebra. We commence Greek next term. The division takes Roman History, but I passed examination upon it. I preferred to enter this division, so that by reviewing the elements of the languages I might proceed rapidly with much greater facility.

Next, we take in addition to these, French, German, and Geometry. I have studied Geometry and Greek History, so they will be a pleasant review.

I like William. We are required to attend worship twice on Sundays and may remain for Sabbath school if we so desire.

There is a Y. M. C. Association connected with the Seminary, with meetings Thursdays and Sundays at seven P. M. It was elected a member of it last Friday.

Smoking is prohibited this year unless there is a written consent of parent or guardian. "Hampton" has high rank here, and you may be assured that I shall endeavor to do justice to the Alma Mater by scholarship and standing.

Thanking you again for your kind interest. I am very truly yours, P.

## A SCHOOL-HOUSE IN THE WOODS.

To be set down in a school-house in the middle of a forest, to teach without blackboards, maps or charts, would daunt the courage of many a Yankee school-teacher.

VA., March 30, 1882.

## Dear friend:

I feel really ashamed of myself for not writing to you before, and thanking you for your kindness to me.

I was glad to hear from you to-day, as I feel that I am almost out of the world. I am bounded on the north, east, south and west by woods, but I think after I get used to the place that I shall like it very well. The people are very kind, but poor, and the children are easy to manage, though they are quite far behind the other schools that I have taught, in their studies. They are very anxious to learn, but say that they would know more, but they have not had a school here very long.

I have nineteen scholars on roll now, expect twenty-five next week, and more after a while. My school-house is very good, but there are no maps, beads or charts. They have promised to get me a black-board after a while.

Mr. Sykes is teaching at Waverly, Sussex County, Va. Mr. Sparks is teaching not far from me, though I have not seen him yet. Many thanks to you for the primers sent me. I heard from Mrs. Hayden today. Our little ones are very near here, so we have Sunday school in the school-house. This, too, is very far behind. I have suggested the International lesson papers, and they have agreed to take them. Please give me the address of some place where I may send and get them.

Gratefully yours, R.

## A MOUNTAIN SETTLEMENT.

This interesting sketch of a "Pure Negro settlement," on a mountain top in Virginia is by one of our faithful workers just the man to cope with the peculiar dif-

ficulties which surround him.

Co., Va., November 10, '81.

## Mrs. D.:

I received your card asking me to report to you all about my school and work here. So far as I am able, I will do so with pleasure.

My school house is situated on a very high hill in the Blue Ridge Mountains, where there is a settlement of thirty two families, all of which are colored. It may be called a pure Negro settlement. They all own the land on which they live, but the land is in such a rocky and unfruitful place they cannot make a living on it; so you see them leaving their homes and "going down to the valleys," they call it, and working by the day or month for a living and paying heavy taxes on their land, and raising little or nothing on it. This has and will forever keep them very poor. I was treated very kindly by all. On the sixteenth of last month I went to church and told the people that I had been sent there to teach their children and "wanted to open school the next morning, and this I did, with ten scholars.

The people being very poor cannot do very well by a teacher, in the way of board, but nevertheless they charge the highest prices possible. A teachers pay only being twenty-six dollars per month, by the time he buys ink, paper and chalk, there is not much left for him to clothe himself. I went and saw my superintendent, and told him that I could not make teaching pay in his county unless he would allow me to teach Saturdays and holidays. This he did at the first word, and by teaching in this way I shall be able to teach my five school months by the eighth day of February. Indeed this is the only way by which I could make a living teaching in this county, at these wages.

I never want to meet with better superintendents than those of this county; they are as kind as any I have met. The white people, so far as I have met them, are as kind as any I have met in the South.

I do not regret being here, yet I am in a place where there is no society, and I am, so to speak, like a man on an island, without a boat; he cannot go to any one, but they can come to him.

I am yours respectfully, H.

## CHRISTIAN WORK. NO BIBLES.

No Bibles, no competent ministers, gross superstition and ignorance—are the conditions under which a faithful Christian teacher is working earnestly for his people, and finding some fruit of his labors.

Co., Va., Dec. 7th, 1881.

## My dear friend:

I have a school of forty pupils. Some can read, and some spell very well; but very few know anything of arithmetic, geography and grammar. They do not attend school so regularly as they should on account of not having clothes and books. The people in this neighborhood are very inactive about having their children educated. I have been around to see them and talked with them about having their children come to school.

All of the patrons at present are deeply interested in the school. Don't know how long I shall teach here as yet. We have a good S. S. and prayer meeting twice a week. We have no Bibles and Testaments for S. S., and will be glad to receive some from any friend who feels like casting his bread upon the waters. It matters not with us whether they are new or not, just so they have the reading matter. Ten of my pupils have confessed Christ precious to their souls and are striving to lead Christian lives. They are very prompt in attending Sunday School and prayer meetings. Pray for them that they may grow up useful workers in the Master's vineyard. The colored people are very superstitious in their religion, they believe in dreams, crossing hell on a spider web, tracking Jesus by his blood, and a great many other curious notions that are not essential to Christianity. You see by this statement that the little ones have a great deal to contend with. The old ones will not follow them unless they can tell a long, miraculous tale about hell and the devil &c. I feel satisfied that they are converted and are striving to love Jesus more and more. Our ministers are very incompetent, and for that reason the teacher has very hard work to convince the people of their error. My prayers are that the day may come when we shall know how to worship God as the Bible teaches, and that the teachers of Hampton and the teachers that took such a deep interest in me, and the rest of my schoolmates that are scattered abroad over the Union.

Most of the colored people are renters with the exception of a few that have bought little farms. A great many more would be able to buy little farms, if it were not for slavery.

The whites seem to feel kindly towards me and say that I am worthy of their re-

spect. I take the SOUTHERN WORKMAN and the Teachers' Guide; I find them to be very instructive, and especially the WORKMAN, as I am always glad to hear from Hampton.

Your old pupil,

H. Class of '79.

## HELPMATES.

We have this pleasant letter on hand, from a wife who with her husband—both Hampton graduates—is teaching successfully in Virginia. The husband being also a carpenter, was engaged in building their new school house.

Co., Va., Dec. 5, 1881.

## Mrs. D.:

I am glad to have the pleasure of writing to you. Your card came safe to hand some days ago, but I have been so busy, I have not found time to write. Hope you will excuse my delay. I was very glad to hear that you and Mr. D. were well. I would like very much to see you both, and all my good friends at Hampton. I wish to visit the dear old place next Commencement if possible. I am happy to say we are teaching, and getting on very well so far, though we have had to work under many disadvantages this term. We are teaching in an old church, and it is very open, and when it rains we have to close school and keep well all the while. They are putting us up a real comfortable house now, and we are looking forward to having a nice time when it is finished. It is a log building and we find many things to be done. I have to work very hard on it. And it keeps him busy all the while; he says, by hard work it can be finished this week. I shall be so glad when it is completed, for we shall be able to have the cold and rain in the one we now occupy. The house cost \$150. The district gave us \$100, and the parents of the children promised to raise \$50, but as they failed in all their crops, they say they can't raise the money. Mr. D. is going on with the work, trusting that some way will be opened for him to fulfill his promise. We have ninety pupils on roll with an average daily attendance of eighty-five. We find plenty of work to do, and have to keep very busy all the time, both in and out of school. We find the children very anxious to learn, and we do all we can to advise them. We very often wish we could stay at one place three or four years, and then we could see what we are doing; but it is so arranged we have to change every year. It has been three years since we taught here before, and we find many things that we could do better, are now very backward. They have made very little progress. Our Board is speaking of making a change, and we shall be very glad of it. The colored people are very poor. Much more so than they used to be. Their children are very badly clad, and I don't know what some of them would have done if it had not been for our good friend Mr. B., of Boston. He has done much to make them happy in the way of sending them clothing, books, &c. But many of them suffer with the cold. Their parents say they don't know when they can get more better. It is just as much as the majority of the people can do to make a living. Times are very gloomy through the country, and the people seem very much cast down as they have made nothing to go upon and are trying to do all the good we can. We are glad to know that the School is so full this term. It seems that our young people are beginning to realize the importance of being educated. We have two pupils there. We are very much interested in them, and hope they may do well.

With many good wishes to you and Mr. D., I am, your old pupil, J.

to labor, are kept down, as you know. Of all the different things that tend to keep my people back, ignorance is the strongest. In fact, according to my knowledge, it is the source of all the evils that I could mention connected with this people. Now, as I am a student dealer, I instructed that the most of them, and a member of this race, there arises a question of my duty. In answer to that, I would say that as these people are a part of this government, and help to compose the mass of filletary of this country, I feel that to do justice to myself, to my country, and to show appreciation and thanks to God for the opportunities afforded me. I must exert all my powers in trying to tear down this throne of ignorance. In consideration of this, I expect to teach, if nothing happens, at least two or three years, and it shall always be my aim to do all that I can for the moral, religious, and intellectual culture of my race, and the good of my race, and the good of my country, hoping by this to show to the world the virtue of the Hampton Institute and the good of your benevolence. I wish that I could express my gratitude to you for your kindness to me these three years, but as it is impossible for me to do it in words, I hope that I may be able in the future to show it in works.

Yours respectfully, G. W. R.

## FROM A YOUNG MAN IN THE MIDDLE CLASS.

Dear Friend:

I am once more requested by the Principal of this school to write to you, and let you hear from me again. I wrote to you last year, told you where I was from, what I was doing, and what I intended to do. And it gives me great pleasure to tell you that I have the very same spirit, and also the same desire for self improvement.

I have not become discouraged, but have become encouraged, for my way or chance seems to be a little better than it was when I wrote to you before.

I came to Hampton Sept. 27th, 1880, and I found everything different to what I expected. We find one of the first things I found was that the school had a good ahead man at the head, and everything seemed to be going on with so much rapidity, that I felt somewhat discouraged for a while.

I felt that I could not keep pace with the people of Hampton, but I soon got into the Hampton ways, so now I don't have any trouble at all severely.

Being self depending and not much to depend upon, of course it helped to bring about many embarrassments, but I bore it all the best I could. Had I been prepared to meet all the necessities and obligations, I might have done better. But as I have heard no complaint I suppose I have given satisfaction. At the end of the term the General told me if I wanted to spend the summer here I could do so, and I felt because I wished to stay where I could learn the most, and as I would have looks a plenty to read, I thought I would stay. Another advantage I would like to mention, was that I could work at the General's trade, so I stayed. Of course as I was only an apprentice my wages were very small. I am not working at the trade and expect to work at it, for I like it very much. It is true I have but very little to depend upon by myself, and what makes it a little tough for me is that I am depending on myself for two things at once; one is to do the studying, and the other is to do the paying, though I shall try to do them both the best I can.

It gives me pleasure to tell you that the Principal seems to be willing to allow me a living chance, if I will make use of it, or if I will do my best, as he often tells us.

I lost no time last summer, that is in vacation I did all I could to help myself in. I do heartily thank you for what you have done for me, among my people, and I am anxious to get to it. I like the school very much, and am anxious to go through, for I think it will add many business qualities to me, and make me a business man. I do not think what you have given here for me will be lost, by any means, for I believe the teachers are doing all they can for me, and I will do all I can for myself.

Yours M

## INCIDENTS OF INDIAN LIFE AT HAMPTON.

BACK FROM BERKSHIRE.

The twenty-nine Indian students who spent the summer on the farms of Berkshire, have, with one exception, returned much the better for their sojourn among the hills. A very generally good report of the work was made by those who had had them in charge, and in some cases very high praise was given of their industry and fidelity. They seem glad to return to study and work at Hampton. On their way back, a few of them were kept two or three days in New York, to visit some of the Sunday schools and churches which have helped the Indian work at Hampton, and to add, by their presence, to the interest of several meetings held in its interest in Brooklyn and New Jersey. They appreciated the reason of this demand upon them, and overcoming their natural shyness for the sake of aiding their people's cause, sang with their chaplain's guidance, some of the simple hymns they have learned at Hampton. It seemed to touch many to hear these Indian children sing, "I need Thee every hour."

TWO YOUNG FOXES.

The students brought by Inspector Townsend last spring from the Sac and Fox agency in Indian Territory, were greatly delighted by their arrival Oct. 26th, with two boys from the same tribe, one of whom has a sister here. Their names are "Colonel Battice" and "Tommy Miles." Mr. Townsend reports that they are respectively 18 and 19 years old, quite bright and promising boys who have had some schooling at the agency, read and write some, and are industrious, and have a disposition to come with last year's party, but Mr. Townsend's number was full, so he had to leave them behind, promising however to try their case before General Armstrong, of the Department at Washington. He result was that they were allowed to join a party of Navajoes Capt. Pratt was making up for Carlisle, and came on from Kansas under his protection. I till they met Mr. Townsend, who brought them to Hampton.

REPORT FROM THE WEST.

Mr. Townsend reports a very favorable state of affairs at the Sac and Fox agency, the school still prospering, and its Indian mission doing excellently as usual. Things are going well also at Dakota, to which he has made three trips since he left Hampton. The Sisseton Agency, in the north east corner of the state, is peculiarly flourishing, doing a great deal in farming, and advanced to such a degree of civilization that many Indians are buying improved farming machinery. While Mr. Townsend was there, three clubbed together and bought a \$700 threshing machine, paying part in cash and giving their note for the remainder. Two others each bought a \$70 silky-plough, and reapers, drills, etc., were purchased by many. The agent is Major Cressey, who has been there four years; the Indians number about 1800 Sisseton and Wapeton Sioux. They have a flourishing school of 75, and Government has just authorized the erection of a new building which will about double the school's capacity.

At Rosebud agency, nearer the center of the Territory, fifty miles from Fort Niobrara, Government is about to erect a good school building, and the Indians manifest a strong desire to have their children educated. He says the same of these at Pine Ridge agency, in the south west corner of the Territory, and Government has just completed a fine school building for them, at a cost of \$14,500. Pine Ridge and Rosebud, regarded as sister agencies, have a population together of about 18,000. They are two of the largest agencies in the United States.

HEALTH REPORT.

GEN. ARMSTRONG.

Dear Sir:

The two Indian students who arrived Oct. 26th, were examined by me Oct. 28th. Thomas Miles, age twenty, has a general appearance of good health. He has had pneumonia but seems to have made a good recovery; no signs of lung disease being noticeable at present.

Walter Battice, age nineteen, has had pneumonia, and by his own statement, has suffered from malarial chills for five years. Decline of expansion was noted in the left lung, also slightly prolonged expiration. The young man has at present a slight cough which seems to be due to a cold taken on his journey here.

Respectfully yours,

M. M. WALDRON, M. D.

## FROM A LITTLE INDIAN GIRL.

Here is a letter from one of our little Indian girls who spent last summer among the Berkshire hills. With the consent of the receiver and the writer, we

give it to our readers, just as it was written, to show what a little Indian girl can learn of English in four years.

Curtisville, Aug. 1st, 1892.

My dear Miss G.:

I think it is time that I should write a letter to you and tell you all about the picnic.

We had the picnic the next day after you called, at the shore of the Lake. We all went.

Besides the things you gave we had for lunch—licious sandwiches, cold lamb and ham, apples, coffee, cake, and lemonade.

I think we all ate a great deal, and Harry had to jump up and run around so he could come back and eat more.

Mr. Dresser rowed us all over and after we ate our dinner we read and played games and when we got ready to come home

Hattie, Harry, Clara, Lilly and I walked across the Lake where the water used to be but now there is not any water there because the Lake is so low, and the mud and Clara lost her rubbers and Harry stumbled over a stump and hurt his knees and Lilly and I fell over the fence, and in all I think we had a very very nice time.

We all thought the things you gave us were very nice, and Lilly and I thank you very much for giving things to us to give to Hattie and Harry.

They went away last week Wednesday. Mrs. Dresser Lilly and I went to Pittsfield last Saturday, and I had my pictures taken but I have not got them yet for they are not all finished.

Is Miss Fletcher at Hampton now?

Last Monday Mrs. Dresser, Clara, Lilly and I went over to the mountain blackberrying got fifteen quarts with two hours.

Miss Fletcher got back with the Indian girls Mrs. Dresser, Clara and Lilly wanted me to teach them how to swim so we have been down the Lake a number of times and Lilly has learned how now.

How is Mrs. S. now?

Yesterday when we went down to swim we heard a kitty mewling and it was our little Ailie, she followed us two days before when we went down to the Lake.

When we were in water she came out and swam very nicely. Please ask Sarah, why she does not answer my letter?

Lilly sends her love to you—write soon. I must close now my love to all.

I remain your loving friend,  
ANNIE DAWSON.

## AMONG THE ONONDAGAS.

A dusty ride of two hours in a rickety, dilapidated stage, a melancholy survivor of ante-railroad days, set me down at the door of the Episcopal Mission house on the Onondaga Reservation, eight miles from the city of Syracuse, New York. In many years' acquaintance in that city, I cannot recall ever having seen the Onondaga Reservation. Only the occasional invasion of a passing railroad train by dark eyed girls, and dingy old women with bead work to sell, would remind me that somewhere in that region must be settled the remnants of one of the great Six Nations, the Romans among the redskins, whose powerful confederation antedated our young Republic, and made them, in alliance with Great Britain, its terrible foe. I had heard more of them since I was no longer their neighbor, and was glad of the special advantages for a visit afforded by an invitation from a former faithful Hampton worker, engaged for the last three years in mission work in the tribe, under the Episcopal church, Miss Julia E. Remington. She met me, with a hearty welcome, at the vine covered porch of a grassy yard bright with clumps of sunflowers, and tangles of morning glory and the scarlet bean, and close to a small mission chapel, the transept of which is used as a school. The Onondaga hills swept grandly round the horizon not five miles away, and delicious airs brought hints of their dowry forests. I found Miss Remington alone in her house, though looking for the arrival of a future lady assistant the next day. The clergyman at present is a young divinity student who comes out once a week from Syracuse to read the service in the little chapel.

After rest and supper, I walked with Miss R. down the one long street of the settlement, past the Methodist mission's neat frame buildings, and the houses of a few of the better off Indians irregularly scattered along it, less neat in their surroundings, but, on the whole, comfortable looking. She gave me some interesting statistics and experiences of her three years' labor in the tribe. It numbers four hundred, with a few Senecas, Cayugas and St. Regis, (the last, the only representatives of the old Mohawks who blended with the tribe in Canada), of whom some have married into the tribe, and others are suffered to remain, though they have no legal right to, and are not generally a desirable element. Still less so are a hundred and twenty Onondagas, a part of whose tribe are settled in Green Bay, Wisconsin, and another part in Canada, leaving but a few in the Onondaga county, mortgaged and lost them and then came here to sponge on the Onondagas. The Reservation is four miles square. It was originally six, but two have been ceded to the State, in consideration of five dollars annuity to each member of the tribe.

The famous Salina saltworks near Syracuse, also belong to the Onondaga tribe, but are leased by treaty to the State, which gives in payment for this one of its great sources of revenue, a peck of salt a year to each Indian proprietor. There is a good stone quarry on the Reservation, but this also is leased to the State and run by whites, the Indians being allowed a small interest in the proceeds. By an old treaty, the United States government gives them an annuity of eleven yards of cloth yearly; it was originally broadcloth, but is now unbleached cotton cloth at seven cents a yard. This is all their relation with the general government, and but for the trifling aid that ends the State—which also sustains a four months' school with accommodations for about forty of their two hundred children—they are self supporting. Their occupation is chiefly farming, hog picking for the neighboring white farmers, and making baskets, some for sale to the summer visitors at Saratoga, and more on orders from the merchants of Syracuse, and some of these are very expert in the artistic trade. There are a few carpenters among them who find work in building houses for the others, taking their pay in money or exchange. There was once a water-power saw mill on the Onondaga Creek—run by the whites, but it has gone to decay. There is one Indian cobbler; for blacksmithing they must go to the white settlements which press upon them, but there is no need, for they own no stock but a few cows and pigs. They have a little milk and make a little butter in the summer, but let their cows go dry in winter. The people are generally poor, and in a low condition as to morals, intelligence and industry. The causes of this condition seem to be exactly the same as are at work in the Western tribes. Our policy of keeping alive their relation to civilization without the protection of our laws, a selfish exaction of all we covet from its possessions, and as selfish a letting alone when we have got it, has been worked out here to the end. The greatest surprise to me was, as it may be to many, to learn that, of this small remnant of a tribe settled for a hundred years, the very heart of civilization in one of the oldest and most intelligent States in the Union, fully one-half are pagans, keeping up every superstitious rite and practice of their fathers. Beyond some inevitable concession to their environment in dress and dwelling—and the old women still wear the blue broadcloth trousers under their calico short gowns, while the older men let their scalp lock grow, though the younger have cut—the pagan half of the tribe is as bitterly opposed to any adoption of the white man's ways as the wildest blanket Indians of the plains. They have their medicine men, and their dances, and observe their sacred year in all its times and seasons, with their appropriate festivals, the green corn dance, the burning of the white dog in sacrifice, and all the other ancient ceremonies of superstition, some of them of a most degrading character.

Against this stronghold of barbarism, the Methodist church set up a small camp many years ago, and the Episcopal diocese of Western New York another in 1860. The good they have done is evident, but the forces too small and ill supported to meet all the adverse influences of red and white heathenism. There are two hundred children in the tribe, the Government school is under the care of the Methodist mission and accommodates about forty. The Episcopal mission school has forty on its roll, but with no compulsory laws of education, and all the drawing down of home life, the school attendance is reported, as it is in the West, "very irregular." Here, as there, the frontier settlements and white squatters on the reservation are demoralizing in every way. In the one way of home life, the school attendance is reported, as it is in the West, "very irregular." Here, as there, the frontier settlements and white squatters on the reservation are demoralizing in every way. In the one way of home life, the school attendance is reported, as it is in the West, "very irregular." Here, as there, the frontier settlements and white squatters on the reservation are demoralizing in every way.

There are two chiefs of the tribe; they are generally bright men, but are all pagans, and the Christians do not find much favor at their hands. The land is good, but under these circumstances it is little inducement to work it. An incident had recently occurred in illustration of this. A young man—a Christian—took up forty acres, enclosed it and planted it. As soon as his crops were up, one of the chiefs came down to inspect it. "Good! You give me five dollars for this." The next day another of the chiefs appeared with the

same demand, and so on, till each of the ten had levied his tax, and the profits of the crop were all anticipated. Not satisfied with this, the head chief managed to tramp up some charge against the young man, who is one of the most intelligent, upright and enterprising of the Christians, brought him before the Council, which, being appealed to by the chief, is always exclusively pagan, and, as was a foregone conclusion, his whole farm was confiscated and divided among the chiefs and their friends. As for the Pagans, they do not work, preferring to live upon the Christians in this way.

A young man who was head Chief of the Iroquois—of all the Six Nations—was put out of office when he was baptized as a Christian. He was the man of greatest force among them, and soon after, the Council, getting into some jungle, was obliged to recall him. He said at once, "This must be a Christian Council and ruled according to the Bible." He was at once put out again, and became a special object of persecution. His successor in the Onondaga tribe was for seven years interpreter in the church, but he had no religion; he gave his office—not an altogether uncivilized proceeding perhaps. He can read and write English, and his father was a graduate of Harvard College, Geneva, New York. The present head chief of the Iroquois is John Mount Pleasant, a Tuscarora, living at Niagara.

The Christians greatly desire a radical change, and have petitioned the State legislature for division of land in severalty, and to be put under our laws. Warned by the fate of the Onondagas, they ask to have their lands made inalienable for twenty-five years, and to have neither suffrage nor taxation for the first five years, till they get fairly started on the new road towards citizenship, meanwhile to have compulsory education for the children, to prepare them for the future. This sensible petition has been met by the legislature by the appointment of a committee of investigation, consisting of Chancellor Simms, of Syracuse University, Mr. E. B. Jackson, a prominent banker of Syracuse, and Mr. Seymour, of Utica, son of the ex-Governor. They will visit the reservation this fall, but the change will not be made against the general will of the tribe, and the Pagans, who of course oppose it, are doing all they can to prepare a plausible statement of their own views for the Commissioners. A hundred names of men and women were signed to the petition. This is a majority of those over twenty one, but some will probably be bought off. The Onondagas also will work against it, not only because they are chiefly pagans, but because they would have no part in the allotment of the Onondagas' lands. The Pagans will stand on the old treaty; the Christians claim that it is already broken by the leasing of land to the whites, and might well be broken further to protect their lands, and their wives and daughters.

As to health, the tribe is holding its own in numbers, though, as in the West, the mortality is great from consumption and various diseases of the lungs and blood poisoning, and is aggravated by superstition, ignorance and poverty. Last year, just one half the membership of the little Episcopal church—eighty-eight—were swept away in an epidemic of typhoid fever.

This seems to be a critical moment for the tribe. It is not likely that a stronger voluntary appeal for civilization will ever be made from one, and, having so thoroughly worked out the natural results of the old policy, would not this be a good place and time for the State to try the new one?

Discussing these vital questions for her Indian diocese, Miss R. and I walked home as the bravest Indian was raising like a beacon fire upon the hill tops. The next morning, we packed a lunch basket and took a fine tramp over them, through woods just beginning to put on their autumnal glories, turning aside here and there to the irregularly scattered houses of some of her interesting "cases." Of course, one of them was the young ex-chieftain, per se, accused for righteousness sake. Unfortunately for the tribe who may some day long for his intelligent counsel, he is apparently already in decline. His face looked like a crook, and he had earned a serpent on his cheek, as Moses lifted up the serpent in the wilderness, so she had lifted up Christ before the people for their healing. He is spending his last days in his foster mother's family. The whole family were gathered out side the house, and brought chairs out on the grass for us. We baited for a while and admired the baby brought for our inspection. I noticed this out door life every where, and was reminded of Hawaiian scenes. The men were generally sitting about smoking and talking, the women at work at their wash tubs, the babies rolling about on the grass. In one house we found an old grand-mother over a hundred years old, left alone while her children had gone hop-picking. She greeted the

"minister lady" with childish delight. On our way home in the afternoon, mysterious groanings issuing from a deserted looking cabin, attracted us to a search. We found a man writhing in pain, and dispatched his sister to meet us at the mission house to get a dose of the specific. Miss R. keeps on hand for such cases. His mother had already started up the mountain to consult a "medicine woman," but Miss R. thought they would take her remedy if they died. Everywhere she was welcomed with warm pleasure by her poor people, and they told me in grateful tones of her faithfulness. She is at their call day or night, however far over the hills may be the little cabin where one of them lies suffering. She is the only white member of their Good Templars' lodge. It includes some pagans as well as Christians, both men and women, and is extending its influence, has a brass band neatly uniformed and quite well trained, and is acknowledged by the county society as a branch.

At her request, I went with her into its meeting that evening, and told the members something of Hampton and its Indian work. The people crowded about the desk to see some Hampton pictures I had brought, and asked questions through their interpreters. They were especially interested, having already, through Miss R.'s influence, asked admission for two of their boys to Hampton and Carlisle. The young Christian child or one or two others, came back to the Mission house, and spent the rest of the evening in asking further questions and discussing the prospects of their tribe.

The next morning early, I took the same dilapidated stage coach back to Syracuse. It came up with a party of Indian men and women going to the hop fields, and took them all on board to the evident annoyance of some of the other passengers, white country people; especially of one woman, of a type that takes little harm. Before long overtaking a large wagon with the rest of the top-picking party, the late ones upon transferred themselves to their friends' company. The white woman shook out her skirts again, and ejaculated, "Well, we're rid of 'em." Looking towards me for sympathy, she went on: "It's a perfect shame that the government should keep up the Reservation—giving up all that good land to that rubbish." I mildly suggested that they seemed after all to have some prior claim upon it. She indignantly replied: "They don't improve it, so they have no right to it, and the Government ought to take it away. I guess I would if I was the Government." "But there are often white people who don't improve their property," I said. "Do you think that would give the Government a right to take it?" I should really have liked to know if her views had that breadth, but her only answer was a vigorous "I hate 'em!" and I was left to my own reflections.

H. W. L.

## THE BI-CENTENNIAL.

A Centennial and Bi-Centennial celebration within six years, seems rather fast work for even this go-ahead nation. The glories of the great Exhibition of '76 in Philadelphia have scarcely dimmed in our memories, and here the sober Quaker city is to be the scene of flags and fire-works, and thronged with processions and visitors. We look back now to a far earlier period in our national history, and commemorate not the victories of war, but the victories of peace which made these possible.

We are told that in the latter part of October, 1682, William Penn sailed up the Delaware with his little colony of English Friends who like himself had suffered persecution for their religious faith, and landing on a lovely slope between the Delaware and the Schuylkill, took possession of his new estate of Pennsylvania, and chose the site of its future capital. This is the event which not Philadelphia or Pennsylvania only, but the whole nation is called to honor, for it was an event of national—yes, world-wide importance. The new state was to be established, not on ideas of gain or fame, not even as a refuge for one religious sect, and "freedom to worship God" in its own particular way; but on the broadest principles of toleration and popular liberty and self-government, far in advance of the sentiment of his age. In his own words, it was to be "a holy experiment—a free colony for all mankind."

In the spirit of these words, he wrote his remarkable Frame of Government, and with wisdom which no statesman since has surpassed, "to the great and of all government, viz: to support power in reverence with the people, and to secure the people from the abuses of power, that they may be free by their just obedience, and the magistrates honorable for their just administration; for liberty without obedience is confusion, and obedience without liberty is slavery."

The spirit of these noble principles entered into all the details of the Code of Laws for the new State. "The Governor and council to erect and order public schools, and en-

courage useful sciences and laudable inventions." "All children of the age of twelve to be taught some useful trade." "In the courts all persons to appear in their own name, and plead their own cause." "No person who shall confess and acknowledge one Almighty God to be the creator, upholder and ruler of the world, and professeth him or herself a heathen in conscience to live peaceably and justly under the civil government shall in anywise be molested for his or her conscientious persuasion or practice."

From this wonderful Bill of Rights, the red men of the forest were by no means exempted. He had refused to consider himself a rightful owner of their land by the King's grant, until he had purchased it with their good will and at a fair valuation. Up to 1810 the ancient elm was still standing at Shakamaxon—now Kensington, a part of the city of Philadelphia—under which Penn and the chiefs of the Indians signed their famous treaty. The Indian treaty never broke though never sworn to. Its provisions are in accordance with the Code of Laws for his white citizens. They were, 1. "That Wm. Penn's people or Christians and the Indians should be brethren, as the children of one father, joined as with one heart, one head and one body." 2. "That all paths should be open and free to both Christians and Indians." 3. "That the doors of their houses should be open to each other as to friends." 4. "That the Christians and Indians should not believe any false rumor of each other, but first come as brethren to inquire." 5. "That if either head or any ill news to the hurt of the other, they should speedily acquaint the other as friends." 6. "That they should do no manner of hurt to each other, but treat each other as brethren." 7. "That if either Indians or Christians should do any harm to each other, complaint should be made and right done, and when satisfaction was made the injury should be forgotten and buried as in a bottomless pit." 8. "That the Indians and Christians should assist each other in all things against wicked people who should disturb them." 9. "That both Indians and Christians should acquaint their children with the treaty and keep the chain of friendship bright while the rivers run, and the sun, moon and stars endure."

"When William Penn landed from the ship Welcome, on the shores of Dock Creek, in 1682," remarks a reporter of a Philadelphia journal, "he was welcomed by a few Swedish and Dutch settlers, together with a number of Indians, and took possession of his new territory quietly, with the smallest amount of force or parade."

"When the person selected to personate William Penn for the Bi-Centennial celebration landed at Dock street yesterday (Oct. 24, 1882) he was greeted by from 30,000 to 40,000 citizens of this great Commonwealth, amid the greatest enthusiasm and display."

The Bi-Centennial celebration in Philadelphia, extended over four days, and introductory services were held by the various religious bodies throughout the State, on the preceding Sunday.

On Tuesday, 24th, the landing of William Penn, was represented at the Blue Anchor inn now the busy wharf at the foot of Dock St. A large procession met the representative of William Penn and his party as they landed from their good ship Welcome and followed them through the city. Prominent in it and one of its most significant features was a company of a hundred and fifty of the Carlisle Indian students, the boys walking in their neat uniforms, the girls riding in omnibuses; showing what might equally well have been done for all Indian children had William Penn's wise and Christian counsels been lived up to. Preceding these were six Navajo chiefs from Arizona who were making a timely visit to Carlisle. In full Indian costume of paint and blankets and feathers, they formed a striking contrast to the Carlisle students, and enforced the lesson of the scene, while learning a startling one themselves of the power and greatness of civilization. They seemed terrified at first by the confusion of strange sights and sounds, but Indian stoicism soon recovered its balance and they marched on in dignity. Asked what they thought of it, one chief replied, "I hope white man."

The feature of Wednesday was the great Trades procession. All the principal business firms and associations of the city were represented, many by very handsome exhibits, but as the Philadelphia Ledger well says, "Among all the fine and useful and ornamental objects exhibited, the men themselves were the grandest sight. Nobody who looked intelligently on that four-hour march of working men could have failed to experience a sense of pride in their numbers, their resources of brain and muscle, their fine condition, the infinite variety of things they make and build, their unexpressed usefulness to themselves, their fellow working men and to the whole body of society." On Thursday, there were grand musical festivals, a regatta on the Schuylkill, a bicycle race in Fairmount Park, and a procession of Masses to the Temple from Pennsylvania and other States,

North and South. The great celebration closed on Friday, with a grand military and naval review, and a general illumination of the city at night.

Some of the features of the Bi-centennial celebration may seem rather incongruous with the memory of the great representative of the peace loving Society of Friends, but William Penn was still more than that, the founder of a great State, one of the chief moulders of a great nation established on the broadest principles of universal toleration and liberty. It is well therefore that all the elements that represent its growth should join to do honor to its memory, and preserve it to generation after generation.

## WHITTIER'S POEM ON PENN.

The town of Chester, near Philadelphia, claims the honor of having received Wm. Penn's first foothold on American soil.

A large commemorative meeting was held there by the Society of Friends Oct. 23d. Mr. Whittier, who had been requested to write a poem for the occasion, responded:

"I should be glad if it were possible for me to put into fitting metrical form the thoughts and emotions which it awakens, but the burden of the years begins to rest heavily upon me, and I shrink from the effort of handling such a theme."

Looking over some old papers recently, I found some verses written by me when a boy of sixteen, nearly sixty years ago. Of course the circumstances under which they were penned alone entitle them to notice, but I venture to send them as the only response to the request which I can make. I am truly thy friend, JOHN G. WHITTIER."

## WILLIAM PENN.

The tyrant on his glist'ning throne,  
The warrior in his battle dress,  
The hero triumph ne'er have known  
Of justice and of righteousness.

Founder of Pennsylvania! Thou  
Didst feel it, when thy words of peace  
Smoothed the stern chieftain's swarthy brow  
And hushed the dreadful war-dance cease.

On Schuylkill's banks no fortress frowned,  
The peaceful cot alone was there;  
No beacon fire the hilltops crowned,  
No death shout swept the Delaware.

In manners meek, in precepts mild,  
Thou and thy friends serenely taught  
The savage huntsman, fierce and wild,  
To raise to Heaven his erring thought.

How all unlike the bloody hand  
That unrelenting Cortez led  
To princely Montezuma's land,  
And ruin round his pathway shed.

With hearts that knew not how to spare,  
Disdaining milder means to try,  
The crimson sword alone was there,  
The Indian's choice, to yield or die!

But thou, meek Pennsylvania! sire,  
Unarmed, alone, from terror free,  
Taught by the heathen council fire,  
The lesson of Christianity.

Founder of Pennsylvania's State!  
Not on the blood-wet rolls of fame,  
But with the wise, the good, the great,  
The world shall place thy sainted name.

1834.

## IF HE ONLY WERE AN INDIAN.

A white captive from the tents of Sitting Bull, sends the following interesting appeal to the President.

Clintonville, Wis., Aug., 24th, 1882.  
PRESIDENT ARTHUR, Washington, D. C.

Will the Government give me an education if I will come to Washington. I will act as an interpreter, if you will. I am a white boy who was captured by Sitting Bull, I was first taken by the Mandanians from near Weapunga when I was four years old, and was taken by them to Dakota and sold to the Sioux. I was with the Indians 18 years in all, but I am now with my parents who found me on the 18th of last March. You will please write to my sister, Mrs. Addie Reed, Rochester, Minn., and let her know if you will educate me, and also to my mother, Mrs. Henry Barber, Weapunga, Wis. Please let me know soon.

Respectfully Yours,  
OTTO KEMPER CLARK.

The boy's appeal was sent to the Department of the Interior, and has found its way

to Hampton, covered with the following endorsements.

"Dept. of the Interior Sept., 6, 1882.

Respectfully referred to the Commissioner of Indian Affairs.

GEO. M. WOOD, Chief Clerk."

"Office of Indian Affairs, Sept., 18.

Respectfully referred to the Hon. Commissioner of Education. The Indian Office has no fund which would be applicable to the education of a white child.

H. PRICE, Commissioner."

"U. S. Bureau of Education, Oct. 24.

Respectfully referred to Gen'l S. C. Armstrong. This Office has no funds to be expended in the education of any child, white, colored or Indian.

JOHN EATON, Commissioner."

Hampton respectfully refers it to the public. This school is open to all who need its aid and is supported by the friends of human need. Is there one among them who feels this a special call for his helping hand?

## MR. HARRISON ON EDUCATION.

The able and deeply interesting "Studies of the South," which have been coming out for some months in the *Atlantic Monthly*, have been noticed in our columns. We quote freely from the September number on Southern Education, for the benefit of those of our readers who may not have seen it, wishing that more of them may be able to follow the series, in which they may find much food for thought.

## EDUCATION.

"The various churches and religious organizations in the Southern States appear to be deeply interested in the work of popular education, and their leading men were evidently studying the problems and difficulties connected with the subject, with serious attention. Education in the South is in the South as in New England, but it is regarded with more respect, and its possession confers greater distinction. The education obtained at the best Southern colleges has long been noticeably solid and genuine in quality, and I thought the young men from these institutions appeared to be rather more vigorous than the students of our foremost Northern colleges or universities,—to have greater intellectual and personal force. Perhaps this is owing to the fact that usually, in the South, only boys that evince superior ability are sent to college."

The educational work already accomplished in the South by the American Missionary Association is of a high character, and it deserves all possible recognition and assistance. The best Southern people everywhere spoke of it gratefully and enthusiastically. At the Normal and Agricultural Institute, Hampton, Virginia; Talladega College, in Alabama; Tusculum School, in Tennessee; and at several other colleges and normal schools which I saw, though the money endowments were scanty compared with the amounts which are needed, the endowments in personal qualities and character as represented by the teachers, are of a remarkably high order. This is necessary, for the work of educating the colored people of the South requires the best teachers that can be obtained."

In many of these institutions the boys learn something of various trades or mechanical occupations, and of farming; and the girls are taught sewing, cooking, and the ways of a house. I examined a great number of the negro common and high schools, which are taught by graduates and students of the colleges and normal schools which I have named, and I think it wonderful that so many of these negro teachers are successful. They have to struggle against many disadvantages, but nearly all whom I saw had the confidence and respect of the lessing white citizens where they were at work. There were a few fools amongst them, of course, but a great majority appeared to be serious and sensible young men and women."

## DIFFERENT SCHOOL SYSTEMS.

One feature divides the state school systems of the South into two classes. The States of the first class have each but one school fund for both races, and in these no distinction is made between white and black children in the distribution of this fund. Of this class the state of Virginia is a good representative. Each State of the other class has two separate school funds, one for white and the other for black children. Of this class the State of Kentucky is a good representative. The white people of Virginia, of course, pay much the larger part of the taxes which are levied for educational purposes in that State, but this does not affect the apportionment of the school fund. The state does as much for a

black child as for a white one in the matter of aid from the public treasury for purposes of education. During the year which closed just before my visit to the South, the number of schools in Virginia was almost doubled; the school attendance was more than double that of the preceding year, and was greater by about fifteen thousand pupils than in any previous year. Over two hundred new school-houses were built, and nearly one hundred thousand dollars added to the value of the school property of the State. The total expenditure for all school purposes for the year was about one million dollars. There were nearly five thousand schools in operation. This number should be greatly increased, of course, as there were then eighty-seven white children for each white school in the State, and one hundred and ninety-one colored children for each colored school. This shows that for a very large number of children of each race no school facilities had, up to that time, been provided.

A very successful Teachers' Institute for white teachers had just been held at the University of Virginia. Four hundred and sixty-seven teachers attended it, of whom three hundred and twelve were women.

The Colored Normal Institute held at Lynchburg was attended by two hundred and forty colored teachers of whom one hundred and ten were women. Dr. W. H. Ruffner, then State Superintendent of Public Instruction, said of this Colored Teachers' Institute, "None who witnessed any considerable part of the proceedings could doubt either the capacity or the desire of the negro for intellectual, and especially, in this case, for professional improvement. There is no social or governmental purpose for which money could be more wisely spent than in the systematic training of colored teachers for colored schools."

The State of Kentucky appropriates the taxes collected from them to the support of colored schools, not considering it just to tax white people for the education of negroes. As there is comparatively little wealth in the possession of the colored people of Kentucky, their school fund is by no means adequate to their needs. The Virginia plan is far better for both races, and for all the interests of the commonwealth, and Kentucky would do well to adopt it, even if it does go beyond the requirements of strict justice and involve some degree of generosity. In Georgia the law gives authority to local school boards to levy taxes and organize schools, and in some places a very remarkable degree of public spirit has been developed among the people in regard to education; the expenditures for school purposes are wonderfully large, and as the system is wisely managed the results are of the most gratifying character. Other States are doing well, but in most of them much remains to be done in the preparation of plans, and the discussion of methods for the expansion and better endowment and organization of public education.

#### HELP FROM THE NATIONAL TREASURY.

As I have already noted, there is in the South a strong and very general sentiment in favor of "a national system of education." By this phrase is meant a system which shall provide for the support of the public schools in the Southern States, or in all the States, by appropriations from the national treasury.

Other Southern men, more moderate in their views, propose that the national government shall undertake the education of the colored race only, leaving the interests of the white people to be provided for by the state governments.

Such a system or method of education would tend strongly to perpetuate race distinctions, as its most characteristic and essential feature would be discrimination between whites and blacks; and it would hinder and tend to prevent the political amalgamation or assimilation of the two races in the South. This blending of the two races into one political community, so that the color or race line shall no longer form the boundary between political parties, is most important and desirable for all concerned.

#### BENEFITS OF EARLY-HELP.

The feeling and conviction, on the part of the white people of the South, that the elevation of the negro race is indispensable to the safety of society, and that their present condition of ignorance and debasement is full of danger for both races, is a most wholesome and necessary sentiment. Nothing should be done to release these white people from their proper duties and responsibilities connected with the education of the negroes, and their moral guidance and control. The whites and blacks together form the political community or society in the Southern States, however they may be separated by social or other distinctions.

I do not think that the poverty of the Southern people is so great as to render national

aid for educational purposes indispensable or really desirable. Such destitution or paucity of resources as now exists in some of the Southern States need not be permanent, and is not likely to be so.

#### WHAT KIND OF EDUCATION?

The education most needed at the South, and especially by the colored people, is industrial and moral training; and the public schools of this country do not, at present, give to the children and young people taught in them much training or culture of either of these kinds. It is of course desirable that the children of Negroes should be taught to read, write and to keep accounts for themselves; but it is still more important that they should be trained to labor, and be aided to obtain such elementary moral equipment as will help efficiently to prevent, their sinking to the criminal or pauper class.

It is the custom to eulogize our system of common-school education, without limit or discrimination. It is perhaps one of the best things in our possession, but it is curiously unmoral; that is, it is almost entirely intellectual, and makes little account of moral instruction or development. The teaching in our Northern schools tends very generally to produce in the pupils a dislike of manual labor, and a disposition to regard those who live by it as an inferior class.

#### THE PERSONAL EFFORTS OF SOUTHERN WOMEN.

Among the most important features of the educational work now going on in the South is one which, from its nature, can have little public recognition. I refer to the personal missionary efforts of the women of the leading white families for the improvement of the common people of both races in their own communities. They are circulating every scrap of reading matter that they can obtain; are advising, instructing, and encouraging the colored girls whenever they can obtain a hold upon them; are trying to inspire and strengthen the young men of both races to resist the evil influences about them; and are, in short, reconstructing society by the old, slow, best method of personal effort and influence. I have rarely found anywhere earnestness greater than theirs, or a clearer sense of the dangers to society from ignorance and immorality. The appalling magnitude of the evils against which they contend, and the pathetic slenderness of their means of warfare, would deeply impress any thoughtful person who had opportunity to do in many places.

In several towns and country neighborhoods these women are forming reading circles and clubs, and trying to prepare the way for the establishment of small public libraries. Every person who has the opportunity to send reading matter to anyone in the South who will receive and distribute it, ought to do so, in this respect the destination is very great almost everywhere, except in the larger towns and cities.

The letters received from these ladies, in acknowledgment of gifts of books from Northern well-wishers are all much alike. The following, from a lady in Louisiana, fairly represents their general characteristics, and I print it as an expression of the feelings and spirit of thousands of Southern women to which the writer belongs:—

DEAR SIR,—The books which you sent reached us safely, and I wish to express, in some small measure, our grateful thanks for your kindness, and for the assistance which your generous friends have given us. Our place was destroyed in 1863, and our dear mother died soon after. Our father, though an old man, was killed in battle, as was one brother. The other died in a prison camp at Elmira, New York.

I was married as soon as the war closed, and I came back to the desolate plantation. The negroes had been scattered, but soon returned. We were broken-hearted, and my sister and I began to go about among the negroes at first to try to escape from our distraction, and then to see if we could find the women or girls to help in the house. Our greatest difficulty was that the old ways of living had been broken up, and none of us knew exactly how to adapt ourselves to the new state of things, which was not yet fully developed.

Finally, my sister said the negroes must be taught. It seemed like trying to make a new world, but she said we might as well begin and we did. My husband laughed at us, but helped us all he could. Most of the negroes about here can read now, and many can write, and we have sent two young men and one girl to the normal school to be teachers.

In answer to your inquiries about the influences and value of different books, we have found that while almost everything is of use, the good books are the best, even for the most ignorant. We make much use of poetry. Many of Mr. Longfellow's poems, and of Mr. Lo-

well's please the negroes, both old and young; and Mr. Matthew Arnold's Selection of Wordsworth's poetry is a good religious book for us.

Mr. Whitney's series are much liked, as are Mr. George MacDonald's Ronald Bannerman's Boyhood and At the Back of the North Wind. Mr. Edward Clodd's Childhood of the World, and Colonel Higginson's Young Folks' History of the United States, are very good. We could profitably use additional copies of all these. But your selections have been so useful that we do not wish to ask for further books. We are very grateful indeed for your offer to send another parcel. If it should contain anything not suitable here, we can send it to our friends in Tennessee, who would like to have our thanks given to the kind ladies who sent us the books. With best wishes for them and for you, I am, dear sir, very gratefully and sincerely yours,

ALICE E.

The opportunities of education and development should of course be equally accessible to all races and classes in our country. There should be no restriction, no favoritism. But the question of what education should be for the working people of America is a very important one. So far from its having been decided, it has not yet been seriously entertained. That which they now receive in our public schools is miserably inadequate. One of its defects is that it does not have in view in any definite manner the essential conditions or specific requirements of the life of the men who labor with their hands. The Negroes of the South should have something better."

[Continued from Sept. No.]

#### REMINISCENCES OF MISSIONARY LIFE IN THE SANDWICH ISLANDS.

BY EDWARD BAILEY.

Soon after going to Kohala to reside, in 1837 I commenced a boarding school for boys. It seemed at that time the only way to influence the people permanently was to isolate the young from those surroundings to which they were accustomed, and which were supposed to have had a great influence in making them ignorant and degraded beings they appeared to be.

I commenced school with a small number, six or eight, intending to increase it if things seemed favorable. I had no school house nor any of the appliances commonly thought necessary for carrying on a boarding school. But a small room in our own house was used for school and dining room; each of the boys built himself a small hut to reside in, and the school was commenced in earnest. But it did not continue. Unfavorable influences worked against it, and it was suspended till more favorable circumstances should warrant a recommencement. Of the boys in this school who, though the school was given up, still continued in a measure under my direct tuition, one whose name was Halelei impressed me as being a boy to be watched, and who I first knew him as a school teacher, though he was not more than ten or twelve years old. He was clad in the dirty rags common to children of that age, and living where water was scarce, was pretty well increased in dirt, so that a scratch on the skin would show a white mark.

As he appeared promising, he was recommended as a pupil for the High School at Lahaina, and he was received there and educated. In the course of his education, or soon after it was completed, he came to Walluku where I then resided, having charge of the female Seminary and where I have ever, since resided. Feeling a special interest in him, I recommended him to the hospitality of my assistant, Malahi, and his beautiful wife Kalausa.

It is painful to dwell on the evils which resulted from the acquaintance thus initiated. Malahi obtained a divorce from his wife who, after a short course in sin, died miserably, leaving him with a boy and girl by a former wife—Lale and Paulo. Another daughter died before she came into the school. Late, though young attended the Seminary school. Paulo was the youngest. The family seemed to lack vitality, and the father to lack judgment. He had one child by Kalausa, which died in infancy. In his zeal to bring up his children in civilized ways, he kept them too closely confined, and one after another died, till his home was left desolate.

Halelei adopted the lawyer's profession, and pursued an erratic course for many years, in the course of which he produced a novel. So far as I know it is the only one in the Hawaiian language, and is perhaps the only book written by a Hawaiian. It is a 12 mo. of about 400 pages entitled "Lalekawai." It has the fascination common to novels, and is well sprinkled with the valuable in knowledge with the superstitions of the times; detailing or mysteriously hinting at things commonly believed of people. It is not without its illustrations of

a high sense of honor, though it sometimes descends to details illly comporting with strict decency.

After sometime Malahi married a pupil of the Seminary for a third wife, who still lives. They have had four children, but only one survives, a daughter, who received an education in the first female Seminary at Makaua. She married a foreigner, and they have three small children.

A year ago perhaps, it became evident that Malahi was a leper; and there was every probability that he would be removed to the leper settlement on Molokai, when he sickened and died May 21, 1881. It was not unexpected by him, and he had been putting his house in order to leave when he was stricken down. Although he had the appearance of a feeble old man he was probably not seventy years old when he died. He did not give any very marked indication of leprosy, and a stranger might not suppose that anything was the matter.

The brother of his widow was a member of the legislature which was called together to elect the present king, Kalakaua—and was the only one whose death followed immediately on the infliction of wounds given by the savage mob on that occasion.

Many comments might be made on this narrative. It embraces nearly the whole of the transition period of the Hawaiian nation from a natural state to one sufficiently artificial. It did not require a very long residence in Kohala to demonstrate that in the circle around us was shown every shade of character, from the honest open one of the well intentioned, to that of the dark plotter whose vision seemed full of suspicion of evil. That dissimulation was common, appeared from the universal distrust of the people of each other. Though it might not be innate, a constant experience of duplicity had begotten it. Toward the missionaries there was distrust was wide; but they were not slow to discover that many of the foreigners coming among them were still less worthy of trust than their own people. So different their ideas from those of white people, if happy you succeed in penetrating them, they fill you with surprise. But the same arguments which seem to convince them at one time utterly fail at another time, though the conditions are the same so far as can be seen.

A large part of the people of Kohala were at that time enrolled as pupils of the school. The whole district was divided into school districts, and teachers were appointed over the schools, which consisted of both children and adults. A school house had been built in each school district, which answered also for a meeting house, where the people came together in the early morning of each day to sing as they were able, and pray and listen to the exhortations of the native teachers. Though the exhortations were probably at times a very curious medley, the habit of coming together and engaging in such exercises no doubt had its influence for good.

Sincere prayer no doubt ascended from some hearts but sometimes the prayers seemed to have been made. Indeed the whole appearance of things was as if the people only saw streaks of light through their darkness, though the gospel had been seventeen years at the islands. At this distance of time it is only to be regretted that so few records were made of things done and said at that time, but it did not then seem as if they were worth the paper they would be written on.

It was in this same immense house that the quarterly examinations of the schools were held. On the day appointed, at 8 or 9 a. m. long lines of people were seen converging toward the house from every quarter. They were dressed in their best, and during our short stay of two years, Kawenot out of fashion, and they really made a good show in their clean white cottons. Every Kihel or shawl was allowed full liberty to spread itself in the fresh trade wind. And in some of those companies, one or two of the Kihels were of splendid satin of some delicate shade of green, blue or buff. They were among the treasures of the chiefs, put for careful keeping among their favorites, who were allowed this use of them. The companies, one from each land, and their teachers at the head, marched into the house and seated themselves in the same order on the ground, till the house was pretty well filled. The extent of their acquirements was shown by their reading each a verse in the New Testament, which had been extensively furnished at that time, all imperfect as it might be. It is doubtful if a copy of that edition could now be found. The people carried that and their hymn books with them everywhere, and one of the disasters of a canoe voyage was often times the loss of the books. Some of the pupils were old, gray headed men, who, as they stood to read, were obliged to hold the book high to the light, and called off each syllable in a prolonged sing-song, with no let up or inflection from beginning to end. I may say in passing, that Hawaiians commencing to learn to write always form a continuous line without any division into words and syllables.

Such reading was common, especially with

## At Home.

## HOME ADORNMENT.

"There's no place like home." Be it ever so humble, it may be happy, and bright and beautiful—yes beautiful—so that its memory will always linger in the mind of its far wandering children as a pleasant picture of loving cheer. A great deal is said and written for rich people in these days about house decoration and adornment. No amount of money will make a home beautiful without good taste and good will. But Nature knows how to decorate her halls and bowers without the costly help of the upholsterer and cabinet maker. After all, they only copy her designs, and she will freely lend to all. A writer in the "Country Gentleman" gives some excellent suggestions as to how to avail ourselves of her liberality, and we quote his advice as we "couldn't do better ourselves."

## LEAVES AND BERRIES FOR HOME ADORNMENT.

Let me also beg you to gather the rubied oak leaves in small bunches, and trailing branches of woodbine, whose leaves are mottled with crimson, yellow and green, and branches of the sumac before they have been withered by the frost, and press them under heavy weights in a book for ferns. Also bunches of black elder berries, which grow by the brook-sides and in the swamps, and large clusters of the bitter-sweet, sometimes called "Roxbury wax work," and hang them to dry in a warm place. And to mingle with them, gather some long, trailing vines of the feathery seed-pods of the wild clematis.

Make a large collection of every kind of brilliant leaf and berry that you can find in your walks in the woods and meadows, and press or dry them carefully, and when the dark wintry days have come, and it is time to prepare for Christmas decorations, you will rejoice that you have such a store of woodland treasures on hand, which, with a bottle of mullage, some pasteboard, and strong thread and needles, can be made so effective in decorating your apartments, and will add so much to their brightness and coziness all through the dreary winter months.

Many writers advise their readers to oil or varnish the leaves and branches; but when thus prepared they will catch all the dust that floats in the air and soon be soiled, while if simply pressed for five or six weeks, they will become well dried. If, however, they are needed at an earlier date, they can be very prettily preserved by rubbing a piece of beeswax over the flat iron while moderately hot, and pressing it upon the leaves. This will give them a fresh, shining appearance, and preserve the colors perfectly.

One of those warm Indian summer days, when the pickling and the preserving are all finished, it is a good plan to have a picnic in the woods, and scramble up rocks and climb fences and leap ditches, and put aside our dignity for awhile, and feel delightfully free and all the troubles of civilization and when we return from the forests and hillsides, rich with the spoils of the woods, we shall soon feel much fresher and able to do the work that belongs to us. Soon will come the season

"Of falling winds and naked woods, and meadows brown and bare."

and all the glories and delights of the summer and golden autumn will be of the past.

S. O. J.

## SOMETIME.

It is a sweet, sweet song, warbled to and fro among the topmost boughs of the heart, and filling the whole air with such joy and gladness, it is a good plan to have a picnic in the summer morning, comes out of the darkness, and is born on the mountains. We have all possessions in the future, which we call "someday." Beautiful flowers and singing birds are there, only our hands seldom grasp the one or our ears hear the other. O, road-trail be of good cheer, since for all the good there is a golden "someday" when the hills and valleys of time are all passed, when the wear and fever, the disappointments and sorrows of life are over, then there is a place and rest appointed of God. O, homestead! over whose roof fell no shadows nor even clouds, and over whose threshold the voice of sorrow is never heard; built upon eternal hills, and standing with the spires and pinnacles of celestial beauty among the palm trees of the city on high, whose lowly God shall rest under thy shadows, where there is no sorrow, no pain, nor the sound of weeping sometimes."

## Gentlemen's Table.

## AT WORK AGAIN.

The Hampton hive is buzzing again, fuller than ever—all earnest workers we hope, no more drowsy among them. We think, as we gather in the old pieces of the young swarm last sent out, and of all our busy labors in distant fields. We wish them bountiful harvests and sweet rewards for their labors in the season before them. We hope they will send us reports of their successes, and of their struggles too. Tell us how the Hampton training has helped you—whether you have been able to avail yourself of the "Butler School" methods, and of Mrs. Walton's kind suggestions for their days that they may apply their own trials and your victories—the dark and the bright. Remember that whatever lessons you may be able to teach your pupils, the lessons of kindness to animals. Children are often cruel to animals, in the thoughtlessness of play, because they know so little what pain is. Boys seem to have a natural fondness for shooting birds and robbing nests and teasing cats. But it is very easy for an intelligent teacher to interest them in the curious habits, and pretty ways of the innocent creatures that inhabit the world with us, and have a right to their share of its happiness, and a special claim in their helplessness on us to whose necessities and enjoyment they contribute so much. An excellent little book of lessons for primary schools on this subject have recently been issued by the Massachusetts Society for the Prevention of Cruelty to Animals, and reported in both England and Germany. It is a shell case pleasure in copying them month by month for our graduate teachers, who can supply themselves with the complete number at two cents each by sending to the office of the Society, 96 Tremont street, Boston.

TEN LESSONS ON KINDNESS TO ANIMALS.  
BY GEO. T. ANSELL.  
President of the Massachusetts Society for the Prevention of Cruelty to Animals.

FIRST LESSON.  
Maker of earth, and sea and sky.  
Thou art the Sovereign Lord and King.  
Who bang the stormy waters high  
And farthest aloft the ocean's wing.  
Bless the dumb creatures of Thy care,  
And bid them to their right and prayer.

"BELL OF JUSTICE"  
[To be read to pupils by Primary Teachers.]

It is a beautiful story, that in one of the cities of Italy, the king caused a bell to be hung in a tower in one of the public squares, and called it the "Bell of Justice," and commanded that any one who had been wronged should go and ring the bell, and so call the magistrate of the city and ask and receive justice.

And when, in course of time, the tower and of the bell-crope had rotted away, a wild vine was tied to it to lengthen it; and one day an old and starving horse, that had been abandoned by its owner and turned out to die, wandered into the tower, and in trying to eat the vine, rang the bell. And the magistrate of the city, coming to see who had rung the bell, found this old and starving horse. And he caused the owner of the horse, in whose service he had tilled and been worn out, to be summoned before him, and decreed, that as this poor horse had rung the "Bell of Justice," he should have justice, and that during the remainder of the horse's life his owner should provide for him proper food and drink and stable.

Until about sixty years ago, there were no laws anywhere to properly protect from great cruelty these dumb creatures that toil for us, and die for us, and make our lives happier and more useful; and so wicked and unmerciful men used to beat them, and work them beyond their strength, and give them too little food, and not properly time for them in cold weather, and in many other ways treat them cruelly and unjustly, and so make their lives very unhappy and miserable. But about sixty years ago some of the good people of England determined that there should be laws to protect these dumb creatures from being abused; and so they formed a society for that purpose, which has become very great and powerful. In other countries, good people, seeing what has been done in England, began also to form other societies of the same kind. And so the work has gone on, until in almost every Christian country of the world,—in Europe, Asia, Africa, America and many islands of the ocean,—these societies have been formed.

ed. And now, within a few years, the children have taken hold of this work, and hundreds, and perhaps thousands, of societies of boys and girls have been formed in various parts of the world, many in Europe, and some in America, to protect animals from cruelty.

## "BANDS OF MERCY"

In England many of these societies are called "Bands of Mercy," and all the boys and girls that belong to them promise to do all they can "to protect animals from cruel usage, and to promote, so far as they can, their humane treatment." And all the boys and girls that belong to these societies have cards of membership to hang up in their homes, so that visitors may see that they belong to these societies. And they have monthly meetings where they read and hear, and tell stories about animals, and recite poems, and sing hymns, and have addresses from older people. In the public schools of Philadelphia, over three thousand boys belong to these societies, and each has a "German-silver badge" in the form of a horse's head, and each society a flag or banner of different color,—blue, cherry, rose, etc. The teachers take charge of them. And they have meetings at which stories are read aloud and recited, and songs are sung, and addresses are made by the teachers and others; and they have a reading room, and a library of interesting books. Sometimes they march to music in the school rooms and sometimes they have a great Union meeting in some public hall, where prominent gentlemen go and address them.

But probably the largest society of boys and girls in the world is one in England, called "The Dicky Bird Society." It was started to protect the birds and their nests, but now includes other creatures. Over thirty-seven thousand boys and girls now belong to this society, and they all promise to be kind to all harmless creatures, and to protect them to the utmost of their power, to feed the birds in winter, and to never take or destroy a nest; and that they will all try to get as many boys and girls as possible to join "The Dicky Bird Society."

To the life of a good man named Thoreau, who lived in Concord, Mass., a few years ago, and who was very kind to all God's harmless creatures. It is stated that even the "fishes came into his hand when he dipped it into the stream; the little mice would come and playfully eat from his fingers, and the very mole paid him friendly visits. Sparrows alighted on his shoulders when he called them; Phobias built their nests in his shed, and the wild partridge with her brood, came and fed quietly beneath his window, as he sat and looked at them." "After he had been two or three months in the woods the wild birds ceased to be afraid of him, and would come and perch on his shoulder, and sometimes on his lap, when he was digging."

I think, if the birds could vote, they would make Thoreau an honorary member of "The Dicky Bird Society."

## SOME QUESTIONS.

[Others to be asked by teachers.]  
What can you tell about the "Bell of Justice?"  
When did they first form a society to protect animals, and where?  
Where are there such societies now?  
When did boys and girls begin to form such societies?  
What are many of them called in England?  
What do they promise to do?  
Where are their cards of membership hung, and why?  
What do they do at meetings?  
How many boys in the public schools of Philadelphia belong to these societies?  
What badge do they wear?  
What banners do they have?  
What is done at their meetings?  
What can you tell about "The Dicky Bird Society?"  
Where did Thoreau live?  
What can you tell about the friendship of the fishes and birds for Thoreau?  
If the birds could vote, what might they do?

## Agriculture.

## SOMETHING FOR THE AMERICAN PEOPLE TO CONSIDER.

"The richest agricultural and horticultural contributions here come down to us from the master minds of Greece. They drew their inspiration directly from nature herself, and not from what some earlier writer had said about nature."

The pupil of Socrates, the leader of the immortal retreat of the ten thousand, from his farm at Elis, wrote: "Agriculture, for an honorable and high-minded man, is the best of occupations and arts by which men procure a living, for it is a pursuit that is most easy to learn and most pleasant to practise; it puts the bodies of men in the fairest and most vigorous condition, and is far from giving such constant occupation to their minds

as to prevent them attending to the interests of their friends and their country. A man's home and friends are the sweetest of all possessions." So long as Greece gave proper attention to her productive interests, and especially to agriculture, her star stood at the zenith, but as luxury increased, labor was degraded, education diverted from practical to speculative courses, and agriculture became subordinated to trade and commerce; the star of her glory gradually sank to the horizon, from which it has never again risen.

The policy of Rome was to "secure by the plowshare what she won by the sword." Twice was Cincinnatus called from the plow to save his country, and not until effeminacy and luxury supplanted the rural tastes and habits of the people was she overrun by the hordes of the North.

Did time allow, we might run through the whole catalogue of nations that are or have been powerful upon the earth, and show that in proportion as they dignified labor and fostered their productive industries they have been great, powerful and stable. Read the histories of these nations, and we find that the development of their productive industries, either by just laws or the fostering care of their governments, has marked the era of their progress, prosperity and highest civilization. The accumulation of capital in the hands of a few, by trade and commerce and the oppression or neglect of the productive industries, equally marks the era of their decline and overthrow.—Dr. Thomas P. Jones, before the American Agricultural Society.

## POULTRY.

If you want fowls for general purposes, take the Leghorns, Hamburgs or Spanish, or some would prefer Dorkings, Polish, Houdans or Crevecoeurs. These last named breeds are what we call constant layers; but for eggs alone there is no fowl in existence that can compete with the Leghorn. They lay more eggs, consume less food, and for early, fast-growing spring fowls they will out-rank any breed.

Perhaps at this time it would be in better place to say a little towards the care of fowls. There is no other class of stock on the farm, as a general rule, that is so sadly neglected as the domestic fowl. Why neglect this great source of human sustenance in such a way? Perhaps some of my readers will hoot at the idea, but it is true there are more fowls and poultry consumed in the United States than there is beef or pork. This looks like a big thing, but the statistics show that such is the case. Look at the consumption of eggs alone; it is almost as great as that of pork. Now is the time to clean and whitewash your roosts, and be sure and get ahead of all vermin, for they make their start in spring, and are more easily gotten rid of at that season than after they have your hen-houses all polluted. A good way to keep them from starting, is to pour coal oil on your roosts and other places about your hen-houses where they are likely to make a start. Spring generally brings disease with it, and a good way to keep fowls healthy is to keep a lump of alum in their drinking water; the alum from the alum mixed with water, helps to tone up their systems and keep them in healthy condition. To make fowls healthy and lay well, a good way is to give change of diet—say soft food in the former part of the day and whole grain in the evening; and green food is very essential for the health of fowls, and also necessary to insure good success in hatching. But every farmer ought to see to it and have good fowls on his farm; for the first reason, it takes no more to feed good ones than it does scrubs, and if he wants to sell blooded stock he must have the trouble to sell blooded stock that he usually buys to sell common scrub stock. And if there is not any stock on the farm that will pay more interest on capital invested than will well-fed fowls.—Alex. Bickett in Journal of Agriculture.

## SUNFLOWER SEED FOR POULTRY.

A correspondent, Mrs. M. J. C., Otter, Iowa, gives her experience in raising mammoth Russian sunflower seed for poultry and for stock. It is eagerly eaten, makes the hens produce eggs plentifully, keeps the feathers glossy and elegant. Our correspondent has grown it successfully on a variety of soils and even in fence corners, and regards the stalks, to be used for kindling, wood as by no means unimportant. In conclusion, she adds: "It grows to double the size of the common South American variety, and far exceeds it in the large heads of nice black seeds, if cultivated like other grains and kept free from weeds. I raised heads larger round than a water-pail, and very heavy. I plant a patch every year for my chickens. If you plant near your barn the poultry will live and be fat, and one would be astonished at the amount of eggs produced. It takes three quarts for an acre and plant as far apart as corn."—Southern Planter.

\$60 a week in your own town. Terms and \$1000  
free. Address H. HALL & Co., Portland, Maine.

ROASTED COFFEE quickly becomes impaired,  
parts with its good qualities and absorbs bad, when  
exposed to air impregnated with the odor of Tobacco,  
Spices, or any impurities or moisture.  
To prevent this we close or seal the pores of the  
Coffee bean by our Patent Process of Roasting, which  
closes the natural air and real essence to remain in  
the Coffee itself until ground for use.  
Still further to more effectively preserve the full  
strength and aroma of the Coffee, we pack it immedi-  
ately after roasting in TIN FOIL PACKAGES (for  
which we have the exclusive patent for the United  
States on Roasted Coffee), by which the Coffee is  
more perfectly hermetically sealed, than in any pack-  
age offered to the public. Thus it is rendered im-  
mune to the action of damp weather and the volatile  
effects of hot weather, and will retain its full  
quality and full strength unimpaired in any climate,  
on land or sea, for years.

**J. B. LAZAR & CO.,**  
NEW YORK. BALTIMORE.

**THE HYGEIA HOTEL,**

AS ENLARGED AND IMPROVED.

**OLD POINT COMFORT, VA.**

Situated one hundred yards from Fort Monroe, at the confluence of the  
Chesapeake Bay and Hampton Roads, being the first point of land lying  
westward between the Capes of Virginia, about fifteen miles north of  
Norfolk and Portsmouth; all passenger steamers running to and from those  
cities touch at the pier, going and returning, with the U. S. Mail, landing  
only twenty rods from the Hotel, which is substantially built and com-  
fortably furnished; has two Otis hydraulic passenger elevators, gas and  
electric bells or Creighton's Oral Annunciator in all rooms; water, rooms  
for bath, including Hot Sea, and closets on every floor, with the most per-  
fect system of drainage of any Hotel or any public building in the country.  
As a resort for the pleasure-seeker, in winter, or resting place for tourists on their  
way to Florida or the North, this house, with accommodations for about 1,000  
guests presents inducements which certainly are not equalled elsewhere as a  
summer resort or cold weather sanatorium. Has during the cold weather over  
35,000 square feet of the spacious veranda (of which there are over  
enough the most delicate invalid to enjoy the sunshine and fine water view  
without risking the slightest exposure. The climate of Old Point Com-  
fort is unequalled for salubrity. Material facts being absolutely unknown.  
The record of the Meteorological Observatory for the past ten years show  
an average temperature of 60 deg., 74 deg., 76 deg., in summer; 70 deg.,  
50 deg., 40 deg., in autumn; 45 deg., 44 deg., 42 deg., in winter; 48 deg.,  
52 deg., 60 deg., for spring. The invigorating atmosphere and mild tem-  
perature being especially adapted to that class who seek the genial winters  
of the South and cool summers of the North. For cheerfulness and sur-  
roundings, the delicious tonic of the pure ocean air and the lullaby of the  
ocean waves rolling upon the sandy beach, but a few feet from the bed-  
room windows, are most healthful soporifics of the Hygeia.

**EMANCIPATION**

ITS COURSE AND PROGRESS FROM  
1481 B. C. TO A. D. 1875.

BY JOS. T. WILSON.

In addition to the history of Emancipation, it also  
contains a review of President Lincoln's Proclama-  
tions, the XIII amendment, and the progress of the  
freed people since Emancipation. Also a history of  
the Emancipation Monument, in Lincoln Park,  
Washington.

It is a work that has long been needed, as it con-  
tains much valuable information and data that can  
only be obtained by long and laborious research  
through voluminous histories and encyclopedias. The  
arrangement is such that reference can be made in a  
moment's time to the date of emancipation in any  
country on the globe.

The Review of President Lincoln's Proclamations  
and the XIII amendment is valuable, showing, as it  
does, the opinions of the different leading thinkers and  
writers on the validity of the same.

The book contains 342 pages, printed in large, clear  
type, on heavy white paper, and is handsomely bound  
in full cloth. Price \$1.50—post paid.

DEVOTED TO THE INDUSTRIAL CLASSES OF THE SOUTH.

VOL. XI.

HAMPTON, VA., DECEMBER, 1882

NO. 12.

A SKETCH OF HON. JOHN M. LANGSTON.  
BY ORINA LANGSTON.

The Hon. John M. Langston recently visited our city, and following a speech made by the Hon. Paul, addressed a large audience of white and colored people, assembled in one of our great tobacco warehouses.

My father had once met Mr. L. at a public meeting in Louisa Co., when he visited his father's grave, and in speeches made there, so conciliated the white people that he was invited to visit and dine in more than one house where a Negro had never before been admitted but as a servant. I had only known of him previous to his visit here by my father's account of him and from common report. His speech here was much admired, and was complimented in the *Virginian*, a bitter Bourbon paper. I had long desired to see this distinguished orator, who has a fine reputation for learning and eloquence, and is considered among the leaders of his race in our land. It is not customary for ladies to attend political meetings here, except on rare occasions, and I had to content myself with a call upon Mr. Langston at the house of a worthy colored widow with whom he was lodging. Mr. Langston received my call, and in the course of conversation with him I learned many interesting incidents connected with his own history, the various places where he has been cast, and the people with whom he has been associated. Mr. Langston has lived in stirring times, and has had a varied experience. After hearing the story of his life from his own lips, I asked him permission to give a sketch of it to the readers of the *Workman*. I wish I could "tell the tale as it was told to me," but can only repeat it from memory, without attempting to give the exact words of the eloquent orator.

As it is always interesting to know how the people we care to hear about look, I will state that Mr. Langston is apparently about fifty years old, somewhat above the medium height, though he bears himself so well that he looks much taller than he is, unless standing near other men. His frame is massive, and conveys the idea of a man in vigorous health, with a strong will. He is a light mulatto, with good features and silky black hair and beard, slightly inclined to curl. His manner is extremely dignified, somewhat reserved at first, but he talks rather slowly, as if weighing his words, and is exceedingly courteous to all with whom he comes in contact. His dress is plain, but fastidiously neat, and the whole impression produced by his appearance is that of a man of dignity and intelligence, who has had large experience in life.

Mr. Langston says his earliest recollections carry him back to a Virginia plantation, where he played with other colored children. He is remarkably the scene of his mother's death-bed, and then a long, weary journey, mostly made by wagon, when he was about three or four years old, to the State of Ohio, whither his white father sent him and his two older brothers, and provided means for their support and education.

At this time he was known only as "Johnny," and being received into the family of a Mr. Gooch, an ex-Virginian, and treated as one of themselves, he was for many years known as John Gooch. When the child was nearly white, and soon forgot all about his old playmates on the plantation. Nothing was ever said in his hearing about his being a colored child, and he does not remember that he was, up to the age of ten years, aware of the fact. Mrs. Gooch made a great pet of him, as he was much younger than her own children, and he always called her mother, and Mr. Gooch father. Their youngest daughter, a very amiable, gentle girl, taught him music and took him to school with her.

When he was ten years old, he was as happy and thoughtless as aurchin as could have been found in the "Western Reserve" as Ohio was then called, but at that time events occurred which had a very important bearing on his life, and were forever indelibly impressed upon his mind. His friend Mr. Gooch, who seemed very comfortable and well-to-do in Ohio, was seized with the "Western fever," and sold his farm, to remove to the rich lands of Missouri, about which fabulous stories were then told. He eventually carried out this plan, settled in Missouri, took the Southern side in the great question then beginning to occupy the public mind, bought slaves, and at the breaking out of the war was the owner of much land and many Negroes. When the family prepared to leave Ohio, one of the important questions in regard to the move was, "What shall we do about Johnny?" They explained to the little boy that he was not, as he supposed, their child, and told him the true state of the case, leaving it to him to decide whether he would go with them to the new home, or be entrusted to other hands where he was. The child did not hesitate a moment, but, to the great pleasure of Mrs. Gooch and the entire satisfaction of the rest of the family, insisted upon going with them. They set out on their western journey in a canal boat, and towards the close of the first day, when they were but a few miles from their old residence, some accident occurred to the canal, and the water was drawn off, the boat ran aground, and the travellers found themselves compelled to stay where they were. This did not at all disturb the boy with whom my story is concerned, who played happily on the tow-path until night-fall, and was up again early in the morning, amusing himself, while the older members of the party were

getting breakfast. The country was perfectly level, and as his eye followed the canal in the distance whence they had come the day before, it seemed like a long thread stretching far away in the distance. He noticed what seemed a moving speck a long, long way off, followed closely by another like it, and as the two objects drew nearer, he perceived them to be men on horseback riding at breakneck speed. As they galloped up to the boat, those on board rushed out to see what the clatter of hoofs meant, and Mr. Gooch found himself summoned to appear at the county Court which was then in session a few miles off, to answer the charge of forcibly abducting a colored child from the district. Mr. Gooch hastily saddled a fine horse he had on the boat, and taking the child he was accused of abducting behind him, he accompanied the officers at once to the Court-house. All along the road, groups of excited people, many of them Negroes, were collecting, and all seemed to be talking eagerly, and often angrily, as they scanned Mr. Gooch and the little boy, who appeared to be the objects of their indignation. The word "kidnap" was so often used that the little fellow, who was much bewildered by the events of the morning, asked Mr. Gooch what it meant, and listened in astonishment to an explanation given him in a few minutes.

When they reached the courthouse, the boy found there his two older brothers of whom he had previously known little. A young lawyer, named Allan Thurman, employed by them as counsel, at once asked the attention of the Court to the case of Mr. Gooch, stating all the circumstances, and bringing up in the will of the child's father, which had been contested in Virginia, but through the influence of three gentlemen of that State, who acted as trustees for the heirs, had been sustained by the Court, and one clause which stated that the child John was to be provided for in the State of Ohio. Mr. Gooch employed counsel to defend him from the charge of kidnapping, and he was soon released from custody. The judge decided, however, that the child could not be taken out of the State of Ohio, and that if Mr. Gooch, his former guardian, removed to a slave State, the Court must assume charge of the child.

This was done, and the little boy placed at school in Cincinnati. This was considered a great misfortune at the time by the child, who was tenderly attached to his guardian's family, but in later years, he came to consider it as one of the greatest blessings of his life. In looking back to that time, with all the great events that have intervened shedding their light upon it, there seems to Mr. Langston to have been a wonderful providence in that break in the canal within a mile of the county line, for beyond its limits the officers who arrested Mr. Gooch would have had no jurisdiction to take him up there.

He remained at school, studying hard and learning fast for some years, and hearing frequently from the Gooch family. About two years after their parting in the Court-room, Mr. Gooch came to Ohio on business, and visited his former ward at school. The little boy was delighted to meet once more the man who seemed like his own father. When Mr. Gooch told him that Mrs. Gooch had said, "he must make Johnny promises that as soon as he was twenty-one years old, he would take him to the place, he would come to the family in Missouri, all of whom cherished sincere affection for him," the child readily promised, and for years looked forward to the fulfillment of this promise as the brightest hope of his life. When the time came, however, and the little boy had come to man's estate, things had greatly changed for all parties. The great slavery struggle, which ended with Lee's surrender at Appomattox, had begun, Missouri was torn by contending factions, and Langston, holding the sentiments in which he had been educated, in Ohio, could only have gone to that "detestable ground," at the peril of his life and liberty. He said with deep regret that he had never seen any of the family since Mr. Gooch's visit to him at school. When the war began, all communication ceased between the young colored men, who naturally enough, was working ardently for the freedom of his race, and the white family who had been the tender guardians of his childhood. When the Southern cause was lost, and the emancipation of the Negroes accomplished, Langston went to Missouri, and sought earnestly for his old friends, but without success. No trace of them could he find. Possibly the older members of the family were dead, and their children scattered. Possibly the bitterness which ruled the hour in those days of sorrow for Southern hearts, prevented any of his old friends from making themselves known to him, when it was in his power. Mr. Langston spoke of the family with the utmost gratitude and affection, and said he had often felt that he would be willing to give his right arm to be able to make a proper return to Mrs. Gooch for the loving care she had lavished upon him in childhood.

When Mr. Langston had finished his course of study at the Cincinnati school, he had a great desire to go to college and fit himself for the practice of law. There were at that time many difficulties in the way of such a plan for a colored man. There was no college in the land which admitted Negroes, except one or two theological seminaries, where colored students could prepare themselves for the ministry among their own race in this country or in missionary work. To one of these institutions young Langston was admitted finally, upon condition of his studying the theological course. After this,

he was in time admitted to the bar, but long years of constant application to study, with intervals of teaching had seriously impaired his health, and when ready to enter upon his work he found himself possessed with dyspepsia, which threatened to end in consumption. A wise physician explained to him the cause of his malady, and promised him a cure, if he would do as he advised, and go at once and live on a farm, doing as much outdoor work as he could, gradually increasing the amount. He doubtless owes his present vigorous health, and perhaps his life to following this advice. About this time he bought a beautiful little farm in Ohio, and employed a worthy English couple to attend to it for him, with the understanding that he was to stay on the place whenever it suited him, and do as much of the work as his strength permitted. This plan worked finely, and his health soon showed the benefit of exercise in the open air. But now fresh troubles came in the way, and had to be surmounted by time and patience. The men who owned the adjoining land, and had to use a lone running through Mr. Langston's farm to go to the market town, was a white Democrat from the South—what the Western Whigs of that day called a "Hunker Democrat," a bitter pro-slavery man, and said to be terribly prejudiced against the free colored people. Many harsh things said by this man of Langston's having land in his section were reported to the colored farmer, and he was warned by white and colored people that he was going to have a disagreeable if not a dangerous neighbor. Langston, however, had early learned the wisdom of at least trying to conciliate one's enemies, and he determined not to be driven from his pretty home, which was daily growing in beauty under the skillful cultivation of his English meadower, whilst he was himself rapidly gaining health and strength upon it. By a diligent course of politeness and neighborly kindness, at first curiously received, but by degrees, properly appreciated, he succeeded in winning the good will of his prejudiced neighbor, who in time came to be his steadfast friend, and they continued on excellent terms until the colored farmer left the district for wider fields of labor.

Many long years after the scene in the Ohio Court-house, which had such important results for the little colored boy, John Langston, who had now become one of the leaders of his race in our land, when living in Washington, had some business to transact with a noted Western Senator, and found himself once more face to face with Allan Thurman.

After the business had been settled, the colored lawyer said to the white Senator, "Mr. Thurman, do you know, sir, that for several years I hated you with what I thought would be a bitter and undying hatred, although I now consider myself under infinite obligations to you." "What can you mean?" said Mr. Thurman, in great surprise. Explanations followed, and Mr. Thurman shook hands cordially with Mr. Langston, telling him that he had wondered a thousand times what had been the fate of the colored child, whose brothers had been among his first clients, and that he was very glad to find that the world had gone so well with him.

For some years after the war, Mr. Langston was professor of Howard University in Washington, and during Mr. Hayes' administration he was sent as United States minister to the Republic of Hayti. He has spent the last five years in the West Indies, except for the vacation allowed by the government to its representatives. His presence in Virginia at this time is thus accounted for, but he leaves on the 31st of October for his home in the tropics.

Mr. Langston gives extremely interesting accounts of the island of Hayti, and its inhabitants, much of which would doubtless be new to most people in the United States, whose chief associations with that country are connected with the terrible revolution which occurred there about fifty years ago, and the name of Toussaint L'Ouverture. He says there is the utmost good feeling in the island towards the United States, and the name of Charles Sumner, whose portrait hangs in the President's reception room, is greatly venerated by the Haytian people.

Mr. Langston talks very hopefully of the progress of the colored people, and thinks the time is past when they need depend on legislative enactments to help them. He believes that the liberal movement in the South will eventually secure to them all the rights they have right to ask from their fellow-citizens, and that henceforth they must trust to integrity of character and industrious habits to bring them success.

THE BROTHER OF LANGSTON.—Dr. Greene, in his "Problem of Health," says there is not the remotest corner or inlet of the minute blood-vessels of the human body that does not feel some wavelet from the convulsion occasioned by good heavy laughter. "The life principle, or the inward man, is shaken to its innermost depths, sending new tides of life and strength to the surface, thus materially tending to insure good health to the persons who moderately indulge therein. The blood moves more rapidly, and conveys a different impression to all the organs of the body as it visits them on that particular mystic journey when the man is laughing, from what it does at other times. For this reason every good hearty laugh in which a person indulges, tends to lengthen his life, conveying, as it does, new and distinct stimulus to the vital forces."

PROF. C. C. PAINTER, of the American  
Missionary Association, remarks in a letter  
just received: "In Greenville, Tenn., in  
passing a school house, I saw a young  
man forming his pupils into line, and  
stopped to watch his drill. I found him  
to be one of your Hampton graduates.  
Next day I hunted him up, and was much  
pleased with him and gratified to hear  
from the whites that he was doing good  
work. When we can run across such men  
in all the school houses of the South, our  
national problem will be solved."

It is no exaggeration to say that the  
only solution of the serious problem pre-  
sented by the constantly increasing ignor-  
ant—and therefore dangerous—class in  
the South, is in the speedy multiplication  
of facilities for general education of the  
most practical kind. Mr. Harrison makes  
a good point in his Southern "Studies," in  
saying "The education most needed in the  
South, and especially by the colored peo-  
ple, is industrial and moral training, and  
the public schools of this country do not,  
at present, give much of either."

It is also true enough as he says, that  
"Nothing should be done to release the  
white people from their proper duties and  
responsibilities connected with the edu-  
cation of the negroes and their moral  
guidance." But in arguing therefrom, a-  
gainst the need of national aid in the ful-  
fillment of these duties, because "the pre-  
sent poverty of the Southern states need  
not be permanent and is not likely to be  
so," he forgets that ignorance does not  
keep at a standstill for the South to get  
rich enough to cope with it. It is, on the  
contrary, increasing with the increase of  
the people, and Mr. Harrison saw enough  
in his clear-sighted observations through the  
Southern states to know that all that has  
yet been done is little more than to  
show what may and must be done. This  
is a national problem, for the danger is  
general, and increasing. We are not even  
keeping down the interest of this national

debt, and it cannot be met by private phi-  
lanthropy or the resources of the South-  
ern states needed. It concerns the nation  
and the nation should aid, not in a way  
to pauperize the people or paralyze any  
sense of state responsibility, but wisely,  
efficiently and speedily.

Public school sessions in Georgia and  
North Carolina are but three months in  
the year. In Virginia, they are but four  
or five, on the average through the country,  
though longer in some of the city schools.  
Little more is to be hoped for from state  
resources. This is not enough to effect  
a general diffusion of knowledge through  
the masses of the people.

Northern philanthropy—such noble  
charities as the Peabody fund and the  
Slater fund, the American Missionary  
Association and kindred Societies,—are  
bearing indirectly on the point by aid-  
ing to supply well equipped teachers.  
But the best of these cannot, by teach-  
ing three or five months in the year,  
while the children run wild the rest of  
it, accomplish much. There is a waste  
of strength.

Reading is taught, but, except the small  
proportion that get into the higher schools  
and colleges, Fisk, Atlanta, Hampton and  
the rest, the people generally are growing  
up with no shifity or taste for reading.

The young men who can read at all pre-  
fer the local political papers to anything  
else. This is natural; people read what  
they feel most interest in. This fact must  
be considered in trying to cultivate a taste  
for reading. General literature does not  
touch them: we must give them first what  
comes home to them. It is with this idea  
that we are beginning a series of sketches  
of worthy and prominent colored people,  
one of which, a sketch of Hon. J. M. Lang-  
ston, Minister to Hayti, written by a South-  
ern lady of Virginia, as others of the se-  
ries will be, is printed in our present num-  
ber, in broad columns, to be made up in  
inexpensive pamphlet form with others  
like it, a biographical series of the Hamp-  
ton Tracts. It would be well if they could  
be introduced with other reading of prac-  
tical bearing, biographical or sanitary in-  
formation, into the public schools of Vir-  
ginia as supplementary reading. We have  
for some time given up exclusive depend-  
ence on school readers at Hampton. We

introduce into the reading classes, with  
great success in awakening interest and  
intelligence, newspapers; the SOUTHERN  
WORKMAN, Virginia Educational Jour-  
nal, American Agriculturalist, editorials  
from various leading journals, and books  
from the library: *The Boys of '76*, *The  
Story of Liberty*, and *Stories of the Old  
Dominion*.

The main problem is to create a taste  
for reading in the young people, and the  
only way to do that is to give them read-  
ing in the line of their interest.

## EDITORIAL CORRESPONDENCE.

OHIO INDIAN AGENCY,

Montana Territory, Aug. 1882.

Sunday Morning.—Two hundred Indians,  
men, women and children, in picturesque  
but scanty costumes, are gathered on the  
square, about an acre in extent, formed on  
three sides by the long, low, one-story Agency  
buildings; a pleasant grassy spot; on the  
fourth side, facing the crowd, is the two-  
story "home," a school building for girls and  
boys, in front of which are the agency officers  
with their wives and our party.

"Nearer my God to Thee" is sung by our  
company, previous to which the Agent has  
explained that we had not come to buy their  
lands, but to see them and to go to the "Medi-  
cine Springs" (Ceylers).

The Rev. H. W. Foote of Boston, read the  
parable of the prodigal son, and we recited  
the Lord's prayer.

He then addressed them through "Bravo!"  
the interpreter, a Roman Catholic, who did  
good service. Mr. Foote said that he had  
come from the far East to them, that we were  
their brothers, for God made us all, and re-  
turned to what "Iron Ball" had said the day  
before about the creation of man. He spoke  
of the love of God, how He had sent His Son  
to teach men to be kind, to love and forgive  
their enemies, and to save them all.

There were occasional responsive grunts  
from the audience, most of whom were atten-  
tive, and some disturbances from countless  
dogs who frisked about in the liveliest way,

reminding me of similar scenes I had wit-  
nessed in former years in Hawaiian churches.

Among the haughty, dogs are fatal to all  
assembly: their noisy increase as the peo-  
ple's subsides. The women were rather vapo-  
ry, full of excuse to laugh, as when an  
Indian fell from a box on which he was sit-  
ting.

The sun was setting, and, in the soft twilight,  
Rev. Dr. Eccleson of Newark, New  
Jersey, spoke briefly, telling of the love of  
God and of their duty to their Creator and to  
their children. When their children did  
wrong it hurt their hearts: when they did  
right it hurt the heart of the Great Spirit. The  
Doctor spoke of the love of Christ and of His  
good work for men; how He healed the sick,  
and raised the dead, but they killed Him be-  
cause He spoke the truth, and they did not  
wish to hear it.

"You must not steal, you must help  
the sick and the poor" is the speaker. Af-  
ter some other remarks, the people dispersed,  
but a few chiefs came forward and spoke,  
shaking hands with each person in the au-  
dience before beginning.

The chief topics were the stealing of their  
horses by other Indians; desiring that white  
men to keep away, and good white men to  
come and see them and shake hands with  
them.

I must mention the chorus of dogs, per-  
haps 500 in number, mean, wolfish looking  
creatures, that greeted our arrival and tuned up  
several times every night, in a hideous pierc-  
ing, hideous howl, that rent the air for several  
minutes, gradually dying out in wailing de-  
cades; no one could sleep through it. But  
like their masters, they have good hear-  
ing, and don't stop. Unhappily the Crow, un-  
like other Indians, do not eat their dogs on  
festive occasions, so there seems no limit to  
the increase of these curs.

Monday.—The Rev. Mr. Lewis, a Methodist  
minister, is teacher of the Government school.  
At the opening, this morning, the promptly  
assembled children sang. "When He cometh  
to make up His jewels,"—ten boys and four  
girls from seven to fifteen years of age—more  
are expected. They are very attractive with  
their neat appearance and bright faces. Ma-  
jor Armstrong states that the Indian depart-  
ment has been liberal, granting all he asked  
for by way of buildings and teachers. He  
expects to enlarge the home and admit ten  
more. An Agent's power depends on who he  
is. He can, if able and resolute, have his own  
way with children at school, making attend-  
ance practically compulsory. The almost  
universal complaint that agency schools are  
failures because of non-attendance is due real-  
ly to the inefficiency of the Agent. The Agent  
here looks after the pupils' homes so that as  
children improve, their homes shall be better  
fitted for them.

This is the true way. He cares nothing  
for the school; whatever is gained in a few  
hours teaching is lost in the low life to which  
they return.

The position of an Indian agent ought to be  
an ideal one for a true man; no man in the  
land has a better chance to do good.

As I write, Mr. Lewis's Indian classes are  
reciting, spelling by sound, some poring  
over primers, digging out "cas," "dog," "pink,"  
"cows," etc.; clear, animated manner  
shows him to be a good teacher.

He is sent by the Methodist Church: he has  
no salary but that of a Government teacher,  
and is likely to be soon starved out with his  
wife and three children. Churches who send  
such men and add nothing for their support,  
are doing nothing, and had better give the  
work to those who will do more. A clergy-  
man who sits by my side said he would  
pledge his own church instantly for help,  
were it the thing to do.

Good missionaries are as important as good  
agents; not a little injury to the Indian  
cause has resulted from weak, inefficient  
clergymen, who, with the best intentions, have  
done more harm than good; those who have  
felled in character have made their name and  
religion itself a reproach in the surrounding  
regions. While the good work at Santee and  
Sisseton agencies in Minnesota, at Peoria  
Bottom, among the Cherokees and other  
tribes, attest the power of the gospel, there  
are, elsewhere, sad monuments to its un-  
worthy representatives. As I write at a desk  
the children are reciting well: One fellow,  
half Indian, half Spanish, Joseph Martinez,  
outdoes the rest in the spelling class, though  
the smallest of them all; but he spells partly  
with his elbows which wag vigorously as he  
shouts out his words of eight syllables, and  
comes in ahead.

There are the lightest colored Indians  
as well as the handsomest I have seen; many  
have white blood from contact with French  
and Spanish in former years, and with white  
settlers of late. Of the white men that Major  
Armstrong found living with Indian women,  
those that were married were allowed to re-  
main on condition of leaving low camp life,  
building decent log houses, and taking care  
of their families; those who preferred bac-  
chanal to decency were condemned as unfit to  
stay: the unmarried ones had to marry, or  
leave.

## A WAR DANCE.

Fifty gaily attired braves decked with  
gorgeous feather tails, crowned with grace-  
ful and striking head-gear, painted as to their  
faces and legs in yellow, green and black,  
sat solemnly in a row, while the tom-toms beat  
up their spirits. One, red all over, was ar-  
rayed in the American flag, an eagle's feather  
for a plume; nearly every one had silver or tin  
brooches; around their necks were strings of  
ornaments of many kinds; badges were on  
their breasts, ermine and other rare skins  
were worked into their sometimes scant but  
graceful costumes; there were floral designs  
combined with elaborate legging, there were  
bodies tattooed all over with a scarcity of  
clothing. They rose, and stepping around in  
their stately way to the wild rhythm of the  
tom-toms and the wilder notes of the chanters  
who, in uncouth sounds, related the deeds of  
braves and the doing of the Gods. It is the  
same thing throughout the savage world; the  
Hawaiian hula dance, over again; only the  
motions there are lascivious and the perfor-  
mances neat, while here they are full of mar-  
tial and religious spirit, and the magnificent  
forms and various striking attitudes are finer  
than any scenery.

The interpreter said that the dance was  
partly religious, descriptive of the creation,  
the red man's "Messiah" perhaps. It was a  
quick, high stepping, that might excite from  
being compelled to move about on a hot iron  
surface; yet it was dignified and graceful, as  
they skipped, gesticulating, around a central  
pole.

The orchestra was a group of highly plumed  
Crows, who squatted around two ruda drums,  
which they pounded incessantly as they sang  
in low guttural tones.

It all made a brilliant tableau, but it al-  
ready belongs to the past. Like the pas-  
sionate "spiritual" of the Negro, it is fitted  
to another era, and must perish.

Around the central party were some 150  
young men, squaws and children, pictur-  
esquely attired, grouped in semi-circle and,  
of course no end of dogs.

These rites had delayed our intended early  
start for Bozeman, 110 miles distant, the point  
of special outfit and departure for the Yel-  
lowstone National Park, to after four o'clock P.  
M.; twenty four miles were to be done that  
day. Nine robes in wagons; four wagons moun-  
ted on Indian ponies purchased at a pony fair,  
held all day, to which were brought a con-  
siderable variety of equine treasures, small,  
wild brutes, with knowing eyes. The Crows  
are up to anybody in a bargain—prices were  
very low.

Each one of us had a buffalo robe costing  
from \$5.00 to \$10.00 apiece; they are getting  
more scarce every year. That hunting and  
reckless killing will soon drive what are left  
of the buffaloes across the British line, where  
they may roam in comparative peace; for there  
they can be killed only for beef, but in the  
United States they are slaughtered merely for  
their skins, with such waste that about  
300,000 are killed, for 200,000 robes, one  
third being only wounded; they escape,  
wonder of and the alone.

We have already traveled five days through  
the heart of the great buffalo domain and not  
seen one.

Reached Davidson ranch at 11 P. M. Two  
wagon loads of us, fifteen in all, including the  
four cavaliers and two drivers; after a hospi-  
table midnight lunch of bread and milk, we  
pecked ourselves for sleep on the floor of a  
small room in a log cabin.

The next night we camped near a ranche in  
the open field. Here one safely enjoys the  
luxury of a night in the open air. The rain-  
less season and dry air make it perfectly safe.  
Buffalo robes under, and blankets over us are  
enough for tired travelers. One gazes at the  
shining stars, thinks awhile, and goes to  
sleep.

This abundance of rattles snakes makes us  
walk cautiously, stick in hand, as we go to  
our morning bath in the Yellowstone river,  
whose banks we have reached again.

We are making 25 or 30 miles a day in one  
two-horse and one four-mule springless  
wagon; the latter kindly supplied by Major  
Armstrong; the seats however are on springs.  
It would be tedious were it not for the won-  
derful mountains that rise on our left and the  
striking scenery that makes every hour inter-  
esting. Our line of march is along the river  
bottom, occasionally rising to the plateau,  
flanking the "Snowies," at intervals, the  
range of the Rocky mountains, whose steep  
sharp peaks, jagged outlines and deep wood-  
ed valleys remind me of the volcanic moun-  
tains of Hawaii, especially the Waikou range.  
This entire is a volcanic region; there are  
numberless angulations of craters; countless  
round hills created with a rampart of rock;  
some are like the helmeted head of a great  
giant; there is nothing like the  
rounded hills of New England. The impres-  
sion of the volcanic region is so strong that  
the impression of the locomotive, for through this wild  
and strange country we are going parallel  
with the road-bed of the North Pacific rail-  
road that winds through the valley of the  
Yellowstone many hundred miles. In less than  
a year the long repose will be over.

"Old Spaniard" a half-breed Blackfoot Indian, is our driver, and works as hard as his mules. Riding for days by the side of his team, he is a good deal of a talker. "Joe," receives most of his exhortations and laudations, being expected to set an example to the rest, but the whip being a poor one and rather short, Joe is slow to respond; for he don't mind being called the names which are showered upon him. Jennie, Joe's mate, is a lot of easily, having a sore place on her shoulder; she does her best. Mark, the old one of the wheel span, is a trump, works hard, all the herder if beaten with the harmless whip; he is a model mule; Back, his mate, is a mean shirk, makes believe pull, but don't, is whipped every minute and makes a great fuss but does nothing. There's odds in miles as in men.

We walk up the steep place, turn and take long looks as we pass fine scenery. In the long drives we examine the backs of the oxen in front of us, have long talks, long pauses, but generally there is something grand in sight. When it is very hot and dry, and the wind from behind dries our eyes with dust, the luxury of ice and Appolinaris water is sometimes mentioned.

Wednesday we arrived at a former Crow occupied by a New York man with his wife and three children, who have started a rancho and dairy here. They seemed poor but cheerful; and will probably grow with the country, which, when the railroad is completed through its rich bottom lands, properly irrigated, will "boom." Out here, things "boom" and men "rattle," an energetic man is a "rattler."

What a dinner we had! Milk, cream, vegetables and eggs, "rattled" up at a few moments' notice. Beef is at Chicago prices, 15 cents a pound, where to raise a thousand pound steer costs but four dollars.

Such cattle bring in the ranches \$30.00 and \$40.00; prices have jumped of late. There is no cost but that of labor. The trouble is that there are not enough people at any one place to buy a whole beef when cut up; it is like "water water everywhere, and not a drop to drink." To kill is to waste. Don't go to a cattle country to get beef. A man can put a small capital into cattle, and get down and grow rich, if hard winters and disease don't kill them and nobody steals them; the only expense is herding and "rounding up" twice a year, counting and branding.

These mountains are full of minerals; one can pick up a fortune on the hills, if lucky. Our host, Mr. Hinckle, is enthusiastic about General Miles, who he says, opened up the Yellowstone valley to civilization. After the death of General Custer, General Miles established Fort Keogh, drove off the Indian war parties, protected and helped settlers, and was always ready to lend a worthy pioneer a hand. He thinks, however, that with the army train came a class of men who have done the country no good; they were discharged as the advanced posts were established. But without the help of the army the wealth of resources could not have been reached and opened.

The Indians have great faith in General Miles, both as a soldier and as a man who keeps his word.

Mr. Hinckle is a typical western woman, who, beside teaching her children, does everything else; a hard, wearing life; but the climate is stimulating and gives one strength; it is bad only for rheumatism.

Politically, Montana is Democratic, but as it settles up there is a steady Republican gain. This region was originally settled by Missourians who migrated to escape the Confederate conscription, and by the remnants of General Price's force, after it was broken up by the Union troops. They are known as the "Left wing of General Price's Army." They are laborers on small farms, and storekeepers; though ignorant as a class, they are improving. The climate and other conditions of their life are changing them for the better. They "hit out," as the expression here is, in 1862 and 1863.

In Montana trout are caught in potato patches. As they go up stream to spawn, they find their way into the ditches that irrigate the farms. Even this remote region is nearly fished out; the army of rail road graders have spoiled the spot. Every day there has been a fine fishing ten miles up, but we have not yet got to it. Crossing the Yellowstone at Benson's Landing, we wind through a pretty valley, the hills are smooth and wooded, instead of being rock crowned and bare and use is made of New England scenery. Muir City is at the end of the railroad tunnel, which is cut 3,000 feet through a mountain. We saw a powerful stream of water playing over a horse upon the blue clay strata; both digging and carrying away more than could thirty men with carts; this we were told, is the first use of water for such railway work; introduced by Col. Muir, Engineer in charge, who told me many things of interest.

Boseman. Pass through which we rode is full of pretty views. From the summit, we

saw the town of Boseman (which Mr. Foote said resembled the plain of Redman in Palestine). Fort Ellis, near by, is situated in the valley of the Gallatin river, which is some nineteen miles in width and thirty miles in length, all capable of irrigation from the two forks of the stream. It is a lovely valley; hills on the other. Its water power is sufficient, it is said, to run all the mills of New England. For irrigation capital is required; but with it crops are sure, and a market is at hand. That of Dakota and other grain states is Chicago and New York. But the farming land of Montana is so limited and her mining and grazing interests so extensive, that she cannot produce the grain she needs at home; flour and vegetables are high and are sold by the farmers, directly to the miners from their river bottom raise most of the food supply for those mining in the western part of the state.

The gold and silver mines seem inexhaustible. The easy process of placer mining; washing and sifting out the grains of precious metal, requiring little machinery, may be exhausted, but there is untold wealth locked up in the quartz rock, to treat which requires heavy and expensive machinery, that only rail roads can bring. This will soon be done. The most productive ones, those yielding \$100 and \$50, and \$25, for a ton, may soon be used up; but the lower grades of from \$3.00 to \$20.00 per ton are practically without limit. Montana's coal, iron, lead, and copper have hardly been touched. She is fortunate in her varied climate; a had year for either is not so serious as in a state like Dakota which stakes every thing on wheat.

Her population is in the main from Ohio, New York, and New England, perhaps one third is Southern. All are modified by the local conditions. In the stimulating air every one is active; there is no "climate change" in the people, but the railroad changes the business method. The break up already is remarkable. Before the railroad came, there were in the West three leading classes, viz: miners, go-zers, and gamblers; the latter, mining, farming, and grazing; a had year for either is not so serious as in a state like Dakota which stakes every thing on wheat.

It is safer to kill a man than to steal a horse. In this remote, vast region, a horse is no gain thing for safety; he is indispensable. A man can perhaps do better without his life than without his horse.

One of our escorts tells me that in those days he once left a wagon full of provisions etc., by the roadside near Boseman for six weeks, and found it as he left it; that there were ranches all over the country full of stores, packed and untouched, which their owners left for even longer periods.

Many fellows, on pretense of going as railroad laborers, get free passes to the end of the track, then drink for higher wages, are dismissed, and become tramps; they make property unsafe, and there is now a new state of things. The completion of the road scatters these characters; steady men become farmers, and the vigilance committees appear at this junction; order is finally organized. A leading business man of Boseman said the leading would ruin some, but benefit the rest of the country by changing the way of doing duty. It would equalize and cheapen prices, lessen profits, and greatly increase the volume of trade. The present set of farmers and tradespeople would probably fall from the inability to adapt themselves to a new order of things.

The Western portion of Montana has been the longest settled. In 1866 and '67, it had a direct wagon road from Omaha, running thence always along the route of the Union Pacific railroad, then branching off to the northwest, crossing the country of the Sioux, till Red Cloud's attacks broke it up, and the treaty of Fort Laramie in 1867, excluded both United States civilians and all travel from that region for ten years. The route from Omaha was thence via Salt Lake City to Ogden, thence north, making the two sides of a triangle instead of the hypotenuse. A Montana merchant going via Ogden to Omaha, was, at the former place, many more miles distant from his destination than when he started. The territory weakened, and Boseman barely held its own, till the Custer massacre by Sitting Bull, in 1876.

The death of Custer delivered Montana. After it the Indians were driven north beyond the United States boundary; the direct route to Omaha and the East was reopened; the Yellowstone valley was cleared of hostile Indians, occupied and improved by settlers, and the Territory has flourished.

The North Pacific railroad would be made possible by the Custer tragedy. So the death of Gen. Custer ended the Modoc war, and peace and prosperity reigned.

The Fort Laramie treaty of 1867 was the beginning of the new policy with Indians; for present purposes, it is hardly worth while going back of that event.

The Western boundary of Montana is the back bone of the Rocky Mountains, though

its northwestern portion lies on the further or western slope of the great dividing range.

The territory lies in the great arid belt. It can hardly ever become a State, for it cannot maintain a large population. Ten acres of grain will not grow here, and the scant buffalo grass and scattered tufts of brush grass, are scarcely equal to one of solid turf. People cannot live, except by the streams, which furnish water for irrigation.

Cristian wells may work wonders, but they are as yet uncertain. This is the condition of Wyoming, Idaho, and other Territories. They are big, but so arid, so scant of agricultural land, that they cannot raise their own food though not yet fully cultivated. They will, however, with their cattle, and especially their mines, make a great railroad business.

We passed three nights in the thriving town of Boseman. Its hotels are execrable. We preferred the floor with our buffalo robes and blankets to the beds: one slept on the veranda outside. Other towns have a good hotel if not a first class. Boseman is full of money as its hotels are of insects. The town is fifteen years old, and offers more misery for the money than I ever knew.

There are churches and some good people, but the variety saloons were brilliant and loud; gambling and singing were rife; we wandered about to see what they looked like; they are a new feature; part of the rowdiness and wickedness of advancing civilization; things will change in a few years. Here we secured our guides, horses, camp tents and provisions, the latter at Fort Ellis from the commissary. Through the kindness of General Terry, an army wagon, drawn by four mules, was put at our service for heavy luggage and stores, and a small pack train of mules, with packers, to make special expeditions. The General's brother-in-law and staff officer, Major Hughes, was in command of the entire force. Our party was most fortunate in its leader and train escort; we had the best possible arrangement for pleasant and profitable excursion on horseback, from Boseman, to the Utah Northern railroad via Yellowstone Park, nearly 800 miles.

#### CAMP DOUGLAS.

On a side hill; prompt unloading, unpacking, wood and water brought, fire kindled, and cooking started by the vigorous actions of the entire force. The General's brother-in-law and staff officer, Major Hughes, was in command of the entire force. Our party was most fortunate in its leader and train escort; we had the best possible arrangement for pleasant and profitable excursion on horseback, from Boseman, to the Utah Northern railroad via Yellowstone Park, nearly 800 miles.

Our first meal in camp was taken in the dark; tin plates, spoons and cups, were felt for, and the coffee pot and frying pan were dangerously jostled. We were amused by the driver's report; "Major, the mules have got the long on me; I've broken my whip." Being too late to put up tents, we wrapped our horses around us and lay on the ground. Our horses were let loose to graze. They were old stagers, having gone over the route often before, and naturally strayed off several miles that night, hoping to escape the next day's duty. They did this repeatedly. Our guide, Jackson, knew their ways, and could take their trail like an Indian, and never failed to appear driving his steeds back to be saddled. They carried us twenty seven miles the day following, back again to the banks of the Yellowstone, where our route lay through a magnificent plain, well irrigated, waving with crops of wheat and oats, and dotted with ranches.

On the farther side, rose steep and lofty mountains, the chief of all being Emigrant peak, in places, some 10,000 feet in height. We passed Emigrant gulch, whose placer mines have yielded millions of dollars, and camped on the river shore where trout abounded. A accustomed rider, a rough coffee, bacon and camp bread: the latter being the production of a soldier cook and a Dutch oven.

I am sitting by the camp fire of burning cotton wood, and with the rest, have been watching the evening glow rise from the base to the summit of Emigrant mountain, as the sun set behind the opposite peaks. The scene is one of unspeakable beauty and grandeur. We are on a level plain, the mountains stand about us on every side, piling up one behind another, in huge masses, like the Alps.

#### HAWAIIAN FERNS.

Mrs. Dr. Coan, wife of the venerable Dr. Coan, missionary in the Sandwich Islands, generously sent me last year, a beautiful collection of Island ferns, which she herself had pressed with great skill and taste, to be sold for the benefit of the Southern Workmen. They were very promptly purchased at the price she set—six dollars—and they

were well worth it, as objects of beauty and interest. Kindly offering to repeat her contribution in the same way, an order for a second portfolio was quickly sent, and the dainty collection has just been received, with much pleasure by the purchaser, and by the Workmen with many thanks.

#### VISITORS FROM FRANCE.

The present Government of France, in establishing its new system of public education, has, in order to obtain the complete information on the subject, sent experts in the different branches, to visit the schools of other countries and report upon the various national systems.

With this object in view, two ladies, Mlle Loizillon, General Inspector of Industrial Schools in Paris, and Mlle. Conturier, Directrice de l'Ecole professionnelle, Rue du Lycée, Paris, have been spending some time in the United States and Canada, and visited Hampton, the southernmost point of their investigations. Their examination of the school here, and the criticisms and comparisons which it elicited, were of very great interest, and the fact that they were not in every respect favorable to us, as Americans, only increases their value, if we accept them in a reasonable spirit. The ladies being well equipped for their work, knew just what they wanted in the way of information, and were evidently keenly observant of all new facts.

They studied faces and aspects, general surroundings and special details, with a vivacity of interest which left little time for discussion, but it was easy to see that they discriminated carefully, and it is a matter for regret that they could not have staid longer on the ground. As foreigners, unfamiliar with our national habits of thought and not entirely at ease in our language, they were, of course, hampered, but their freedom from race prejudice, and knowledge of European industrial systems, enabled them to make surprisingly correct estimates of the points wherein they could learn from us. Having previously visited the public schools of Boston, New York, Baltimore and Washington, they had received strong impressions of the value of the primary work done under the American system, and the superiority of our grading and organization to theirs. They considered however that in respect to instruction in the arts, trades and most branches of manual labor, they were in advance of us, especially in the training of girls in all departments of household work. They said pitily "we do not think you know how to live, it is not taught to your girls as it is to ours," and an invitation to visit the Kitchen Garden was received with a polite refusal and the criticism: "It would be a waste of time for us, our girls, even in the poorer classes, learn all at home; it would be quite useless in our schools." They approved of the fundamental ideas of the Hampton training for girls, but it was painful to realize that they looked upon us as a nation to be pitied because of the lack of home education in its strongest sense,—training at home in the making of homes.

In some directions they considered us to be trying "pedagogic experiments" whose value was not yet ascertained, but America differs from other nations in that such experiments are demanded by the new conditions which surround us and to this our French visitors were fully alive. Their impressions of Hampton, during the few hours they were able to spend here, were distinctly and flatteringly favorable, while the great interest they showed, leads us to hope that after their return to their own work, we may get from them, (and lay before our readers) a more extended report of the results of their observations.

An interesting letter from one of the three Indian students who graduated last year from Hampton, will be found on the page of Graduate Letters. The writer is second chief of his tribe—the Abenaki Shawnee of Indian Territory—to some extent a civilized tribe, but like the others, in need of a good deal of civilizing. We are glad to learn from a more recent letter, received too late for publication in our present number, that he has now obtained a school and hopes to be able to give some account of it hereafter.

DR. BLYDEN AND LIBERIA COLLEGE.

As its President remarks in his inaugural address, "A college in Africa for the education of African youth by African instructors, under a Christian Government conducted by Negroes, is something so unique in the history of Christian civilization, that, wherever in the civilized world the intelligence of its existence is carried, there will be curiosity if not anxiety, as to its character, its work, and its prospects." Dr. Blyden is himself an interesting feature of this unique college; a man of pure Negro blood, an African birth, of liberal education and extensive learning and travel; free, as his birth in a British colony and education in England can make him of any personal experience of the height of race prejudice, except through sympathy with those of his people who suffer from it. What such a man's hopes and plans for his race are, it is of interest to know. We have before us his first annual report as president of Liberia College, and a copy of his inaugural address delivered Jan. '81, in which he sketches his conception of the work which lies before the college, and the manner in which it is to be accomplished. His ideas of both are original. He believes that "the African must advance by methods of his own," that "there are possibilities before him, and he must take them, but that there are also dangers, but that there are to be developed in original ways," "the special road which has led to the success and elevation of the Anglo Saxon is not that which could lead to the success and elevation of the Negro." He finds the Negro "notwithstanding his two hundred years residence with Christian and civilized races, largely unable everywhere in the United States, West Indies and Central America to cope with the responsibilities that devolve upon him." He goes further, and says that "while to a certain extent, perhaps to a very important extent, Negroes trained in the schools of Africa have the advantage of those trained in foreign countries, the intellectual and moral results have been thus far as a rule, far from satisfactory. There are many reasons for this, but very few of any capability—even few who have that amount of that sort of culture which produces self respect, confidence in one's self, and efficiency in work." He finds the reason for this incapability, not in any inherent inferiority in the race, or any attendant circumstances, but in the "system and method of European training to which Negroes are everywhere in Christian lands subjected, and which everywhere affects them unfavorably. Of a different race, different susceptibility, different bent of character from the European, they have been trained under influences in all respects adapted only to the Caucasian race." They live where they are only passive spectators of the deeds of a foreign race, and an element of doubt as to their own capacity and destiny is fastened upon them. "The Negro child revolts against the descriptions given in elementary books—geographies, travels, histories—of the Negro. After leaving school, he finds the same in newspapers, reviews, novels, most scientific and literary, a wide acceptance what at first he indignantly repelled, and concludes that his only hope of rising is to strive after what is most unlike himself and alien to his tastes. "In Africa," where they are free from the benumbing surroundings of an alien race, they still read and study the books of foreigners, and form their ideas of every thing that man may do or ought to do, according to the standard held up in those teachings. "They attempt to copy and share the fate of copyists. It is David in Saul's armor."

Dr. Blyden's plan to avoid these disadvantages in his college course is to "teach them to forget." He would throw out all modern European history and literature—at least in the earlier college years—limiting the studies to the Oriental, Greek and Roman and Mediaeval periods. The chief studies of the course will be the Greek and Latin classics, and Mathematics. "In those languages there is not, as far as I know, a sentence disparaging to the Negro." "There is nothing that we need to know for the work of building up this country in its moral, political and religious character which we may not learn from the ancients. Law and philosophy we may get from the Romans and Greek, religion from the Hebrews. . . . It will be the aim also to introduce the Arabic and some of the principal native languages—to have intelligent intercourse with the millions of the interior and learn more of our own country. They know better than we of the laws of growth for the race—we see among them the rudiments of that place with faith and opportunity, will develop into important and effective agencies for our work. . . . In the religious work of the College, the Bible will be our text book—the Bible without note and comment. The meaning of the Good Samaritan is as certain as that of the forty seventh proposition of Euclid, and a good deal plainer."

"Christianity is not only a local religion, but it has adapted itself to the people who ever it has gone. I have often thought that in this country it will acquire wider power, deeper influence, and become instinct with a

higher vitality than any where else. When we look at the treatment which our own race and other so called inferior races have received from Christian nations, we cannot but be struck by the amazing dissimilitude and disproportion between the original ideas of Christianity as expressed by Christ and the practice of it by his professing followers. We must rather view its adherents not from the examples of some of its adherents but from the sacred records. This is the influence which is to become the principle of the new civilization which we believe is to be developed on the continent. We have a great work before us. The world is looking at this Republic to see whether law and order, religion and morality, the rights of conscience, the rights of persons and the rights of property, may all be secured and preserved by a government administered entirely by Negroes. Let us show ourselves equal to the task."

This is a great and noble aim, and the New England founders of Liberia College will not object to being among the things its students are "taught to forget," if so that aim can be best reached. The exact and full effect of the enforced contact of the Negro race with modern civilization, is difficult to see, as it is not yet unveiled future, but it is impossible for us to think that such a mighty thing as this is only to be ignored, or to without significance and without purposes of good for itself and the world, in the broad providence of God. We hope that this may yet become as clear to every student of this race as its promise of deliverance towards Israel in Egypt. At present it is evident that the very conception of the unification of Africa, and all the efforts for its Christianization are the outgrowth of modern civilization and its mighty impulses towards universal liberty.

At the same time, there is much in Dr. Blyden's address for those to consider who mean to be friendly to the race. He says that "it is neither edifying nor dignified to be forever declaiming about the wrongs of the race. Lord Beaconsfield, once said in the House of Commons, that Irish men were too much in the habit of clanking their chains in rising to speak. Such a habit when it ceases to excite pity, begets contempt." This is true enough, but comes better from the Irish members and Dr. Blyden than from Lord Beaconsfield, or from us. If we don't like to hear the chains clank, let us take them off.

Dr. Blyden's report is hopeful after a year's work. There are eight students in the college with twenty eight in its preparatory school, three of whom are aborigines; four out of the whole are looking to the ministry.

The college was much run down when he took it, and the building greatly out of order. It has been repaired to some extent, but his desire is to remove it to the interior, for greater health, avoidance of foreign influences, nearer access to the native tribes, and room for an agricultural and industrial department, applicable to all classes, preparing for the development of the country, and providing the opportunity of self help to indigent students, and a growing income to the institution."

Dr. Blyden regards the college as a necessity, "to train men amid the scenes of their labors—who will know the country and its needs and languages and will require acculturation, who, like the intrepid Anderson educated in Liberia, can walk two hundred miles barefoot doing exploring and scientific duty, and who can walk from their village to village proclaiming the Gospel of Christ to the natives in a language they can understand, and can sit down on mats and skins in native huts, reading the Greek Testament and Hebrew Bible, or discussing the Arabic Koran with Mohammedans, and then, at meal time, can enjoy with their hosts, palm oil and rice, palaver sauce and dumplings, not longing and pining for bread and greens, peaches and pears, broadcloth coats and heavier hats." The wisdom of this is evident; the unwisdom, equally so. "If it were practicable to train any number of good citizens, not to say missionaries and heroes, without the restraint and inspiration of surrounding civilization and religious influences, Liberia college would not have run down as it has, or now show but eight students."

Dr. Blyden's ideas are not without force, and his plan is interesting. It would have more chance of success if there were many more like him. Why are there not more Blydens out of all the millions who have not come to him, but under the enervating influences of modern civilization?

The work in Africa and the work in America are both dangers and necessities, and both require the same providence of God towards this race. Both methods have their advantages and disadvantages, and both must furnish what workers they can, as well equipped as may be, and so God's work goes on. The danger, by more and more, till all advanced can be combined on African soil, and the great problem of Africa's future be solved.

Horsford's Acid Phosphate is recommended for headache occasioned by indigestion, and whenever there is a general feeling of sluggishness and lack of energy.

EMANCIPATION: ITS COURSE AND PROGRESS. FROM 1491 B. C. TO A. D. 1875, BY JOSEPH T. WILSON; published by the Normal School Press, Hampton, Va.—

This is a very neat and tasteful looking volume, of 242 pages—8 vo., the work of a colored man, of Norfolk, Va. It is highly creditable to its author, and will be of great interest and value to the colored "youth of the present generation," to whom it is dedicated as "a record of the deliverance of their ancestors from bondage and oppression." That deliverance is fast receding into the past. Ten years ago, the students of Hampton were all, with scarcely an exception—ex-slaves, with an experience of slavery more or less intense; of the four-hundred who fill its class rooms now, there is hardly one to whom the thrilling events of the war, and even the emancipation proclamation itself are more than historical matters to be half learned with hard study like those of Greece and Rome. While this new fact of its pleasant side, it is not fitting or desirable that the race as it rises should forget the wonderful story of its past, the sufferings of its fathers, and the great price of its freedom. Mr. Wilson's book will be found a very interesting and convenient book of reference for the general reader. It is, as its name indicates, a brief survey of the progress of emancipation all over the world, from the exodus of the Israelites, 1491 B. C., to the abolition of slavery in the Portuguese dominions in 1875. It is chiefly a compilation of statistics, acts of emancipation, and speeches and documents relating thereto. Dates are given very clearly in the margin, and are sometimes all that is recorded. There are some intended omissions of "minor states and kingdoms in Asia, Africa and the Isles of the Seas," but the general course of emancipation is followed through England, Ireland, Spanish America, Prussia, Denmark, Hayti and the other French colonies, India, the South American states, Austria, Mexico, the British colonies, the Dutch colonies, the United States, Russia, Cuba, Brazil, Porto Rico, and Portugal. An interesting description is quoted of the scenes following the peaceful emancipation in the West Indies, and of the liberation of the serfs in Russia. The largest place is of course given to emancipation in the United States, beginning with the proclamation of Lord Dunmore, Lieut. Governor of Virginia, of freedom to the slaves of the colonists in the Revolution, and giving the previous efforts of Virginia and other colonies to rid themselves of the curse of slavery, and the subsequent abolitionary acts of the Northern states. The history of the general emancipation is given in copious quotations—the letters of the Convention on the Contraband question, President Lincoln's special message, his preliminary proclamation and letter in its defence to the mass meeting of "unconditional Union men," and the proclamation itself, all in full, with some of the subsequent discussion of its validity; the text of the thirteenth amendment, and the statistics of its ratification by the states. The history of the emancipation of their slaves by the Indian tribes, and the treaties providing for it, makes a separate chapter; and another interesting one, on the progress of the race since emancipation, is contributed by Mr. Monroe, a young Methodist preacher of Maryland. A full account of the Freedmen's Memorial, its unveiling in Washington, with the speech of Hon. Frederick Douglass on the occasion, is given by Mr. Wilson who was an eye-witness of the ceremonies. A photograph of the monument is made the fitting frontispiece of his book, and it closes with the declaration of independence, and the constitution of the United States, with its situation of the United States, with its situation on his book and commend it to all our readers, whether colored or white. It is printed and bound at Hampton Institute, the type and press work done chiefly by colored students, the binding by a veteran soldier of the volunteer Union army. It is therefore in all respects a characteristic volume, representative of its title—the progress and results of emancipation, and for this as for the information it gives, well worth a place

in a library. The book will be introduced in the "supplementary reading" of the reading classes at Hampton Institute.

THE TRANSIT OF VENUS.

On the sixth day of December, a sight may be seen in the heavens, which no one now living will ever see again. On that day that beautiful planet will pass between our earth and the sun, in the direct plane of the earth's orbit, an event which occurs in her revolutions and the earth's around the sun, at intervals of 121 years, eight years, 105½ years, eight years, 121½ years, and so on, in regular rotary periods. The interest to astronomers of this event is, that it affords them an opportunity of making observations which will determine the distance of the sun from the earth, and other planets, and also that of the stars, and the velocity of light. All depends on the accuracy of the observations. No absolutely perfect have yet been made, but as astronomical instruments improve and observations multiply, the measurements approach nearer and nearer perfection. The approaching opportunity, the last for living astronomers, is looked for with deepest interest. Forty expeditions have been projected, and millions will be expended. The United States Government has appropriated many thousands of dollars. One post of observation will be at Patagonia and another in New Zealand.

Let all our readers be sure to witness this interesting sight. Provide yourself with pieces of smoked glass, 17¢ on have no telescope; and looking at the sun, at 35 minutes past eight on the morning of Wednesday, Dec. 6th, if no clouds obscure the view, you will see Venus, like a black dot passing across the lower half of the sun's disc, till it leaves it at 58 minutes past one.

A HARD CASE.

A worthy young woman who worked her own way through Hampton Institute with pieces of smoked glass, 17¢ on have no telescope; and looking at the sun, at 35 minutes past eight on the morning of Wednesday, Dec. 6th, if no clouds obscure the view, you will see Venus, like a black dot passing across the lower half of the sun's disc, till it leaves it at 58 minutes past one.

—Va., Oct. 1883.

Dear Friend:

I came here about three weeks ago, and as I had never been here before of course I was an immigrant as well as all other strangers. I say this because I had been wanting to go to Africa for three or four years, and did not know that it was so near me until now. I walked the place a whole week to see if I could get decent boarding place, and was not able to do so, on account of my labors employed by the R. Co. If I had been a cook or washwoman I might have been accommodated very readily. Any way I stayed in the City long enough to notify the people that I was their teacher, and asked them to send their children to school.

I am teaching in the Church until the school house is built, and I hope it will be completed before cold weather, for this house is not very pleasant to sit in six hours a day, and even longer than that, such weather as we have had for the last two weeks, when the windows need from 12 to 14 panes of glass in them; to keep out the rain and cold. I am sorry to say it, but I think the colored people who have been living here, and have failed to buy land, and secured no money to do it with, are worse off now than they were the year that Abraham Lincoln issued the "Emancipation Proclamation."

If I were teaching for what I expect to make, and not the good that I may do this people, I would have left here the next week, and should not have come back. But I don't like to give up after I undertake, and I want to the next station to get a boarding place there, and I was accommodated better than I could be here for less money. Of course I have to take the train night and morning, and I am better satisfied at that than I was here. I would ask the question, what is the difference between this and a soldier's life?

My pupils come daily with no books, and slates and pencils, and I have nothing to teach them with. Can you send me something that I can teach my pupils from? I have twenty pupils on roll, and as soon as the crops are gathered I shall have a full school. I cannot write as much about the place and people as I might, because I am afraid of the people. I think if I can stand this term, that I can do very well.

Your friend,

W.

# INCIDENTS OF INDIAN LIFE AT HAMPTON.

INDIAN GIRLS' ACCOUNT OF WINONA LODGE.

"I guess you would like to know about our new building. We call it Winona Lodge. Well, I am going to tell you about it. We like our new building very much indeed. Almost everything we have now in Winona Lodge. Well, we have a sewing-room and a Chapel and Office, and I don't know how many rooms are altogether. Our new building got three story, and down in cellar we have wash room, room and bath rooms. And now I going tell you about what we do in our new building.

We have two girls in each room and we got everything in it, what we want to use. In morning we get up, dressed ourselves and go to breakfast. Virginia Hall, and come back sweep our Halls and steps before we make our beds, and when we finished that we clean our own rooms, some of us got teachers rooms. So we clean our own rooms before we do the teachers, because they get up later than we do and I always get ready for school before I go to clean the teachers room. Right after that I go to school and in afternoon we have sewing at 1 o'clock and stop it at 4 o'clock, after 4 we have study hour. We have lots of things to do in our new building; we keep our new building clean indeed we scrub all the halls and steps on Friday, in morning. Saturday we scrub our own room too, our teachers says our works are all very good indeed, and I am very glad of it and I thought it to myself we did not keep our new building like out in west.

ROSA BEARFACE."

## MOVING OVER.

"O we were so glad to move, but when we did move we did not like it the first night because in the morning when we got up we didn't have any bell, and our rooms were not in good order, and another thing it rained all that week and we had hard time about moving our things over. But we got out alright at last. Now our house is in good order.

## PLAY-ROOM.

We have a large hall for our play room. So we play most every evening. We don't have any hour at night like we use to, but we have our study hour from 4 o'clock till 6 o'clock and then after study hour we have time to get ready for supper.

## DRILL.

O, I must tell you about our Capt. Washington, (one of the colored graduates.) Well he call the roll every evening and morning, so we named her captain. Some Saturdays if she has time, we march sometimes out of doors, and some in our play-room by the piano, and once in the Assembly room.

## SEWING ROOM.

I forgot to tell you about our sewing room. We have a large room to sew in. We sew every afternoon except Saturdays.

## LAUNDRY.

I must tell little about our new Laundry. Well my wash-day comes Wednesday morning. Capt. Washington has charge of the laundry. The Captain told us that we must keep our laundry clean as our parlor, so the laundry is pretty clean. It is not quite finished yet but it will soon be finished.

## SUNDAY SCHOOL.

We have Sunday School in Winona Lodge, and we are divided into different classes. They are divided into eight classes.

ANNIE LYMAN."

## VISITORS.

"All of us Indian girls enjoy staying over here very much, and think we try to keep it nice and clean, so when the white people come to see it will look nice and clean. I think if we try keep it nice (I am not very sure, this what I think) I think Miss— will say "The Indians are learning how to keep the building nice and clean." I don't think she can quite say it yet, but when she does I will be glad and we all will be glad.

## SCUBING.

Miss Lovey says—Lets us hurry and get through scrubbing before the teachers get up. So it look nice and clean." We scrub our rooms and every thing in the building—have our rooms looking as nice as the halls for when the people come they want to see our rooms looking nice as the hall. We wash the windows, the halls, and sweep the veranda, and we try to keep them clean.

MARY GOULDER."

"Some girls are going scrub on Saturday this big hall. I like to scrub very much because this house always want to be clean like the white people houses.

REBECCA MAXKUTE."

"We have a piano in this building, but I don't think it belongs to the Indian girls because when we play on it by ourselves, they

always make us stop. I like to play on the piano. The teachers always give us zero if we don't mind them what they told us, and some of the Indian girls like to work but some of them don't like to work because they are lazy.

MARY HINMAN."

"The teachers that room in Winona Lodge invited the teachers that room in Virginia Hall. They came over here and had a party last night and when they went to school this morning they looked so sleepy.

MARY TRAVERSE."

"I am very glad because tomorrow we all going to have warm house with the Indian boys tomorrow night. I think the white people were very kind indeed to give us the money to build our new house with, and I think it is very good for the Indian girls to learn while they here so when they go back they can teach their own folks how to work too.

HATTIE MILLER."

## A LETTER FROM CHIEF KEOKUK.

Mr. Townsend, Government Inspector of Indian Agencies, sends us an interesting letter from the Chief of the Sac and Fox tribe, prefacing it with statements and comments which add to its interest, and we print both letters.

DEPARTMENT OF THE INTERIOR,  
Office of Indian Affairs,  
Washington, November 1st, 1893.

Editor Southern Workman,—

Enclosed I send you a letter from Keokuk, father of Nellie and step father of Mary, now at Hampton. Do you wonder I take a deep interest in the Sac and Fox children at school with you? If this letter had been written to reflect the views of some other person or perchance to sound the praises of the interpreter or amanuensis (as is too generally the case with this class of communications) it would possess little interest for me and I should regard it as of minor importance; but Keokuk expresses only his own feelings and honest convictions, as he has repeated them to me time and time again. It comes like the voice of one crying out in the wilderness of intellectual darkness, and emanating from the source it does, may justly be regarded as a remarkable letter. If there is no sham in or about it; no high coloring to it and that the appeal for "more light" is earnest and sincere.

The Sac and Fox are a proud people: rich in annuity monies legitimately obtained from the sale of lands and past treaties; they are arrogant and correspondingly indolent as they are rich and languid, and while recognized as semi-civilized are, as a rule, adrift on their Indian customs, their traditions and the religion of their fathers as they were fifty, probably an hundred years ago, and far more so than many of their less civilized neighbors. It is their pride and boast that they are Indians; they teach their young people that they are all rich and need not work, and that the religion of their fathers is the best religion for the Indians. This is the worst type of barbarism and must inevitably tend to retard their growth, their progress and their civilization.

They are intelligent, kind hearted people; true to themselves and each other, and respectful to their neighbors both white and Indians. They are no more disposed to become hostile or go upon the war-path than the colored race in Virginia and while they possess many noble characteristics (I might add virtues) and few vices, they are wickedly and wilfully perverse in their opposition to the civilizing processes of this nineteenth century. They watch with keen and rept attention the ceaseless march of civilization, yet refuse to "fall in" and keep step with the advancing column; they hear the glorious anthems of universal freedom and progress, but turn a deaf ear to their inspiring strains; they see the curling smoke of distant work shops and factories, listen to the hum and din of a thousand industries, but content their souls with although good for the white man are "bad medicine" for the Indian; they hear the whistle of the locomotive and the click of the telegraph breathing a mysterious language with voices tongue, but believe them to be the children of the Evil Spirit; they regard with deep concern advancing civilization and its tireless tread sweeping across the Continent even down to the isles of the sea, yet the advantages and golden opportunities thus placed before them are rejected and they refuse to reap the harvest brought to their very doors. In the midst of this moral obscurity and darkness Keokuk is the only man to raise his voice in condemnation of the course his tribe is following. Single handed and alone he battles alike with friend and foe in his efforts to enlighten and promote among them a different spirit. Criticized, almost ostracized for having adopted the "white man's way" he

goes forward in his faithful devotion to his people, and by precept and example endeavors to lead where he knows he cannot drive them. To encounter the ridicule and derision of his enemy is no mean feat of a white-man's courage. Keokuk has not only this but that of friends and relatives like wise.

To withstand the tide of popular sentiment and prejudice tries the metal of many a man and women, and mental Goliaths often quail and quake and succumb in the presence of these over-awing and imperious masters; but Keokuk meets this and more with quiet fortitude, and by his very example of forbearance commands the respect and confidence of his tribe and at the same time eliminates an effective reproach which exerts a civilizing influence among them. They may profess to ignore and assume to deny it, but nevertheless it manifests itself in many ways in the lives and manners of those who surround him and with whom he comes in contact. In many respects he is a remarkable man, and in some sense a statesman and philanthropist.

The question of compulsory education is seriously considered in many places in our own country, and in some foreign countries is relied upon almost wholly for educating the masses, and may yet be introduced, as Keokuk says, as an important factor in the great problem of Indian civilization.

He is son of old Keokuk (in whose honor the city of Keokuk was named) one of Black Hawk's noted warriors, and possesses many traits of the sire as well as of Black Hawk himself, whose blood still courses through the veins of his tribe and by whom the memory of that old chieftain is honored and revered with affection, even to the present day. The subject of this sketch is somewhere past fifty years of age, a full blooded Indian, and does not speak a word of English. The empty holes and bite out in his ears bear barbarous witness of his early history. Only a few years ago he was bedecked with paint and feathers, wore his blanket, and joined in the dances and dog feast; but now the light of a new civilization is dawning upon him and he lives comfortably in a brick house (built by the government for him) cultivates quite a little patch of ground; always has a nice garden with considerable fruit, and lives as a man ought to live. In addition to this he has between four and five hundred head of cattle and if fortunate will soon be a prosperous stock raiser.

With his neighbors and all the leading men of his tribe, without exception, dress in native costume, not a few priding themselves upon their stylish (f) head gear, highly ornamented buckskin leggings and moccasins and richly decorated blankets. Keokuk can be seen any day in his plain farmer dress, while on Sunday he appears in a genteel suit of black broad cloth, white linen, polished boots, driving to church with his family in a spring wagon drawn by a pair of well matched blacks.

The picture is not overdrawn, and others who know him more intimately than myself will bear testimony to the truth of these statements. It has been said that the "only good Indian is a dead Indian or the kind used as signs in front of cigar stores" but I ask shall such a man as Keokuk be thus compared? No, will not the question it would be an insult to him and a wicked libel upon his many noble qualities. I only wish the public generally could understand and would believe that with the Indians as with the Whites there are good men and bad men; smart men and fools; leaders and followers; that among the Indians you find liars, drunkards, thieves and murderers, but that human nature in its normal condition is the same everywhere, whether glossed over with a white, a bronzed or a black skin, and until our intercourse with the Indian is based upon the eternal principles of "doing as we would be done by" we must expect the Indian to continue to be a very "bad Indian."

Human nature is very like a banana; dissect it from either extremity and when you get down to the substance it is just the same. I am fully persuaded that a goodly goodly kind of policy, or a good Lord and good deed will not develop the best side of my nature, and the rule applies to the Indian as to ourselves.

Very respectfully,  
E. B. TOWNSEND.

SAC AND FOX AGENCY,  
Indian Territory, June 27th, 1893.

Mr. E. B. Townsend,

Dear Friend, Your kind letter is at hand. Dear friend, you don't know how much good I felt when I received your letter. I want that you are well and also the children tell them for me not to be lonely, but to make up their minds to learn the work they went there to learn. Tell them not to think about home in the Indian Territory. They must learn first, and be prepared to teach their people, and their example may help to lead the rest of the young people to the light of civilization. I hope to go to them soon in their homes well taught, and well prepared to take hold and

help the rest of the young people to see what education can do, not only for white people but what it can do for Indian also. It is a great mistake in our leading men now, to reject and refuse to send their children to school. I am ashamed of it but as it is I must bear it a while longer. If it were in my power I would send every last one of the Sac and Fox children to some school where they might learn to do for themselves when they become men and women. I hope the Government will instruct our agent to urge it upon our leading men to send the children to school. It is the only hope we have for the young people of our tribe. Friend, you know yourself, you have been with us long enough to agree with me. My friend it is high time to do something. The work must be done soon or we must be left in the dark. The rest of the Indians are far ahead of our people. It is a shame to think about the foolishness of our leading men in the tribe not seeing what is before them and how far ahead the other tribes are to-day—I must stop. You know how I feel towards my people. I wish they would do better for their own good. You also state in your letter the expenses of my children. I am still thankful to learn that the Government is still willing to add something to the money furnished by me to pay the expenses of my children from this agency to Hampton. Friend, you know that I will do all I can to encourage the children. You keep the money for them and give it to them when you think they ought to have it, or as the teacher for them, and send me the account from time to time. Please see that the girls use the money rightly, and that they get it if you leave it in the hands of somebody else. I am willing they should use the money, and tell them for me to be good girls and learn all they can and fast as they can. Farewell, dear friend, I hope to see you again.

Chief Keokuk.

Please write soon.

## CIVILIZATION

vs.  
AN INDIAN PROPHETESS.

Additional testimony to the fine qualities of Chief Keokuk comes opportunely in a letter to Inspector Townsend from the Agency, which we are allowed by him to publish. It contains also an interesting account of a recent conflict between the new ideas of civilization and a revival of superstition from the visions of an Indian prophetess, in which, through the influence of the valiant old chief and the sensible counsels of his friend, civilization seems to be getting the best of it.

COL. E. B. TOWNSEND,  
Washington, D. C.

Dear Sir,—

Our mutual friend—Keokuk, handed me your letter dated Washington, Oct. 28th, and requested me to acknowledge its receipt thereof.—"What shall I say to him in reply?" was my first question after carefully reading the same.—"Tell him," said Keokuk, as a smile spread over his handsome face, and his eyes were twinkling in a vain effort to dispute the mist that was fast obscuring his vision.—"That his letter has made my heart very glad." It was a manifest exhibition of genuine feeling, such as an Indian seldom indulges in, and speaks plainer than pen or tongue can portray, the nobleness of the old chief's nature.

He bade me to tell you that "the outlook toward the ultimate civilization of this people is better to day than ever before." "That the opposition you encountered while here, is slowly but surely giving way." "That your talk has set his people to thinking," and your words have been repeated till almost every Indian in the tribe has them indelibly impressed upon his memory. Soon after you went away, a Shawnee woman living in the Northeastern part of the Territory, created quite a stir among all the tribes by repeating a vision she had seen, and a talk she had had with the Great Spirit, where she was in a cataleptic state. She stated that she had— and in fact all her friends say that she was dead—and while in that state the Great Spirit revealed to her his will concerning the red man. It is a long story, but can be summed up in few words. The substance of it was that the Great Spirit was angry with the red man, for having adopted, in any part, the white man's ways—and the only thing they could do to appease his wrath was to go back at once to their ancient ways and customs; throw away everything the white man had made; dress in the skins of animals killed in the chase, not with powder and ball, but by the bow and arrow. Drink no more coffee, nor fire water, &c., &c., for if they continued to do these things the Great Spirit had sworn in his wrath to utterly destroy the whole earth, &c. &c.

# THE INDIAN QUESTION.

A paper read by R. G. Armstrong at the anniversary of the American Missionary Association in Cleveland, Ohio, Oct., 20th, 1888.

Besides the fifty-nine thousand Indians in the Indian Territory, there are about two hundred thousand of whom about fifty-five thousand are wholly supported by Government, forty-five thousand are partially maintained, and one hundred thousand receive little or no aid. They occupy two hundred and fifty thousand square miles of land, nine tenths of it grazing land; the rest is suitable for agriculture. Its constantly increasing value from its mineral wealth and the building of railroads, presses hard upon its thrifless occupants, who stand right in the line of progress, and must either change or perish.

Meanwhile their source of subsistence, game, is disappearing, and more and more they will depend either on public charity or on stealing their food, unless taught to take care of themselves.

## THE "CIVILIZED" TRIBES.

The Indian question is upon us as never before. Those in the Indian Territory and the few thousand in Minnesota, Wisconsin, New York, North Carolina, and other states, say seventy-five thousand in all, are the remnants of tribes who formerly lived East of the Mississippi river, are inclined to agriculture and domestic life, and have been considered superior to the nomadic tribes of the West. They long since ceased to trouble us, and are, at some places, making commendable progress in education, stock raising, and agriculture, besides generally holding their own in numbers. Still, to a large extent, they seem fixed in a half civilized, half pagan state; lacking their earlier manliness for the want of hardship and discipline in their lives; keeping up their heathen rites and dances, living in poverty, without law, demoralized more or less by annuities, and destitute of the conditions that create character and self reliance.

They need practical education; few are already at Hampton and Carlisle; five hundred more should have the opportunity. More than this, their tribal relations should be broken up; homesteads, inalienable for at least twenty-five years, should be assigned, and they should be left as citizens of the several states in which they are to vote and be voted on.

Reservations are merely places for herding Indians; temporary, necessary expedients, that, after a given time, may become growing evils. Herding Negroes in like manner would have been a curse to both the white and black races. There has been more sentiment than sense in treating the Indians as a separate people. It was a kindly meant, but, as to its results, a cruel plan.

This part of the red race have suffered most from the whites; their comfortable Eastern homes have been broken up, thrifty farms and fruitful orchards abandoned for a Western wilderness, where thousands have died from exposure; their record has been the saddest part of the "Century of Dishonor."

## THE WILD TRIBES.

The destruction of the buffalo has been more trying to the Indian than was sudden emancipation to the Negro. The latter changed the relations rather than the realities of life; the former the realities rather than the relations. One remained on its old foundation of land and labor; any shifting was voluntary. Game, the support of the one, has failed, and they have been roughly pushed from tract to tract, till pauperism seems the only fixed fact of their life.

The human machine, after running for centuries, does not readily reverse itself; the strain on the Indian is tremendous; was greater ever put upon man? Force to control them, charity to weaken them; wisdom demands self-help as the condition of ability. Emergency is man's best teacher; it makes him creative. The facts of human nature and of experience have been ignored in our treaties with the Indians, probably because we never really conquered them but purchased peace on the best terms we could make.

Carrying the Indian from helplessness to self support is the most difficult administrative problem of our country. The Negro hastened care of himself. The "forty acre and a mule" method would have ruined the race. He was thrown on himself, and given a vote; dangerous as it once seemed, who would now have it otherwise?

The Indian is fed till he shall become self-supporting, which gives him a motive for not becoming so. He shuns, of all men on the earth, finds industry not a reward but a penalty. The Shoshone, when a reduction of rations was suggested, threatened to stop cultivating their fields.

A few may go to work, but the whole line will not move forward while rations and other gratuities are issued, as now, to lines of ragged, wretched looking mendicants, who are helped for the asking. Treaties must be kept; but the treaties contemplate ultimate self support, and the necessity of education to that end. It is, I believe, quite within their spirit to withhold supplies from the lazy and luctatious.

At Yankton, David's Lake, Cheyenne River, and at other points, efficient Agents keep the schools full, and the Indians busy by the argument to the stomach, which is their weak point. It is, I believe, the starting point of Indian civilization.

On the Fort Hall reservation, in Idaho, I recently saw fields of wheat, oats and potatoes; two thirds of the tribe had become farmers, besides owning herds of cattle, because a former agent had issued the coffee and sugar rations, which the red man dearly loves, only as each one successfully stalked out plowed and planted his allotted little farm.

The nation's gratuities may do the Indian as much good as they are now doing him harm, if wisely administered, especially the luxuries, which afford the

best leverage. He is managed by a class of men, whose title, in spite of shining exceptions, is a by-word and a reproach. Decayed clergymen, bungling politicians, and the broken of every profession are not the ones to make citizens of the red man. Fifteen hundred or two thousand dollars a year will not secure first class men who must travel far with their families at their own expense and be liable any day to discharge and disgrace.

By refusing adequate salaries, Congress, (and Congress means the people,) decides that the Indian's greatest need shall be unsupplied and that at a comparatively trifling cost. Millions for food and dry goods, but not one of two hundred thousand dollars more that helps on the track of a locomotive. He will not come. Good beef, flour, and shoes, but second rate men, whose average official life is less than two years, is the present policy for them.

The tender mercies of the government to the Indians are cruel; the much talked of treatment of the slave owner was tender by comparison. The self interest of the Southern barons was humanity itself in contrast with the course of men sent in the name of a high duty, many of whom are tempted if not forced into corruption. I would throw no slur on the good men among them, of whom the country is not worthy.

The Indian is a child and needs a father; physically mature, he is mentally an infant; he stands proudly but helpless on the track of a locomotive. He will not come. The advice of a white man inferior in natural force to himself; and such, as a rule, he has to deal with. No wonder the young prefer their own leaders. In the school of civilization only object lessons are good for much. What lessons we have given the Indian!

Recent agitation has chiefly concerned the education, lands and rights of the race, and decided progress has been made in that direction, but the Indian has not moved. He must be touched by the law, and the law must come together; virtue will go out of us into the other, as it did into her who once touched the hem of a sacred garment.

There is no salvation in acts of Congress; it is from the springs of action within. To awake these in the bosom of the Indian and to consummate it in Christian character, is the work of individual men, by constant and by personal influence.

The Indian question is, first, one of organization; and second, one of executive duty; of conditions and of action. In the former, of late years there has been much progress. Respecting the latter, there has been little; crops and herds have somewhat increased, and education has advanced, but executive work drags because there is no body to do it. Men are the need of the hour, and money to provide for their wants.

At the northern frontier outpost this summer, for the first time, the soldiers remained in their barracks. At the forts in Montana and Dakota, which I recently visited, there was general respect for Indian prowess, and belief in his capacity and in his wrongs. "Were I an Indian, I would fight," seemed the feeling of all.

So far as army officers are gentlemen of character, force, of experience with the red man, and of humane ideas (for there are opposing views,) I believe they are better fitted than any others to settle the Indian question.

Their destructive work is nearly done; it has fitted them for the constructive work to be done. As officers, they have peculiar advantage over civilians of the same capacity and worth; far less temptations, and far stronger standing ground for the control of Indians. One half of the sixty agencies might well be put at once under selected officers—not that it is strict military duty, but it is not an "Old woman's work," as one of high rank said of Captain Pratt's effort. The latter is indirectly doing more than any two hundred for the pacification of the Indian—the army's special business.

Railroads are doing the work of pioneer and missionary combined; peace is not far off. There will soon be need of the army only as a national police, and half of the fifteen thousand troops at the West may be dispensed with. What better service can a few of its accomplished officers undertake than building up our civilization at its weakest point.

Only by personal devotion can the Indian be rescued from a sad fate. That has, under God, created the great results of the missionary work throughout the world in recent years.

The labors of the Riggs, Williamson's and of Bishop Whipple, and others, during the past half century, in the western wilderness, has been a seed sowing of which the results are now appearing. The men they have touched and taught are those who are now breaking from the old superstitions and asking for light, while official dealings have scarcely a moral result to show for armies of Agents and vast annuities.

Only the light of Christian truth and example, steadily shining, can lift men up. The missionary work among the Cherokees and others, and for the Sioux at Sisseton, Fort Sully, and Santee agencies, in Dakota, where once wild Indians are settled in so peaceful, prosperous homes, that "a stranger traveling through the country would not think that he was on an Indian reservation," attest the complete success of the Congregational, Episcopal and Presbyterian Societies. Peoria Bottom, where I visited in 1881, is a charming village of twenty Christian families, in plain homes, created by the energy and wisdom of the Rev. Thomas L. Riggs. "In proportion to the aid and means employed, no mission to the heathen since the Apostolic age have been more successful than those of the American Aborigines," declares one of these homes, and there have been many weak and disappointing missions and missionaries.

Such work cannot be inspired from Washington, though it may supply many of the conditions of it; a purified civil service would do more for the Indians than for any part of a class in the country. Good agents would create a *moral* life a favoring tide for the Christian teacher.

The point of the Indian question I believe to be honesty and capacity in dealing with him; given that, and

the rest will work itself out; without these, oceans of good intentions and of money are naught. Within ten years, the Indians could be citizens, and there would be no Indian question but one of Christian effort.

Can anything be done to improve the cumbersome machine that is so well fitted not to do it?

The present able and faithful Commissioner of Indian Affairs is only a clerk of the Secretary of the Interior. He should be the head of an independent bureau or department, not as now, with an insufficient and poorly paid set of clerks.

His office feels the parsimony of Congress, as does nearly every faithful effort that concerns the Indian.

The government should appoint its own officers; the Churches their own. The latter have made a failure in nominating agents; it is not in their line; it creates a mixed responsibility; and the privilege has been abused.

It is a question how far Indians may at once become citizens and voters of the various states. I believe that to-day Oregon, California, and Colorado, could take better care of their Indians than is now done should they be allowed the ballot. That power would, as it did in the South, compel attention to the welfare of the ignorant voter. Would not Oregon do as much for the enfranchised Indians as Virginia has done for the enfranchised slaves? Homesteading, education and legal rights, would fall into line naturally, and not be forced as they are, upon an untrained, indifferent Congress.

Recent visits to the country of the Sioux, Crow and Bannock Indians, have impressed me with the favoring conditions there by way of extensive grazing lands on which they can raise cattle, for which, from all accounts, they are especially adapted.

General Alfred T. Terry, declares the solution of the Indian question to be in our word "Cows"; his success with four hundred Cheyenne captive warriors who, under chief Dull Knife, made one of the most desperate and brilliant raids of our own or any history, goes far to sustain his view. They are now peaceful, prosperous herders on the Rosebud river, under the care of Captain Ever, of the general's staff. They only lack Christian teaching, and that they easily need.

The three thousand five hundred Crows are as wild pagans as there are on the continent, but I witnessed a work which in less than ten years will, if sustained, place every lodge on a cattle ranch of its own. The Agent in charge, last spring, induced ninety Indians of both sexes, sixty of whom had never worked before, to cultivate a farm of seventy-five acres, which had been divided into twenty-four lots, each lot having been assigned to a family. I saw them last August gathering and sowing their crops. The next season each family will be settled on the legal allotment of one hundred and sixty acres of farm land, one hundred and sixty acres of grazing land, with eighty acres besides for each one of the lodge; on condition that ten acres of land shall be fenced in, the Agent will build a house. He expects to persuade the tribe to convert their sixteen thousand ponies into cattle, place them all in a fertile, well watered region in the Big Horn mountains, on lands of their own, and to sell a large part of their five millions of acres of reservation land, investing the proceeds in stock.

Their lessons in farming will fit them to raise wheat, oats, potatoes, and hay, which command high prices; and create fixed homes, which a purely grazing life would not do. On most of the reservations there is farm land enough along the rivers for Indian agriculture, and abundant pastures; these turned to account by well directed, persistent effort, would, in a few years, break the miserable herding of Indians, and (always providing for the non-alienation of lands, for at least twenty-five years) whites would settle in their midst, and, in spite of some had men, the Indian would find contact with a thrifty race, the greatest help toward his temporal salvation. The five thousand Sioux at Standing Rock are most favorably situated as to lands, while many thousands on other points of the Missouri are most unfortunate in this respect.

This method is illustrative rather than exhaustive, for there are special conditions affecting each tribe that would modify any general plan. Uniformity of treatment would be absurd. The Indian is, I think, placed where, if encouraged, he can well work his way to self support. The policy at Washington is now, I believe, to cut down the ration supply all around, in order to stimulate the Indians to work for themselves. It will prove a blunder or a blessing, according as they shall be warned in season, and be wisely helped by competent agents. They look to the Agent call him "Father." If he is the right man in the right place, and properly sustained he will, after some hardships and difficulty, teach them to do with less food, and finally with little or no aid from government.

At the majority of the agencies the present policy is likely to be disastrous, and may lead to bloodshed; it is pressure on one side without help on the other.

## WORK AND DUTY IN THIS EAST.

At Hampton there are now ninety (soon to be one hundred and six) and at Carlisle there are nearly three hundred Indians—boys and girls—who are learning civilization as an object lesson, and are themselves an object lesson to the centres of intelligence and wealth where is the sentiment that inspires and means that provides for the combined practical and spiritual teaching of the red man. They suffice, perhaps, for a tangible proof of the Indian's capacity, of which the need was great; their effect upon public sentiment has been marked. The result with Indians has so far proved satisfactory. Scattered these pupils among the farmers of Massachusetts and Pennsylvania for a portion of the year, has had such a good effect mutually, that five hundred more might well be so placed in various states under the care of special agents, with proper recondens, where the sick or unsteady visitor might be kept with a view of returning home, say ten per cent. of the entire number.

The Negro institutions at Nashville, Tenn., at Talladega, Ala., and elsewhere, could do excellent work for them. The aims and methods of most white schools render them unfit for Indians.

We have found the weak point of the race to be physical, not mental or moral. They can endure the hardships peculiar to the plains, but not steady work from day to day. They are swept away by measles and smallpox, being weakened by inherited disease; the lungs are their weakest point. They are sinewy but not muscular.

As a race they hold their own, with favorable surroundings; they are not decreasing seriously, if at all; they will not settle the problem by dying out.

Mechanically they have proved apt to learn but slow to execute. Our Hampton Indian workshops have, this year, supplied the Indian department with two thousand pairs of brogans, five hundred dozen articles of tinware, and seventy-five sets of double plow harness, which were pronounced by the Inspector at the depot of supplies in New York City, as "well and strongly made, and for actual service are fully equal to any produced by the Department." Both girls and boys take quickly and kindly to neatness and to industrial pursuits, as well as to books. They are as eager as the Negroes for knowledge, and become more and more so as they advance. Want of ambition is the least of their troubles. Teaching them is hard work, but interesting and stimulating in the highest degree.

They resent injuries, but are not revengeful; there has not been a sign of treachery in nearly five years. Religiously, they are, I believe, the most hopeful of heathen races. The vastness and grandeur of the West has affected them as desert life did the Arabs; they are remarkably Oriental in customs and ideas. They worship no fetish: there are no idols to break; but a crude faith is to be cleared; dim eyes are to be opened. Christian effort under Archdeacon Kirby of the Episcopal Church has evangelized the ten thousand Indians of British America in their simple, natural life. The mixed, harassed condition of our own tribes makes the work far more difficult. The trouble is from the white man.

The Anglo-Saxon pounces on his inferiors without mercy. The mingling of races has worked well; they are mutually helpful and stimulating; as Indian classmates are kindly, thoughtfully treated by his colored compatriots. A race that has been led is leading another. The "house father" or chief of the sixty Indian boys, is a Negro, a Hampton graduate.

With perhaps finer mental and moral texture, the red race does not produce help enough to feed itself; the rougher, stronger black race, has not thrown a pauper upon the country, and raises raw material for the mills of Christendom.

With benevolent intentions, we have diminished and weakened the one; we are getting the other for selfish purposes, it has multiplied and grown strong.

Both are peculiarly the concern of the American people. In doing for them we are doing for ourselves, our children and our country.

On the Indian girl rests most heavily the weight of past and of present surroundings. When, in October, 1891, I took twenty-five Indian boys and the girls back to Hampton, the former were really placed in rooms by themselves away from the camp, employed in agency workshops at the trades they had learned, and were thus helped greatly; the girls could not be so isolated; they had no trades, and though they could make their own garments, and do housework, there were not suitable situations for them, and they returned to their mothers and grandmothers, who would sell them to the braves who would pay the most prices for them; one of the five, an earnest Christian, wrote: "Hard to be good woman out here;" she finally married a white man of good repute. She has recently brought her savage father and mother near to her home.

Another is reported as a most satisfactory house-servant in the family of a missionary; another keeps her father's store and books; he is one of the best and most thrifty of Indians, but the family live in one room in a log cabin.

Two others, younger, are waiting an opportunity to return to Hampton for two years more training, with a view of becoming teachers. Teaching is the career for Indian girls, as it has been the one way for colored girls of the South to be more than drudges; it is the only field for a womanly ambition. The increase of the educational fund for Indians creates some hope for their girls, on whom rest the hope of the race.

There is a tendency to increase our course of study to longer than three years. One set having returned, the Indians, whose parental feeling is tender and strong, are more trustful of us, and are ready to consent to a longer absence of their children. One boy has already returned at his own expense, and another is saving money for this purpose, both to learn more, and to perfect themselves in the trade of shoemaking. The sooner the Indian can stand without government aid the better. Any boy can return who will pay his way back. This gives a motive to work, and creates appreciation of his opportunities.

For the practical necessities of Indian life, their training should be practical. We give help the way to fit them to take care of themselves, may do them more harm than good. Mechanical more than Agricultural training is given at Hampton and Carlisle, for the better wages that tradesmen get.

Government allows \$235.00 apiece annually for each Indian at Carlisle, which is a government affair. For Hampton and other private schools, I think that only board, clothing, and cost of medical attendance should be asked—say \$15.00, or \$18.00, for the entire year. Hampton is allowed but \$127.00, (less than was asked for, and less than the Commissioner of Indian Affairs requested,) due to a foolish parsimony in Congress.

The cost of a double set of teachers, one in the school room and the other in the shop, is estimated at \$70.00 a

year; a \$70.00 scholarship is sought for each Indian at Hampton.

I think that when charity and the government are linked together for Indian work, the former must erect the building and maintain it; the latter supply the wants of the body. United States beef and flour are as good as anybody's, but government employees, as our civil service stands, are not the men to elevate the Indian. Those who support the teacher control the work. The telling factor in all humane work is the person who does it. Unless that shall be supplied from the pure fountains of our Christian civilization, it will not, as a rule, be supplied at all. I prefer the educational work at the Agency, where the government duty and boarding schools should, of course, be strictly responsible to the appointing and controlling power, and their moral value will be that of the Agent in charge. Missionary effort should stimulate these greatly; the mission teachers should be superior men and women, directly responsible to their own supporters in the East.

Let us first supply our own teachers for the Indians, and then fit them to become their own teachers; to make these is to make the people.

The system of Negro free schools in the South is vitalized by a number of strong, central institutions that train the picked youth of the race as teachers. This, I think, the true relation of Negro charity to the Indian; excellent boarding and industrial schools at each important Agency, to train the best boys and girls to teach the rest, both in school and by their good example. Getting fifteen dollars a month a piece from government, for the food and clothing, and medical care of each pupil, need not, in the least, weaken the independence or morale of a teacher. The friends of the Indians will do the rest. They are no poorer for having given, \$27,000.00 for "Winona Lodge," a new Indian girls home at Hampton. Philanthropy and public functions should never be mixed. They get along best when in most clearly defined relations.

#### THE SITUATION.

Four rail road lines belting the Continent, some of them crossing reservations, mean a belt of enterprise for fifty miles each side of the track, and progress everywhere. In Indian lands are going up in value; their value-bines are tempting the pioneer on his weakest side; their rich river bottoms are coveted by the farmer, who can get fabulous prices for his crops of potatoes, wheat and hay. Neither treaties nor promises can sustain the Indian in his tenure of vast tracts; he cannot hold hunting grounds on the track of progress, any more than the white man can. Back of all legislation there are ideas which are mightier than the dollar and the sword. Thought is supreme. It demands use as part of one's title to land and property. The Indian must give that or give up. Our frontier line is pushing steadily westward, at the rate of twenty miles a year; has already wrapped itself around and is pressing hard upon the reservation. The red men have given up much already, in part on a bargain, in part to force. The always friendly Crow and the Sioux and others, must make homesteads for themselves, or be gradually forced back to where they will endure no longer, and fight. Frontier officers force and expect the latter. The alternative is civilization or extermination, and that before very long. For the former is needed a wisdom and executive energy not yet supplied. The latter will cost at least one white man's life for every Indian killed, besides up to half suffering and expense; it can be done, but it will hurt us as much as the Indian.

Public sentiment is growing stronger in favor of Indians; contempt and hopelessness prevail but do not gain. Congress provided last session nearly three times as much money as ever for their education. There has been a marked improvement of late years in Indian administration; its standards are higher, its men are better than they were. Plundering Agents are very nearly out of the way. Capacity rather than mere honesty is the need now.

The people to-day will do more for Indians than ever before.

#### THE AMERICAN MISSIONARY ASSOCIATION.

The recent transfer of the Indians under its care by the American Board of Foreign Missions to the above named, a home society, unites the Congregationalists, concentrates the interest of New England in one body, through which it will express its sympathy for the red race of our country.

The sons of the Pilgrim Fathers have a heritage from the past by way of a duty to the Indians that the time has come to fulfil.

The situation is critical; the opportunity is great; the rising tide of public sentiment, the movement at Washington, the eagerness as well as the urgency of the red man, all signify that to meet the duty of the day there is the spirit among the people.

But this work needs a leader; it will drag if thrown on overloaded men. The race is as much as the money, the one will bring the other, not only by wise appeal but by wise, good work, that will commend itself to the country.

For more than a century Indians rejected our civilization. Now their thinking men, (for they are a race of thinkers) forecast the future, and wish their children taught the white man's way as their only hope.

They do not choose this; they are compelled to it; hundreds, thousands, are waiting and are glad to work on an education. They beg for what they once detested, and this feeling is growing.

A final word for the result of Indian teaching.

We prefer at Hampton pupils from the simple, wild Indian life; pure blood. Whatever they have done they have not shined against light; they are low but not degraded; they are not fallen, for they have had no where to fall from. Their response to Christian teaching is a surprise and a delight. They are converted from their own way; they have morally come to the right about, faced the other way. We feel sure of their fidel-

ity, but not of their consistency. There is a moral support in surrounding circumstances that constitutes at least half of the virtue in New England. There is a moral drag in a Christian Indian's surroundings that doubles the value of the good in him, and in virtue of which he may stand justified in spite of a life that would condemn any of us.

The truth applies to ranks of all the less favored classes or races of the world. The only hopeless people are those who have knowingly rejected the light.

#### A JEWISH SERVICE IN SAN FRANCISCO.

For the Southern Workman, by C. C. A.

I have just returned from the Feast of Tabernacles. I went with a pleasant lady who goes to the Jewish Synagogue sometimes to feast on the music, which is grand. We walked about three blocks, and were in time at 10 A. M. The place was similar to other churches, with galleries, where we sat so as to have a good view. The seats were made of California laurel, varnished; cushioned, carpeted, &c.; the windows all painted with gorgeous colors, the house dimly lighted with gas. A large tinted organ rose behind the altar, surrounded in front by a handsome railing. Under the organ was the Holy of Holies, where the Ark of the Covenant stands. Within the railing stood a priest at a table, reading eternally in Hebrew and English, with a very German accent, but a rich musical voice. The congregation of German Jews was sparse. Both sexes sat together in the pews, the men with uncovered heads, for this is a so-called Reformed Jewish Synagogue. Many used books when the priest read. The Rabbi came in with a black cap on his white locks, and sat in an arm chair at the right end of a little black table, who also wore a black cap. Their garments were not colored and decorated with gold lace as in the Greek Church. The general impression was of sombre black. The singing and organ music was grand. It reminded me of what an old gentleman in Springfield said of Jenny Lind, whose sweet voice I heard there in 1859: "She used books when she sang from the inner tabernacle, and help up before the people, surrounded by ornaments of gold. This was accompanied with reading in Hebrew and a grand music. Such clear, melodious, rich voices, it was a delight to hear as they echoed around us. The Commandments were then brought from the tabernacle and the scroll laid on the table, and partly unrolled. Then the Rabbi stepped forward and read—this I interpreted with music. Then it was rolled up, and wrapped in a richly ornamented covering—perhaps the work of some 'Lydia,' 'seller of purple'—again held up before the people, and then carried out of sight into the Holy Place. The priest then seemed to read a prayer; then all of the congregation who were robed in mourning stood up. Then followed a verbal prayer, and then the benediction. The service seemed solemn and impressive, and in my soul I said, 'Come Holy Spirit, Heavenly Dove, quicken and baptize with Thy Spirit each soul in this house.'"

#### THE ALUMNI JOURNAL.

We are glad to see this little sheet—owned and published by resident graduates at Hampton—still holding its own, in appearance and prosperity. It contains each month news from ex-students scattered in various places, and is a pleasant means of intercourse among them as well as a good school for its managers and contributors. We should be glad if all could take it and sustain it. A graduate correspondent in the last number says:

I have just closed my school, situated about five miles in the country, after a term of nine months; from January 2nd to Oct. 2nd, 1893; walking about a mile a day to and from school every school day during the term. You see that I do not go to and from school every day because I have to, but the summer days are so long here and time is so precious that I could not afford to pass the long afternoons in idleness, but take my afternoons in cultivating my orange grove which contains about 800 or 1000 trees. It is quite important to know that in laboring with the mind we should also labor with the hands. Education in the State of Georgia seems to be progressing, but not so rapidly as if there were a sufficient school fund appropriated to run the schools without so much burden upon the patrons of the schools in having to pay the greater part for their children's education; but through the efforts of Professor Orr, State Sup't., it is hoped that the educational system will be on a firmer basis.

You will find enclosed fifty cents which you will please accept in payment of one year's subscription for the Journal.—Yes, send me the Journal for it is a great companion for me. I can never get too tired to read it. Thanking you for your kindness,

Respectfully,

G. R. JARVIS,  
Darren, Ga.

PLEASURE TAKING.—Pleasure-taking is not nearly as much provided for among our earnest, intense, energetic American people as it should be. We live altogether too much in the future, too little in the present. We live poor that we may die rich. We get all ready to be happy, and when we get quite ready, infirmity, or disease, or death steps in, and we are changed to take comfort in this short life is gone. If we could only be content to seize upon the little pleasures that lie just outside and often within our daily pathway, they would make a large sum total at the end of the "three score and ten." Far too many of us seem pleasure that is cheap and near, and within our grasp, and complain because we cannot have such as are costly, and remote, and inaccessible.—*Exchange.*

At Home.

HELPING MOTHER.

Sweeping, and washing the dishes.  
Bringing the wood from the shed,  
Ironing, sewing, and knitting,  
Helping to make up the bed,  
Taking good care of the baby,  
Watching her lest she should fall,  
Oh, there is work for us all,  
Helping Mother.

From the New England Farmer.

PRESERVING CURIOSITIES.

"The young man or young woman who, on leaving school, consider that their education is completed, will, in after years discover that they were greatly mistaken; for, in fact, it is but just begun. Only the foundation as it were, is laid, upon which to begin to build. A person may go on gathering knowledge on every hand and treasure it up from day to day, as long as life shall last. Lessons are to be learned from the animals we care for, as well as those which we have to guard against, and also the birds in the air, and the thousands upon thousands of little insects with which we have to keep up a continual warfare. Useful lessons are to be learned from a ramble in the forest and the field in the orchard and the garden. Something new is continually coming up for our instruction, and it, we keep our eyes open we shall be the gainer. These beautiful autumn days are a very favorable season for outdoor study, and the farmer's wife and daughters who have been roasting over the stove the past few months, preparing food for their hungry menfolk, should embrace every opportunity to be in the open air these delightful afternoons, and take a ramble in the woods to admire the beauties of nature and you will need to take along a basket because you will surely want it. You will find some nice autumn leaves a prize for house-decoration, some rich leaf mould to put in your flower pots, and perhaps a lot of chestnuts may be gathered.

I have been thinking lately, if we could have room devoted especially to the preservation of curiosities that we could secure on the farm, and an extraordinary product of the soil, it would be a valuable adjunct to any and every farm, as it would afford instruction and amusement to every member of the family; and many an hour could be profitably spent. If we found an extra large potato or apple, or any other like product that could not be kept for an indefinite period, it could be cut open through the centre, laid on a sheet of white paper and a pencil mark around it, so as to preserve a correct drawing of its size, and notes made in regard to it that it would be interesting to remember; tall or exceedingly prolific stalks of corn, or fine ears should be saved, as well as very fine heads of grain or anything else of the sort. Sections of trees or shrubs of a peculiar growth might well be brought home, and as well as cabinets of insects that have been collected; and in fact, anything and everything that will be interesting to her here; and make it the museum of the farm. For lack of room I have not got this "museum" yet, but I feel the need of it, and it is under contemplation. I have a lot of specimens of stones collected in different parts of New Hampshire, Massachusetts and New York, and if the room was provided, it would most certainly get filled with a collection of interesting objects. I often come across things in the field and forest worthy of preservation, and think that everyone who is deeply interested in farm life can in a few years, gather a collection that it would pay to look at. The influence that such a room would have over the young people of the farm could hardly result in anything but good to them, and I believe that in after years it would be looked back to, as being a very bright place in the old homestead.

A place of this kind on the farm would have tendency to make farm life more interesting to the boys, and girls too. A great deal is said about getting the boys interested in the farm, but I want to see the girls as deeply interested. Our boys will want wives; and if the boys wish to engage in farming for a life work, the girls should be equally interested in it. How often we hear young ladies say "I wouldn't be a farmer's wife," and yet, they sometimes do ten times worse than marry a farmer. When the farm is made for a girl, it is a very pleasant place, and I have often thought that the farmer's wife had as easy a life as the wife of the village mechanic, and usually very much pleasanter surroundings. To me the quiet of the farm is greatly preferable to the noise and bustle of the town. I think that if the rural people do not enjoy themselves it is their own fault, and there is an need of their being interested in their home.

Cornell, N. Y., Oct. 25, 1882. P. M. D.

Teachers' Table.

"SENTIMENTS" FOR RECITATION.

We have recently adopted at Hampton Institute a practice found beneficial in other schools, and which we would recommend to all. It is the recitation at the opening of the school each morning, by one of the students of the Senior class—all taking their turns—of a brief selection of prose or poetry embodying some useful truth or vigorous sentiment. It is an excellent thing to store the mind with elevating thoughts and expressive words, and their recitation in the morning will tend, with the reading of the words of inspiration, to give tone to the whole day. For the benefit of those of our graduate teachers especially who may have pupils sufficiently advanced to learn them with profit, we will give from time to time, as below, a column of the "Sentiments for the day"—recited at Hampton.

Those of the last month have been selected chiefly from the golden words of the great founder of a great state, whose bi-centennial has just been celebrated.—WILLIAM PENN.

"Governments, like clocks, go from the motion men give them, and as governments are made and moved by men, so by them, they are ruined too. That therefore which makes a good constitution must keep it, namely, men of wisdom and virtue, qualities that because they descend not by worldly inheritance, must be carefully propagated by a virtuous education of youth."—William Penn.

"I know of no religion that destroys courtesy and kindness, which, rightly understood, are great indications of true men, if not of good Christians."—William Penn.

"There can be no reason to persecute any men in this world about anything that belongs to the next."—William Penn.

"I know some say, Let us have good laws, and no matter for the men that execute them. But let them consider that though good laws do well, good men do better, for good laws need good men, and are abolished or evaded by ill men; but good men will never lack good laws, nor allow ill ones."—William Penn.

"Obedience is our universal duty and destiny, wherein whosoever will not hand must break; too early and too thoroughly we cannot be trained to, know that would, in this world of ours, is a mere zero to should, and for the most part, as the smallest of fractions away to shall."—Carlyle.

"True it is that in these days, man can do almost all things, only not obey. True, likewise, that who cannot obey cannot be free, still less bear rule. He that is the inferior of nothing, can be the superior of nothing, the equal of nothing."—Carlyle.

"Be, and not seem. If you would not be known to do a thing, never do it. Never was a sincere word uttered alone. A man passes for what he is worth—what he is, engraves itself on his form, on his features, in letters of light."—Emerson.

"It is by what we ourselves have done, and not by what others have done for us that we shall be remembered by after ages. It is through that which has aroused the intellect from its slumbers, that has given lustre to virtue and dignity to truth. It is by those examples which have influenced the soul with the love of goodness, and not by means of sculptured marble that we hold communion with Shakespeare and Milton, with Johnson and Burke, with Howard and Wilberforce."—Francis Wayland.

"The crown and glory of life is character. It is the noblest possession of a man, constituting a rank in itself, and an estate in the general good will, dignifying every station and exalting every position in society. It exercises a greater power than wealth, and secures all the honor without the jealousy of fame. It carries with it an influence which always tells—for it is the result of proud honor, rectitude and consistency, qualities which perhaps more than any other command the general confidence and respect of mankind."—B. Smiles.

"Method goes far to prevent trouble in business; for it makes the task easy, hinders confusion, saves abundance of time and insures those that have business depending, what to do and what to expect."—B. Smiles.

Health and Humanity.

TEN LESSONS ON KINDNESS TO ANIMALS.

SECOND LESSON.

On These each living soul awaits,  
From Time, O Lord, all seek their food.  
Then openest Thy hand  
And fill'st all with good.—Hayden's Creation.

"WHAT WE OWE TO ANIMALS."

[To be read to pupils by Primary Teachers.]  
Those who have read the story of Robinson Crusoe, the sailor who was shipwrecked on an island not inhabited by white men, will remember how he soon made companions of the various animals he found there, and with their aid sustained life until he was rescued. The ox told for us, no dog to be our companion and guard us in the night, no cat to lie on the hearth, no birds to sing their songs, no living creature to keep us company, no sound of living thing by day or night, only solitude and silence everywhere, with nothing to eat but such roots as we could dig from the earth, and nothing to wear but such bark as we could pluck from trees, we should then know how much we owe to these creatures, which God has mercifully provided for our use. And ever afterwards, if we escaped from such a life, how grateful we should be to God for giving them, and how grateful to them for the service they render us.

It has been said by those who have studied, that if only the birds were all destroyed, which would live on the earth, for the insects which birds eat would destroy all the vegetation, and all human and animal life would perish.

BENEFIT OF ANIMALS.

Let us consider what we owe to animals. Some of them, such as cows, sheep, and goats, supply us with both food and clothing.

Horses, mules, and donkeys toll for us through life, up to old age. All that these animals get in return for their service is only their simple food and water, with shelter from the weather, sometimes very poor, cold in winter and hot in summer.

The dog is the companion and faithful friend of his master; whether the master be rich or poor he never deserts him, follows him as cheerfully to his hovel as to a palace, and asks in return only words of kindness, and the leavings of his master's table.

The cat keeps our houses free from mice, and makes them more cheerful.

Hosts of animals there are that make the world more pleasant and our lives happier. They add a charm to the meadows by their bleating and bawling, and peaceful existence. They make the woods pleasant with their sweet songs and fair plumage. They peep with bright eyes from tree, and bank, and bush. The river can't fill the streams, and ponds, and lakes, and ocean, with their brilliant forms and abundant life. Since they do so much for us, we should do all we can to make their life comfortable and happy, by shelter, and care, and kind words, and always give them proper food, and kind treatment.

A FABLE.

In an Eastern fable it is told that Amurath, sultan or emperor of the East, once in a sudden fit of anger cruelly struck a dog that was playing about his feet. At once a peal of thunder was heard in the palace and the Spirit of Syndarac stood before him.

"Amurath," said he, "thou hast struck thy innocent brother, who, like thee, has received from the Almighty capacity of pleasure and pain. If thou art justified in giving pain to him, I, Syndarac shall be justified in giving pain to thee."

From this let us learn that if we cruelly and cause weaker creatures to suffer, God, who made them, may cause us to suffer in return.

SOME QUESTIONS.

[Others to be asked by teachers.]

If we were shipwrecked on a desert island where there was no bird, nor any living animal, what should we be compelled to eat, and what could we find to wear?

If all the birds on earth were destroyed, what is it said would happen, and why?

What benefit do we receive from cows, sheep, goats, oxen, and horses; and what do they get in return?

What does the dog do for us, and what does he ask in return?

What does the cat do for us?

How do hosts of other animals make our lives happier?

What ought we to do for them?

What can you tell about the Eastern fable of Amurath, sultan of the East?

What can we learn from that fable?

Agriculture.

HOW TO BEGIN FARMING.

Success in any business depends more on the man than on the business. Some men will succeed in almost any business, while others may engage in the most profitable business, and not pay their expenses.

If a man possess an average intelligence, is industrious and not wasteful, he will be very sure to succeed in farming, providing he takes an interest in the business and makes the proper efforts to inform himself as to the best methods of growing the particular crops he desires to raise.

We do not think of any business that would promise very good returns without capital, or some knowledge of the business. As farming is a business that prospers by intelligence, quite as well as any other, it would not be wise for any one to attempt to follow it until he has become practically acquainted with the use of farm implements, and understands the principles of plant growth.

The young man who desires to become a farmer, and has neither capital nor a knowledge of the business, should hire himself out to some intelligent farmer who has made the business a success; and he should work so diligently, and make himself so useful, as to get the good will of the farmer, who will thus become interested in his welfare and gladly give him such information as to the best soils and crops, and the best fertilizers and methods of cultivation, as will be needed when he has a farm of his own. While a business education is thus being acquired, if money is so economy be used, money may be laid up, so that in a few years he will have enough to purchase a small farm; thus accomplishing two very important things at the same time, and he will also probably have decided upon a particular branch of farming is most agreeable to him. If it should be the production of milk, fruits or vegetables, he must locate near a city or manufacturing town, where he can secure a good market for his produce.

The amount of capital required must depend somewhat on the price of land where the location is desired, and also on the energy of the man.

He who commences in any business with a small capital, must expect at first his gains will be small, but we believe he had better commence with a very small capital of his own than a large capital that is borrowed.

A young man who desires to become a farmer can invest his first hundred dollars by purchasing ten acres of land, and still keep at work for wages until he has saved money enough to purchase manure to fertilize two or three acres, and enough to pay for plowing and the seed required. He can work on his own land a portion of the time, but still work for others enough to pay expenses until his crops are grown. Thus one can commence on a very small capital, without much risk.

As a rule, it is better to buy only what is wanted for cultivation. Cultivate it well, and its value is very sure to increase; much more so if purchased and permitted to lie a barren waste.

First, Make yourself acquainted with the business you are to follow, and be sure you like it.

Second, Begin small and on your own capital, and increase your business only as your capital increases.

Third, Strive to produce the best varieties of everything that is grown, and prepare them for the market in the best manner.

Fourth, Do just as you agree. When you promise an article at any particular time, be prompt, and deliver it as soon or before that time expires.

Fifth, Be diligent, be liberal, be just, and thus build up a character that will secure to you, in your declining years, the respect of all and the title of an honest man.—Ed., Southern Planter.

SWEET POTATOES.—A DISCOVERY.

It is well known among farmers and gardeners that English peas, beans, tomatoes, and some other plants need some support to climb upon to keep them off the ground, or else the result of the crop will not prove satisfactory. In the case of these plants the reason is obvious enough. Not only the plant itself needs all the air and sunlight that it can get, but the fruit itself must be kept off the ground, or it will decay.

But few farmers, we opine, ever thought of providing similar supports for sweet potato vines to climb upon, or even thought that it would be any benefit at all to keep them off the ground during the growing period. Yet an accidental discovery we made the past summer almost convinces us that it would be much better to provide in some cheap way a support to keep the potato vines off the ground, and thus have both them and the earth about the roots more accessible to light, heat, and air. All know how hard it is to

HAMPTON, VA., JANUARY, 1883

NO. 1.

## IN THE SHENANDOAH VALLEY.

BY ORLA LAMORINE.

About the middle of September, I set out with my sister, who had been spending some weeks with me in the Shenandoah Valley. In order to make the necessary connections, we took the night train, and it was about twelve o'clock when we entered the comfortable waiting-room at the Union depot, which was well lighted, and everything orderly and quiet. We were the only women to be seen, and the railway officials, the night watchman, and the half-dozen men, who like ourselves were waiting for the train, were all polite and obliging, ready to answer our questions, and do us any service in their power.

Such scenes always give me a feeling of thankfulness, as I recognize the great benefits granted to women, in a civilized and Christian country. What a contrast with the day when a woman must ever be closely veiled and kept within doors, or if compelled to travel, must be accompanied by an armed guard. When young and beautiful, she was ever liable to become the prey of robbers, and old and ugly, the slave of any who cared to assume charge of her, scarcely sure of her life, unless her services were in requisition.

When the train came, we entered it promptly, and following the example of most of its occupants, resigned ourselves to slumber as calm as if we were at home and in bed.

Reaching Charlottesville about 3 A. M., we were put off on a dimly lighted platform, several kindly hands being extended to aid our uncertain steps and lift our numerous bags and baskets, and obeying the direction given us, we crossed a dark piece of open ground to reach the train, which was waiting to hear us over steep mountains, and through long tunnels, to that fair and beautiful vale, where so many of our affections lie.

Charlottesville is a famous place for confusion about the stations in the daytime. The University students crowd around, and Africans of every shade, but mostly of jetty hue, in numbers sufficient to have stocked the slave markets of old, and caused a decline in the price of field hands, no doubt, all bearing trays, loaded with the leggy chickens and soggy biscuits, supposed to suit the digestion of the traveling public. I had looked forward with pleasure to reaching the classic home of Jefferson in the silent hours of night, supposing that students and Africans, like the wicked, would then have ceased from troubling. This was true, so far as the students were concerned, but far wrong as to the Negroes. Not one of them was missing, and I could not stop a moment in spite of the warning voice of the conductor, to survey the strange, weird scene about us. Scattered over the dark area between the two stations, fiery little furnaces were glowing, pots boiling, chickens frying, the tiny bearers huzzling round, crying their wares in hoarse voices, all looking like gnomes of darkness, who feel no mortal weariness, but are compelled by the evil geniuses they serve, to go on forever offering sour apples and tough pies, superstitious numbers of chicken legs, and greasy hicoat at the car windows. Then the train plunges on in the darkness, and the uneasy traveler, whom hunger and impatience have betrayed into eating, starts from the brink of precipices over which he is being driven by a demon, to find himself safe in his seat in the car, with the conductor calling the name of the station at his side. Having turned a deaf ear to the snarl sellers, we could have slept comfortably in our rapid transit over the blue mountains, whose beautiful vistas were veiled from our eyes by the heavy wings of night, but for the lively chatter of two pretty school-girls on their way to Staunton to enter one of the numerous seminaries of that flourishing little city. The girls rattled away without flagging for about two hours to a somewhat sedate youth, who seemed to enjoy taking things quietly himself and hearing the girls chatter and giggle, which they were obliging enough to do without stint. Is anything in this world as silly, unreasoning, and attractive as the average young girl?

When we reached Staunton, daylight had dawned, and a foggy light was beginning to come over the mountains. The air was so fresh and sweet we did not care to ride the few squares laterally between the C. O. and Balt. & O. stations, and looked around for a small African to convey our bag and bundles. At once we realized that we were

west of the Blue Ridge, and felt the advancing price of labor! Eastern Virginia swarms with Negroes, and in all towns east of the ridge, there are always numbers of little black ragamuffins, dirty and hungry looking, who jump at a chance to go anywhere, and do anything for five cents. In the Valley and Western Virginia, the slaves were comparatively few, and there has, of late years, been a steady depopulation of Negroes from that section.

Those who have had advantages of training go to the cities of the North or West; the able bodied laborers are taken to distant mining districts. Our looked for colored boy seemed very scarce at first, and when he was found, he would not touch the luggage for less than ten cents, and seemed quite indifferent about it all. He was clean and well dressed, however, a refreshing contrast to our Lynchburg street gamin, and we learned, on talking with him, that he had had his breakfast, was on his way to school, and was only picking up a job or two for small change, so upon the whole, he had made a good start as an American citizen, and might be said "to have a bright future before him." Hearing me say that I should like to mail a postal announcing our safe arrival, he remarked politely that he was going by the Post-office, and would drop it in for me, and having fully earned his dine, he took it with a merry smile, and bade us good morning.

We found ourselves an hour too soon for the Valley train, and would have felt uncomfortable in the car, which was chill and damp from vigorous sweeping and sprinkling, had we not recognized in the colored stewardess who was busily dusting the seats, our old acquaintance, Mrs. H. Her presence recalled my first meeting with her some years ago in Lynchburg, when she came to me in much distress, wanting to borrow money to get back to the Valley with her two sons, who had been beguiled into our tobacco town by reports of the high wages to be gained in the factories. Mrs. H. had lately been left a widow, with many children, and had cherished great hopes of the day her boys could give her, when making factory wages, but these hopes she declared, in vehement language, had proved a delusion and a snare. It was true the boys, when working, had made money fast, but they had also spent it fast. The work was "one regular," the price of board at the snuck houses where the men had been taken was dear, and in short, the anxious mother after vainly waiting for the boys and their money, had come in search of them, and chancing on a day when the tobacco was not "in order," had found them loafing, ragged and penniless in the streets, with hundreds of factory hands as improvident as themselves, in the same condition. She had only enough money with her to defray her own expenses, but she was bent on taking her sons back with her, and knowing of no one else in the city to whom she could apply for help, she had come to me, and argued me to lend her the money. I had often heard of my visitor as a tenant of my uncle's, who bore the character of being honest and industrious, and could not find it in my heart to refuse her entreaties. Having secured the necessary funds, the unlucky mother collapsed her onerous task of offering and departed. Some weeks later, a note from my sister in the Valley informed me that Mrs. H. had placed the money loaned in her hands to be returned to me, with many apologies for not sending it sooner; she, "had to earn the money before she could pay it." We learned with pleasure from the stewardess that she was quite prosperous, having for years held a good position with the B. & O. company, who paid her "living" wages and furnished a house for her. When I asked for the boys who had caused her so much trouble in Lynchburg, her cheerful tone and expression changed. She said sadly, they were both for the army, and she was glad to get them away from her again. One had come back sick after a while, and lingered only to die; the other had been killed in a row on some western rail-road, where the foreigners "struck" when colored men were put to work with them. While we were expressing sympathy for the sorry tricks of the fortune teller, Mrs. H. youngest son, a bright little fellow, came into the car, and tried to coax his mother to consent to some plan of his, and the manner in which she despatched him from the

station, with the abrupt change in her voice, gave good proof that her vigor was not gone, and her natural force abated by reason of age or care.

An hour's ride through the green hills and dells of Augusta and Rockingham, brought us to our journey's end, and many smiling faces at the station bespoke us a cordial welcome.

The elections were approaching, and we found the Valley people much interested in politics. It was amusing to hear the comments of a Philadelphia friend, who had been spending some time in Harrisonburg, on the excessive love of political excitement shown by the Virginians. He said he had heard much discussion on such subjects in a week in Virginia, than he should have heard in the North in a year. When he took the train at Staunton, he wondered why they did not start, as it was long past schedule time, and the conductor explained that the Convention which was to nominate the member of Congress, was in session, and he had promised the people of Harrisonburg to bring the news.

It is proper to state that this was literally the "accommodation" train. The mail and express trains of the B. & O. do not wait to hear the result of political meetings.

In proper to state that this was literally the "accommodation" train. The mail and express trains of the B. & O. do not wait to hear the result of political meetings. In Augusta county, at which general Mahone and other prominent politicians, were to be present, and should have gone but for the long ride over rough country roads. Several of our friends, who attended, enjoyed the occasion highly.

Crowds of people of all classes and kinds, embracing the habitants of a district extending over twenty miles of country, assembled, among them some two hundred colored people, all cheerful, good humored and bent on enjoying the day. There was an enormous amount of good things to eat, with plenty of music, speeches from popular orators, and everything passed off pleasantly.

The most casual observer can see that a few years have made a great change in liberalizing public sentiment and doing away with much of the prejudice between races and sections throughout Virginia. The civil war seems almost forgotten, and the bitterness which was the natural result of such a revolution, has softened into a far nobler sentiment of regret for the sacrifice of so many lives of those who should have been friends instead of enemies. The country is generally prosperous. In the Valley as in other parts of the state, much mineral wealth is being developed, and those who for a season wore the raiment of sorrow, begin to look forward cheerfully and think "there is a good time coming."

## SEAL HUNTING.

The common seal inhabits the colder waters of most parts of the world. It is a handsome creature, with beautifully mottled skin, and large, intelligent eyes. Its color is generally grayish yellow, with spots of brown or black. Its length is seldom more than five feet. Though true mammals and not fish, the seals, like the whales, are inhabitants of the water, and specially formed for an aquatic existence. All the feet are enclosed in a thick web, which makes them into broad fins. On land the movements of these animals are very clumsy; they shuffle along by means of their fore-feet, or rather paddles, and drag their hind-feet after them. Their food is chiefly fish, and they sometimes chase salmon quite far up rivers. They are fond of crawling out of the water upon the rocks, beaches and ice-floes, to bask in the sun, always keeping a good lookout, and plunging into the water at the approach of an enemy. They are playful, but at times fight fiercely, and their life is severe. Their voice is a kind of snapping bark. They can remain under water twenty minutes or longer; their animal heat is among the highest found in mammals. They swim with considerable speed and are expert divers. Their sense of smell and sight are very acute. They are easily tamed, affectionate and intelligent. In Zoological gardens they have been taught to sit erect, to bow, kiss the hand, pretend to be asleep, and snore, turn the crank of a hand-organ, aboulder a gun, shake hands, and perform other similar tricks. Seals are among the most useful of animals to man. The Eskimoes use the flesh for food, the oil for light, warmth and cooking; the skins for their thick, warm clothes, from their bodies

nets to their hoods, and for the coverings of boats and tents; the sinews for thread and fishing lines; the skins of the entrails for window curtains and shirts; and the blood for making soap. The Eskimoes hunt the seal in winter, proof boats covered with his skin. This boat or *Arqut*, is small, sharp at both ends, and entirely covered over except a small hole in the middle, just the size of the owner's waist. He tucks himself through this hole, into the boat, and then waves single handed the fury of the ocean. He uses the teeth of the seal for spear heads, and makes floats for his life, of the creature's stomach. In the winter he spears them through the holes in the ice where they come up to breathe. The smaller ones are stunned by a blow from a club. The seals are covered with coarse long hair, underneath which is an under jacket of soft fine fur. It is this which is left on and carefully dressed and dyed, to be made into the beautiful seal skin cloaks worn by ladies. Millions of skins are used in Europe and this country, and thousands of tons of shipping are employed in their capture. The seal fishing is extensively carried on from Newfoundland, in sailing vessels of from fifty to two hundred tons burden, manned by from twenty-five to ninety men. Recently steamers have also been employed. The seals are taken on the ice, off the east and north coast of the island; the season lasting from the first of March to the last of May. The finest seal skins however come from Alaska. Large herds of seals of various species are found on fields of floating ice, called seal meadows; on these the hunters try to surprise them when sleeping, killing the young with clubs and shooting the old ones.

Such a scene is represented in our picture, for which we are indebted to the courtesy of our friends Messrs. Harper Bros.—*Appleson's American Encyclopedia, Woods' Natural History, and Cecil's Book of Natural History.*

## WEALTHY COLORED PEOPLE OF PHILADELPHIA.

Some of the wealthiest colored men of America live in Philadelphia. For instance there is Col. John McKee, who pays taxes on more than a hundred houses besides other properties and stocks. Mr. Green of West Philadelphia can draw his banker for \$30,000. Mr. Robert Purvis is the owner of and lives in the handsomest house owned by a colored man in that city. He is worth not less than \$50,000. Mr. William Still conducts a fine coal business and is worth \$30,000. Mr. Isaiah Ware is reputed to be worth \$30,000; L. F. Cram, Stevens, Edwards, Cromwell, Adger, Allen, Eddy, Matthews, Bowers, Page, Davis and Foster anywhere between \$10,000 and \$15,000. Madam Dutelle carries on the largest undertaking business in America.—*Industrial Herald.*

AN ANCIENT NATION.—At the departure of the children of Israel from Egypt, China was seven hundred years old; and when Isaiah prophesied of her she had existed fifteen centuries. She has seen the rise and decline of all the great nations of antiquity. Assyria, Babylon, Persia, Greece, and Rome have long since followed each other to the dust; but China still remains a solitary and wonderful monument of patriarchal times. Then look at the population of the country, roughly estimated at four hundred millions, ten times the population of the United States, more than thirteen times the population of Great Britain and Ireland. Every third person that lives and breathes on this earth is a Chinese; and every third grave that is dug is for a Chinese.

Amid the ranks of shame and woe  
The Chinese is passing to and fro;  
O'er sin and sorrow and distress  
He bends with yearning tenderness,  
Alike upon the pure and vile  
Beams the soft radiance of his smile.

Yellowstone lake, 380 miles in circumference; columns of steam rising from the geysers thirty miles away; piles of mountains in every direction; vast stretches of pine forest as far as the eye could reach, and the Grand canon at the Yellowstone at our feet, a deep, wide gash through the mountain's back, cut by the relentless power and persistence of water.

Aug. 25th. With the feet from where I sit, the Yellowstone river leaps from a height of 380 feet into the bottom of the Grand canon, nearly 1,500 feet in depth, and goes foaming and roaring down between overhanging cliffs. Descent is possible only by means of ropes. The slides are either brown or yellow in color (whence the name of the Yellowstone) and are of soft rock, which the wear of water for ages has carved into curious, fantastic shapes, making gigantic pinnacles and towers, that from the bottom rise one above another to the top, in wild variety and with surprising effect, almost perpendicularly; the river is green, and contrasts with the colored masses of rock on either side that makes the place so famous. The scene before me, I think, the most impressive in America; the tremendous plunges of a great river, 400 feet down, the yawning, terrible depths below; the struggle of the elements expressed in the strange grand forms carved out of the sides of the canon; the low, winding valleys for miles away; all create impressions that I can compare only with those of a volcano.

By turns, as we took hold of hands, each man looked from the end of a human chain over the edge of the precipice, to see the water strike below; and it is easy to recall the sensation; some of us could hear it but a moment.

Below here we attempted this morning, to find the bottom, which the guide said we could not reach, and found he was right after a descent of several hundred feet. Two of our party, in crossing a steep slope that ended in a fall of five hundred feet, slipped, and with difficulty escaped a fatal slip. It was by four initiates that to end, one of them who had saved himself on a projection of rock, and was perched just above a grim doom, but could reach one of the long line let down from above, was as excited as the rest; some of us would like to repeat, I doubt if mortal man has ever reached the solena depths we vainly sought.

An hour ago we stood on a high projecting rock, almost in front of the upper Falls, and watched the full, swift, Yellowstone river leap from a cliff above, right towards us, not twenty yards off; then, full one hundred and eighty feet into its basin below, displaying a power and beauty of volume that we could enjoy more than the terrible Lower Falls before us. There is no finer sight than a majestic river gradually hastening to extreme swiftness, curving over the crest of the rock, throwing itself instantly into white, graceful, arrowy forms, flying through the air, seeking to change its whole nature, audibly resuming its color below, and rushing away on its long journey to the sea.

Above the falls, is a succession of cataracts for half a mile, along which the convenient trail leads us, then for many miles clear to its source in Yellowstone Lake. It becomes a wide, placid stream, dotted with green islands here and there; the very expression of peace. At the falls its change of character is complete.

The lake is the highest water of its size on the continent, being about eight thousand feet from the sea level. On the right is Mt. Sheridan, capped with snow. In every direction are broken ranges, which slope quietly down to the brink of this beautiful inland sea. We all enjoyed bathing in its clear, cool waters. As we approach the lake, the scenery is for ten miles picturesque, quiet, like that of a gentleman's park. The road runs between the river bank and the forest, sometimes over open grassy ground, sometimes through clumps of trees. In such scenes we made a camp. There were mountains in the distance, and a pine grove to the rear of us, on the edge of which we built our fire; it seemed a perfect place. Later the full moon shone; the land of dreams could not be lovelier.

A strong home feeling soon comes upon one after dismounting: every want is supplied; there are no cares, and nature cheers us. The order and routine of our camp, being military, is complete and most comfortable.

The guide takes care of the horses, for they are his and he is careful of them as his own. You may make something by buying a horse of the outset and selling him afterwards, but nobody will care for him, as will the man who owns the horse you hire. The cheap Indian pony you buy, wanders wickedly off by himself; the others go in clumps and as he himself. What one gains by buying hardly pays, if comfort counts.

Our work is to unroll our blankets, and make our beds. We usually cut a pile of pine needles, and make a layer of leaves six inches thick, on which we place our rubber blankets, buffalo robe and other blankets; a delicious, aromatic couch. We have two wall tents that we can usually dispose of. The weather has been perfect for the first, yet from scorching mid-day heat to midnight

freezing is rather trying; once the ice was an inch thick.

We have feasted on black tailed deer, elk, wild duck, and brook trout; eighty-four of the latter were brought in last night, some of which weighed three pounds each, and the little ones are the best. We sit around the camp fire till tea o'clock and hear our packers, old frontiersmen, talk. One of them, Jack Bean, a well known character in these parts, also a hunter of renown and an experienced guide, has a never failing fund of stories about bear hunting, vigilance committees, and celebrated local characters.

He once guided the geologists Hayden and Goicks, through the Park. He does not believe much in scientific men. He brought one of them a piece of rock, which he had cut in two, one part being slightly colored by a fire which had been made on it, the other of natural color, and asked the scientist how near together the pieces could be found in nature. He was told that they were not found thousands of feet apart from each other.

He showed a shrub which an eminent botanist declared poisonous, and then ate it before him.

In the morning we repair with soap, toothbrush and towel to the river. Breakfast is soon ready, which we take sitting on the grass or on a log; all our paraphernalia is of tin. Each one helps him-elf from the frying pan, coffee pot or camp kettle. Pie, jam, and maple syrup go to the right spot, and fast disappear. Our appetites are ravenous; everything tastes good.

At half past seven we are off for a twenty-eight mile ride, dinner at four P. M.

As we reached the lower portion of the Park, each day's march and camp seemed pleasant. Each camp is "Sweet Home" for a few days. Aug. 30th. The first geyser, called "Hell's Half Acre," a large white mound several acres in extent, covered with pools of steaming water from 50 to 100 feet in diameter, fringed with a border of brown and coral like formation; the water being a delicate emerald green. The "Excelsior," the largest one, 150 feet in diameter, once an hour discharges a column of water nearly 200 feet into the air, which shoots like a rocket from the boiling lake that roars and rages, meanwhile throwing off clouds of steam. But the Upper Basin is the finest.

We camped near the celebrated "Old Faithful," the "Giantess," the "Lion," the "Lioness," the "Cubs," the "Bee Hive" and the "Castle" were not far off. Beyond them were the "Grand," the "Grotto," the "Fun" and the "Splendid." It is impossible to put on paper the impressions they make.

"Old Faithful," every hour to the minute, sends a solid, symmetrical column of water three feet in diameter to the height of 200 feet; nothing could be finer than the clouds of steam curling upwards and rolling away as we view them from the top of Mt. Washburn, thirty miles distant. In all the geysers there is a preliminary pulsation, a throbbing, a few small jets, then a magnificent stream of water is tossed far into the air, who then stands around the whole and soil slowly, grandly upwards.

The "Splendid" looked like a column of white marble, nearly 200 feet in height, from the summit of which issued wreaths of smoke-like plumes.

The solid mass of boiling water descended in cool showers of spray, and its mineral deposits had formed around some of the geysers curious carvings. The "Castle" and the "Grotto" are the most remarkable of these: graceful, snowy, white fantastic structures, well described by their names.

We would stand a low foot off on the windward side, or retire some distance to get the effect of the white volcano against the background of dark pine forest. A geyser is a volcano of water instead of molten rock; both are alike inspired by the central beat of the earth.

Some of the finest discharges but one day: the grandest of all once in ten or twelve days.

We had been waiting for the "Castle" to go off: thick columns of steam meant something; suddenly a stream shot far up; cheers from more than two hundred people made the valley echo. A Montana party of twenty-five yelled incessantly; scores scampered across the fields to behold the peculiar glory of the "Castle" geyser; we climbed to the very edge of the crater; one man threw his hat into its mouth; it was carried up and there descended.

Sept. 1st. Yesterday was full of wonders, but more are to come. We are sitting about the quiet pool of the "Grand," some thirty feet in diameter. There is no crater; it is like any other pool among the rocks, of emerald green and shallow, except a central aperture of three feet, which has a dark, deep look. Through this some time to day a pouring out of the waters from under the earth is seen. It comes at length; a rumbling and bubbling and threatening; the pool is intensely agitated, and finally the water leaps to the skies like so many white sky rockets. It is not the usual column of water, but a succession of jets, and arrows twenty or thirty at a time, leaving a

long, graceful train of spray behind them.

There are successions of volleys of these for twenty minutes; we walk around and watch the superb display of waters from many standpoints and in every light.

The "Bee Hive," has indicated its usual daily performances, but this "delicious" small aperture ten feet off, an inflexible forerunner, had seemed up, and a crowd soon gathered about this peculiar geyser, named from the small crater-like a bee hive, that had formed around its mouth, in irregular opening, some nine feet in circumference. Soon it gurgled and bubbled and spluttered about, throwing out steam till all at once it sprang up, suddenly, and noisily, with thundering noise, shaking the earth around it. Imagine a powerful fire engine, throwing a stream of water two feet in thickness two hundred feet into the air, only to have this geyser. It is the most resounding of them all; by some considered the finest. No one is so energetic and awful in its effect, but I do not think it is the most beautiful. "Old Faithful" and others play more easily and gracefully, but this one gives an effect of concentrated force.

There are five famous geysers within five miles of our camp; probably the most active volcanic vicinity in the United States. We hear as we walk about the boiling and unboiling of waters beneath us.

There are besides the geysers hundreds of clear, round, shallow pools, with delicate pink, borax-like and of exquisite green color, either warm or boiling hot, in which travelers are accustomed to wash their clothes.

The "Queen's Laundry" is celebrated for its efficient boiling of garments. Some soldiers ventured to throw a large wash into "Old Faithful" one day, taking it for granted that they would be thrown out at the next discharge, but they were not. "Punch Bowl" the most famous and beautiful of the pools, is close by "Castle" geyser, is thirty feet in area, and one looks with wonder at the huge, green, like gigantic emeralds that form its sides, but the bottom is blackness itself, seemingly featureless, in spite of the marvelous transparency of the water. Among other interesting sights, was looking at the geysers as they settled in their ways, the columns of water, and clouds of spray and steam; by moonlight they were indescribably lovely. Sometimes three or four would erupt at the same time, and it was to watch them all at once. While memory retains much, it is impossible not to be surprised as well as delighted with every new action of a geyser.

Camping at the geyser basin is less pleasant than elsewhere. The water is not good; many have been on the ground before, and there is too much of a crowd.

United States police force shall be organized, the value of the Yellowstone Park, as a national resort will be much diminished; in ten years it will be almost destroyed. The settlement of the park will be preferable to that. Wherever tourists camp they must have fires; they enter the park at the dryest time of the year, when forest fires spread most rapidly, and they are easily started by neglecting to keep their camp fires. We travel for miles among the dead trunks of burned trees. We saw most devastating fires doing their work, which might have been stopped, but there was no one to do it. The attention of the government has been called to this, and it is hoped that hereafter a company of cavalry will be detailed to guard the park.

Sept. 3rd. Idaho Territory, on route from the park to Dub Northern rail-road, a ride of 120 miles. At camp on the Little Modoc river, a gentleman from a neighboring camp called and inquired if he could send an Indian girl to Hampton, whom he had the kindness to take when she was very young and brought up to her sixteenth year.

She was neither Indian nor white; was taught to read and trained in house work, but there seemed to be no place for her among the whites or among her own people; the gentleman was distressed at the situation; was willing to pay any expense, and wanted to know what he could do for her.

He was advised to send her to Hampton, where she could be fitted to be a teacher, and he sent to some Indian boarding school as a helper in the domestic department.

This gentleman owned a large cattle ranch near the Bannock Indians' Agency, where he employed them to care for his flocks, and found them most satisfactory. He added his own to the almost universal Western testimony that the Indian is especially adapted to a herdsman's life.

Few west will not say "Amen" to Genl. Terry's solution of the Indian question—

—Cow.

He had, during the past twelve years, traveled in the interest of his business through Oregon, California, Nevada, Idaho, and Montana; knew the people and the country, and had ideas of the Indian as follows:

Different tribes should be dealt with differently; the conditions of each varies widely, and makes the same method for all an absurdity.

Indians should vote. Everybody should then regard and treat them differently. In

the more settled states, where they had become established, as in Oregon, Nevada and California, they should be turned over to the state authority as citizens, not without government aid for a time for education and for subsistence. This would prevent a New York politician being sent to Oregon to civilize Indians or a broken down Vermont hotel-keeper being sent to lift up the Sioux.

This was the feeling of a man who had all his property at stake in the Indian country. He stated that the cattle business had been over done; that the stock ranges in the Platte river region in Western Nebraska, Oregon, and Idaho were nearly exhausted; that the only first-rate pastures left were those in Montana, whether thousands of cattle had been driven the past summer, and that in five years that region would be deserted.

Cattle men must get possession of land, fence in large tracts of land, in order to control them, and many had done this. This would require extra capital for land and fencing, and keep up the price of beef, which is high. The supply of four year old steers is now less than the demand. The "desert land act" allows one man to take up 650 acres, and, by combining, large tracts had thus been secured for stock ranches.

At noon to day we passed the "divide," or ridge, which sheds water from one side into the Pacific ocean and from the other side into the Gulf of Mexico.

The way of a man with a mule is illustrated by our teamster and four, whose names have been yelled into our ears, "Ginitier," "Blue," "Crazy June" and "Stomper" have been exhibited to their duty in very imaginable forms of appeal. They have pulled our baggage over two hundred miles, and got no thanks for it, but, instead, volleys of abuse and curses besides the constant application of a most inefficient whip for which the quarter master's department has been called by the driver to a terrible account.

Murray declares that a man can't drive a mule without swearing. The driver, a cowboy, a clerkman to try it. Mules certainly have some mean ways; how can one help saying something when, while bridling, his finger is nearly bitten off by the beast stamped on. Vulgarity in the Western wilds seems different from that in the cultivated circles of the East. Approbrious epithets may mean affectionate regard, or 't reverse according to the modulation of the expression. They seem a part of the general coarseness of the life, of dress, manners, language and living generally.

It is terribly democratic out here. Whatever there is, is to master and servant. Cook and guide share equally in the supplies and general conversation. Your hired man will grab a handful of sugar from the bag for his coffee, feeling no reproach from the Eastern gentlemen, who must use a spoon or nothing. He is not altogether at your beck and call; but he is faithful, does what he thinks is right, and is a good natured brute fellow; you can't beat him much. In a tight place he is a trump; especially when your horses are lost; a ten mile tramp after day light in search of them is not uncommon; he takes their trail and is sure to find them in spite of their most knowing "vologs" to escape him. Our animals have practiced marvelous tricks to hide their course, but to a purpose.

September 4th, Idaho Territory; Beaver Canon, a station on the Dub Northern rail-road; a distance of 114 miles from the Geyser, which we did in four days, reaching it in time for the 3 P. M. train to Ogden, 300 miles south, on the Union Pacific rail-road.

We camped last night at Henry's fork of Snake river, after a ride of thirty miles; six and one half hours in the saddle. The journey to this railroad, excepting at the start, smooth and pleasant; parts of it are delightful, like riding through sparks; far reaching fields of grass, dotted with clumps of pine trees. The great feature is the ride through Liberty lake basin.

The lake lies in a level plain, seven thousand feet above the sea; is fourteen miles in circumference, and abounds in fish as the region does in game. Yellow grass covers the extensive, perfectly level plateau; around it rise high mountains, the principal of which are Mt. Sawtelle and Mt. Reynolds. The golden plain contrasts with the blue of the rising ground. We saw antelope and elk in the distance; flocks of wild geese flew over the lake; there is no better hunting ground than this.

This remote region was once a rendezvous of "road agents" (land pirates) who came here for sustenance, rest and pasture for their horses.

Being a basin, it is filled in winter with snow several feet deep, and cattle cannot find food; they can winter only in a hilly or rolling region, from the summits of which the snow is blown away, exposing the dry hillsides.

The three distant Teton mountains, 15,000 feet high, the grandest view of the entire trip are concealed from view by clouds.

The western part of the basin, and our gallops over the plains in the midst of surrounding mountains have been exhilarating. Such appetites as we have had! The memory of brook trout, black tailed deer, wild duck, ending with far-fetched and maple syrup, will not soon fade.

# INCIDENTS OF INDIAN LIFE AT HAMPTON.

THE MERRY MAKING FOR THANKSGIVING.

"I will tell you something; next week Thursday, Thanksgiving, good time I know and I am so glad; to day Monday, and three days more I have good time. Something good to eat, good play, no corn bread when Thanks giving. I am so glad I skip, run."

So wrote an Indian boy in his anticipation of the day, which surely proved all that he or any one could wish. The first excitement was the return of the two boys who had been North to attend the meetings in New York and New Haven. And the loud cheers which greeted them as they passed the Wigwam showed that their friends felt a grateful pride in their success.

The new building, Winona, about which too much that is good cannot be said, was filled during the morning, with the merry voices of the girls, as they went about their work, talking of plans for later enjoyment. As they filed into the Chapel, with the warm color burning in their cheeks, where the crisp Northern wind had pinched them just enough to remind them of their far away homes, we felt that the right chord had been struck, and that in their hearts the true spirit of thankfulness was awakening.

At dinner, which was served directly after service, one had but to watch the eager looks turned in one direction to find the door through which the turkeys should come. Now they came! The silence of expectation is broken by exclamations of delight, and chattering fills the large room to be silenced only when the happy mouths are "Too full for intermission."

Most of the boys spent the afternoon kicking foot ball and playing base ball, two games of which they are very fond, and so passed the time before tea, which they were invited to Winona, where the girls had arranged little tables for quiet games, leaving room in the hall for ring games, of which the smaller ones are fond. While, in the Chapel, others excitedly followed one of the teachers, who had hidden pieces of candy in various nooks and corners, and led the game by announcing "An old hen has gotten in, and laid some eggs." Those who find any of them may have them. One of the secret places was behind a door, where a broom, some boards and one or two coats had made a delightful number of cubby holes. At last, when the game was nearly finished and one tiny girl had found no eggs, the teacher led her to this nook, when lo! behind the door, safely hidden, stood a youth calmly enjoying the banquet all by himself. Amid shouts of laughter, he was dragged out and dubbed "the sky fox who has stolen the eggs."

The walking matches were, as usual, the great attraction. The first was a single-file race. And the prize, a bag of oranges, was given to one of the smallest girls, who held her head so erect and kept such perfect step that it was impossible not to see her. At the end of the line was our small bunch of dynamite, who is never by any possibility still, and when his name was also called his air was the essence of compressed springs. There was a silence, while he opened his bag, and drew out a large turban; not to be overruled, and before the burst of laughter could break out he calmly remarked, "The next time I think I get a little cabbage." The double march followed; the first prize, a box of candy, being won by another of the little girls, who steadily kept step with the tall young brave who had asked her to march.

And so passed the day or holiday; yes, "Holler all day" as a small Indian boy defined it, and surely the spirit of Massasoit and his ninety men, who were among those who first bled a day of Thanksgiving in this New World, must have hovered about with songs of praise that this good work was started, and their race gathered in.

HOW SOME INDIANS KEEP THANKSGIVING.

Now I am going to tell you how the Indians spend their Thanksgiving day. Well they didn't have Thanksgiving until the white people told them about it, but they had a feast, and now they have that Thanksgiving. They make a big fire out of doors and kill two or three cows, that is if they think it will be enough to eat for them, and then they make their bread in this way, but first I am going to tell you they don't have corn bread like we do, and they have coffee. Oh! they like coffee better than anything else, and they like meat too. Oh yes, I must tell you how they make bread; they fry their bread, instead of baking it, and they don't have any vegetables as we do here; but coffee, bread and meat, and sometimes they have wild cherries, something like that but not always. You ought to see them when they are coming to their dinner, both children and women with a spoon and cup, also a plate, and then they all sit down on the ground and have about two or three men to wait on them. Oh yes, first before they come to their dinner they would pick out an old man, and he would go around to the houses

and tell them to come to dinner, but he don't go into the house but he would tell them dinner is ready just as loud as he can holler so they can hear him—and they don't have certain ones come but, everybody wants to come, if they want to come it be all right. These who have their dinner that way don't go to church, but most of the Indians do that, but just a few of them do it yet.—You never go to a place cool find all the people doing the same and the right thing always, so it is with these Indians, most of them have houses and do not do these things, and they spend their Thanksgiving like they do in the East.

ANNIE LYMAN.  
(A Sioux girl)

## NEWS FROM RETURNED INDIANS.

Thomas (Wildcat) Alford, an Indian graduate of the Senior class of '89, returned to Indian Territory last June. Mr. Elliott, the Missionary, says of him:— "Thomas Alford has not found the real work of life so pleasant as his anticipations led him to conclude, but he has been faithful to every trust imposed on him, and carried himself as a dignified Christian gentleman."

CHINESE FLOWER GIRL.

My dear teacher,

Since I left Hampton Institute I have done no work of any kind worth to mention. Discouragement and disappointment seemed to have characterized my past experience among my own people, and consequently I have not written to you as I ought to have done for fear it might lead you to lose all hopes of me. Since my arrival at home last June I have been on a sharp look-out for work to do, and had not it been for the kindness of Mr. Elliott, the Missionary, to give me an employment as interpreter, I should have doubtless become one of the "cowboys" on these prairies. The employment has enabled me to procure my clothing and pay my board and washing, and besides to save a little money. Having been away from home a month and come home last Monday week ago, I found I things in a better state, and now I have every reason to hope for better times.

I am happy to write that I am pleasantly situated this winter to do good among these people. Agent Carter has kindly offered me a position of teacher in the Pottawatomie day school, which I opened last Monday, 6th inst., with nine scholars. At present I have on roll twelve. Salary, forty dollars per month. Though with many doubts and fears that I received, for the simple reason that I would much prefer to work with my own people and would feel more confident of success among

them, I took it partly for the sake of getting an experience which will help me to do more good in the future and which otherwise I cannot get. I am teaching in a small log-house about 20x15, and we also use it as a place of worship. We had a good Sunday school last Sunday of which I am also superintendent. School is doing well so far.

Mr. Elliott visits us about twice a month and is a great help and comfort to me in my work.

With best regards to Geo. Armstrong and others, I remain yours gratefully.

T. W. ALFORD.

Josephine Malnouic returned to St. Berthold, in Nov. 1891, after three years at Hampton. She made a brave effort to use the little knowledge she had gained for the help of her people, and has lately married a well to do, and respectable white man. Mr. Hall, the missionary, writes of her:— "Josephine's marriage has been the means of drawing her family out of the village to a healthier and better place up the river, about seventy miles, and this will help our endeavor to get others scattered out." This letter has just

Dear Annie, will you please tell me what he, say Mr. Hall, down Hampton? He say anything about me or say something to me? Give my love to your sister Mary. That is all I have to say to you. Good bye. Try to be a good girl Sarah, next time I will write to you again. Write to me soon.

Dear Sarah, I wish you will send a singing book, or a nice story book.

JOSEPHINE GRINNELL.

Edwin Ashley returned to Crow Creek Agency Dakota, a year ago last October, after three years at Hampton. He has been teaching since, in the Agency school, CROW CREEK, Oct. 31, 1892.

GEN. S. C. ARMSTRONG.

My Dear Friend:

I am very glad that I heard Capt. Pratt is coming again. I am always rejoiced to know that Capt. Pratt and you like Indian boys. Dear sir, I always remembered what you told me before I came home among my people. I will never forget what you told me, and I am trying to live that way. Everything is going on in my school very nicely, and all the time I have been very busy every day since you left, and we have services just as we did when you were here, about one and a half years ago. Dear sir, I wish you would think about us always, because I often think about you. Please give my love to all the Indians, boys and girls, and also my compliments to Gen. M. and teachers. This is all I have to say.

Your truly friend,  
EDWARD P. H. ASHLEY.

## FROM AN INDIAN SCOUT.

Lieut. Geo. LeR. Brown, Commandant of cadets at Hampton Institute, hands us this note, as "evidencing something of the condition of the persons mentioned, who have served under his command as Indian Scouts." It makes some mention also of one or two former students of Hampton.

PORT BENNETT, D. T. Nov. 11, 1892.

Lieut. B— Dear Sir, Your kind letter was received. Ambrose asked me to answer your letter so I will try to do best I know how. Paul Traversie says he wants his daughter to stay one more year at school. Ambrose got his daughter at Mr. Kinney's school; he says they are doing well. Ambrose sister don't want to go down. Harry Brown is at McKinzie Point but Ambrose did not see him to find out. Ambrose quit scouting about a year ago, he worked in Robb's store, now he is up to Stone Creek near Warren River with his cattle. Ambrose is rich man if he don't have bad luck with his cattle.

Paul Traversie is working in Agency stable. I am still scouting yet; also Nedee Traversie and Charlie Vee. I cannot get my sister to go down Hampton to school so I give up sending her down. I got few head of cattle now to start with. Lieut. Myer is in charge of Indian scouts. I am going out on buffalo hunt next week. Commanding officer told me I could go after I re-enlisted again. I am getting along nicely now. I was thinking about quit scouting in spring to go out start a home for me.

Your very obedient serv't  
LOUIS DERRITT.  
Supt. of Indian Scouts.

## GIRLS IN CHINA.

Our young people may like to hear about the real condition of girls in China to-day. Perhaps they suppose the old henish customs, such as binding the feet of girls, and of mutilating or selling them, have passed away in the light of these latter days. But, China still sits in great darkness.

The Peking Gazette of March 15th, in this year of grace, 1891, states that the Governor-General of Szechuen asks imperial honors for a girl of eighteen who starved herself to death after the burial of her betrothed. He also asks honors for other females who have displayed their filial piety by mutilating themselves. The bonobers were granted.

Miss Safford of Poochow, writing for Woman's Work in China, says that parents still sell their daughters and handmaids their wives. When a man sells his wife the sale paper is stamped by the woman herself. The palm of her hand is smeared with ink and makes on the paper a firm, clear mark that could not be obtained without her consent. A paper thus attested proves that the woman was not stolen from her husband.

Think of a little girl five or six years of age having her feet so bound that she cannot walk! It is broken and the toes pressed under the sole! It takes six or eight years to finish the work, and after that the "little" girl must hobble about all their days or their dis-

Wagoza, I. T. Nov. 11, 1892.

been received by one of her school-mates.

GRINNELL D. T. Oct. 15, 1892.

My dear friend:

Just now I am thinking about you, then I write to you. This is Sunday evening. Dear Sarah J. J. Walker, what do you think? I was married. I got new name now. I've got everything very pleasant. I had very fine dresses, and gold watch, and rings. I had very pleasant home, I always go anywhere, I always go down to see all my folks, then, when I came here, I went up to Fort Buford. I have very good time. I am little lonesome this winter, all my folks going home up here, and going home home up here for new family. Last winter I was at Mr. C. L. Hall's house. I like to stay with them, but it is hard to live for me, because all my folks was getting very poor, then I went away from home, and married. I want to help them, (my poor folks), and take care of them. Dear Sarah, you will see when you come home; very poor place Fort Berthold; good thing you did not come home. I am very glad you did come home. When you come home, will be hard for you I think. I am all right now. Last week I went down to see all my folks, and I saw your little sister, and grandmother too, she want to hear from you much. If you want to see something to them tell me, and I will tell them. I am sure every body sends love to you. Give my love to all the girls, tell Annie, I will write to her.

[The women of the lower classes have great advantage over their aristocratic sisters in this respect. Fashionable deformed feet would unfit them for work. The pretty flower girl from North China represented in the picture, for which we are indebted to the *Missionary Herald*, has not had to submit to this painful and hideous custom. 'She ought to be happy, but she probably envies her fashionably deformed superiors, as a healthy, vigorous country girl is America sometimes envies the equally senseless and far more dangerous deformity of a wasp waist.]

EDUCES BY ARCHDEACON KIRKBY.

At last ooe day, when we had nearly crossed the bay, we discerned in the distance some black spots; by and by, as we neared them they began to look like man—men sitting on the water. Then we saw a queer looking, long narrow boat, that they were sitting in—a *Kayak*. As soon as we got within hailing distance their voices all rang out over the water "*Chimoh. Chimoh.*" Trade. Trade. "*Squaw-back. Squaw-back.*" Peaceful. Peaceful. Then we saw some great big spots approaching, these were the women's boats,—

Now I will show you a contrasting picture. Alaska was Russian America. The Russians established a trading post. Did they build a hall and invite the Indians in among their families? No, they built a fort, with a bastion at each corner, and on each bastion, guns mounted, and pointed inwards. Every Indian who came there never traded a single skin, except under the cover of these guns.

But this time to be a geography lesson. After a while more missionaries came, and we retraced our steps from the Red River to the Mackenzie River, among the Cree Indians, and then to the Athabascans. The missionaries had been translated and no one there spoke both English and Indian. How should we learn the language or teach them ours? I took two or three orphan boys into my house, and after they were used to it, I set them to work with me. I taught them to read the Bible, and, pointing to myself and said *head*, *eyes*, *nose*, *chin*, and so on. They repeated the words after me. Then I took their piece, said *you* pointed to their head and eyes and nose, and so on, and told them to repeat. When they were a good much faster than I did. It is a very good way to learn a language from the children. It doesn't matter so much if you make a mistake now and then. But you must have to be careful in talking to the people. One day I was talking to a man, and I thought he was doing very well when suddenly the whole audience burst into a laugh. He was

One day as we were paddling down the river in our canoe, we saw some *kayaks* and *omahks*, shoot out from the land. The *Esquimaux* were coming. The Indians at Eneah Bay were very friendly to us, and we were great thieves. I said to the Indians in my canoe, "Keep way out in the middle of the river. They are calling Squawback; Squawback is a name they give to the Indians who know what kind of people they are." So the Indians kept our boat in the middle of the river. But directly, the *Esquimaux* swarmed upon us. They laid upon us with their long paddles, and drifted our boat along with their spears, and we were quite at their mercy. They drifted us ashore, and then they began stealing everything they could lay their hands upon. They took our guns, and our knives, and all my valuables into a box, and I took goods as it can be said that box. One old woman had a large piece of blubber, and wanted me to go with her to the beach to get it. I said to her, "The *Esquimaux* are a very different race from the Indians; they are whiter, and have black beads, and oblique eyes, just like the Chinese. They are very cunning, and I am afraid they would try to kill my Indians; so myself, for they have more respect for white

men. But they think nothing of killing an Indian, and on the other hand, an Indian thought nothing of killing an Esquimaux. We escaped them however, and went on to the Rat river country.

Now I have another story for the children—a good one this time about the Rat river and the Rat river country, and how they got their name.

Our Indians have their own story of the creation of man. They say that the first man God made was a white man. He looked at him, and found him too pale and sickly looking. Then he made a black man, but he was too ugly. Then he made a red man—but was just right. The first red man's name was Wen-ko-chah—and he had a nice wolf to play with. One day Wen-ko-chah walked up from a sleep and found his wolf gone. The wind told him that the King of the Serpents had stolen it while he was asleep. Wen-ko-chah was very angry, and went after the King of the Serpents, and found him asleep, and got back his wolf and ran off. The King of the Serpents woke up and pursued Wen-ko-chah but could not catch him, so he blew from his mouth a great stream of water, and that soon caught Wen-ko-chah on the mountain side, and he was killed. What is this? I must go into a high place. So he climbed to high ground, but the water followed him; and then to a higher hill, up a high mountain, but the water followed him, and he was a afraid of being drowned. Then he took his hatchet and cut down some trees and made a large raft. Then he said to all the animals who had followed him up the mountain side, "Come—come to my raft and save yourselves. So they all came; the bears, and the beavers, and the rats and foxes, and all the rest, and Wen-ko-chah and his wolf. After they had sailed around for several days, he began to fear they would all starve, for they had nothing to eat. The beaver said he would go and see what he could find. So off he splashed into the water, and came back with a piece of meat. Then he said to all the animals, "Come—come to my raft and eat. So they all came, and Wen-ko-chah blew upon the leaf, and the leaf grew up and covered the raft, and the raft became a continent, and the land became a world, and that is the way we all came to be here. So now you know where you came from. The country was named in honor of the Rat.

Now we have finished our geography lesson, and I must tell you, as I promised, about the peculiarities of this distant part of the earth.

In a country as large as the whole United States you will expect, of course, to find many different kinds of climate and soil. All the Southern part is a great grain bearing country. It has as fine wheat as there is in North America. The Northern part can only be inhabited by Indians, and produces only furs. There are as many Indians, as many trees there now, as there ever were, and it is a very good place for them.

It is a very cold there. What will you think when I tell you that the mercury in the thermometer goes down to ten, twenty, thirty, forty, fifty, yes, sixty degrees below zero sometimes. But in the North, the providence of God, when the thermometer is lowest, it is always calmest, and one can hear still cold at sixty degrees below zero, better than a wind twenty degrees below. If the wind blew at sixty as it does at twenty, no flesh could hear it. I have often been reminded of David's exclamation in the one hundred and forty-seventh Psalm, "O the easteth forth his ice like money; who can stand before his cold?" The ice on the river is often six feet thick; the iron handles of our doors have to be kept wrapped, so that we can handle them, and not leave the skin of our hands on them, as if they were red hot. The frost that forms from our breath on the window panes gets to be an inch and a half thick. This darkness there very much and makes a great difference in our short winter days, only four hours long at the heat, the sun rising at ten, and setting at two. So, as soon as the sun rises, we wash off the frost with hot water, to get all the light we can.

Strange to say, in summer it is as hot as in winter it is cold. The mercury rises to 90, 94, 98! And the mosquitoes—Mercy me! as you say in the States! I don't like to think of them ever now!

Another peculiarity of our life there is the great distance our houses are from each other. The Indians go wandering all about. The trading posts are two hundred and fifty miles apart; a most excellent country, to my vast gossip. And if we want to visit our next door neighbor; well, in winter we just have to walk there. In summer we go in our canoes. Our winter walk is on snow shoes; a wonderful invention of the Indians, a light frame of wood bent into the shape of a ball racket, laced across like a cane bottomed chair, with reindeer sinews. The whole is

of six feet long, but very light. The foot rests in the centre, with the pointed end of the shoe behind. These snow-shoes will bear you up on the crust without sinking, and you can walk comfortably and rapidly, when you are used to them. We had light sledges without runners, covered with canvas, about eleven feet long, holding our provisions, and camp outfit. I would have an Indian walk ahead, for we had to walk over the snow without any roads, as far as from Hampton to Philadelphia, in a straight line, and an Indian guide would go straight ahead and never make a mistake. Then came the sledge drawn by four dogs, then another Indian behind the sledge to turn it right side up, when it upset, which it did four or five times an hour. Then I would walk last, in the snow of foot all the rest make.

At nightfall, when we came to green and dry trees, we would make our camp. We would work out a space ten feet square, throw all the snow out of the sledge, and get down to the ground, cut some green pine boughs, and throw them into the hole to sleep on, then some dry wood, make a fire in one side, all down by it, and out our supper, and then go to sleep. If it was a calm night, we would be very comfortable; if it blew, oh, how cold it was! But I took good care to sleep in the middle. Some travellers make a bag of buffalo skin, and lay the Indians the them up in it. But then they were helpless. I never like the bags, I prefer to have the use of my limbs and feet. Sometimes it would snow all night, but that was no matter. The snow was like sand, and kept us warm. In the morning the Indians would get up and make the fire, then come and wake me, shake off the snow from me, and after a cup of tea, and sleep, and then get up. Of course there is great isolation there, as to the miles. During the twenty-eight years there, we never got letters but three times a year. A year larger parcel, like a newspaper, or any other thing, and had the Indians to get for anything it would be two years before we could get it. Fancy sending for a paper of pins, for needles, for clothes, for a dress for a baby, and having to wait two years for them—that is, if no ship occurred.

You missed a boat, you might have to wait four years for it. As I had to wait for a coat once, I was in such straits for it, that at last I said to my wife, have you anything in the house that could possibly be made into a coat? And she, dear woman, took a black shawl she had with some sort of a bright red blue or yellow border, and cut off the border and made the shawl into a coat for me, and I wore it all the years till the last time. When we got to England, I got her the very best dress I could afford to, to pay her for her shawl.

(To be continued in next number.)

ADDRESS BY DR. BLYDEN,

President of Liberia College,

TO THE STUDENTS OF HAMPTON.

"Young Ladies and Gentlemen:—I am glad to see you here. I have been glad to see the advantages you are having, and the progress you are making, and especially because I believe it will all have results in God's providential designs for the ancient home of our race. I have recently come from that distant home of ours, and you will be interested to hear something about its present condition.

You all know that Liberia is situated on the Western Coast of Africa; the grain coast as it is sometimes called, and that it was founded by colored people from America in 1820, who had been rescued from slavery, and were sent out by the American Colonization Society. The coast was then infested by slave-ships, and the Society hoped that the colonists would help to suppress the slave-trade, and spread religion among the native tribes, and enjoy the blessings of freedom. The first to go were eighteen people. They went out like Abraham, hardly knowing whether they went, like the children of Israel, from the house of bondage into the wilderness. Two men-of-war were sent out by the United States Government to protect them at first. They settled at Sherbro, but the climate there was against them, and they moved to their present location. The slave-traders instigated the natives against them also, making them believe the colonists had come to interfere with their commerce. They had something to fight for their lives. But more colonists joined them, God helped them, they drove the hostile natives back, all the time. The tribes in the interior are superior to those on the coast in intelligence, and in all respects. A powerful Mandingo chief from the interior took them under his protection, and warned the colonists to let them alone. So, with God's favor, they went on increasing in prosperity, advancing into the interior and making friendly treaties with the tribes, and sometimes absorbing them. Now they occupy six hundred miles of the coast, and two hundred miles of the interior, and have thirty-six settlements, and towns. In 1847, they incorporated a Republic. Some such, step was neces-

sary. As they grew in prosperity, they were lapped on by the traders, who paid no duties and made what bargains they pleased. So the colonists banded with the friendly native tribes, and sent Commissioners to England, who cheerfully acknowledged them as an independent nation; then France, Germany, Portugal, Spain, Russia, the United States; now all the nations of the civilized world. They are now in dispute with the British Government about a boundary line, and America comes in as arbitrator. The coast is swampy, fever prevails, as in Jamestown, when it was settled. But the interior settlements are healthy. The highlands on which they are, do not suffer from fever. We raise coffee, cocoa, tropical productions in the greatest abundance. Liberian coffee is called the best in the world. It sells at fifty cents a pound, and one settlement produced last year a million pounds. It was settled by families from North Carolina, ten years ago. They came with no capital but their knowledge of labor. The Government gave each family as usual, twenty-five acres of land. A good farmer can always get on there. The natives around bring their slaves to the plantations when they come out, to learn their methods, so we get help in farming. So we are pushing on, right across the Continent.

Liberia is a Republic, just like this one in its form of government, with a President and Vice President, a Legislature, Judiciary and Executive Department, Courts, etc. It is a small government, but a real one, with all the necessary machinery and all the possibilities of growth. I come to this country, and say to you young men, here is a field before you. Go and build up your nation. White men have failed; it is your work. You have had no school to get ideas that you may carry back these ideas to your home, and push on the work of its uplifting.

The most important and intelligent native tribes there have become allied to Liberia, the of the Mandingoes. It goes clear across the Continent. I saw them in Egypt. They are great traders. Another is the Vei tribe. They have made an alphabet of their own, and reduced their language to writing. Each letter represents a syllable. Very few tribes in the whole world have done that; the Chocwas did, and the Vei. The Vei have schools. They were a great nation by itself. Another tribe is the Kroos. They are a maritime tribe. They build canoes that will hold a hundred people; and understand all the rivers and bars and inlets, and the management of the surf. Without the Kroos, there would be no navigation at all on the West Coast. And they are only found on the West Coast. They are engaged as pilots; every pilot pays a tax to the Government. They do the Mandingoes employed as guides across the Continent. It is a signal providence, that has placed us on just this part of the Coast, with these advantages. The fourth of our allies, is the Bassa tribe. They are manufacturers of palm oil, producers of articles of commerce, bring rubber and other spontaneous productions of the soil. They extend from North-west to South-west. They are the farmers who bring their children to learn the American ways of farming, as I told you.

We feel in Liberia that we can build up a nation with the elements we have, in time, and you need not come at all. But we select, some of us, that it could be developed sooner by your help, and that you have a right there. It is your home; the great mass of the country is in the hands of your people; foreigners are only scattered in a few spots.

The Mandingoes are Mohammedans. Mohammedanism you know arose in Arabia. It developed the idea of one God. It spread along the East Coast. Now there are twenty millions of Mohammedans in Africa. All Mohammedan tribes speak Arabic, so through that they can have intercourse; all have our religion, and all know their sacred book, the Koran, by heart, all through. So that is a great means of the unification of Africa. All read and write Arabic. In Africa, from the equator to the Mediterranean, there are no savages; no place where you will not find the people manufacturing gold and iron, cultivating the ground, living in houses, under laws, in communities. Why then call them savages? I have been sent twice by the British Government to make treaties with native chiefs three hundred miles back from the coast, but I found no savages. Seven years ago, I went there to visit a powerful chief. I found all the forms of a court, as in England. The gold studs I am wearing to-night were made by one of these "savages." I am telling you all this to correct the mistakes of white travellers. When I spoke to Cameron at Stanley, he said he didn't see why Stanley had so much trouble. Men can draw out of other men just what is in themselves. Stanley himself talks differently now. In '90, Mr. Reed went with me to visit a chief seventy-five miles from the coast, sitting with me at the court table, he said he was sorry he had written as he had. So Captain Burton wrote some dreadful things about the Africans; but now he speaks differently. No people can interpret Africans, but Africans. In Sierra Leone, the Governor one day had thirty

chiefs from the interior dining with him, and all his finest dinner services was set out to do them honor. They had never seen a white man before, but such politeness and dignity of manner you would not see in Europe in a promiscuous company.

The twenty million Mohammedans believe in one God. They believe in Christ in a sense; believe that he was conceived by the Holy Ghost and born without sin. They do not believe in his atonement as we do, but they can make do; they listen respectfully to what you say. Not one of these twenty million Mohammedans ever drinks, or has ever tasted ardent spirits. It is forbidden by their religion. That is a large temperance society. If it were not for them, all Africa would be filled with rum as it is on the coast. The traders go along the coast carrying rum and gin, and getting richer, ivory and gold dust, and the natives drink themselves to death. A trader was telling me how much liquor he had sold—15,000 cases of gin in a month. I asked him what effect drinking had on the natives. He said it killed them. Yet he sold it. But they can't sell it to the Mohammedans. A trading vessel tried it, took sixty pancheons of rum up the country, to a Mohammedan settlement, but had to bring it back again. They are holding the fort, till by and by these shall come who will give the land a Christian civilization. The Mohammedans eat no pork, which is unwholesome in tropical countries, so they keep their health; they are not gambling or usury among them. They have strict laws on all these things, and the children of the coast tribes are better. You see them, you think they are a different class of men from the Pagans; larger, brighter eyed, stronger, intelligent, with all the elements of civilization. Travellers see that the Christian negroes of the coast tribes are better. Our only hope is to bring Christians over who are better and stronger. The Mohammedans believe in Abraham and Isaac, and Ishmael whom they regard as their father. They are of the Arab race. The King of Timbuctoo told me that he believed that Ishmael and Isaac will strike hands and unite in Africa. The Koran has some beautiful passages. I will repeat one in the English and in Arabic. It is a prayer used by all Mohammedans, in Africa, India and China, when they pray nine times a day.

"In the name of God, gracious and merciful, King of the day of judgment. It is thou whom we adore; it is from thee that we require help. Guide us in the right way, in the way of them that thou hast gratified, against whom thou hast not been displeased; and we shall not be misled."

They are called to pray not by bells, but by a call—the Muezzin—from the minaret of the mosque, a call which they say was composed by a Negro, named Bilal, to whom Mahomet gave this office because of the strength of his lungs and the strength of his faith. I have often heard the sweet sound of this call in the early morning, and risen from my bed to go out and worship when all were sleeping. When a Mohammedan prays he washes his face, head, hands and feet. Washing his ears he prays to God that they may hear no wickedness; washing his eyes he prays that they may see no vanity; his mouth, that he may speak no evil; his hands, that they may do no wrong; his feet, that they may not go into sin.

As to the honesty of the natives in Africa, I can say that I have travelled seven hundred miles through thinly inhabited districts, and though I was known to be carrying money, I never was troubled."

In reply to questions from the students and others, invited by Dr. Blyden, he said further that the population of Liberia is a million, including the Aborigines; that in the course of Liberia college, the Arabic and some native languages are taught; that all Liberian citizens vote, and delegates are sent to Congress from the four Counties, each of which is governed by a Superintendent, who is like a Governor in the United States; that a militia is sustained in which every man from 10 to 50 serves; and that there are in Liberia as here all the various denominations of the Protestant church.

DR. BLYDEN'S OPINION OF THE PLANTATION SONGS.

In reply to a request that he would say what he thought of the plantation songs, Dr. Blyden said with eloquent warmth:

"I am grateful to hear you sing these songs, they tell you a tale you can never tell—they express a power you can never express in any other way. These songs you must never despise or be ashamed of. You may be likely, as you advance in your studies here, to despise these songs, but do not forget that you will forget. No—that would be a great mistake. These are the songs of your race. They do not come from slavery, but in spite of slavery. They were the Lord's songs in a strange land. They consoled the hearts of your fathers. They were the songs in the night. All Europe has wondered at and admired these sweet strains. Here you sing them under a cloud. When you go back to Africa, you will sing them with fresh delight. Don't be ashamed of them! Never forget them. Do all you can to preserve them."

## TO THE HAMPTON GRADUATES.

## My Dear Friends,

There is a good old saying, "Where there's a will, there's a way," and from your letters, I believe you have in many instances, found this to be true. Some of you have had serious obstacles to contend with in pursuing your work, but you have surmounted them by patience and perseverance. In doing so, you have not only improved your own condition, but you have stimulated and encouraged others to follow your example. I hope you will take every opportunity to improve upon those around you the possibility of succeeding in their enterprises, if they will take the proper course. Some persons waste their energies in striving after the unattainable, or in grieving for the want of those aids which they think necessary to success. They wish for some sudden stroke of good fortune, which never comes; they wish for friends without respecting themselves; for the pecuniary result of labor, without performing the labor and using the energy, industry, and economy that would surely bring competence, if not wealth. Merely wishing for a possession, whether it be money, or influence, or power, is a very different thing from determining to obtain it. A foolish man is continually wishing, and regretting that he does not realize his wishes. A wise man resolves, and takes those measures which result in obtaining his reasonable desires. He lays his plans with sagacity, and carries them out prudently. A teacher, on entering a new school, finds his pupils unruly, and indolent, his school house unattractive, and the parents of his pupils without interest in the improvement of their children. If he is wise, he does not sit with folded hands, mourning over his difficulties, and idly wishing some good friend or fairy, would bring order out of disorder, and put an end to his troubles. By patience, kindness, tact, and unflinching energy, and, above all, with prayer and faith in God, he carries out his resolutions, and finds "Where there's a will, there's a way." I know of a case in point. A graduate of the Theological department of Lincoln University, was invited to take charge of a church, in one of the Southern States. On his arrival he found the field of labor very unattractive; the people of his congregation were addicted to the use of tobacco in every form; even the women were constant chewers of snuff. The pews and the floor of his meeting-house were filthy. The Bible in the pulpit was so soiled with tobacco juice, that he could scarcely make use of it. Disgusted as he was with this condition of things, he did not, at first, venture to remonstrate with his congregation against their disgusting habits. The people themselves, although they had invited him to preach to them, were a little afraid of him, because he had been educated in a university, and they rather dreaded that he would introduce Latin or Greek words into his sermons. He, therefore, contented himself for some time with preaching "Christ and Him crucified," and, after he had won the affection of his congregation and satisfied them that he had their highest interest at heart, he said to them one day: "Before I studied Theology I was a plasterer, and you can imagine how it grieves me to see these walls spattered with tobacco-juice and the floor of this room not fit to walk upon. Now, if you will thoroughly cleanse the pulpit, pews, and floor, I will plaster the walls. To this end, I will readily consent. They gave a thorough cleansing to the church, and their pastor plastered the walls. By giving up tobacco, they had money, not only to put a new Bible in the pulpit, but two small Bibles in every pew, and, when my friend and informant visited the place six months after this transformation, he found the church still neat and clean. Besides this, the minister persuaded the people to remove a great pile of rubbish near the church, and enclose with a paling the ground which they had carefully sodded under his direction. What one man has done, another can do with the same tact, discretion, and Christian effort.

There are three requisites for a teacher's success in the highest sense—love to Christ in his heart, love for children with the earnest desire for their eternal welfare, and a love of teaching. Hoping you are all imbued with these requisites, I am, with my best wishes for a Happy New Year,

Sincerely your friend,

M. A. L.

## CORRESPONDENCE.

EMERALD BOWER, Hilo, Nov. 10, 1882.

GEN. S. C. ARMSTRONG,

My Dear Friend:

I sure your heart has been moved with deep sympathy for us, as you have heard of the sorrow that has come into our sweet home. This active man, so vigorous and so enthusiastic in his work, so interested in all the progress of the world's concern, because their progress advanced the coming of the brighter day, lies helpless now, stricken down suddenly by pa-

ralysis. It is eight weeks ago to night that he retired in apparently his usual health; the day had been a bright one, full of activities and of enjoyment. For many days previous he had been unusually pressed by a series of special gospel meetings, by the meeting of the East Hawaii Association, by his large correspondence, and by the fact that he watched him from day to day, knew how he spent himself—how wearied he often was, but always so indefatigable. I could not get him to rest when I knew he needed it so much. But that Friday, eight weeks ago, the Association having adjourned, and it being the day after steamer day, there came a little lifting of the pressure, a little breathing spell—which we took the comfort of—and the memories of the day will always be precious to me. The next day the shadow fell upon us, and we believed the hour of his departure was near at hand.

With him all was peace, yet more, his soul seemed full of love and joy, and to have foretastes of glory. But the Lord still spares him, and his symptoms have been for some weeks past so favorable that we have been encouraged to hope that he would once more be allowed to leave his couch of weariness and helplessness, but we do not know. His gain is very little week to week, and it may never be enough to put him on his feet again. He is beautifully patient, bearing all without a murmuring word—lying passive in His hands, and knowing so well that His will is done. He is greatly affected; for this we are very thankful—he is able to talk with us to some extent, sometimes to lead in prayer at our family devotion, and he is interested in all the letters that come, and in the news of the day. I know your high esteem and your affection for this dear saint, and therefore I have written thus fully.

Mr. Coan bids me to give you assurance of his love; to tell you that his heart is in your work and that he watches it with interest, assured that it will have great success. He desires that there be a remembrance to Mr. Marshall, and those associated with you, especially those whom he has met, Mrs. A. and Miss L.

I have written a little sketch of the family here, to which perhaps you will give a corner in the "Workman," though it has no great importance. Give it to the waste-basket rather than to let it take the room of that which is more important. Mr. Coan directed me to send you a copy of "Life in Hawaii." He bids me ask whether you ever received it.

Very sincerely yours,  
LYDIA BISHOP COAN.

A BELLEVILLE, MOBILE.

I have read in the children's beautiful story, "The Dying Knight," of a noble knight, who, in the last days of his life, had done good in missionary work with his kindest of masters, the Rev. Titus Coan. Seventeen years ago, two gentlemen rode into Mr. Coan's yard, having arrived from the district of Kona, on the other side of the volcano island. Bringing the heavy baggage of the travelers, came the pack animal, into whose back the burdens had so been pressed and worn that there were deep bleeding wounds, had enough to make the horse unfit for further service. So they turned him into a pleasant pasture for a long holiday, and the stranger guests offered him to their host for the keeping of and caring for him.

Afterwards, when the sores had healed, and the animal was found to be valuable, Mr. C. paid something for him, and for many a year Kona, as he was called, because of the place from which he came, most faithfully served his owner. Perfectly kind and gentle, he was ever ready to come at call, and hundreds of times he has been saddled and bridled for the long tours through Puna and Hilo, and for the pastoral work at the Station. Up and down the "pala," through the wild, romantic gorges, over mountain streams, or long stretches of jagged lava, by the surf-beaten shore, or up the highlands, to the world-renowned crater, no matter where, he trotted patiently with willing feet, as the master guided him. And in these journeys he often learned where, by the road-side, grew the dainty tid-bits, convolvulus, the blue flowered "oi," and tender grasses, and the indulgent rider always allowed him to turn aside, a little and better in his steps as he cropped the sweet morsels. Then he knew as well as any of us, where the purest streamlets flowed, and quickened his pace as he drew near them.

Undaunted by the onrushing waves along our beach, he pranced joyfully home, leaving hoof marks on the sand, to show as the waters receded. And so in shade or shine, in storm or calm, has he gone and come, and never was a horse more truly loved. He patiently-expected he stood by the hour, in the corner of the pasture nearest the house, sure that at last there would be brought to him the coveted breadfruit, or banana leaf,

growing on our side of the wall. But just here I must acknowledge, Kona had one fault. He was not generous and courteous to other horses who sometimes came for a share of the rare fodder, but with emphatic gestures made them understand he was master in the pasture, and the household's pet. Yet he fraternized kindly except in the privileged corner, with his fellows, and one of our memories of him was the truly affectionate welcome he gave a comrade after a week's separation. As Kona heard his approach, he looked up and gave a pleasant whinny of welcome, which he repeated more earnestly as the other came nearer. Then the two horses touched noses, and rubbed their cheeks together, saying as plainly as words could have told it, that they were glad to see each other.

One week after this he was sick, so sick that in one day the strong frame succumbed, and when the next morning we hastened to see how he was, we found him dead. By willing obedience he had been a great helper in good works. I have told this story of his because of grateful memories, and of his faithful services, and because I wanted to chronicle the kindness of the master who never struck his horse a cruel blow, or spoke a harsh word to him, whose gentleness has made him great.

L. B. C.

The Springfield Republican,  
Weekly Edition.

## THE NEW ENGLAND NEWSPAPER.

A Comprehensive, Progressive, Independent Journal,  
Devoted to  
News, Politics, Literature, Social, Interests and General Affairs.

An Admirable Weekly Review of American Life.

[Established in 1821 by Samuel Bowles.]

The WEEKLY SPRINGFIELD REPUBLICAN is a comprehensive, progressive, independent journal, devoted to news, politics, literature, social interests and general affairs. It is a valuable general newspaper for the family, for the farmer and for the active worker. It contains a full and complete record of the news of the day, and is published every week, except on Sundays and holidays. It is published at a low price, and is sent to subscribers at a special rate.

Subscription: Four cents a copy; 7 cents for six months; \$1.20 a year in advance of the year or more. \$1.35 a copy, one year. Total subscription 25 cents plus postage. A special cash remittance allowed to Postmasters and others, falling in local agents. Specimen copies sent free on application, and all subscriptions payable strictly in advance.

ADDRESS—

THE REPUBLICAN,

SPRINGFIELD, MASS.

**BUGGIES.**  
Do not neglect your own interests. We have received our new line of Buggies, and are now offering them at a special price. They are made of the best material, and are of the latest design. They are light, strong, and comfortable. They are also very cheap. We have a large stock on hand, and are ready to deliver at once. We also have a large stock of harnesses, and are ready to deliver at once. We are located at the corner of Main and State streets, Springfield, Mass.

**THE COLUMBUS BUGGY CO.**  
Columbus, Ohio, is the largest factory in the world for producing Buggies, Phaetons, Sevens, Carriages, and also give more real value for the money than any other manufacturers. Dealers sell our vehicles everywhere. Name of nearest will be sent with prices.

Be sure, before buying, to examine the Name Plate to be found on the rear of every Buggy manufactured by us, for, upon a genuine vehicle they bear the name of **COLUMBUS BUGGY COMPANY, Columbus, Ohio.** Many inferior buggies are offered, at Columbus Buggies, and care should be used to distinguish between "Columbus Buggies" and Columbus Buggy Co's Buggies.

**WISDOM** people are always on the lookout for chance to increase their earnings, and in time they become wealthy; those who do not improve their opportunities remain in poverty. We offer great chance to make money. We want many men, women, boys and girls to work for us right in their own localities. Any one can do the work properly from the first step. The business will pay more than ten times ordinary wages. Expensive outfit furnished free. No one who suggests fails to make money rapidly. You can devote your whole time to the work, or only your spare moments. All information and all that is needed sent free. Address **WISDOM & CO., Portland, Maine.**

## HORSFORD'S ACID PHOSPHATE

IN DYSPEPSIA  
Dr. A. Jenkins, Great Falls, N. H., says: "I have prescribed it as an adjunct to its seemingly almost specific virtues in cases of dyspepsia, nervousness and morbid vigilance or wakefulness."

T. A. Williams &amp; Dickson,

WHOLESALE GROCERS

—AND—

Commission Merchants,

3 &amp; 4 ROANOKE SQUARE,

Norfolk, Va.

A MOST MAGNIFICENT ILLUSTRATED WORK FOR ALL LOVERS OF THE BEAUTIFUL IN NATURE AND ART.

A volume worthy to be for Christmas, Birthday, Wedding, or for presentation purposes generally.

## Studer's Birds of North America

Contains ONE HUNDRED AND NINETEEN PLATES, on which are represented all of our birds, upwards of seven hundred, ARTISTICALLY DRAWN AND FAITHFULLY COLORED FROM NATURE, with a copious text giving a popular account of their habits and characteristics. It makes a large quarto volume, richly bound in White Watford Satin, and is a most valuable addition to the library of every naturalist. The edition, which is limited to one thousand copies, will be ready for delivery to subscribers in December of this year.

## ENDORSED BY THE HIGHEST AUTHORITY.

From Mr. ELLIOTT COATES, Author of "Birds of the Northwest," "Colorado Valley," "Key to North America," etc.

"I can heartily commend the whole work as one admirably meeting the needs of a popular ornithology of North America, at once instructive and entertaining, and at a reasonable price. The text is perfectly clear, and the illustrations are of a high order of excellence. The work is a most valuable addition to the library of every naturalist."

From Prof. HENRY A. WARD, of Ward's Natural Science Establishment.

"I am greatly pleased with your work on the Birds of North America. The plates impress me as being both accurate and beautiful, the text is reliable and readable, and the work is a most valuable addition to the library of every naturalist. It is a real treasure to every lover of birds."

From Prof. J. B. NUTTALL, Columbia College, New York.

"The work is accurately and tastefully prepared. With the plain and general character of the work I am much pleased to find it is more fully comprehensive than the most attractive popular exposition of our ornithology which I have ever seen."

From Prof. W. D. HORNADAY, Taxidermist, U. S. National Museum.

"I have carefully compared the figures in 'Studer's Birds of North America' with those in Audubon's great work, and am free to say that they are more accurate and more complete than any other work of the kind. Numerous examples in support of this could be given."

From Prof. C. J. MAYNARD, Author of "The Birds of Florida," and "The Birds of Eastern North America."

"I am much pleased with Studer's Birds of North America. In the grouping of the birds, arrangement of light and shade, in the perspective and delineation of the forms and features, Mr. Studer has certainly surpassed all other artists, producing the pictures of the species which I have ever seen."

## ECONOMISTS FROM THE PRESS.

"A superb work."—*Publisher's Weekly.*

"A great work."—*National Teacher.*

"A beautiful volume."—*Turf, Field and Forest.*

"It is one of the most valuable publications ever attempted in this country or abroad."—*Orchard and Garden.*

"It is a marvel of beauty and excellence."—*Ohio State Journal.*

"No one wishing such perfect care and finish, at such a reasonable price, has ever been published either in this country."—*Inter-Ocean, Chicago.*

ADDRESS—

STUDER &amp; CO.,

Tribune Building, New York.

Lovers of the beautiful in Nature and Art have now an opportunity to possess one of the most magnificent works ever placed before the public. We refer to "Studer's Birds of North America." This superb work was undertaken to supply the want in America of a good illustrated work on Ornithology at a reasonable price. Baird's magnificent book, originally sold at a thousand dollars, is now very scarce, and only rich men can afford to buy it. An edition of Wilson's work is now to be had of a Philadelphia publisher for about a hundred dollars. Baird's "North American Birds," of which three volumes have appeared, is sold at twenty dollars per volume, the plates, however, showing only the heads of the birds. Jacob H. Studer, Tribune Building, New York city, now offers the public a work in every way worthy of the subject, and attainable by all lovers of birds. His book contains one hundred and nineteen beautiful and artistic colored plates, representing upwards of seven hundred North American species of birds—all that are known to date, with a copious text giving a clear and interesting account of their habits and characteristics. Whether in letterpress, illustrations, or price, it is unapproached by anything of the kind in existence.—*Montreal Herald.*

## HORSFORD'S ACID PHOSPHATE

A REFRESHING DRINK.

Dr. C. O. FILES, Portland, Me., says:

"After perspiring freely, when cold water has utterly failed to satisfy my thirst, it has accomplished the purpose with most perfect success."

A week made at home by the industrious. Best business now before the public. Capital needed small. No experience necessary. Boys and girls wanted every where to work for us. Now is the time to start. No other business will pay you so easily as this. No one can fail to make enormous pay, by sending \$1.00. Cash, orders and terms free. Money made fast, easily and honestly. Address, **WISDOM & CO., Portland, Maine.**

### Teachers' Table.

#### "SENTIMENTS" FOR REFORMATION.

The pleasant custom of beginning the day with a recitation of some beautiful extract of poetry or prose, is continued at Hampton Institute with much enjoyment to those who recite and those who listen. The following are some of the monthly selections, which may be profitably transferred to our graduate teachers' common-place books, for similar use in their own schools, or for their own satisfaction.

#### NOBILITY.

"True worth is in being, not seeming;  
In doing each day that goes by  
Some little good thing—not in dreaming  
Of great things to do by and by.  
Of great things to do by and by.  
And spite of the fancies of youth,  
There's nothing so kindly as kindness,  
And nothing so royal as truth."

We get back our me as we measure—  
We cannot do wrong as right,  
Nor can we give pain and feel pleasure,  
For justice avenges each slight.  
The air for the wing of the sparrow,  
The bush for the robin and wren,  
But always the path that is narrow  
And straight, for the children of men."

"Tis not in the pages of story  
The heart of its life to beguile,  
Though he who makes courtship to glory  
Gives all that he hath for her smile.  
For when from her heights he has won  
Her, Alas! it is only to prove  
That nothing's so sacred as honor,  
And nothing so loyal as love."

We cannot make bargains for blisses,  
Nor count them like fishes in a sea;  
And sometimes the thing our life misses,  
Helps more than the thing which it gets."

For good lieth not in pursuing,  
Nor gaining of great or small,  
But just in the doing, and doing  
As we would be done by, is all."  
Alice Carey.

"The reward of virtue is virtue.—The only  
way to have a friend is to be a friend."  
Emerson.

"It is told of Brutus, that when he fell on  
his sword, after the battle of Philippi, he  
quoted a line of Euripides. 'O virtue, I have  
followed thee through life, and I find at last  
but a shade.' I doubt not the hero is slandered  
by the report. The heroic soul does not  
sell his justice and his noblesse. It does not  
ask to die silently, and to sleep warm. The  
essence of greatness is its perception that vir-  
tue is enough. Poverty is the ornament. It  
does not need play, and can very well abide  
its loss."—Emerson.

"No man can safely go abroad that does  
not love to stay at home; no man can safely  
speak that does not willingly hold his tongue;  
no man can safely govern that has not been  
cheerfully become subject; no man can safely  
command that has not truly learned to obey;  
and no man can safely rejoice but he that has  
the testimony of a good conscience."—Thas.  
A. Kempis.

"Nothing great or good can be accomplished  
without labor and toil. Motion is the law of  
living nature. Inaction is the symbol of death  
if it is not death itself. The hugest engines,  
with strength and capacity sufficient to drive  
the mightiest ships across the stormy deep,  
are utterly useless without a moving power.  
Energy is the steam power, the motive  
principle of intellectual capacity. It is the  
propelling force; and as in physics momentum  
is resolvable into velocity and quantity of  
matter, so in metaphysics, the extent of human  
accomplishment may be resolvable into the  
degree of intellectual endowment and the  
energy with which it is directed. A small  
result driven by a great force will produce a  
result equal to, or even greater than a much  
larger body moved by less force; so it is with  
minds. Hence we often see men of comper-  
tence equal to, or even greater than the dis-  
tinction in the race for honor, distinction and  
preference."—Alexander H. Stephens.

"Never speak anything for a cause which  
you know or believe to be false. Lying is a  
great sin against God, who gives us a tongue to  
speak the truth and not falsehood. It is a  
great offence against humanity itself,—for  
where there is no regard to truth there can be  
no safe society between men and man; and it is  
an injury to the speaker, for besides the dis-  
repute which it brings upon him, it occasions  
so much baseness of mind that he can scarcely  
tell the truth or avoid lying, even when he  
has no color of necessity for it; and in time  
he comes to such a pass that, as other people  
cannot believe he speaks the truth, so he him-  
self scarcely knows when he tells a false-  
hood."—Sir Matthew Hale.

## SOUTHERN WORKMAN.

### Health and Humanity.

#### THIRD LESSON.

Be kind to dumb creatures, be gentle, be true,  
For food and protection they look up to you.  
For affection and help to you dumb beasts they turn.  
Oh, do not their trusting hearts wantonly spurn!

#### THE CATTLE.

(To be read to pupils by Primary Teachers.)

"In the first chapter of Genesis we are told  
that 'God made the cattle'; and in the eighth  
chapter of Genesis, that 'God remembered  
the cattle'; and in the one hundred and fourth  
Psalm, that 'He causeth the grass to grow  
for the cattle'; and in the fifth Psalm,  
that 'the cattle on a thousand hills are His.'  
If God made the cattle, and remembers the  
cattle, and causeth grass to grow for the cattle,  
and causeth them to be kind to you, those  
who kill them very cruelly in the slaughter  
houses,—those who take the little calves  
from their mothers when very young and  
treat them cruelly,—those who, to save the  
cost of hay, give their cattle so little food in  
winter that they are half starved, and become  
lean and sick!  
Sometimes cattle suffer more than a thou-  
sand of their kind keepers do at  
times because their keepers do not provide  
comfortable barns.  
Cruelty to cattle and other animals in keep-  
ing them, or in killing them, injures their  
meat, making it unwholesome, and some-  
times poisonous. So, also, cruelty to cows  
often makes their milk, and the butter and  
cheese that is made from the milk, unwhole-  
some and poisonous.  
I should not like to eat the meat of ani-  
mals that had suffered on the cars, just before  
they were killed, or that had been killed in a  
cruel manner, knowing beforehand that they  
were to be killed. They should all be killed  
instantly, either by shooting them in the  
head, or otherwise, and so animal should ever  
be compelled to see another animal killed."

The great teacher, Agassiz, used to teach  
his pupils to quickly kill even the fish they  
caught as soon as they were taken out of the  
water, by striking them on the back of the  
head with a stick or stone, because fish that  
die soon as they are caught are much bet-  
ter than those that die slowly and suffer  
before they die.  
No creature, either bird, or beast, or fish,  
should ever be permitted to suffer long before  
dying, because it is cruel to the creature and  
injures the meat. The Massachusetts Society  
for preventing cruelty to animals, publishes a  
little book showing how all domestic crea-  
tures can be killed in a merciful way.  
I would not like to drink the milk of a  
cow that had been frightened, or in any way  
abused, for I should know it would not be  
wholesome. I should not like to drink the  
milk of a cow that is kept alone in a stable,  
or that does not have fresh air, exercise, and  
sunshine; for a creature that is kept alone  
is likely to be very lonely and un-  
happy, and a creature that does not have air,  
exercise, and sunshine, is likely to be un-  
healthy, and give poor and dangerous milk.  
If we want good milk we must treat the cows  
kindly. One of the greatest dairymen of  
America says that "he always speaks as kindly  
to his cows as he would to a lady." We cannot  
treat unkindly any of God's creatures that  
supply us with food, without danger of suffer-  
ing ourselves.

If you think that cattle have no intelli-  
gence, you are mistaken. They understand  
what their drivers say to them. They under-  
stand how to defend themselves when driven  
from them are attacked by wild animals,—  
always putting the younger and weaker ones in  
the middle, while the stronger meet the en-  
emy with their horns. In southern Africa,  
oxen have been taught to fight in battles for  
the tribes to which they belong. (See 'Ox' in  
Chambers' Encyclopedia.) Cows have great af-  
fection for their young. The greatest cow  
will fight for her calf. At North Coaway,  
near the White Mountains, a few years ago, a  
cow fought and wounded and drove off a  
large bear that tried to get her calf.

#### STORY OF A BOY.

I have recently read an account of a boy  
about fourteen years old who, while watching  
the cows, was attacked by a wolf. One of  
the cows came to the rescue, attacked the wolf,  
and saved the boy's life. I know that cows  
have gratitude, for some years ago I was  
crossing a field in Dorchester, near Boston,  
Mass., and found a cow who had been tied to  
a tree with a long rope. In feeding she had  
gotten the rope wound about her legs and  
was thrown to the ground, and in struggling  
wound about her, until she lay entirely hap-  
less. When, after a long time, I succeeded in  
cutting her from the rope, and getting her on  
her feet, she came to me, with a kind look in her

eyes, and lapped my coat-sleeve with her  
tongue. When I went home I told the folks  
that I had met a lady in great distress, and  
had relieved her, and that she had rewarded  
me with a kiss.

Cows have often been trained to know their  
own names, and come when called. The  
great American statesman and orator, Daniel  
Webster, asked, just before he died, that all  
his cattle, which he loved so much, should be  
driven to his window, that he might see them  
for the last time; and as they came, one by  
one, to his window, he called them each by  
name.

Let us always remember how the oxen toil  
for us; how the cows supply us with milk, and  
butter, and cheese; how much all these dumb  
creatures do for us, and how little they get in  
return, and let us try to do what we can to  
make them happy.

#### SOME QUESTIONS.

(Others to be added by teachers.)

What are we told in Genesis about cattle?

What are we told in Psalms about cattle?

In what ways are cattle cruelly treated?

What effect has cruelty to cattle, and other  
animals, upon their meat?

What effect has cruelty to cows on their  
milk?

What is said about animals being killed in-  
stantly without pain?

What did Agassiz teach his pupils about  
fish?

What is said about cows being kept in  
stables alone?

What is said about cows kept without  
fresh air, exercise, and sunshine?

If we want good milk, how must we treat  
cows?

What did one of the greatest American  
dairymen say about his cows?

What is said about the intelligence of cat-  
tle?

How do they defend themselves against  
wild animals?

What have the oxen been trained to do in  
Southern Africa?

What can you tell about the cow at North  
Coaway, near the White Mountains?

What can you tell about the boy who was  
attacked by a wolf?

What can you tell about the cow at Dor-  
chester, near Boston?

What did Daniel Webster do just before  
he died?

What should we remember and try to do?

### Agricultural.

#### PREPARING FOR TRUCK FARMING AT THE SOUTH.

BY DOCT. A. OSMER.

LOCATION.—The requisites the truck-farmer  
must have in view in selecting a location  
are cheap, safe and expeditious transportation  
of produce to the market, convenience for pro-  
curing manure, a soil adapted to the crops he  
wishes to grow, and sanitary surroundings.  
Other conditions being the same, water carriage  
is preferable to that by wagon. If in the se-  
lection of land, one is confined to a single soil,  
he should select one consisting of a mixture  
of organic and inorganic matter; a high, deep,  
loose loam, with plenty of humus, or vegeta-  
ble matter. Experience has shown that, with-  
out this, crops will not yield as well as propo-  
tion to the quantity of manure applied. Loca-  
tions in the immediate vicinity of the larger  
coast cities offering the best facilities in the way  
of transportation and manure, are in the pos-  
session of local market gardeners, and such lands  
are generally highly fertile. The truck-farmer,  
quitting a larger area, is compelled to locate  
several miles beyond the corporate limits, on  
the line of a railroad, or on the banks of a nav-  
igable stream. The land will often be one,  
the fertility of which has been shipped to Eu-  
rope, or the North, in the shape of cotton, by  
some planter, whose measure of success was  
gauged by the rapidity with which he could ex-  
haust his soil. The renovation of land will be  
the first desideratum. To that end, and the  
consequent production of remunerative  
crops, the plowing under of green manures,  
application of fertilizers, proper preparation  
and careful tillage and deep plowing will be  
necessary. The practice of deep plowing de-  
pends upon circumstances; a good though  
shallow mold, or other soil, resting upon a  
sticky clay subsoil would not be benefited by  
being at once broken up deeply, bringing  
large, hard lumps of unfruitful clay to the sur-  
face, and deteriorating the physical quality of  
the topsoil. Draining, especially under-drain-  
ing, renders a clay subsoil, when moved by  
the plow, more susceptible to pulverization,  
and in such case, a thorough drainage should  
precede a deep plowing.

DRAINAGE, ITS ADVANTAGES.—Under-drain-  
age prevents the drowning out of crops after  
heavy rainfalls. It increases the fertility and  
protection by admitting air. It keeps the  
ground warmer in a dry season. It prevents

the washing away of the soil and the fertili-  
zing materials. It permits the farmer to work  
his land sooner after a heavy rain, and earlier  
in the spring, and prevents the land from be-  
coming sour in wet seasons. The total absence  
of water would be destructive to vegetation,  
for it is itself necessary to plant life, but un-  
drained land is not merely wet, it becomes  
water-logged, and through absence of air,  
drowns out the plants. When, however, wa-  
ter passes through and away from the land,  
air takes its place, and also passes through  
the drains and finds its way into the overlying  
soil, increasing its fertility, and pulverizing  
it. The reason why drained land gains heat,  
and the temperature of water-logged land de-  
creases, is lack of heat-conducting power of wa-  
ter; heat can not be transmitted downwards  
through water. Efficient drainage being pro-  
vided, the land should be broken up and pul-  
verized as deeply as possible.

PLOWING AND STIRRING THE SOIL.—Owing  
to the absence of a covering of snow and of  
successive frozings and thawings, fall plow-  
ing so useful in the North, is destructive of  
fertility at the South, and not advisable.  
The land having undergone proper prepara-  
tion, having been sufficiently manured, and the  
crop having been planted with special re-  
gard to the capacity of the soil, the most im-  
portant matter is the proper culture or keep-  
ing the earth free and mellow among plants.  
Stirring the soil can scarcely be repeated too  
often during the early periods of growth, or  
until there is danger of injury to the roots or  
to the tops of the growing plant by the cul-  
ticator. The ground may be too wet but never  
too dry, for stirring; because the more fre-  
quently it is broken up, flaked, and aerated,  
the more moisture will the soil absorb from  
the atmosphere. Stirring is an operation that  
should be performed after every rain sufficient  
to cause incrustation or baking, which would  
prevent a free admission of air into the soil. The  
most obvious benefit of stirring the soil is the  
destruction of weeds; for no crop can become  
remunerative, if crowded by weeds which de-  
prive it of air, and thus more and more ex-  
haust it, until it is finally abandoned, and used up  
as a part of the fertility of the soil.

The plow, horse-hoe and cultivator are to  
be used, whenever available; but the hand-hoe  
must be relied on for the finer and more re-  
fining work, and particularly in the later stages  
of the crop, only superficial stirring is advan-  
tious. When plants are growing in a crowded  
state, darkness and the want of air elongate  
the stems and leaves at the expense of the  
roots and of a general healthy condi-  
tion. The operations of thinning and hand-  
weeding are performed in connection with hoe-  
ing to admit free circulation of air around the  
stems and leaves, and the sun is permitted to  
have an immediate influence upon each, de-  
veloping the desired form, bulk, and other  
qualities.—American Agriculturist.

### Temperance.

#### TEETOTALISM.

Rev. Stophard A. Brooke's Experience.

At a recent discussion held in Bedford  
Chapel on the subject of Teetotalism regard-  
ed as a Theory, a Practice, and a Remedy, Rev.  
Stophard A. Brooke gave his experience as  
follows:—"There is one point raised in the debate  
which I may meet with my own experience.  
It has been said that moderate doses of alcohol  
stimulate work into greater activity, and  
make life happier and brighter. My experi-  
ence, since I became a total abstainer, has  
been the opposite. I have found myself able  
to work better. I have a greater command  
over my powers of intellect. I can make use  
of them when I please. When I call upon  
them, they answer; and I need not wait for  
them to be in the humor. It is all the differ-  
ence between a machine well oiled, and one  
which has something among the wheels which  
catches and retards the movement at unex-  
pected times. As to the pleasure of life, it  
has been also increased. I enjoy nature,  
books, and men more now than I did; and my  
previous enjoyment of them was not small.  
Those attacks of depression, which come to  
every man at times who lives too sensually  
a life, rarely visit me now; and when depres-  
sion does come from any trouble, I can over-  
come it far more quickly than before. The  
fact is, alcohol, even in the small quantities  
I took it, while it did not seem to injure  
health, injures the faculties of the physical  
balance which means a state of health in  
which all the world is pleasant. That is my  
experience after four months of water-drink-  
ing; and it is all the more striking to me,  
because for the last four or five years I have  
been a very moderate drinker. However,  
the experience of one man is not that of an-  
other; and mine only goes for what it is worth  
to those to whom as much alcohol as is con-  
tained in one glass of sherry or port alters  
away from the standard of health. I have  
discovered, since abstinence, that that is true  
of me. And I am sure, from inquiries I have

made, that it is true for a great many other people who do not at all suspect it. Therefore, I appeal to the men here, young and old, to try abstinence for the very reason they now use alcohol—in order to increase their power of work and their enjoyment of life. Let the young make the experiment of working without alcohol; let the old corrupt and certainly retards the activity of the brain of the greater number of men. They will be able to do all they have to do more swiftly. And this swiftness will leave them leisure—the blessing we want most in this overworked world. And the leisure, not being led away by alcohol into idleness, into depression which craves unnatural excitement, into noisy or slothful company, will be more nobly used and with greater joy in the usage. And the older men who find it so difficult to find leisure and who, when they find it cannot enjoy it, because they have a number of slight ailments which do not allow them perfect health, or which keep them in over-excitement or over-depression, let them try—though it will need a struggle—whether the total abstinence of alcohol will not lessen all their ailments, and by restoring a better temper to the body—for the body with alcohol it is like a house with an irritable man—enable them not only to work better, but to enjoy their leisure.

"It is not too much to say that the work of the world would be one-third better done, and the enjoyment of life increased by one-half, if no one took a drop of alcohol. These considerations belong to us only as persons. There is a wider view, containing in it larger and more powerful motive—not scientific, not personal— which has not been touched on to-night, but which of itself alone ought to urge us into abstinence, if we cared enough for mankind. I knit it on to one of the arguments used to-night. It has been said that in all ages of the world men have taken narcotic poisons, and derived enjoyment from them. And that is true, and the universal argument is a powerful one. But, among these narcotic poisons, alcohol stands alone in this, that, while it excites pleasantly for a time, its use demands increase of the dose, and the increased dose brings about in a very large number of persons not only personal ill effects as opium does, but a loss of body and mind in which crimes are done, in which cruelty, savagery, a loss of intellect, of moral feeling, and madness are prevalent; in which the greatest misery is brought on all who are connected with the drunkard. What ever men may have said in the past about the joys of drinking and of its harmlessness, there is no possibility any longer of doubt that they were wrong. It has been proved step by step that this element received into the human system is the direct cause of far more than half of the crime, the disease, and the insanity of mankind, and the direct cause, through heredity, of unnumbered other evils. It stands alone in abominable preeminence as the Power of Evil who degrades and then murders the human race. Nor is this statement one whit exaggerated. It is plain proof. Therefore, I say it does not matter what personal enjoyment you get out of it by using it moderately, it is your duty the moment you see the truth—and it is a sad thing to see it only as I have seen it when the half of life is over—to throw yourself heart and soul into the war against this evil for the sake of the human race. Let love of man banish alcohol from you. If you are not able altogether to save yourself from the ranks of those who belong to this evil, save the young who are not yet infected. Take care that none belonging to you touch it. You will do more good by joining in warfare against this wrong power than you will do by any other kind of charitable or active work; and you will be certain that everything you do will bear fruit, will save and redeem men. There are few things of the good results of which we may be certain, still fewer in which the good fruits of our work we are allowed to see. This is one of those things. And the work is purely human. It is not necessarily bound up with any political or theological party. It can bind together men who differ in anything else, into a brotherhood, the better. It is not enough to think only of ourselves, to become total abstainers because our health will be better or our enjoyment of life greater. We are then only wise and selfish. We have not done enough until we enroll ourselves among those who form the army of attack on this great evil, and feel in our hearts the impulse, sympathy, power, and ardor which union for a great human cause creates, supports, and develops toward victory. It is that which taking the pledge means; and, let men laugh as they will, no better and no more ideal action can be done."—*The Christian Register.*

HORSFORD'S ACID PHOSPHATE  
acts as food for an exhausted brain.

## THE HYGEIA HOTEL,

AT SEASIDE AND BEACH RESORT.

OLD POINT COMFORT, VA.

Situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Cape of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. Mail, landing only twenty rods from the Hotel, which is substantially built and comfortably furnished; has two Old hydraulic passenger elevators, gas and electric bells or Crelighton's Oral Annunciator in all rooms; water; room for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any hotel in any public building in the country. As a resort for the pleasure-seeker, invalid, or reading place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanatorium. Has during the cold weather over 15,000 square feet of the spacious veranda (of which there are over 35,000 square feet enclosing the house on all sides) enclosed in glass, enabling the most delicate invalid to enjoy the sunshine and fine water view without risking the slightest exposure. The climate of Old Point Comfort is unequalled for salubrity. *Male-fal fevers being absolutely unknown.* The record of the Meteorological Observatory for the past ten years show an average temperature of 60 deg., 74 deg., 76 deg. in summer; 70 deg., 59 deg., 40 in autumn; 45 deg., 44 deg., 43 deg. in winter; and 49 deg., 52 deg., 60 deg. for spring. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the room windows, are most healthful soporifics of the Hygeia.

ROASTED COFFEE quickly becomes impaired, parts with its good qualities and absorbs bad, when exposed to air impregnated with the odor of Tobacco, Spices, or any impurities or Moisture. To prevent this we close or seal the pores of the Coffee bean by our Patent Process of Roasting, which causes the natural oils and real essences to remain in the Coffee itself until ground for use. Still further to more effectively preserve the full strength and Aroma of the Coffee, we pack it immediately after roasting in TIN FOIL PACKAGES (for which we have the exclusive patent for the United States on Roasted Coffee,) by which the Coffee is more perfectly preserved from the action of damp weather, and the volatile effects of hot weather, and will retain its fine qualities and full strength unimpaired in any climate, on land or sea, for years.

Close connections with Old Point Comfort and Newport News.

## Hampton Normal and Agri-

cultural Institute

AT

### HAMPTON, VIRGINIA.

Incorporated in 1870, by special Act of General Assembly of Virginia: exempt from taxation. Devoted to the Education of Negro and Indian youth in Agriculture and the Mechanical arts, and as teachers of their respective races.

S. C. ARMSTRONG, Principal; J. F. B. MANSFIELD, Treasurer.

Annual session from October 1st till the middle of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all, (provided by friends.)

Board, etc., ten dollars per month; payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The institution is aided by the State, but is supported mainly by voluntary contributions.

Besides State aid and Government help for Indiana, the sum of \$30,000.00 a year, must be raised by contributions, to meet current expenses.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all.

The great need of the institution is a permanent endowment fund.

The Hampton Institute is supported by, and responsible to, no denomination or society, and has no paid soliciting agent or machinery whatever, but depends directly upon the public. It is earnestly Christian in its teachings and influences.

Present attendance, 490 students, of whom 92 are Indians: average age 18. Negro boys 228; Negro girls 170. Indian boys 60; Indian girls 32. All but thirty-two board at the Institute. Twelve states represented, but chiefly Virginia and North Carolina.

### FORM OF BEQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of ..... dollars, payable &c., &c.

For further information address,

S. C. ARMSTRONG, Principal.

## JUST OUT

A BOOK FOR EVERY

Man, Woman and Child.

## EMANCIPATION

ITS COURSE AND PROGRESS FROM

1481 B.C. TO A.D. 1875.

BY JOS. T. WILSON.

In addition to the history of Emancipation, it also contains a review of President Lincoln's Proclamations, the XIII amendment, and the progress of the freed people since Emancipation. Also a history of the Emancipation Monument, in Lincoln Park, Washington.

It is a work that has long been needed, as it contains such valuable information and data that can only be obtained by long and laborious research through voluminous histories and cyclopedias. The arrangement is such that reference can be made in any moment's time to the date of emancipation in any country on the globe.

The Review of President Lincoln's Proclamations and the XIII amendment is valuable, showing, as it does, the opinions of the different reading thinkers and writers on the value of the amendments.

The book contains 242 pages; printed in large, clear type, on heavy white paper, and is handsomely bound in full cloth. Price \$1.00—post paid.

AGENTS WANTED, to whom liberal inducements will be offered. Address

VOL. XII.

HAMPTON, VA., FEBRUARY, 1883

NO. 2.

VISITING THE GREAT FATHER.

# NOTES FROM THE EHEANDAOH VALLEY.

BY ORRA LANGHORNE.

Among the pleasures of a sojourn in the fair home of my childhood, are the visits of our old family servants, who always have a kindly welcome for me, and this year the meeting with these old friends was especially interesting, because of the reunion of a grand-father's cook, known in the community as "Aunt Lucy."

One of the daughters had been employed for some years after the war in the family of an army officer, and had first in the far south, then in the northwest, had finally married in an Indiana town, where she now lives. Josephine, an elder sister, had gone away during the war, with her husband and children. The husband, a very worthy and amiable man, had afterwards joined a band of Jubilee singers, with whom he had travelled for years. His wife had sometimes accompanied him on these long journeys, especially since their two children had grown up and found occupation for themselves.

Josephine, a handsome light-skinned girl, very lively, cheerful disposition, was the beloved playmate of my old sister, now long dead, and myself in our childhood days. Meeting her again after the lapse of so many years, recalled many pleasant associations of the time when, as a young girl, she had, with her husband, turned out to dress dolls, make cake and "dog-latin," baskets, and talk "gibberish and dog-latin." In the blissful ignorance of childhood, we were all unconscious that we represented an oppressive slavery; and our beloved little playmate, a sister, had been a slave. The fact that out of the conflicting interests of the two classes would come a revolution that would shake the continent and influence the world, was not in the mind of the young girl, who, with her many children, had spent her life in the quiet of a southern city, and I found her somewhat more morbidly in appearance, but still handsome, amiable, and cheerful, with much to tell of her travels and adventures since we parted. She had the pleasure of finding her old parents, whom she had left slaves, living in a home of their own, hale and hearty, her mother now over seventy, and still devoted one of her now or seven years, and in great demand on festive occasions.

One of the impressive scenes of my girlhood, which lingers in my memory of an interview with Aunt Lucy, a tall, fine-looking, dignified black woman, the queen of the kitchen, who ruled over her domestics with no slack hand, and my grandfather, when, as a young girl, she lay upon his death-bed.

Aunt Lucy had been purchased from a hard and cruel master in her early youth, had developed into a fine, industrious woman, and become the mother and grandmother of many children, and the kindliest relations had existed between three generations of our family, and three generations of hers.

Her pathway and that of my grandfather had seldom crossed, as he had been absorbed in books and business, and left the details of household affairs to the women of his family, only venturing to remonstrate mildly with his expense-borne slaves, and Aunt Lucy had well fulfilled the duties of her department, her reputation as a culinary artist extending far and wide.

At the time of which I speak, an air of sadness and gloom brooded over the usually cheerful establishment. My grandfather had been failing for some time, and had now taken to his bed, strength and appetite all gone. His children, grandchildren and many friends gathered around him, the most skillful physicians were summoned, but the flat had gained nothing, and human power availed nothing. Asking only to be quiet, the old man accepted the decree, and lay calmly awaiting the end.

It chanced one day, that being left to watch the invalid, I was called from the room for a moment, and returning hastily was surprised to find Aunt Lucy, whose presence was a rarity in that part of the house, standing at the bedside, and noticed that my grandfather, who had lain almost in a lethargy for some days, had roused himself and was regarding his visitor with a kindly smile. I took my seat quietly, and listened with interest to this conversation that ensued. "Master" said Aunt Lucy, whose manner, always impressive, was now a curious mixture of tenderness and respect, conveying much the idea of a queen, graciously conferring favors upon a worthy and highly esteemed subject. "They tell me you can't eat othin' at all, an' I just thought I'd come an' see you myself, an' ask you if you can't think o' somethin' I could make for you that you might eat. Just try, I'll get it for you, no matter what it is. My grandfather, with the gentle, courteous manner habitual to him, replied, "I am much obliged to you, Lucy, I know you would do your best for me, but my appetite is gone—I cannot eat at all." Aunt Lucy looked deeply disappointed, and drawing nearer, said her

hand on the bed, and in the soft cooing tones of a mother, with a sick child, urged him to try to eat, suggesting the daintiest dishes she could mention. The old man smiled kindly, shook his head, and thanked her for his efforts, and at length, with drooping head and sorrowful aspect, she left the room.

Another incident connected with Aunt Lucy comes to my mind, as I recall the weary days of the long hot summer after the close of the war, when, after many vain efforts to cook a beefsteak in the style we had so enjoyed in the old regime, I despairingly seized my bonnet and weeded my way to the place where our old servants were living, to invoke Aunt Lucy's aid in exploring this new field. Arrived at the house, I found Aunt Lucy with spectacles on her nose, seated at a table, laboriously consulting a spelling book, and apparently finding her lesson as hard as mine had been to me. She yielded promptly to my request, and went back with me to reveal the mysteries of culinary lore, in which she was proficient, to the luckless novice who sought her assistance.

Although Aunt Lucy's literary tastes were only developed late in life, she and all her family are people of unusually vigorous intellect as well as physical traits, and her children, most of whom could read in slavery, have taken a good stand among their race.

The eldest daughter, who has lived in Rockingham since the war, came to me as soon as she heard of my arrival, and invited me to visit her in the new house into which she had lately moved.

Accordingly, the first convenient afternoon, one of my sisters went with me to "Africa" or "Newtown," as the suburb, chiefly occupied by colored people who own their dwellings, is called. Every foot of the land is full of associations for me, as the village has grown up on part of my grandfather's estate, the freedmen's homes being built on the ground of my childhood. The old family residence was in sight; the graves of our household were hard by; each hill and dale, each rock and tree bore for me some connection with our cherished past, and I felt almost in a dream, and had to rouse myself as we reached the door of a large, comfortable, weather-boarded house, in order to realize that it was the year of grace 1888. I stood before the dwelling of our ex-slaves.

The mistress of the house was at the door to give us a smiling welcome, and I suppose it would have been the proper thing for us to greet each other as "Mrs. Wilson," and "Mrs. Langhorne," but middle-aged people find it hard to learn new ways, and I fancy I shall be "Miss Orin," and she will be "Our Jenny," so long as we both shall live.

Jenny married soon after the emancipation a man named Robert Wilson, who understands more or less of several trades, and his knowledge has been of great advantage to the family. Jenny, who is an unusually intelligent, active, healthy woman, has earned a good deal by laundry work besides attending to her household duties, and her two sons, smart, useful young people, John is generally in service in Washington or Baltimore, and Lucy, a Hampton graduate, has had considerable experience in teaching, and enjoys a fine reputation in that line. The youngest child, "Olynes Grant" already begins to earn a little money when not at school, and, like the rest of the family, shows much interest in books. The family have all been industrious and careful, and have all assisted in building the nice comfortable house I was invited to visit.

Some years ago, Jenny and her husband bought a lot on the river, and also an old log-house sold at auction for lumber, which they removed from another part of the town to their land. This was patched up for a temporary dwelling, and occupied until recently.

When the land was paid for and means laid up for building, the new house was begun. This is a three-story structure, two rooms on a floor, with large, well-lighted halls on the second and third floors. It was interesting to me to see that the house was built after the plan of my grandfather's residence, on a smaller scale, the folding-doors of the old homestead being reproduced by double doors open, make one large handsome apartment. The basement consists of cellar, store-room and kitchen. Seated in the tidy back parlor, I listened with heart-felt interest, as the proud and happy owner of this comfortable establishment related the story of perseverance and self-denial by which the work had been accomplished.

They had all been saving what they could from their earnings, striving for this and that, the little boy had aided in digging the foundation, and his mother thought it a fine joke that he had often carried his playmates to help him to dig and carry out the dirt, and he had managed to make them believe it was all play, and keeping them amused while securing valuable assistance from them. Then her husband had induced the contractor, the leading white architect of the town, to take in

his and his son's labor, a part of the consideration. The lumber and other materials had been purchased here and there at odd times, in large or small quantities, as chance offered. Parts of the old house had been saved of use.

Wilson had often been employed as a hand on large jobs of carpentering, plastering, masonry, etc., and when his employers had lumber, lime stone, etc., left over, he had, some times, been able to purchase such materials at great bargains, sometimes had been given him for clearing up the litter around a building. The house seemed substantial and well built, with a very good taste, and I was astonished to hear that the outlay in money had only been \$450.00, when to have it at one might have supposed it cost nearer a thousand.

I asked if they kept a cow, and Jenny answered that she had always had one until now, but they had "put the cow into the house too," everything had gone into the house this year; she was nearly dry at any rate, and they had sold her to the butcher, but would get another as soon as a while.

Feeling interested that the elder children, who had invested most of their savings in the place, should have their part of it secured, I inquired as to the title to the property, and was told "our deary" quite as wide awake on that as on other subjects.

Considering the possibilities of her death and her husband's marriage, again, and having a son, a nephew, and a daughter, she had insisted upon having the deed made to the three children. Her elder children were fond of their step-father, as was of them; they had all assisted in building the house, and expected to enjoy it together, but there was no room for interlopers and she did not propose that any stepmother should reap the benefit of her children's efforts.

Jenny showed me many pictures which adorned the walls or filled the photograph albums, and beside the Hampton teachers and students, she showed me many of her children, and many of my own family. Lucy was not at home, but her mother displayed with affectionate pride the nice books, charts, etc., given to her daughter by her teachers or sent her by friends in aid of the North.

Leaving "our Jenny" happy in the enjoyment of the home, which is life well earned reward of toil, we went over the hill to visit my uncle's family, who still own a portion of the old estate. This visit showed no less plainly than the former one had done, the great changes that have come in our generation, and I could not recall the remark of an English servant to her mistress as reported by Punch, "You see, my class is a-going up now, and yours is a-going down now." There was not a servant on the place, and my relatives, having grown accustomed to the new way of living, seemed quite content with them. The eldest son, who attends to the farm now-a-days, told us cheerfully of the good corn crop he had made, and after talking with us awhile, said warmly, "I would like to stay with you, but it is growing dark, and I must go and milk." Everywhere it was evident that the change in the social system was complete. Few servants are kept even by the most wealthy, and the freedmen are not so desirous to employ more than one. Very generally the ladies are learning to do house work, and the children are growing up with habits of usefulness and self-reliance. Many changes are being made in household arrangements, all looking to saving labor for house keepers, and dispensing with servants.

There is necessarily far less hospitality than of old, as people cannot enjoy the society of their friends, when the hostesses must be the cook, as they did in days when visiting was one of the great occupations of the rural districts.

The young, able-bodied Negroes are fast leaving the country, most of those who are left, being very poor, with hare and there a family rising rapidly in means and position. I heard of two cases, where colored men were raising blooded stock, to which much attention is paid in the district. One of these exhibited recently at the Aqueduct Fair, a fine colt of the famous Engineer stock—Engineer was the beautiful white horse owned by the Hon. John Minor Botts, which was stolen during the war by an "enterprising Yankee," who colored his hair. Mr. Botts followed his horse through the North, recognized him in Boston in spite of the hair dye, and recovered him.

My visit was saddened by the death of a lovely girl, the daughter of one of my early friends. The blooming young creature in the midst of exuberant strength, was stricken by brain-fever, supposed to have been caused by a fall, and after a few days of pain and delirium, she passed away, leaving a widow and an orphan. The father, a man of great energy and enterprise, was on the part of her friends, the silence of death came, and the fair young girl lay in her last long sleep. The whole country side mourned with the stricken family, and a vast concourse assembled in the country churchyard, to which the mortal remains of a so much beauty and vigor were borne.

In a moment of sadness, or perhaps under

the influence of one of the strange presentations which sometimes come to the human mind, Josephine had said some words which, to a group of merry boys, who surrounded her, and whom she had been urging to lives of temperance, industry and usefulness. "Some time I feel as if I might die, young and old. I want all of you boys to be my pall-bearers." Recalling the words, I little dreamed when uttered, the sorrowing mother requested the boys to fulfill the desire of her youthful child, and it was a touching sight to behold the youths, the eldest just come to man's estate, the youngest hardly past childhood, sorrowfully bearing to the grave the cold and silent form of the blooming maiden who had been the love and admiration of all. After the usual services by the minister at the grave, loving hands covered the freshly heaped earth with pure white flowers, sweet emblems of immortality, and then, after a moment's pause, the servants of the family and the ex-slaves, who had come from far and near to attend the funeral, with many colored "pious" of the neighborhood, for "Miss Joe" had been beloved by all, formed a circle, and sang one of the wild, sweet, touching hymns peculiar to the Negroes, with its wailing chorus, "There is no place like our Father's home," which seemed to linger and linger on the breeze as if it would bear its burden of human sorrow to the portals of the great world.

The large assembly of people, the colored people, the tender words of the hymn, ever and anon repeating the refrain with its will of love and grief, and when the last notes died away, there was not a dry eye in the multitude.

## VISITING THE GREAT FATHER.

Our picture this month, for which we are indebted to our friend Messrs Harper Bros., illustrates one of the many visits of Indian Chiefs to Washington, to interview their "Great Father," the President, and the Secretary of the Interior, and to discuss their grievances or anxieties. We recognize the friendly countenances of President Hayes and Secretary Schurz in the white portraits at the interview, and are surprised that the red men were the Sioux chiefs who came East during that administration, to visit the children of their tribe at school at Carlisle and Hampton, and see for themselves something of the advantages of education and civilization. Their visit was a pleasant and profitable one. We wish there might be many more such visits and such occasions for them. The intercourse between the Indians and the white people of the nation has been better calculated to give them respect for our power than for our virtue. As one chief wrote in complaint of another: "His has been so often to the Great House that he has learned to be a chief. But the Cherokee were about to be forcibly removed beyond the Mississippi in violation of solemn treaties, one of their chiefs, Speckled Snake, thus replied in complaint to the President Jackson, assuring them that he "loved them like a father."

"Brothers! We have heard the talk of our Great Father; it is very kind. He says to us, 'Use red children, and red women, and the white man first came to these shores, the Muscogees gave him land, and kindled him a fire to make him comfortable; and when the pale faces of the South made war on his people, he drew the tomahawk and protected his head from the scalping knife. But when the white man had warred himself before the Indian's fire, and filled himself with the Indian's food, he became very large; he stopped not for the mountain tops, and his feet covered the plains and the valleys. His hands grasped the eastern and the western sea. He loved his red children, but said 'You must move a little farther, lest I should, by accident, tread on you.' With one foot he pushed the red man over the Ocean, and with the other he trampled down the graves of his fathers. But our Great Father still loved his red children, and he soon made them another talk. He said much, but it all meant nothing but 'move a little farther; you are too near me.' I have heard a great many talks from our Great Father. And they all began and ended the same. Brothers! When he made us a talk on a former occasion, he said: 'Get a little farther, go beyond the Ocean, and the Oklahoma; there is a pleasant country.' He also said, 'It shall be yours forever.' Now he says, 'The land you live on is not yours; go beyond the Mississippi; there is game; there you may remain until the grass grows and the water runs.' Brothers! Will not our Great Father come there also? He loves his red children, and his tongue is not forked."

Do we still deserve the biting irony of this speech of eighty years ago? We boast of our high civilization, and wonder whether the weaker races can ever approach it. Will not a more highly civilized age sometime wonder that in two hundred years a nation of millions could not learn to manage a few thousand aborigines with wisdom and justice?

The Spaniards of Florida endeavored to break up the English settlement under Gen. Oglethorpe in Georgia.

In the states of Mississippi, Louisiana,  
Alabama, and South Carolina, and in many  
districts in other states, there are over-  
whelming Negro voting majorities, which,  
to no extent, subject the wealth and in-  
telligence of those states and districts  
to the control of a well disposed but  
ignorant, incapable class, who them-  
selves, as a rule, led by demagogues,  
whose interest is to keep their constituents  
in ignorance. Hence, during the twenty  
years since emancipation, not a notable ef-  
fort or appeal has been made by the Re-  
publican leaders from the South for the  
education of the illiterate blacks who have  
placed them in power.

They have apparently been satisfied  
with the wretchedly inadequate educa-  
tional provisions of their state legisla-  
tures.

As a matter of fact, a portion of the old  
masters, especially ex-soldiers of the Con-  
federacy, have taken a leading part in  
the mental and moral improvement of the  
Negro.

Not that this has been the fashion down  
here, but some clear-headed Southern men  
have, against odds and obstacles, pushed  
the cause of the Negroes in common  
with their professed friends, establish-  
ing common schools for both races, not  
quite as New Englanders would have done,  
but with remarkable earnestness and suc-  
cess considering the circumstances.

Congress has been throughout indiffer-  
ent, though individual men in it have urged  
national aid for education. The Re-  
publican party's assumption of the Negro  
as its "war" has, so far, failed in a vital  
point. It gave him the vote, but denied  
him, in his political blindness and  
danger, the light by which to act.

Public men say "it is a constitutional  
question," a stereotyped answer, given usu-  
ally without the slightest apparent concern  
for the future. But a single outbreak  
that will create a few thousand more votes  
inspires their vehement oratory throughout  
the land.

Since the Constitutional Amendments  
were passed, statesmanship, as to recon-  
struction, has about gone out of sight, and  
party interest has predominated. Time  
will show the effect of this. Not until a  
political revolution such as is now im-  
pending, shall transpire, will the real and  
naked view of reconstructive measures  
be apparent.

The voter will see how weakly and  
blindly he has been led; how little has  
been done for him as a man; how ephem-  
eral have been his political advantages.

What he is and knows only will help  
him then.

A most earnest effort is being made in  
Congress to pass a bill making liberal pro-  
vision for the educational improvement of  
the illiterates of the land, by devoting un-  
der certain conditions, ten millions of dol-  
lars a year for five years to that purpose.

Unless there shall be a certain per cent.  
devoted to industrial education, say ten or  
fifteen per cent. of the amount appropriated,  
there is likely to be no product what-  
soever of our country—quantities of use-  
less knowledge, hordes of intelligent,  
quick witted youth, unable and unwilling  
to live by hard work.

This danger has already created many  
opponents to the bill now before Congress,  
and they have ground for their objections.

The officers and teachers of the Hampton  
School have signed the following state-  
ment and petition to Congress.

HAMPTON, NORMAL AND AGRICULTURAL INSTITUTE.

Hampton, Virginia, January, 1883.

Hon. HENRY W. BLAINE.

Chairman Committee on Education,

U. S. SENATE, WASHINGTON, D. C.

Sir:

The undersigned officers and teachers of the  
"Hampton Normal and Agricultural Institute,"  
have long to present through you to Congress,  
the following statement and petition:

We have, the past fourteen years, been en-  
gaged in diffusing intelligence among the  
Negroes of the South, with whose condition  
and needs we have become familiar, through  
the over five hundred graduates and ex-stu-  
dents, who have gone from here as teachers  
throughout the southern states. Experience  
has shown the Negro's eagerness for knowl-  
edge, capacity for improvement, and at the  
same time, the utter inadequacy of the educa-  
tional opportunities supplied these six million  
blacks by various state appropriations, amount-  
ing to something over a million dollars.

Virginia, ahead of other southern states in  
providing for the Negro, has not one third of  
the competent teachers needed; her school ses-  
sions (except in cities) of from four to six  
months; her vast states are wholly inadequate;  
southern county school buildings are generally  
wretched half-sheds, and for the most part  
unfitted; proper supervision is usually  
wanting; for the small salaries paid the county  
superintendents do not justify them in doing  
anything but keeping accounts and records,  
and in making examinations and appointments.

Teachers grow old as pretty much as they  
please; many who are disheartened could, by  
inspection, be made efficient. The training  
of teachers, a vital matter, is well done at a  
few points, chiefly by northern charity, but it  
cannot supply one tenth of the existing de-  
mand; many of those now teaching are worse  
than none at all.

The large class of poor whites is no better  
off than the blacks; even the increase alone  
of black race is not being properly taught. In  
the more southern states especially, the moral  
and mental condition is as low as that in  
Africa.

If intelligence and virtue have to do  
with the fate of republics, there is danger  
ahead.

Masses of ignorant voters are controlled by  
hired demagogues, or defrauded of their  
rights. They are not capable of intelligent  
action. There is danger whether their vote  
is cast, or suppressed. This can be prevented  
only by such efficiency of the system of south-  
ern education as Congress can supply.

We represent, in part, the vast northern  
charity, recognizing since 1863, about twelve  
million dollars, given by individuals, not only  
for the Christian education of the Negro,  
but in payment of a debt to humanity, and in  
fulfillment of a duty of the nation to those  
whom it has given the ballot without an idea,  
a power without the knowledge how to use  
it; creating, thereby, most serious conditions  
for the future. Why should not Congress  
follow the people in this great national work?

England, neglecting the emancipated slaves  
of Jamaica for more than thirty years, now  
aids in their education. The United States,  
except through the Freedmen's Bureau, has  
done nothing for the most emancipated of  
the ex-slaves in twenty years from the time of  
their freedom. We believe it will yet be

forced to provide against the increasing num-  
ber of illiterate and consequent evil.

We therefore, through your committee,  
most earnestly petition Congress to make  
prompt and adequate provision for the increas-  
ed efficiency of all schools for the illiterate  
classes, by increasing the number of teachers,  
therein the need of normal schools, teachers'  
institutes, and the equally great importance  
of industrial training, without which an in-  
telligent, but useless class, political hangers  
on and adventurers,averse to labor, may be  
raised up.

GOVERNOR THOMPSON of South Carolina,  
whose course recently in supporting  
civil service reform is everywhere applauded,  
has been known to us for some years,  
as promoting, with equal earnestness, the  
cause of popular education in his State, as  
Superintendent of Public Instruction.

After a good record as a Confederate  
soldier, he devoted himself with energy to  
the schools of his state, pushing both the  
colored and the white; advocating the  
former against much local prejudice and  
opposition.

We know of no northern public man  
who has, the last five years, done so much  
actual service to the cause of Negro im-  
provement as has the capable Governor  
of South Carolina.

The Negro will more and more find that  
his real welfare is not in the plans of any  
party whatever, but of men who feel, and  
think, and work for his race; that there are  
many of them in the South; that not only  
northern wealth and thought, but south-  
ern sentiment and resources, regardless of  
party, will concern themselves with the  
condition, deplorable and dangerous to  
the nation, erected by a vast illiteracy,  
and by the deep moral degradation of peo-  
ple who are unable to help themselves,  
and are not responsible for their situation.

We publish in this number two letters  
from the Rev. Thomas L. Riggs, the  
second of which is of especial interest, as  
showing the results of Indian education  
at the East. We believe that the facts  
are fairly presented; what ground of hope  
they give is obvious. They must be well  
looked after and reinforced. The govern-  
ment policy of employing cheap men  
as Indian Agents, is a criminal folly; a  
blunder which is worse than a crime. On  
the Agent, depends, as much as on the  
Indian, the success of the latter's educa-  
tion. The former may be a good honest  
man, but far from the able, efficient, wise,  
devoted officer who will care for and lead  
the Indian up. The statement, on page 19,  
of George Bantolter, who was at Ham-  
pton three years, will be of interest as from  
an Indian standpoint.

## THE FOUNDING OF HAMPTON.

On Monday, Dec. 18th, 1882, died at  
Pittsburgh, Pa., Hon. Josiah King, at the  
age of seventy-five years, editor and pro-  
prietor of the "Pittsburgh Gazette."

Mr. King had been long identified with  
the leading commercial enterprises in his  
part of the State, and was influential and  
eminent as a journalist.

We quote from the *Gazette*:

"But, perhaps, of all his civic and philan-  
thropic activities none have borne so rare a  
fruit as resulted from his connection with  
the administration of the Avery estate as Trust-  
ee. It challenges the attention of every one  
conversant with the usual fate of such trusts,  
when we point to the fact that the Trustees,  
in the first report made to the legal authori-  
ties, accounted for almost half a million of  
dollars, and for more than four times the ad-  
mittedly worthy testator thought he had  
committed to their care. The names of the  
institutions founded or aided by the Trustees,  
W. M. Shinn, Esq., and more especially Hon.  
Thos. M. Howe and Josiah King, for the ad-  
vancement of the colored race in America and  
the introduction of the Gospel in Africa, sur-  
pass computation, (except by references to the  
books. But they would number several hun-  
dred. One of the most celebrated institu-  
tions that of Hampton Normal and Indus-  
trial School, near Fortress Monroe, had its  
origin in a happy proposition suggested by  
Mr. King to other philanthropic parties in  
New England."

Mr. King had long been urged to de-  
vote the \$10,000.00 assigned from the  
Avery fund to Virginia, to a land scheme

on the York river; a mere speculation  
with an educational plan as a bait, but on  
visiting it in company with the late Rev.  
Dr. Geo. Whipple, Secretary of the Amer-  
ican Missionary Association, of New York,  
Mr. King detected a flaw in the propo-  
sition, and consented, on Dr. Whipple's  
suggestion, to visit Hampton; the latter  
having had some correspondence with the  
present Principal, on the subject. They  
visited this place on the stormy day of  
the spring of 1866. Mr. King was quick to  
see the points explained; he viewed the  
land from the summit of the present Na-  
tional Soldiers' Home buildings, appreciat-  
ing the remarkable resources and the  
beauty of the region, how it lay at the  
confluence of many waters, from the north,  
south and west; was accessible by rail-  
road as well as by water; and that it was a  
geographical centre, as suitable for educa-  
tional as it had been for military opera-  
tions. Let us at the very table, he turned  
to Dr. Whipple, and said: "This is the place  
for that money." The farm known as "Lit-  
tle Scotland," of 162 acres, was purchased  
for \$20,000; there were two good brick  
buildings, and over twenty hospital bar-  
nacks, which could be put to good use.

Mr. King paid \$10,000. The American  
Missionary Association assumed the rest,  
and the general responsibility; transfer-  
ring it later to a Board of Trustees. It opened  
in April, 1866, with ten teachers and  
fifteen pupils. It now has nearly fifty  
teachers and officers, and five hundred  
pupils, of whom one hundred and six are  
Indians; and its lands and buildings are  
worth \$350,000.00.

We have always regarded the visit of  
the Hon. Josiah King as the initial move  
of the Hampton Institute. He has often  
visited the school, and seemed to enjoy  
the part he had had in it.

The Avery fund of \$250,000.00 was a  
legacy left for Negro education two years  
before the war, before emancipation was  
secured; yet it placed the foundation  
stones of many important institutions,  
when few men were ready to give large  
sums and little was known of their needs  
and importance.

THE REV. THOMAS L. RIGGS, missionary  
to the Sioux Indians, son of the Rev. Dr.  
Riggs, the veteran Indian missionary to  
Dakota, makes the following reports. Mr.  
Riggs is one of the ablest, and most de-  
voted workers in the Western field;  
born in the midst of it, he has unusual  
experience and insight. The Sioux at  
Hampton declared that he talked their  
language better than any of themselves.  
His settlement of 21 Indian families at  
Peoria Bottom, on the upper Missouri  
river is one of the brightest spots in our  
Indian life.

The second report, on the youth sent  
back from Hampton fifteen years since,  
touches the vital point of all this work:  
What becomes of the Indians who are re-  
turned from Eastern schools?

Very much depends upon the Indian  
Agent. Put first-rate men in charge, and  
the educated Sioux children, will not, as  
a rule, go back. There should be, at least,  
one good man to help counteract the  
influence of barbarism.

Hampton Va., Jan. 1, 1883.

GEN. S. C. ARMSTRONG,

Principal of Hampton Institute,

Dear Sir:—In accordance with your request  
dated Nov. 6th, 1882, and under authority from  
the Indian office by letter of Oct. 24th, 1882,  
I bring a party of Indians from Dakota to  
Hampton School, and respectfully submit the  
following report:

By letter of Nov. 4th, from Mass. Eustis, I  
was requested to secure at Cheyenne River  
Agency, if possible, (1) The consent of the  
parents of Mary Traversie, now at Hampton  
School, for the extension of her term. (2) To  
give Virginia Traversie, opportunity to join  
this party. (3) To return Eliza Plester, a former  
Hampton scholar, from Standing Rock  
Agency, to the school. Consent was readily  
granted, extending Mary Traversie's time at  
school; no limit set; and great satisfac-  
tion expressed. Virginia Traversie had  
strong desire to attend school, but because of  
her mother's stronger objections, failed to join  
the party. Rosa Plester, who had during the  
summer been at the Cheyenne River Agency,  
could not be found. She is reported to have  
returned to her relatives at Standing Rock.  
Telegraphed to Agent McLaughlin, of Stand-  
ing Rock, of the case, and also afterwards wrote

"The writer of this work has been engaged for some thirty years in a practical application of the principles of Christianity, with a view of curing certain great social evils in the city of New York. He has been able to test his power on a large scale, in diminishing poverty, crime and misery. He has also had a humble share in, and been a witness of, the great effort of the United States, to remove its transgressions—Slavery—and he knows how far Christian ideas were at the foundation of this great reform, and how much they stimulated and supported the long struggle."

"For many years, studies in the laws and history of the Roman Period and the middle ages, have shown him the traces (often almost obliterated) of the elements and principles of the great reforming Power of the world. He has also been engaged in examining and presenting in public writing the influences of the Christian Faith in the modern period on International Law, Arbitration, and the relations of nations. It has seemed to him, that to write a condensed history of the progress of the humane ideas, practices, and rules of action, and to encourage by his Religion, would be a useful thing, especially as making them a more direct possession, and coils in the civilized world, and as forming an indirect argument (not less powerful for being indirect) for the truth of this Faith."

"There are certain practices, principles and ideals—now the richest inheritance of the race—that have been either implanted or supported by Christianity."

"They are such as these: regard for the personality of the weakest and poorest; respect for woman; the absolute duty of each member of the fortunate classes to raise up the unfortunate; humanity to the child, the prisoner, the stranger, the poor, and even the brute; increasing opposition to all forms of cruelty, oppression and slavery; the duty of personal purity and the sacredness of marriage; the necessity of temperance; the obligation of a more equitable division of the profits of labor, and of greater co-operation between employer and employed; the right of every human being to have the utmost opportunity of developing his faculties, and of enjoying the fruits of the earth; the principle that the injury of one nation is the injury of all, and the expediency and duty of unrestricted trade and intercourse between all countries, and finally and principally, a profound opposition to war, a determination to limit its evils when existing, and to prevent its arising by means of international arbitration. Ideas, principles and practices, such as these, are among the best achievements of Christianity."

"It has seemed to the writer not impossible, that great numbers of the vast English speaking race in Great Britain, America and Australia, might more and more unite in a kind of moral confederation throughout the world to support and advance these great and humane ideas."

"The plan of the book, to state it in the briefest manner, is to present an accumulation of evidence, carefully weighed and arranged, and tending to show that while the influence of the teachings of Jesus has been quiet, slow working, and in a kind of main confined to the individual soul, it has also been strong, far reaching, and permanent, beyond that of any force known to humanity. The subject is treated without prejudice, and from the standpoint of a man who has had a practical experience in dealing with his fellow-men, and puts it, for most of us at least, beyond criticism. As a book of reference, and for all thoughtful people, Mr. Brace's work must be universally recognized as of great value, while it is indeed a joyful thing to know that such a man can say, out of the depth of his knowledge of human strength and weakness, that

"Nothing better has been, or can be conceived by the mind of man, to make man better or happier, than the Christian Religion."

"It does more than present a system of ultimate morals. It throws in a Force which Evolution does not reckon upon, and which hastens on all the currents for good, working in the world, and in the mind, for an unequalled character, for a divine Person who embodies all abstract morality; it throws about Him and His teachings, the halo and mystery of a Religion; it presents the individual struggling for a higher morality, hopes and fears which take hold of all that is grand and awful in the universe. It even makes morality into the blossom and fruit of the love that would implant for this transient and being, and of the faith in unseen and eternal realities. In loving the highest excellence as personified in CHRIST, the man unconsciously loves the happiness of all created beings, and is planted in the highest morality."

## EDITORIAL CORRESPONDENCE.

BARNOCK AND SHOSHONE AGENCY.

Idaho Territory, Sept. 7, 1893.

Indian Agent A. S. Cook states that this reservation is 70 x 30 miles in extent, contains about 1,000,000 acres of which 30,000 are arable if irrigated; the rest is pasture land. It is very mountainous, poorly timbered, hardly enough for houses and fuel.

There is now no game to speak of; the Indians' game on passes from the agent to hunt in the mountains of Idaho and Wyoming, but hunting is being steadily exhausted and restricted by the settlement of the country.

For twenty miles along the Snake River, a strip of land one and a half miles wide produced this year a thousand tons of hay, nearly twice as much as last year, but by Indians with ten mowing machines, seven of which were loaned to them by the Agent, and three bought, along with hay-rakes, and two wagons, by Indians themselves, at \$150.00 a piece, and paid for by selling sixty tons of the hay crop. The like was never done before. On P. M. River, there is more hay land, but the reservation contains a very small proportion of it. Hay is a most profitable crop in this region.

With the proceeds of the hay, which is in steady demand, Indians pay their bills at the trader's, who is not afraid to trust them, in food, clothing, trinkets, and squander money in gambling. They save nothing, are inveterate gamblers, especially at horse racing; when they have spent everything, they go to work again. The census of 1890 reports that there are five hundred and forty Bannocks, and one thousand one hundred and eighty Shoshones Indians; they are hardly holding their own as numbered, being tainted, hereditary, and incurable diseases, which, the Indians say, is due to fifty or more trappers, who, many years ago, were established at this point by the Hudson Bay Company; numbers of them became squaw-masters. The primary form of the disease is hardly known. Soldiers and settlers are not without responsibility in this matter.

A far larger, which lasts into September, they go hunting until snow falls. This year the party of four hundred who went out, shot but thirty buffaloes. Buffalo meat, which has been their main reliance for winter food, has nearly failed; trouble in breeding. The Chiefs said that President Hayes, and Secretary Shurz visited them and promised them all the beef they wished to eat. The Agent states that his men actually counted 750,000 pounds of beef, that the Indian Department asked for only 400,000 pounds, and got from Congress but 300,000 pounds. The Indians held a council, and quoted to the agent what the President and Mr. Schurz had said, and declared that the agent lied when he said he had asked for food enough.

Finally, a white man whom the Indians trusted, read to them the Agent's request for 750,000 pounds, and then the answer from Washington; they were astounded. Whom could they believe? This is a characteristic and common experience of the Indians. Every body means well; the trouble is with our stupid, bungling system. White men covet the rich mineral and farm lands on the reservation. Some two hundred whites (part of them before the reservation was allotted) have settled the southern part of it, on the fertile banks of Marsh Creek, and Portneuf river, are established and cannot well be moved. A bill has been before Congress to take from the Indians 335,000 acres of land for \$125,000.00. As they shall abandon the hunt and take to agriculture, they will need every acre of farm land they can get; they will above have neither game, nor land enough to furnish food. Another bill is proposed, which shall take more land, including a valuable mineral region.

It is the old story of pushing the Indian to the wall; consent is always wrung out of them in some way.

Agent Cook says, "Indians will work for good pay. It is impossible to get enough Indian labor at present rates, fixed by the department; which is fifteen dollars a month, and rations; twenty or twenty-five dollars would command all his wants."

When men get from fifty to seventy dollars a month; Indians put to work with white men do well, though inclined to be untidy; they soon get tired and sit down. There are now no apprentices in the work; the six employed did very well, but got tired of working at low wages, (ten dollars a month and rations being allowed) and ran away. Agent Cook, as well as the foreman, think that fifteen dollars a month would keep them.

Over one half of the Shoshones are ready to go to work, while less than a quarter of the Bannocks are so disposed, being more inclined to hunting. The former have been trappers; with a few Bannocks, they go after harvest to collect pine nuts, besides berries

and elk meat, which they dry for winter use, roasting sometimes two hundred miles away.

One hundred and twelve leading Shoshone families are farming this year, and cultivating over five hundred acres of land; the Bannocks do a fourth as much. There is a slow but steady improvement in agriculture; ten miles of wire fencing have been put up this past year, seven by Indians, and the rest by the government. They then hold their land, and secure their crops.

They are a feeble people, a bad crop discourages them. To depend on government food has been a part of their education. Practically the industrious Indian depends on rations in winter, for he has not learned to save, and gambling makes away with most of his gains. Savagery was taught as much as cropping. They beg for everything; there is no better trained beggar than the proud Indian. With his regular ration of beef, beans, flour, baking powder, coffee, sugar and tobacco, besides clothing, blankets, wagons, harness, plows, hoes, and utensils of every kind, he still wants more. He has been educated to this.

These tribes have a strong prejudice against the agency schools, from the fact that six out of twenty-four children who went there died of an epidemic. They call school "bad medicine" for Indians. One difficulty in educating them is that they get married at twelve years of age and leave school. The improvement in dress, etc., due to school influence, makes them attractive to the whites. (Since this visit, M. J. Cook, agent, has been admitted to the admission of four Shoshones to Hampton who desire to come, and many more would follow, but there is no government aid for them. Ed. S. W.)

Commissioner Price has authorized an expenditure of \$5,000.00 for a new boarding school house. The present one is of logs plastered with mud—a pig-stick looking place. The Indian police of fifteen men, half Bannock and half Shoshone, in command of Captain Race Horsa, is a success; they are paid five dollars a month and an extra ration; only ten drunken men have been seen on the reservation since January last, and horse stealing is almost stopped.

Indian police have been a great success in Pine Ridge, Rosebud and other agencies; they have a remarkable aptitude for this and for military duty. Drunken Indians are arrested, compelled to tell where they got their liquor, and the officers "go" for the seller of it. Especially when off hunting, Indians are tempted by white men. In their own ground, they take less trouble than would whites, and are more easily managed by the right kind of men. At every reservation I have visited it is the remarkable and universal testimony that Indians are among themselves, kind, peaceable, and easy to get along with.

Responsibility will affect an Indian as quickly as it will any man. When Buffalo Horsa, chief of the Bannocks, was killed in the Big Horn fight of 1876, Bear Skin took command, and shot down, got up again, again shot through the base of the brain, and left for dead; but lived, and although he was a celebrated horse thief, having stolen thirty at one time, he is now a most exemplary and useful policeman. It takes a rogue to catch a rogue.

Reform in idleness, as the Indians now are, is impossible. Give them something to do, and a change of life is easy. Hence the idea of the plan of enrolling the young braves as soldiers, which would keep them busy. The plan has often been proposed and is most wise.

Agent Cook called a council to day, at which Tyche, chief of the Bannocks, made a speech. He is a tall, white haired, noble looking man, reminding one of the picture of Henry Clay.

He said he was trying to do what Washington told him to do, (he had once visited that city) and doesn't listen to any thing else. One thing hurts him. He works hard and is hungry; eats his wheat "just like a chicken." The Agent don't give him enough to eat; he could be satisfied with plenty of food.

"When you go to Washington" said he "tell Washington that he don't send money enough to feed his children; they are starving. I am ashamed to ask for food; I would ask for bacon were I not ashamed to ask for it. The Agent has promised bacon, but supplies had not come."

Tyche said he would be the happiest man in the world if Washington would give him enough to eat; "It is hard" he says "to work

on an empty stomach." "Be sure and tell the Great Father what I say."

He stated that Secretary Schurz had promised to send him a buggy, for him to ride around in when he was an old man; but no buggy had come.

He had been farming nine years, and had done better this year than ever; had many different things in the ground; oats, wheat, corn, carrots, beans and cabbage; also a yoke of oxen and seven acres of cultivated land. He throws away from his tribe any Indian who shoots a white man; sticks to the white man.

He has heard that there is a God, and believes it, because all men say so. He is somewhere up above. His father never told him about God, but told him to trust everybody right and be kind to all men.

Chief Tyche thinks that the Indian was made out of a bird just like a white man. "What do you think?" "Ah, "God made man out of the earth" Tyche—"Just as children make clay images?"

Peg White, Bannock Chief, thus speaks: "Why don't you talk about the money government owes us? Why don't Washington make the soldiers keep white men off our reservations? They promised to do so. There are a great many whites on our land; they are cutting our hay."

"I wish to tell you something that you will tell at Washington. I wish that between us and Washington there would not be so much lying. I wish Washington would stick to his bargain."

We were promised \$5,000.00 to let the Oregon Short Line R. R. go through our reservation; the money to be put into our hands, so we could use it. We signed after the fact, they made the road and the money is not paid."

"They said they were not lying, but meant what they said to us; that we all believed in the Great Spirit, and they would tell the truth."

"My people now get only four cattle a week, with they could have eight. (Government has reduced the rations.)"

The money was, I believe, actually paid to the Indian department; invested with the Indian trust fund in government supplies. (The Indian wishes the money in hand.)

He would no doubt squander it; the government becomes at this point, paternal, does what seems best for the Indian; the latter is angered and believes he is lied to. Is it best to be paternal or keep faith, even if it hurts the Indian a little? This is the basis of much trouble with Indians. A treaty making power one day, a little child the next.

We had driven twelve miles to see one or two prosperous Indian settlements. This is at the head of the Rose Fork, a small river; The other end of the Bannock river, is larger.

We are on a fertile plateau, surrounded by hills and mountains, on which are grazing the ponies and cattle of the Shoshone farmers. We drive by fenced fields and quite extensive crops, witnessing a surprising thrift and cultivation for a wild people and country; and are introduced to "Whiskey Joe" a fine looking man. He has planted fifteen acres and has this year raised 175 bushels of wheat, 125 bus. of oats, 175 bus. of potatoes, 15 bus. of turnips, half fifty tons; has ninety horses and a herd of cattle. Like the rest, he gambles, but stakes only his horses; he lost this year all but four, but won them all back and five more. He raised considerable more this year than last. From our wagon we could see about thirty lodges in groups of four or five, each containing from six to seven people; standing on the edge of cultivated fields of from five to fifteen acres in extent. For summer life there was in each camp a large leafy bower of fresh wood, where they cooked and ate and slept. The fields were traversed by ditches, made by Indians, which carried the mountain waters to the thirsty land and increased the crop.

The work is done in the simplest way, after the fashion of Scripture times. The men use the cradle, and the women the sickle, "Joe" has the only fanning mill. The others pile their wheat in threshing pens, and give ride ponies round and round in the most picturesque, cheerful fashion, gradually separating the wheat and straw; the latter is pitched out, and the women winnow the grain by tossing it into the air again and again. All the chaff is blown away, a most picturesque sight; the last time it falls on a canvas cloth, and is bagged and stored in the wigwag, to be sold or taken to the agency mill to be ground for us. This makes work for all. In spite of the Indian tent and dress, there seemed a moral health in this wild region, where all are busy. The men work as the west coast women, which is a long step towards civilization.

Machinery hardly consists with such a simple pastoral life. There may be, as in times of old, a true, Godly life in tents, and a fine type of manhood and womanhood; but idleness is fatal to all good.

The great thing for the Indian, as for all, is daily occupation; a routine of duty engaging head and hand is the most effective way of human influence on character. Those who voluntarily do nothing, in whatever plane of life, are worth nothing.

(Continued on Page 36.)

## LETTERS FROM HAMPTON GRADUATES

**CAST DOWN YET REJOICING. A GOOD PLEA FOR HIGHER EDUCATION. RESPECT FOR THE "SCHOOL MISTRESS." A REPRESENTATIVE IN SPIRIT OF HIMSELF. MAKING HIS OWN CHARTS AND BLACK-BOARDS. A PLEASANT REPORT. "TOO MUCH RELIGION."**

CAST DOWN YET REJOICING.

One of our faithful workers has a story to tell of blessing and trial. In the loss of his property in the flames, he can rejoice in the good fruits of his labors in his Master's vineyard.

Dear Friend:

I write to let you hear from me. I commenced teaching here last Sept. with fifteen pupils—now I have fifty. Don't know whether I shall remain here all the spring or not. I have a nice school house and good furniture. I am boarding with a widow lady about three miles from my school. She is very kind to me and makes everything as pleasant as possible. Most of my parsons are renters, and have to work very hard to make a living; their children are poorly clad, and very few have the books they need; the parents take a great interest in having their children educated, but they cannot feed and clothe them as they ought; the whites as well as the colored are kind to me and treat me with the highest regard. Nearly all of my pupils can read some in the Bible. I organized a prayer meeting in my school house last Oct. Forty have accepted Christ as their Savior; fifteen of them are my pupils. Pray for us that these may hold out and be useful workers in the Master's vineyard. On account of the bad weather, our S. S. has been suspended for a while. I had a very serious misfortune recently—lost my house by fire—valued at \$300. It was not insured. I have no right to complain, the Lord has blessed me thus far with health and strength. Wishing you a happy new year and many of them.

Your old pupil,

## A GOOD PLEA FOR HIGHER EDUCATION.

YOUR MAN who worked faithfully at Hampton in school and at his trade and has done good work since he left as a teacher and missionary in Kansas, now writes from Oberlin, where he is pushing his way for "all the education he can get," and where we heartily wish him success. He makes excellent points in his argument for higher education. There is no question—at Hampton certainly—of the advantage of "getting all the education one can"; in our correspondent's good figure, providing one's self with "sharp tools instead of dull ones." The only folly is in spending time and money on ornamenting tools instead of sharpening them, or in buying a carpenter's tool chest when you mean to do shoemaker's work, instead of fitting up your own kit. But this is not applicable to our graduate's case in the present instance, and we are glad, as in all such cases, to see his enterprise and success thus far.

OSHERLIN, OHIO, Dec. 23rd, 82.

Miss C—

Dear Friend:

Your letter of circular of 13 inst. has just reached me in time to receive my undivided attention. Our winter vacation, beginning 19 inst., enables me to write you earlier than I otherwise should have been able to.

It has been some time since I have had any correspondence with any of the Hampton people, consequently I begin to feel myself quite a stranger. I do not know where any of my classmates are. When I think of the past associations and pleasures, I feel that I have been moved out from the midst of the great circle to wait the development of the future.

There is only one other Hampton student here—Stevens—who has for some years taught at Winchester, Va.; Randolph was compelled to leave on account of his health. His address at present is Galena, Kas. Miss Cabell, now Mrs. W. C. Boyd, has moved from Boxer Springs, Kas. since her marriage. I have not learned her new home.

I have been very glad to be allowed to study longer. I find this just the place. I have no profession in view whatever. I have no desire to take up any. I intend to teach as long as I am able. The whole course of my coming here was that I was unable to occupy positions that offered themselves to me, because I had not enough of the higher education. I have frequently heard it said and of its being said that the classical education made idiots of the Negro, yet I have failed

to see and can not see upon what ground of evidence such argument is based or what examples worthy of note present themselves in support of such arguments. The whole matter of classical learning can be answered by answering such questions as these: How much money should I have in order to begin life or how many friends ought I to have? The answers would be as much as I can get or as much as I can get. When I used to work at the shoe trade, I always found it backward movement to work with dull knives, besides it was dangerous to the shoe, because I did not know when I should blunder and cut a hole in the shoe. A job with a dull knife never looked well; it was rough, bungled, awkward. So when we come to education, we want all we can get, because it is one thing of which we lay in a life time supply at the outset. A good education is as a sharp knife, cutting just when and where we would have it. A job turned from its shop is neat and smooth, showing a high polish. With a few grains of energy behind the whole and with go ahead in front, the forces all in line of battle, and the order forward march, what can withstand such an army? I say, give me all that I can get. I may not be able to stay here longer than the close of this year, yet I have made the most of the time. I am now in the first year of the regular course, and everything clear for the month beyond which we see nothing. I suppose six months is far enough for one to peer into the future.

Yours truly,

## "RESPECT FOR THE SCHOOL MISTRESS."

A young woman of last year's class writes thus cheerfully of her work in a country school house, though everything is pleasant but the want of pay.

—Co. Va. 1-2-83.

Dear Miss C—

It is no unpleasant task to answer your kind letter. It is pleasant that you are still connected with the work of Hampton, though unable to be there. I have a great deal of pleasure in the thought that I have actually begun the work for which I was preparing.

I have a very pleasant school house, comfortably furnished and completely furnished—that is with black-boards, desks &c. Maps, charts and globes are luxuries in a country school house.

I have fifty-four scholars on roll, most of them are under twelve years of age, a very interesting little set. I have been teaching three months, and never enjoyed anything better than even studying. My little ones are very bright and take up new ideas readily. I am their standard of perfection, and you can imagine what a responsibility rests upon me. It keeps me always on the alert that no word or act of mine may mislead them.

The people in this part of the country are poor and ignorant; they don't realize the importance of education. All are not so, but that is what may be said of them generally. I have been very kindly treated among them; every one treats the "school mistress" with great deference. The whites are very kind and respectful.

There is much to be done here. Miss B— preceded me, and began a very good work which I have been trying to carry on successfully. I have been working in the Sunday School, but the cold weather has hindered me in this. The church in which the S. S. is held is very open and uncomfortable, the children poorly clad, and so I have been obliged to discontinue it until the weather is more favorable.

I have enjoyed the holidays very much—resting quietly, reading and studying. On Christmas night I had a tree at the school-house, which gave a great deal of pleasure to the children.

The return of the time to celebrate that Birth which has brought so much good to us all, gives me a new inspiration to do what I can for those about me. I find new pleasure in my work each day.

Last Thursday I began to snow and continued until Friday night. The snow is very deep; there can be very little traveling except on a horse or in a vehicle. I shall not be able to get to my school house, which is nearly four miles away, until it melts away, or at least some of it. Rattle and Ross D— teach about seven miles from me. I hear from them but do not see them often. It is pleasant to think that they are so near. I received a package of papers from you some time since, and thank you very much.

The Superintendent and trustees like Hampton graduates, and are very kind to us, but don't pay us very readily. I have received but one payment since I have been teaching. They say they have sent me any money in the treasury. I hope you will only your work. I imagine you will, though I should think it would demand a great deal of your time. I hope to hear from you again, though it is a great deal to ask of you.

Affectionately yours,

## A REPRESENTATIVE IN SPIRIT OF HIMSELF.

Very few Hampton graduates have gone into politics. The best way for office to come is to come unsought, and we hope our correspondent may bear, in the honors thrust upon him, the same character for faithfulness and honest purpose he did at Hampton.

—N. C. Dec. 30th, 1882.

Dear Principal:

Sir: As I've not heard anything from you or the benefactors of Hampton Institute in some length of time, I thought I would write to hear from you and to let you know I am still here (Hampton Institute).

Dear Principal: As I'm reluctant to write without speaking a word for the Hampton N. and A. Institute, I must say it must have been a wise providence to establish such an institute for the training of youths of our race. On account of some doubt that I've been possessed with I've not written you before now concerning the past election held in my County, of which I was a candidate and elected. I shall be pleased to hear from my kind friends and will start for Raleigh on Monday the first Jan. prox. Sir: You will please pardon me for not writing you before now, as reason enough stated has prevented me from doing so. I shall be pleased to hear from my kind friends and will start for Raleigh on Monday the first Jan. prox. Sir: You will please pardon me for not writing you before now, as reason enough stated has prevented me from doing so.

I remain your oh! student,

Address, Raleigh, N. C.

## MAKING HIS OWN CHARTS AND BLACK-BOARDS.

The following interesting report is from a graduate of '76:

—Va. Dec. 12th, 1882.

Dear Miss—

I began my school on the 3rd of Oct. with 49 scholars; the number has increased since to 70 on roll with an average daily attendance of 40. I admire my work more and more every day, because I feel that it is a duty enjoined on me by none higher power, though I often feel the unworthiness of such a high position. My children seem to be anxious to learn; to tell them to do a thing seems to be all that is necessary; they will go about it with all their power. I very often have what one might call discouragement; though I never think of being discouraged in this noble work, since success is my aim, and by the help of the good Master, it shall be my end. I am in this work with my heart and mind. I have no school-house here. I am teaching in the church. We suffer a good deal from the cold by the church not being comfortably fixed. Some of the children suffer more than others by having no one to care for them; no one to get out of clothing for them, no one to give the books the law requires them to have. Many of the children who have parents are poorly clothed, and labor so cheap that many of them are obliged to work for what they can get and wear, leaving nothing to supply books for their children. I have to do most of my teaching from blackboards and charts of my own construction; which are very rudely made. The people, many of them, do not manifest any interest at all in trying to educate their children, while there are others who do something at it. Let me tell you about our school-house. We commenced to build one about three years ago, and not being able to complete it gave it up.

## ACKNOWLEDGING RESPONSIBILITY.

The white people show a great desire to have the colored people to learn to read the Bible, and feel that they take an active part in all the school work in the neighborhood. They do many things to encourage them to attend their Sabbath schools. They often visit my school during the week, and give words of encouragement to the scholars. One said the other day in addressing the school that God was holding the white people of the South accountable for the education of the colored people. We have a large Sabbath school going on here 80 pupils and teachers, all but the colored. We could have more if the fatherless and motherless had suitable clothes.

I have not been to Hampton since '76, though it has been one of my highest wishes to see my school teachers, who I did so much for me while at Hampton. I am extremely thankful for the opportunity of addressing you this

time. May the Lord bless and take care of you forever. I am yours gratefully,

B.

## A PLEASANT REPORT.

Another of the class of '82 gives a cheering account of his new departure in good work.

—Va. Dec. 27, 1882.

Dear Teacher:

I am sorry at having waited so long before answering your letter, but I waited until I got a good opportunity to write to you. I was very glad to hear from you, also very glad to know you still have an interest in my welfare. And it makes me unspeakably glad to say I have accepted the offer so freely given to me. I did not own a part in Christ during my stay at Hampton, but I thank God that I can say I do now. Will you pray for me? I desire the prayers of you all.

I am teaching school in the country about 20 miles above L—, but I am now spending my Christmas at home. The people here are very generous, they are really in need of education; what they need is good teachers. It seems as if I could not do too much for them. They are social and try to learn; they seem to know they are in darkness and are making efforts to turn to the light. I am blessed to be among friends, of both classes; the white people are very generous toward their colored friends, the majority I mean. There are some who try to pull down every effort to establish a free school among the colored people. You see, this is the second time a free school has existed up here since the Emancipation Proclamation was issued, so you can make a rough guess as to the education of the people.

When I first came here I thought I could not stay, but now I think the Lord that I can look upon my work with a pleasant face, and hope for a bright future. I have found a school-house, a new one just built, and have on roll 27 pupils; but will get a great many more after Christmas. The majority of the students are large and cannot be spared from the crops until late in the term. The terms are only 5 or 8 months and they give from 25 to 35 dollars per month, and they pay up very well. They are very fond of the Hampton graduates, as they are very few, and so far are very successful. One whose lot is cast in this field has his hands full. I think I would be shy if I said for the community at large, they and I desire the prayers of the H. N. and A. Institute. You will, I hope, pardon me for saying so much on this subject, but my heart is in the work and I feel I ought to plead for them. We need now in this county 3 teachers as I know, besides others I know not of. I am dear teacher,

Yours gratefully,

A.

## "TOO MUCH RELIGION."

"Plenty of it such as it is," but "not very good what there is of it," seems to be the writer's criticism upon the kind of religious zeal he finds among his people. It is at least a very good indication that one of the preachers has asked to be admitted to the school. Where there is any show of such a spirit, it should be wisely and kindly encouraged.

—TENN. Nov. 11, 1882.

Miss K.

Kind Friend:

I find the people much better here than those in N. C. We have three colored churches and services every Sunday. Society is very good, and the people have more respect for morality. We have no drum holes in the village, still once in a while we can see or hear a drunkard on our streets.

While this is a good place and the people seem to appreciate education, yet we have our faults. The churches are not on extra good terms. They talk about each other. They don't like to see a member, not of their church, go along. Miss K. I do believe so many different churches' faiths or the ruinance of us as a people. The people of N. C. seem to want religion, but here they seem to have too much. Our preachers have no education. One now wishes to enter our day school. In N. C. I had immorality to fight against, here I have jealousy. One is just as bad as the other. The worst of it is, the people have carried this spirit into the school. Last year the teacher sided with one of the churches, the people did not like her for that. I am independent and side with no church, and I think I am pleased all. Still I have heard of no complaint. I think the people like me, and all say I have the best school of all the teachers. The white people treat me very kindly. Sometimes I think they think more of me than the colored. This is a good grain country. I am here among the mountains; mountain people always have the name of warm hearted and liberal, and I think the people here have something of that trait. Not too much. I wish we had more of it.

Sincerely your pupil,

B.

"Captain Jim, a Shoshone, once a scout, has three wives, and, ten acres of wheat, oats, and potatoes. Gibson Jack, a very clear headed Indian, one half Shoshone and one half Bunock, has two wives, a farm and a stock ranch; four acres and fifty cattle. These people are inclined to Mormon views, having been much under Mormon influence.

Pointaligo John, cultivates forty acres, makes forty tons of a year, owns forty fine cattle and seven horses; his brother Tim has a farm of sixteen acres, and owns twenty-nine horses.

Mosho, the "Mormon Bishop" has seven acres of land, fifty horses and nine cows. The above are Shoshones. Horn, a Bunock, has a good farm and fifty horses.

The tribes are suspicious of each other; do not inter-marry much; speak different languages.

This farming is due to the wisdom and energy of a former agent, Maj. Danielson, who refused to issue luxuries, sugar and coffee, until the Indians had staked out and planned out their allotted fields. Then they were rewarded.

Again he held back the luxuries till the fields were planted and crops were started; then another issue.

This is the way to move the Indian. He feels the argument to the stomach more than any other. That of the bullet makes him angry and dangerous; that of the palate tames and civilizes him. Major Swan at Cheyenne River agency in Dakota, Major Gesman, at Yankton, Major McLoughlin, at Devils Lake, Major John D. Miles, Indian Territory, and other agents have done wonders in this way.

The ration gives the Indian agent the strongest influence that can be brought to bear upon a man. There is no other such opportunity in the country. He has the power, or can have it, with proper backing. Here, unfortunately, the Indian department is weak-kneed. Indian inspectors Gen. G. H. Howland has strongly urged this policy, but it has not been adopted as it should be.

To do this takes men of nerve who are not afraid of hard work; and requires a high order of ability and character.

The Indian agent has no motive to do much work. He will find endless difficulty with Indians. He is usually a cheap man whose salary Congress has fixed so low as to serve as a protective tariff against competent men.

The railroad ride from Ross's Station to Ogden, brings one at daylight within the beautiful valley of Salt Lake, where steep, high mountains rise sharply on one side, and on the other is a gently sloping plain that stretches away to the horizon.

Near by, along the foothills, is an unbroken line of fern houses for many miles. We pass Brigham City and Coriase, flourishing Mormon towns, embowered in foliage. This region seems to blossom as the rose. No wonder the people think they are Latter Day Saints, so favored is the land that they have taken and redeemed. Was it the organizing genius of Brigham Young, or what was the inspiration of this wonderful prosperity?

All are talking about the registration of voters now going on at Salt Lake City, expected to weaken the Mormon's power, by excluding polygamists, who must never have violated the law, before they can become voters. Their leader, John Taylor, says in effect, "Perjure yourselves and register;" anything for power is his idea. This is no spirit of martyrdom. Property or power before principle never made a people strong. I suspect that the old martyr spirit which created their vigor, is replaced by a much lower sentiment. Taylor dictates to the people whom they shall vote for.

Idaho, through which we have just passed, has great mineral wealth. There is a desert of black rock 150x100 miles in extent, barren, except a little sage brush; impassable except on horse back, absolutely worthless for any purpose.

Sneke river, named from its very winding course, runs south of the desert into the Columbia river, through a valley seven hundred miles long, from five to twenty miles in width, which is capable, with irrigation, of producing great crops of fruit and grain. Groom Creek, Rock Creek, and Marsh basin running north into Snake river, traverse a productive country, which is largely occupied by Mormons. They hold in this territory the balance of power between Republicans and Democrats, usually favoring the latter, and have the best lands in their possession.

"Jack Mormon" is a politician who goes over to the Mormons for the sake of their vote. The present delegate to Congress from Idaho is a Mormon.

There is this year a strong anti-Mormon movement on the part of miners into the Wood River region, north of the desert, where there is a vast mineral wealth; they are rapidly changing the politics of Idaho.

A portion of the "left wing of Genl. Price's army" from Missouri, are here; they are being meddled by climate and other influences, and form a valuable class of citizens in their possession.

The mining interest of Idaho is not fully developed; it has a fine future. While the richest ones may not last very long, there are mountains of silver and lead and other ores which, when treated by proper machinery, will yield a fair profit as at a lode.

The North Pacific Railroad, when completed, will, as the Utah Northern is doing now, bring the best appliances to work the mines. The latter is doing a good business, though running through a seemingly barren, unpopulated country.

The Oregon Short Line R. R., crossing Idaho will connect with the Union Pacific R. R., making a line to the Pacific Ocean independent of the Central Pacific, while the Southern Pacific, connecting with the Denver and Rio Grande, will make another independent road; and the competition will get the benefit of competition in trans-continental travel.

Cattle raising is a leading industry in Idaho, though the grazing lands are rather overstocked and encroached upon by settlers. While it pays enormously, it requires constant care; it is too hard work for Eastern men; a drover makes his fortune at the expense of great expense and exhaustion.

This region is a mission field. There is little Sunday observance with, however, a tendency to improvement. The arid belt east of the Sierras, four hundred miles wide, and a thousand miles from north to south, is better for cattle than for men. Drovers and miners are its natural inhabitants; the population of such territories can never be great. Some of them may become states, but they will aggregate an enormous population. The need of the benefit of church and school. The genius of the people creates the latter, but not to the same extent the former. This is a most serious concern of eastern people and churches. There is a fact about the good element is much out-numbered.

The far west is in its iron age, as the east is in its golden. The iron age is a profane one, as the golden age is one of redemption. Every thing and every man is "out and out." A doctor who wears "store clothes" cannot get much business. Dignity is at a discount. A man must "rustle" or go under; vigor and roughness are in the air; even the meek will hardly move unless they are worn out.

Here the minister has a field where he can study human nature pure and simple; fight undisciplined sin, preach in a theatre when it is not needed for vulgar shows, and have it all end to bend with Apollyon.

The human material is like the mineral ore, much of it very rich. Good men and good machinery are the need of the hour; the tendency so far is rather to the latter. The pure gold of character is the real wealth of any country, but it is not so diligently sought as the grosser articles.

The West is to be shaped, morally, for better or for worse. The Roman Catholics are making extensive and far reaching plans for the upbuilding of their church. Protestants are on the alert, but hardly as vigorous and well organized.

A long growth has about determined the condition of Christianity in the East: in the West and the uneducated South it is undetermined. Few realize how much more interesting, stimulating and paying is effort in an open field like the latter, than in the fixed position of the former. There is like a steady bombardment between old forts and new ones, sound away forever with little change; but here, in the West and among the semi-barbarians of the South, it is like a dashing attack in the open; there is earnestness, response, a lack of immaculate property, but plenty of straight out manliness; not so much "respectability" as aspiration and push for better things among difficulties and temptations in which men sometimes fail, but they rise up and go at it again. The heroes are in the iron age.

The workers get small pay in the west, but are ready and hopeful for the next.

A good way to study geography etc., is to "pump" people when traveling. Most of my information about Idaho is gathered from a chance acquaintance on the cars, who represents Idaho in the great Denver industrial exhibit this summer.

I met a man who had lived twelve years in Nevada, and was moving to Dakota.

Nevada ought not to be a state, it has about 10,000 people, and is thinning out; mining is not very satisfactory there. It was made a state for political or party reasons; the folly of it is more and more apparent.

A day at Denver is interesting; the city is a marvel of the buildings and of municipal perfection in every way. One comes to it in its most splendid as an Eastern pilgrim to the shining city of his prophet. It is a surprise among the wild mountains. By contrast, it seems magnificent. The good and the ugly are both there. The habitation of western resources was first: minerals prevailed; but the grain made no mean show. The town of "Greely" through which we passed, has a prosperous well watered look. I could not but notice in the cars, a lady returning East after several years in Denver, with a robust husband and two splendid looking boys; her head was

boned up from neuralgia. The climate is better for weak lungs than for weak nerves; excellent for men and children; often too stimulating for women.

An excellent author on Western matters, an official, whose name I am not permitted to give, an accidental railroad acquaintance who had lived in Hilo, Hawaii, said that the law allowed the public timber to be used for mining and domestic purposes, for private use only; but that it was being extensively cut to sell. First, the saw mills picked out the best timber, next railroad ties were taken; beams and joists of them in the head waters of the Platte river, to be floated down; then the coal barrens fished up everything, and left the country a desert.

The mountains of Colorado, and other states and territories, are full of forests, which hold the snow far into the summer, yielding it up gradually as the heat penetrates the cool shade, creating higher water as the summer advances, so that irrigation is possible when exposed directly to the sun, soon melts, and produces spring freshets such as have not been known before, and crops are damaged.

But the miners of Leadville and other great centres must have charcoal, at the expense, however, of the country watered by the South Platte and northern Arkansas river, which are beginning to feel the spring freshets and summer droughts. This means more silver but less cars; one form of wealth at the expense of another. Shall grain or gold be fostered?

To offset this, and to improve the arid region, government has authorized the experiment of two artesian wells in Eastern Colorado and one in Dakota. If successful they may marvellously change the aspect of the arid and lead regions. Water would make even the "bad lands" blossom like the rose, and open to settlement and to the poor of all nations millions of acres now out of use.

There is, however, a steady "marching on" of the edge of frontier settlement beyond the line of sufficient rain. The Eastern portion of Kansas, Nebraska and Dakota, are well watered and good for agriculture; but the western half of each is dry and best adapted to grazing; crops are uncertain, farmers can count on about one in three.

We are riding, at this moment, through Western Kansas, viewing some fine fields of corn, the best crop in three years—which emigrants have ventured into, risking far more than farmers in the Eastern part of the state, on account of the scarcity of rain.

We pass an interesting settlement of Menominites, a thrifty class of non-combatants, exiles from Russia, invited there long since, by the czar, under promise of exemption from military duty, but in being of late forced upon them, they have sold out and emigrated in Kansas numbers to this country, settling in Kansas, Dakota and elsewhere. They have sold out their Russian goods except corn, not in poverty, but have begun here in the simplest, wisest way to build up. They spend the summer on their farms, but winter in their villages. America will gain by Russia's folly.

My companion says that the "timber culture act" by which one hundred and sixty acres may be taken up, provided a man has, during ten years, cultivated eight acres of timber, is taken advantage of in many cases, by a speculation, to take to somebody else. The real homesteader who takes land along side, does a good thing, but the law allows two years for plowing etc. and the speculator usually holds it, does nothing, and sells, if he can, at an advance within the two years.

The cars are crowded, noisy and patriotic, for the "Grand Army of the Republic" meets in Topeka to-morrow, to be addressed by Senator Blaine, speaker Beyer and others; sixteen thousand ex-soldiers are expected and provided for. The citizens will open their houses, and the American flag will stream.

Eastern Kansas is wonderfully fertile: one hundred miles around Kansas City is a garden spot. The city stands on a bluff; on the river edge, are warehouses and heavy operations generally; above, a well laid out, undulating city, around which my drive, with a companion of college and earlier days, was interesting.

"How civilized and elegant these western cities are!" is the first thought of one who lives East, with a suspicion that they are going ahead of anything, but he speaks approvingly of what they are trying to do out West.

I stopped a day in St. Louis to see the Industrial School, connected with Washington University, of which Rev. Dr. William G. Eliot is president. The university was built by Dr. Eliot, and has become a great reaching power, for in its western civilization, the value of which is beyond all estimate.

St. Louis has nobly responded to the efforts of a noble man; what she has given to Washington University she will get back an hundred fold.

It is a many-sided institution. "Mary Institute" for girls, was inspired by a great sorrow, and is a model work of its kind. Wisely planned and managed, it has exerted great

influence upon thought and life of the whole circle of young women whom it reaches. The "Manual labor Training School" gives instruction in Mathematics. Drawing, the highest branches of a High School course, and instruction and practice is the use of tools.

The course of instruction is three years. Manual instruction is given on the Russian plan; that is, men are taught to make with their hands, those forms of wood and iron which enter into every article that can be made of these materials; just as girls learn the piano by playing exercises, not by playing tunes. When they are perfect at the exercises, they can play any tune. So boxing is taught, not by boxing, but by a series of motions involving all possible blows that can be given. So all named arts are best acquired.

This is the method of common sense, it is rapid, effective and superior to any other.

Prof. C. M. Woodward backed by Dr. Eliot is the heart of this department, and has made a splendid success of it. There is a large three story building filled with a great and costly variety of tools; lathes for wood and iron, forges, etc., and steam engine, all arranged in spacious shops; there are rooms for recitation and drawing. It was to open the day after I visited it. In September, in much improved condition. It is eagerly sought for. Prof. Woodward's soul was satisfied the day before, when he had to say to a rich man's son who wished to take a course of manual labor instruction: "There is no room for you." There are over one hundred in attendance.

It is no experiment. It is the nearest to perfection of the true method of training head and hand together I know of. The same plan is pursued, at the Boston School of Mechanical Arts, and at the school of trades in Concord, N. H. St. Louis school is far ahead of the one in Boston.

Our civilization demands this sort of thing. The trouble is that while people theoretically believe in practical education, they are not ready to throw large sums of money into it as they are with the old style colleges, which have a tremendous hold on the public mind. The best experimental people will have such schools when they will pay for them. Labor schools are the most expensive kind. They require two sets of teachers, one business skill, the other variety of material and of appliances of which ordinary schools are ever dream of. As in everything else, the better ad more complete the product the more it costs. You cannot say your year is over and take your money, but you must pay more for industrial education.

I may here remark that such a labor school as at Washington University belongs rather to high civilization. The student's personal support is assured by the accumulated savings of educated generations. There is nothing to do, but to go directly to the special work in hand.

At Hampton, for instance, and in like schools for like people, the bread and butter and clothes question, is primary if not paramount. They must have something to eat before they can be taught. So we pay them for their work instead of, as in St. Louis, being paid for what work we give them. We cannot make fancy or real articles; we must make carts, wagons, windows and door frames; building material, shoes, harness and tin ware; make horse shoes, and raise asparagus, cabbage, peas, potatoes, wheat and corn, that we can use for food. It is all up with us. In doing this, workmen learn much, not so thoroughly and nicely, and quickly, as by the Russian method, but perhaps better for the rougher life and experience of the south and west. A round character rather than mere technical skill is our point. The morale of the one is assumed, in the other it is to be created.

They wish to make a specialist; we wish to make a self-reliant man. They clasp tightly away at one as "heir of all the ages" to make him a little more perfect. We show from the raw material men who have come out of deep darkness and wrong, without inheritance, but of savage nature, the best product we can, and care as much to infuse it with a spiritual life and Divine energy as with knowledge of the saw, and plane, and hoe. Such work is full of inspiration and interest. It drags only because few appreciate the tremendous drain on the skill and resources required to convert any \$30,000,000 worth of labor rendered every year, into cash, to pay for the food that four hundred people eat and the clothes they wear. Many help; a few put in their thousands at the point of exigency.

There must be a difference in the educational methods of the races in our country. And years behind the whites in the line of development. It is fair to say they are below us!

At Washington, to arrange for fifteen more Indians, chiefly girls, for the rapidly pushing "Winona" Lodge.

Sept. 17th At Hampton again to push "Winona" Lodge. The building is a splendid tida of Indian and Negro students that threatens to be larger than ever this fall.

This mode our Western correspondence, unless our gallant escort through the Yellowstone Park, Maj. Hughes of General Terry's

staff will, as we are trying to persuade him to do, report the adventures of his party which left us at the Geyers, and found their way back to Fort Snelling through the Big Horn mountains, and via Fort Custer in the hope of game, which he would find there. It couldn't but be interesting with Jack Bean and Murray and his mules, and the trophies of Jack's unending rifle, taking the trail through that wild country.

The party scattered at Ogden. The "Purson" has returned to his post of duty near Bunker Hill; the South Carolinian maker of tea, is sitting on the Spanish Claims Commission, adjusting national differences; the Colonel, who came so near sliding into the depths of the Great Canon, is managing the affairs of the U. S. Court of Claims, happy with his "bales." The college boys after some serious sickness—perhaps they were too tender for such roughness—are back at their books, excepting one (who nearly split open his head in a mad plunge into the Yellowstone river after a wounded duck) who is traveling abroad for his health, and improving any opportunity of studying the methods of the industrial schools of the continent, hoping to bring back some facts or thoughts that will benefit our efforts in that direction.

S. C. A.

## FROM A SOUTHERN STANDPOINT.

We are happy to receive the following unalloyed testimony to the results of Hampton's work, from a Southern County Superintendent of schools, under whom many of its graduates have taught. Similar letters have frequently been received in the past, and we hope many more may be received in the future.

STANTON, VA. Dec. 15th, 1882.  
GEN. S. C. ARMSTRONG,

Dear Genl:

I have filled the position of County Superintendent of Schools for Augusta Co., Va., for four years. As a term of service is near its expiration, and I do not suppose I shall be retained, I take the liberty of this opportunity afforded me, by the reception of your report for the year ending June 30th, 1882, to thank you for what I conceive you have done for the education of the Negro race in our state and so far as I can, by my encouragement and approbations, to uphold your hands in so good a work. Since I have been in office, I have used all the inducements I could offer to get hold of your graduates, and year by year our number has increased, and wherever they have been located, there has been visible improvement in the tone of educational sentiment. These graduates, so far as I have noticed, have been mostly correct, been diligent in their business, and have made good progress with their schools. Their fellowers who nominally take the benefit Hampton has been to them, and with all right thinking people will do more to give them weight in any community than the most decided and bounteous political bias, whether in the direction of one party or the other. With great respect and with the kindest wishes of this season for you and yours; I remain, my dear Sir,

Your obedient servant,

CHARLES GRATTAN.

## FROM A VETERAN MISSIONARY.

One of the pioneer missionaries to the Sandwich Islands, enjoying a green old age, in the soft air of his tropical field of labor, sends a pleasant greeting with a generous contribution to the Southern Workman.

HONOLULU, Nov. 27th, 1882.

To J. F. B. MARSHALL,

Dear Sir:

Inclosed please find the sum of five dollars, for the Southern Workman. You may send me one copy for the year 1883, and the other four to some of your poor, but worthy graduates, and thus oblige.

Most truly yours,

LOWELL SMITH.

P. S. We are much interested in the Southern Workman, and regret that we are not able to do more.

It is very obvious that your Institution is doing a great and good work, both for the Africans, and also for the Indians of the United States of America. And we hope and trust that, through the co-operation of the American Colonization Society, some of your graduates may be long as missionaries to the dark continent of Africa itself.

We have recently mailed for you, Mrs. Marshall, a small pamphlet, which will give

you some account of our golden wedding, which took place on the 2nd of October.

According to a record in our old family Bible, I am eighty years old this 27th day of Nov. 1882, and Mrs. S. is seventy-three.

You are aware perhaps, that in 1863, we had a furlough from the Prudential Committee, to leave our work for one year—returning on a visit to our friends in New England, New York, and elsewhere, with the hope that such vacation would so reinvigorate our health, as to add ten more years to our mis-erced seventeen years; and for such that now appears, three more may be given us, before we go hence.

The bounds of course are set, over which we cannot pass. But we feel conscious that we are still doing good; instructing the ignorant, healing the sick, entertaining missionaries and evangelists, who are running to and fro, carrying good news, and glad tidings to the destitute.

Enclosed please find a picture, which I have just received from Mr. Montano's photograph gallery. If you do not recognize the original, please ask Gen. Armstrong if it reminds him of any person whom he saw when on a late visit to Honolulu.

Mr. Smith unites with me in Christian salutations to yourself and Mrs. Marshall, to General Armstrong, and to all co-laborers in that blessed Institution.

Most truly yours,

LOWELL SMITH.

## AFRICA OR AMERICA?

For many years the American Colonization Society has been laboring with monumental patience to effect the transmission of the colored people of the United States over the Atlantic and settle them in Africa. That the great majority of the members of this distinguished and venerable institution so actuated by motives of a noble philanthropic character was not for a moment in any manner wavering in its sacrifice have been important, their labor stupendous, their courage superb. Recently the great African scholar and linguist, Dr. Blyden, has thrown the weight of his extensive African knowledge in favor of the same movement. But the Society has made but slow progress against the tremendous force of opinion opposed to it. Its arguments have in every instance been doubly answered, its logical canons invariably evaded, and the voice, pen, and the eloquence of events have poured into the benevolent old craft of African Colonization, broad ridges of irresistible demonstration that has filled the air and enounced in language too clear for misinterpretation the wise ultimatum that the home of the American Negro is America.

Standing on Gumbie's Hill and looking down on the Fredericton works, we see hundreds of colored workmen busily engaged in the various occupations which such a scene of variegated labor demands. What would these rollers, hesters, roughers, etc. do if placed on the shores of Africa next April? What material compensation would be given them for the loss of their means of earning their daily bread or the interruption of mechanical education? In labor and in the provide books, schoolhouses and teachers for the great army of children who are now the beneficiaries of the free schools of the United States? What is there in her surroundings, her antecedents, or what does she point to in the future; what El Dorados does she contain, to warrant our pell-mell crowding upon her shores? Such a universal immigration would be one of the seven wonders of folly of the modern world.

Here is our home. Ours by the toil of our fathers and mothers, by the blood of our kindred, ours by two and a half centuries of wearying, unceasing, crushing, labor. Ah, the gray hairs of the venerable old men who have crossed with us the Red Sea of God's providence, and who tolled that ours might rest, who saved that theirs might spend, who were ignorant that theirs might be wise, these gray hairs we say, tell us it deeper than human language, that those whose heads they cover, have won for us a witness title to an imperishable inheritance. If any people have a right to a residence in the land of their birth, a right to be legalized by the Divine approbation and the acclaim of heaven and earth, they are the colored people of the United States. Inspiring the Romans after ten centuries of warfare driven from out the gates of Rome; or England after long ages of struggle for constitutional liberty remained to perpetual servitude in Siberia; the picture would not be more graphically sorrowful than the expulsion or the furling of the colored people from the United States.

Warren Hastings looked upon the beautiful estate that had been the pride of his ancestors but which he could not call his own, a resolve grew in his soul to devote life, time and talents to its recovery. Through a career almost unparalleled in vicissitudes and prodigies in interest, he adhered to that purpose, till the time came when he entered the old paternal home as lord and master. So let us

resolve that from the wreck of slavery we shall find a way "to rise in." Though not by the same methods, we can with the same resolution, be as successful as a race as he was as an individual.

We can do more for Africa in the United States than we can in Africa. The great consolation, sublime even in its darkness, may be called with extreme appropriateness a vast continental hospital with its hundreds of millions of unspecialized patients. It is our duty here to furnish medicine from the great dispensaries of this country, to raise up skilled and experienced nurses who can diagnose spiritual disease and prescribe for ignorance. It is our duty to send forth all the remedial influences possible to quicken into life and spiritual vitality the great Dead Sea of human existence that stretches in almost unbroken gloom from end to end of Africa. But to rush amidst the pestilence and become victims when our mission was to be saviors would be melancholy indeed. Firemen stand on the outside of burning buildings and fling water upon them instead of rushing into them and adding fuel to the flames.

Let us help Africa by staying in America, where we can render the most desirable assistance.—The Industrial Herald.

## WEALTHY COLORED PEOPLE OF ST. LOUIS.

Mr. Thomas was born in Nashville 50 years ago. In infancy, lost his mother Mrs. Rutgers, daughter of Feligius, the widow of Louis Rutgers, the heir of one of the wealthiest citizens of St. Louis, after whom one of the streets of the city has been named, and who was now the possessor of the Rutgers estate, which is estimated as worth in the neighborhood of \$300,000.

Mr. B. Hickman is the Nestor of colored lawyers in St. Louis, who runs the shop in the Leclaire Hotel, and who nearly forty years ago made smooth the chins of another generation in Barium's Hotel. His fortune is estimated at \$5,000.

Charles Bledsoe, a clergyman old veteran of sixty years, is another colored citizen who has managed to make money and keep some of it. He owns a saloon and billiard room on Charity Ave. It is said to be the largest colored establishment of the kind in the United States; also keeps a boarding house, and the net results of his industry foot up the respectable sum of \$30,000.

Charles Tyler, a carpenter and builder, has managed by strict attention to business, to roll an agreeable competence in the shape of a flourishing business and a nest egg laid of some \$50,000.

Charles Tyler, who runs a saloon for colored patrons on Eleventh street, is worth from \$25,000 to \$30,000.

Alfred White, who has been a steward on the river for nearly forty years has accumulated a fortune of about \$30,000.

Mrs. Laperdus, whose family is the most aristocratic in colored social circles, is reported to be worth over \$100,000.

Peter Nash a purser and room cleaner, has managed to save about \$15,000.

Mrs. Wm. Robinson, widow of the late Professor Robinson, who built the famous harbor shop, is worth from \$15,000 to \$10,000.

Felix Dora, a partner of James P. Thomas in the Lindell House barber shop, is the owner of \$15,000, most of which he made in the restaurant business at R. and L. Junction.

John H. Johnson, cashier in the custom house, has made some \$10,000, which he has judiciously invested.

Among the colored capitalists in a smaller way may be counted Frank Dorsey, porter of Cotton Exchange, who owns \$7,000; Charles Newton, principal of Colored school No. 3, 5,000; J. H. Hector, principal of Colored School near Biddle street, \$3,000; O. M. Waring, principal of Sumner High School, \$5,000; Arthur D. Langston, son of the United States Minister to Hayti and principal of the colored school at Rock Springs, \$5,000; W. P. Dye, whose saloon is the resort of the colored aristocracy, \$5,000; Rev. John Turner, \$10,000; Rev. John M. Wilkinson, \$5,000; Frank Robinson, barber, \$5,000.

In medicine, there is Dr. D. P. Jones regular practicing physician, a graduate of Nashville, Tenn. Medical Institute; in law there is Albert Burgess, graduate of Ann Harbor; who has the confidence of his race and the respect of his associates at the bar, while the newspaper business has James Wilson, editor and proprietor of the St. Louis Tribune; James Milton Turner and P. H. Murray, editors and proprietors of the St. Louis Advance, and W. H. Bell and A. J. Wagner, editors and proprietors of the Freeman's Journal.

All things considered, it must be admitted that financially and intellectually, the colored citizens of St. Louis are able to make a showing whose record cannot be but a source of pride to themselves and the race at large.

—The Industrial Herald.

## INCOMPETENT WHITE TEACHERS.

The evils justly complained of in the following letter must disappear in time from all the South as they have from the better parts of it, with the enlightenment and growth of public sentiment. The demands on all teachers, whether white or colored, are, are sure to increase and in the direction not of superficial show but of thoroughness, and character.

—Vs., Nov. 17, 1882.

My last letter to you was written at ———, where I taught school last winter and spring; I have a school this season only a few miles from home, so I walk to school and back home every day, which makes it much more pleasant than it was at ———, for then I could only get home about once in a month; my school is much smaller than the last one that I taught. I have only 28 scholars enrolled. But after the work season is over I shall have many more. The colored people here never had but one colored teacher before me, and it has been six years since they had one; during those six years the school has been taught by white teachers picked up here and there by the Trustees and appointed to teach the people's children much against their wishes. I am sorry to say that a great deal of wrong is committed by school trustees in various parts of the country in that particular direction; I do not mean to say that white teachers are not as capable of teaching as colored, but such white teachers as are put in colored schools are, as a general thing, men defective, morally, religiously, and not unfrequently in temperance. I am told by the people here that their last teacher rarely ever came to school without bringing a dry supply of whiskey, and if he failed to bring it when he came in the morning, he would go to the store at recess and get a supply there; such characters can not get employment as teachers with their own race; the white people will not allow them to come in their schools at all. But the Trustees think they are good enough for the colored people. If the colored people in the country could get good white teachers like those at Hampton, and who are interested in the improvement of our race, and who do not teach with a spirit of philanthropy feeling that they were engaged in a grand and noble work, we would have but little to complain about, but it is not so with our white teachers in the country; they care for little except their salary, and even in that they will often teach for lower wages than good colored teachers will teach for. Before I got the appointment to my present school, I applied for a school in another portion of the District and offered my services for \$25.00 per month, and a white man was present, and agreed to teach it for \$20.00 per month, so of course I didn't get it. When Hampton and other high schools are preparing and sending out good teachers every year to supply the colored schools, I think it is getting quite tedious these white teachers and fill their places with good and well trained colored teachers. I learn that Hampton has a good many scholars this term from ———, Co. It is a good thing, I am glad they are there, and hope they may do well. Remember me kindly to all who may know and ask about me. The papers you sent me last winter, I enjoyed very much.

I must close, wishing to hear from you soon.

I am yours respectfully,

G.

## PICTURE PAPERS.

We often laugh over the recollection of the discomfiture of a literary friend by a specimen of small news boy. Tired of the importunities of this young Arah, he put on a mock scowl, and solemnly said, "No use offering your papers to me my young friend, I don't know how to read." Quick as thought, the little monkey whipped out another paper from his pack shouting, "Take a Frank Leslie, sir—picture paper—suit to the meaneest capacity." It is needless to say that the reproach brought him "thrice his fee" from the literateur, amid an explosion of laughter from his companions.

And that is the glory of a good illustrated paper, to be suited to all capacities, and the enjoyment of all. There is no one with eyes who does not like pictures. In our reading room at Hampton they are a very great advantage, and we can hardly have too many. The illustrated papers are always in demand and constant use. This being the case, we are very glad to add to the number, the well known and long established Frank Leslie's—both the Weekly and the Sunday Magazine. The pictures are abundant, good and interesting, the stories of harmless and superior character, and the general articles instructive and bright. As the colored race gains in general education, reading of one sort or another is sure to flow in, and they will read what is made attractive to them. Every good and pure popular paper is a missionary to uplift the public taste and keep out an untold amount of evil.

# Teachers' Table.

## SORAPS FROM THE SCHOOL-ROOM.

I will own one is often at a loss, for just what to keep one division busy while another is sleeping. Perhaps one of the best things at work in our schools is the use of cards in fancy shapes. The idea was suggested by an associate teacher, who collected all the various forms she could get—birds, fish, boots, leaves, rocks, stars, and the like. This she did not find much trouble in doing, as many of the stores issue these cards for advertisements, then the children added very materially to the work, many adding their ditty in the general collection.

As a preliminary exercise the children watched the teacher trace the outline of her hand on the board in crayon; then they were allowed to follow with the pencil the outlines of their tiny hands on their slates.

The idea having been given, the cards were distributed, one child receiving a card in the form of a fish, or a bird, or a boot. "Make as many as you can," was the general direction to the class; when they were left to themselves, while a recitation was carried on with another division. A few pleasant remarks when glancing at the results delighted the children. "Why, you are a little fisherman." "Do you keep a boot-store?" You are a baker and make star-cakes."

This exercise gave so much pleasure that gradually pieces of card and wood in geometrical shapes were added to the stock. These the children used as they had the card forms, only that they learned to make a symmetrical arrangement about a center. These designs, (for they are really designs) figure to their childish imagination as plans for marble floors, all-cloth, patch-work, etc. It was really wonderful, the clever designs that these little folks produced from what seemed the most meager material. Frequently a child would show from the result on his slate that he had little or no idea of symmetrical arrangement. But when both a good and poor design, with the square or circle for a unit had been drawn upon the board, he was led to see that there was no beauty in an arrangement of squares and circles scattered over the slate promiscuously and that it was possible to arrange in such a way that the result would be pleasing to the eye.

This fall, remembering how few people can readily recognize the common trees of the woods and roadsides and call them by name, incidentally to the regular work with plant-lessons, I called attention to the leaf of this or that particular tree. I had already made a collection of the leaves of the oak, maple, elm, etc, by pressing them between old newspapers—these leaves were quite green, yet they pressed nicely. After the names had been taught, the children were allowed to take the leaves, laying them on the slates and marking round the outline. They were directed to hold the leaves up to the light, that they might see the venation; when this had been done, the mid-rib veins and veinlets were drawn in the leaves outlined on the slates.

I will admit some of the attempts were the crudest, roughest imitations imaginable, while others were decided masterpieces, yet many were most excellent, and the children took great interest in the work, noting the trees on the way to and from school, and asking very questions showing that their eyes had been opened for a peep at another of Dame Nature's wonders which are spread around us.—Primary Teacher.

## ADVICE FROM DR. RUFFNER.

Hampton students and graduates will be especially interested in the following excellent advice to a young student, which our friend and correspondent, Mrs. Orra Langhorne, kindly sends us from a letter from our late Honorable State Superintendent of Education, Dr. Ruffner, to a young friend and relative.

Study the details of English composition, use of capitals, paragraphing, width of lines apart, size of paper in proportion to handwriting, letter writing, purity and perspicuity of language, etc. What are all acquisitions worth, and all mental culture, without the ability to express what is in your mind in a clear, concise, vigorous and pleasant style? I write a great deal, and subject every page as a whole, its general appearance and properties, and every part, down to the minutest detail, to some critical test. Try constantly to improve your handwriting, especially on the point of legibility. Drawing is a fine exercise as well as a valuable art. Now, my dear friend, do not respect common. You need less. But the points on which I have dwelt, are those where girls generally fail, owing to their imperfect method of education.

# Health and Humanity.

## TEN LESSONS ON KINDNESS TO ANIMALS.

### FOURTH LESSON.

All Father who on Mercy's throne,  
Heard's Thy dumb creatures' faintest moan—  
Thy love to us, and ours shall be  
Returned in deeds to thee and Thee.

Rev. H. B. Carpenter.

(To be read to pupils by Primary Teachers.)

On one of the most travelled roads, just out of the great city of London, England, at the foot of a hill is hang this sign—

"HORSE. PETITION TO HIS DRIVER."

"Up the hill whip me not,  
Down the hill hurry me not,  
In the stable forget me not,  
Of hay and grain rob me not,  
With sponge and brush neglect me not,  
Of soft dry bed deprive me not,  
When sick or cold chill me not,  
With bit or rein jerk me not,  
And, when angry, strike me not."

To which should be added—

With tight check rein, choke me not,  
And do not cover my eyes with blinders."

Man kind can never pay the debt they owe to the horse. Without him, our carts and wagons, and carriages, and saddles, and sleighs in winter would be useless. We would be compelled to ride oxen, or go on foot. Horses are now found in most parts of the world, and in all climates, receiving in return only their simple food and water, with shelter from the weather sometimes in very cold stables in winter and very hot stables in summer. They require plenty of wheat and straw for food, and clean water to drink, and among the children, whom they are very careful not to harm. The Arabians never whip them.

Horses, like human beings, are sometimes sick and sometimes well, sometimes strong and sometimes weak. They live, when kindly treated, thirty to forty or more years, but, like human beings, they require plenty of wholesome food and water, also regular exercise, fresh air, sunlight, and clean stables. Their stomachs are small, and to keep them in health they should be fed and watered often. In Europe you will oftentimes find drivers giving their horses slices of bread.

Some persons are very cruel to their horses by letting them go a long time without food and water. Some persons give their horses so little to eat that the horses become very poor. In the little village in Massachusetts near Boston, where I live, a man who pretended to be respectable kept his poor horse half starved; but one day the village boys got together, and each contributed five cents, and they bought a bag of oats, and that night they went to the man's barn and gave the poor horse a good feed. The next day the boys left the horse a label on it,—"Presented by the Society for the Prevention of Cruelty to Animals." After that the poor horse fared better.

Horses know when they are badly treated. I need to drive a very spirited, but perfectly safe, horse which I never struck with a whip. One day when the horse was tied at a neighbor's, some young people thought it would be a good joke to have a free ride. The horse would not have minded that; but the first thing they did was to strike him with the whip. He gave them a good fast ride, and when they were well, and at the next street corner he upset the carriage and emptied them out; then he ran a few rods further, and then stopped and commenced quietly eating the grass by the side of the road. Those young people received a lesson on the importance of treating an intelligent and spirited horse kindly which they will never forget.

I used to drive another horse as spirited as the one I have just told you about, and I always treated him kindly. One day he was trotting down a steep hill near Boston, with a heavy two-seated carriage, when both the hold-backs broke, and the carriage came upon him. He stopped almost instantly, and held the carriage up; we could get out. Do you think if he had been used to being whipped and cruelly treated, he would have done that? (The Horse continued in next lesson.)

### SOME QUESTIONS.

(Others to be added by teachers.)  
Where was the horse's petition hung?  
What was the horse's petition?  
What should be added to it?  
What should be compelled to do if there were no horses?  
What say do the horses get for their labor?  
Where do the horses live in Arabia?  
Do the Arabian, whip them?  
Do horses vary in health and strength, like men?  
Why should they be fed and watered often?  
What do their drivers often give them in Europe?  
What did the boys in Massachusetts will do to the man who half-starved his horse?  
What can you tell about the horse that ran away?  
What about the horse when the hold-backs broke?

# Agricultural.

## KEEPING ONE COW.

The management of a single cow differs from that given the herd in the dairy, as she usually keeps under the care of the whole family, and possesses a monopoly of attention and privileges that cannot be afforded under the wholesale system. She is the dependence of the poor farmer, and her place cannot be filled by any other animal. But it is quite a business to so manage the family cow that she may be of the greatest service, but how to furnish her with green food is commonly an important question. Where pasture can be had at a small cost, advantage is usually taken of the opportunity, but there are times and places in which no such opportunity occurs. If the family possesses a small piece of ground, there can be grown a large variety of green feed, for early in the season a crop of peas can be grown for the family, the vines given the cow, and the whole taken off in time for some other crop. Small places are made rich in each instance when all the manure is given them, and for that reason the seeding down of one crop before the first is removed is but the practice of a high system of farming, to which the small farmer and family cow have contributed more than anything else, for it has compelled the adoption of the best methods in order to attain success. Green corn, clover, and Hungarian grass, if properly folded, can be cut several times, if only folded is wanted, and Hungarian grass will spring up as fast as it is cut down. A few cabbage put away in the fall will help the cow along in winter, and a large crop of carrots, turnips and beets, enough for one cow, can be grown on one-fourth of an acre, say nothing of the crop of millet that can be quickly grown and stowed away late in the fall. A Jersey cow or grade Jersey, is small, and better adapted for a family cow than any other breed, if butter is the desideratum; but the Holstein or Ayrshire is better for milk, and it is cheaper to keep a good cow than a poor one. The owner of a farm of one acre in New York State reports that his cow gives him about five hundred pounds of butter every year, but it is, by good feeding, and attention that she does so; and while he claims that the profit from her is large, he admits that his cow would be an expense if she were an inferior animal. It is best, therefore, to be willing to pay for a good cow. The outlay, though large at first, will bring in a quicker and surer return than a small investment in a scrub. As the family cow receives kindness as a general thing from all, the lesson to dairy-men is that by carefully managing the herd, and treating each cow with the best care, there is no reason why the profit may not proportionately be as great. This soiling system is the family plan on a wholesale basis.—Phila. Record.

BROAD TIRES.—A farmer who has used a wagon with broad tires on wheels long enough to ascertain their relative value as compared with narrow tires, writes: "Four inch tires will carry two tons over soft ground with greater ease than a two-and-a-half inch tire will carry one ton. The wheels are not so much strained by stones and rough tracks on the road, and the road is not cut up, but, on the contrary, is packed down and keeps smooth. The prevalent idea that the draft is increased by widening the tire is altogether baseless; on the contrary, a wide tire reduces the draught. The extra cost of the tire is repaid many times over every year in the extra work that can be done by a team."

[The Farmer's Review, of Chicago, Illinois, publishes the above item. We have long thought that broad tires on our wagons and cart-wheels will lessen draught, and improve the roads by packing the surface. Why do not our wagon and cart-makers adopt the idea, and why do not our farmers demand that change? The common roads of Virginia are bad enough, all know; and if broad tires will improve them, and at the same time lessen draught, they should be universally used.—Ed. SOUTHERN PLANTER.]

A PRETTY WINDOW ORNAMENT.—A hanging garden of sponges is a very pretty window ornament. Take a good-sized sponge and saw it full of rice, oats, or wheat, placing it for a week or ten days in a shallow dish containing water. The sponge will absorb the moisture, and the seeds will begin to sprout before many days. When this has fairly taken place, the sponge may be suspended by a cord from a hook at the top of a window, so as to swing free, where it will get a little sun. It will thus become a living mass of green, and require but little moisture.

## HORSFORD'S ACID PHOSPHATE.

AS A REMEDY FOR POOR BLOOD.  
Dr. J. W. Smith, Wellington, O., says: "I have used it advantageously in impaired nervous supply."

# Home.

## WHY A KEROSENE LAMP BURSTS.

BY A CIVIL ENGINEER.

Girls, as well as boys, need to understand about kerosene explosions. A great many fatal accidents happen from trying to pour a little kerosene on the fire to make it kindle better, also by pouring oil into a lamp when it is lighted. Most persons suppose that it is the kerosene itself which explodes; that if they are very careful to keep the oil itself from being touched by the fire or the light, there will be no danger. But this is not so. If a can or a lamp is left about half full of kerosene oil, the oil will dry up—that is, "evaporate"—a little, and will form, by mingling with the air in the upper part, a very explosive gas. You cannot see this gas any more than you can see air. But if it is disturbed and driven out, and a flame reaches it, there will be a terrible explosion, although the blaze did not touch the oil. There are several other liquids used in houses and workshops which will produce an explosive vapor in this way. Benzine is one; burning fluid is another; and naphtha, alcohol, ether, and chloroform, may do the same thing.

In a New York workshop lately, there was a can of benzene, or gasoline, standing on the floor. A boy sixteen years old lighted a cigarette, and threw the burning match on the floor close to the can. He did not dream there was any danger, because the liquid was corked up in the can. But there was a great explosion, and he was badly hurt. This seems very mysterious. The probability is that the can had been standing there for some while, and a good deal of vapor had formed, some of which had leaked out around the stopper and was hanging in a sort of invisible cloud over and around the can; when the match struck it, it exploded.

Suppose a girl tries to fill a kerosene lamp without first blowing it out. Of course the lamp is nearly empty or she will not care to fill it. The empty space is filled with a cloud of explosive vapor arising from the oil in the lamp. When she pushes the nozzle of the can into the lamp at the top, and begins to pour the oil, running into the lamp, fills the empty space and pushes the cloud of explosive vapor up; the vapor is obliged to pour out over the edges of the lamp, at the top, into the room outside. Of course it strikes against the blazing wick which the girl is holding down by one side. The blaze of the wick sets the invisible cloud of vapor afire, and there is an explosion which ignites the oil and scatters it over her clothes and over the furniture of the room. This is the way in which a kerosene lamp bursts. The same thing may happen when one pours the oil over the fire in a range or stove, if there is a cloud of explosive vapor in the upper part of the can, or if the stove is hot enough to vaporize quickly some of the oil as it falls. Remember, it is not the oil but the invisible vapor which explodes. Taking care of the oil will not protect you. There is no safety except in the rule: Never pour oil on a lighted fire or into a lighted lamp.—Educational Journal.

### WHY?

We want a good reason for everything we do, or decline to do. Let us not understand the reasons for our commands and prohibitions. Those who use it plead in its favor that it is a pleasure, it is social custom, that it is something to the nerves.

1. It is a filthy habit. All agree in this, even those who are most addicted, from the lowest class up to the polished gentleman and Christian. But God commands all uncleanness and filthiness. Eph. 5:3, 4.
2. It is contrary to nature. No one has a natural taste for it; the taste is acquired with difficulty, through sickness which lasts for days.
3. It is an expensive habit. One best understands the amount of this daily leakage by trying to stop it.
4. It is a poison; stronger than arsenic or strychnine. Those who say it is not poison are careful not to eat it. They never cook it like cabbage, put it into soup or celery, or eat it in salad as we do lettuce. On the contrary those who chew it are careful not to swallow it, but to spit out all the juice, or if they smoke it they draw the smoke into their mouth and throw it out again.
5. It ruins the mind as well as the body. This is more noticeable when the user is obliged for a season to do without it. He is irritable, cross, tremulous, and sometimes delirious. The soporific influence, so often adduced in its favor, is only temporary, like the stupor furnished by alcohol. The reaction on the nervous system is disastrous.
6. Are not these reasons sufficient to deter at least a Christian from using the filthy weed? Will he, can he, dedicate the body, weaken the brain, poison the blood, and so unfit himself for the noble end of his existence—to glorify God and enjoy Him!—Buckeye.

HORSFORD'S ACID PHOSPHATE

FOR OVERWORKED PROFESSIONAL MEN.

Dr. CHAS. T. MITCHELL, Canandaigua N. Y., says: "I think it a grand restorer of brain force or nervous energy."

Beard at Old Point Comfort.

**WARD-AT OLD POINT COMFORT.**  
Persons seeking change of climate and moderate prices, at a select private boarding house pleasantly situated on the Chesapeake Bay, and opposite the entrance of the celebrated Fort Monroe.  
Address, Mrs. S. P. KATON.

Rev. Bishop Cheney, D. D.  
James Nevins Hyde, M. D., Chicago, Ill.  
Mrs. Wm. & Choate, New York City.  
Geo. W. Read, 15 Garden Place, Brooklyn.  
Geo. E. Read, 5 Pine St., New York.

**RENT** not, life is sweeping by, and dare before you die, something mighty and sublime have behind to conquer time. \$25 a week in your own town. No rent free. No risk. Everything new. Capital not required. We will furnish you everything. Many are making fortunes. Ladies make as much as men, and boys and girls make great pay. Reader, if you want business at which you can make good money, write for particulars to H. HALLATT & Co., Portland, Maine.

Farmers and others desiring a general, lucrative agency introduce, by which \$25 a week can be earned, send address at once, on postal to H. C. WILLIAMSON & Co., 100 and 107 Fulton Street, New York.

HORSFORD'S ACID PHOSPHATE  
LEMONADE.

Dr. C. C. OLMSTEAD, Milwaukee, Wis. says: "I use several bottles of my family, annually as 'lemonade'; I prize it highly."

The Springfield Republican,  
Weekly Edition.

THE NEW ENGLAND NEWSPAPER.

A Comprehensive, Progressive, Independent Journal.

News, Politics, Literature, Social, Interests and General Affairs.

An Admirable Weekly Review of American Life.

(Established in 1854 by Samuel Bowles.)

THE WEEKLY SPRINGFIELD REPUBLICAN is a convenient, cheap, and reliable source of information. It contains the best features of THE DAILY AND EVENING REPUBLICAN, with re-written and carefully classified news summaries and comfortable or rural matter.

It is a valuable general newspaper for the family, for the farmer and for the active business or professional man who cannot keep pace with detailed daily issues, and especially for New Englanders at home and abroad.

**SUBSCRIPTION:** Four cents a copy; 75 cents for six months; \$1.50 a year, in advance. Single copies, one cent. Trial subscriptions 50 cents for two months.

A special cash commission allowed to Postmasters and others selling the paper. Specimen copies sent free on application, and all subscription paid, unless sent in advance.

THE HYGEIA HOTEL,

AS BEING THE MOST IMPROVED.

OLD POINT COMFORT, VA.

Situated upon hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. Mail, landing only twenty rods from the Hotel, which is substantially built and comfortably furnished; has two Otis hydraulic passenger elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; water; rooms for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or any public building in the country. As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanitarium. Here during the cold weather over 15,000 square feet of the spacious verandah (of which there are over 35,000 square feet enclosing the house on all sides) encased in glass, enabling the most delicate invalid to enjoy the sunshine and fine water view without incurring the slightest exposure. The climate of Old Point Comfort is unequalled for salubrity. *Malaria* fever being absolutely unknown. The record of the Meteorological Observatory for the past ten years show an average temperature of 60 deg., 74 deg., 70 deg., in summer; 70 deg., 50 deg., 40, in autumn; 45 deg., 44 deg., 43 deg., in winter; and 48 deg., 22 deg., 63 deg., for spring. This invigorating atmosphere and mild temperatures being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful specifics of the Hygeia.

EMANCIPATION

ITS COURSE AND PROGRESS FROM

1481 B. C. TO A. D. 1875.

BY JOS. T. WILSON.

In addition to the history of Emancipation, it also contains a review of President Lincoln's Proclamations, the XIII amendment, and the progress of the freed people since Emancipation. Also a history of the Emancipation Monument, in Lincoln Park, Washington.

It is a work that has long been needed, and contains much valuable information and data that can only be obtained by long and laborious research through voluminous histories and cyclopedias. The arrangement is such that reference can be made in as much time to the date of emancipation in any country on the globe.

The Review of President Lincoln's Proclamations and the XIII amendment, is valuable, showing as it does, the opinions of the different leading thinkers and writers on the subject of the time.

The book contains 212 pages; printed in large, clear type, on heavy white paper, and is handsomely bound in full cloth. Price \$1.50—post paid.

NO. 3.

WILLIAM LLOYD GARRISON.

[From Harper's Weekly]

## WILLIAM LLOYD GARRISON.

For this fine picture of the grand old reformer, and pioneer in the anti-slavery cause, William Lloyd Garrison, we are indebted to our friends Messrs. Harper Brothers. All who share in the benefits of emancipation should treasure his name, and the history of his life devoted to its cause. With the fading out of sectional and party passion, as time carries us further and further from the war, and, from all standpoints, things assume their true perspective, the character of Garrison will rise to universal esteem, till it is venerated alike by North and South, as Washington is honored in England as in America. Mr. Garrison was born in Newburyport, Massachusetts, on the 12th of December, 1804. Like many the nation delights to honor, he began life a poor boy, apprenticed first to a shoe-maker, then to a cabinet-maker, and at last, fortunately for his desire to educate himself, like Benjamin Franklin and Horace Greely, to a printer. When but sixteen, he began to write anonymous articles attracting

attention. In 1829, he began his career as a reformer, by delivering an oration in Park street church, Boston, soon after becoming joint editor with Benjamin Laundy, of the "Sentinel of Universal Emancipation," published in Baltimore. In that chief centre of the domestic slave trade, he did not hesitate to proclaim the rights of every man to freedom, and so vigorously denounced the infamy of a Newburyport shipmaster, who carried a shipload of slaves from Baltimore to Louisiana, that he was convicted of libel, and thrown into prison. Henry Clay was about to pay his fines when they were paid by Arthur Tappan of New York. Leaving the South, Mr. Garrison returned, Jan. 1, 1831, the first number of *The Liberator*. Its motto was: "My Country is the world; my Countrymen are all Mankind." His first editorial began thus: "I am in earnest, I will not equivocate; I will not excuse; I will not retreat a single inch, and I will be heard." He kept his word in every particular. His word was always heard by willing and unwilling

hearers, in the advance of every out-spoken effort for universal liberty. In 1843, he was chosen president of the American Anti-Slavery Society, and held the office for twenty years, till he laid it down triumphantly, his great life work accomplished. Still true to his broad motto, one of his last public efforts was an eloquent protest against the anti-Chinese policy. He was an earnest champion of the rights of woman, and in all his experiences in the anti-slavery struggle, in one of which he was nearly killed by a mob in Boston, he owed much to the sympathy and encouragement of his lovely and beautiful wife, of whom he said, "on no occasion, however perilous, did she ever counsel a less personal exposure, or a more moderate course of action on my part. On the contrary, it was her desire that I should at all times be firm, courageous, and true to my highest convictions, and I all the more bless her memory for a co-operation that was so essential to my domestic tranquility and public service." She died in 1876, Mr. Garrison died on the 24th of May,

1879, in New York city, to which he had come for medical treatment.

One of the moral lessons for all to be drawn from the life of this noble reformer, was thus finely drawn by the English philosopher, John Stuart Mill.

"If you aim at something noble, and succeed in it, you will generally find that you have succeeded in not only that alone, but a hundred other good and noble things which you never dreamed of will have been accomplished by the way, and the more certainly the sharper and more agonizing has been the struggle which preceded the victory. The heart and mind of a nation never are stirred from their foundations without manifold good fruits. In the case of the great American contest these fruits are already great, and are daily becoming greater. The prejudices which breed every form of misery—of which there was a plentiful crop in America—are rapidly melting away. The chains of proscription have been broken. It is not only the slave who has been freed, the mind of America has been emancipated. The whole intellect of the present day has been set thinking about the fundamental question of society and government, and the new problems which have to be solved, and the new discussion which have to be encountered are calling forth new activity of thought. A great nation is saved, probably for a long time to come, from the most formidable danger of a completely settled state of society and opinion—intellectual and moral stagnation."

## FREDERICK DOUGLASS.

BY ORRA LANGBORN.

Frederick Douglass, the foremost man of the African race in America, was born in Talbot county, Maryland, about the year 1817. Mr. Douglass has recently published his autobiography, telling the instructive story of a most eventful life, and comprising also the record of a long and very important period of our national history. This little sketch, taken mainly from Mr. Douglass's narrative, is designed for the large class who have not time or opportunity to read the book. It would be well for every American youth to read the interesting story of the man who, born and reared a slave, has by force of talent and perseverance surmounted difficulties, become one of the prominent citizens of the republic, worthy of the high positions which have been entrusted to him.

Douglass was born on the great estate of Col. Lloyd, but was the slave of Capt. Anthony, the manager of the Lloyd property.

In regard to his parentage he says, "Of my father I know nothing. My mother was a tall, finely proportioned woman, of dark glossy complexion, with regular features, and amongst the slaves was remarkably sedate and dignified in her bearing. The first experience of life began in the family of my grandmother and grandfather, Betsy and Isaac Bailly. From certain circumstances, I infer that my grandmother was held in high esteem, for higher than was the lot of most colored persons in that region. She was a good nurse, and a capital hand at making nets for catching shad and herring, and was withal a famous fisherwoman. I have known her to be for hours in the water, seine hauling. She was a gardener as well as a seine-hauler, and remarkable for her success in keeping seedling sweet potatoes in winter. She had gained the reputation of being "born to good luck." In planting-time, grandmother was sent far in all directions, simply to place the seed potatoes in the hills, for superstition had it that her touch was needed to make them grow. This reputation was full of advantage to her and her grandchildren, for a good crop brought her a share of the harvest. Whether she was a field service, or because she had so faithfully discharged the duties of her station in early life, I know not, but she enjoyed the high privilege of living in a cabin, separate from the quarters, having only the charge of the young children and the burden of her own snapper imposed upon her. My grandmother's five daughters were hired out, and my chief recollections of my mother are of a few hasty visits, made in the night, on foot, after the daily tasks were over, when she was under the necessity of returning in time to respond to the driver's call to the living in the early morning.

Living thus with my grandmother, whose kindness and love stood in place of my mother's, it was some time before I knew myself to be a slave. I knew many other things before I knew that. The little cabin had to me the attractions of a palace. Its fence-railled floor—equally floor and bedstead—upstairs, its clay floor down stairs, its mud and straw chimney, and windowless sides, this ladder stairway, and the hole so strangely dug in front of the fire-place, in which sweet potatoes were kept in winter, were full of interest to my childish eyes. It was not long, however, before I began to learn the sad fact that this home of my childhood belonged not to me, but to a dear old grandmother, but to some one who lived a great way off. I learned, too, the saddest fact that not only the house and lot, but that grandmother herself and all the little children around her belonged to a mysterious person called "old master." Thus early did clouds and shadows begin to fall upon my pathway.

Capt. Aaron Anthony, for such was the title of my old master, was really a man of some consequence. He owned several farms in Tuckahoe, was the chief clerk and butler on the home plantation of Col. Lloyd, had overseers as well as slaves on his own farms, and gave directions to the managers on the Lloyd estate, which was upon Nyo river, and was one of the largest, most fertile and best cultivated in the State.

I learned that this "old master," whose name seemed over to be mentioned with fear and shuddering, only allowed the little children to live with grandmother for a certain time, and that as soon as big enough they were taken away to live with old master himself. These were distressing revelations indeed. I wished it were possible I could remain small all my life, for grandmother was all the world to me, and the thought of being separated from her was a most unwelcome suggestion. But the time came when I must go. The distance from our cabin in Tuckahoe to Col. Lloyd's home place was full twelve miles, and the walk would have been too severe for me, but that grandmother afforded me some relief by carrying me occasionally on her back. She was a woman of power and spirit, remarkably straight in figure, elastic and muscular in her movements. My weight seemed hardly to be a burden to her.

We set out on a beautiful summer morning and it was not until the afternoon that we reached the much dreaded end of my journey. I now found myself in the midst of a group of many children of all sizes and colors, black, brown, copper-hued and nearly white. After laughing and yelling around me, and playing all sorts of wild tricks, they asked me to go out and play with them, which I refused to do. Grandmother looked sad, but patting me affectionately on the head, she told me to be a good boy and go out with the children. "They are kin to you," she said, "go and play with them." She pointed out to me my sisters Sarah and Eliza and my brother Perry. Brothers and sisters were at once in blood, but slavery had made us strangers. At once I went out with the children, and stood looking at the games of the others. After a while one of them exclaimed, "Fed, Fed, grandmammy gone." I could not believe it, but fearing the worst, I ran into the kitchen to see for myself, and it was indeed gone, far away and clean out of sight.

Almost heart-broken I fell upon the ground, and wept a boy's bitter tears, refusing to be comforted. My brother gave me apples and peaches to console me, but I threw them away. It was now late in the afternoon, and the day had been exciting and wearisome.

I sobbed myself to sleep, and its calm was never more welcome to any wounded soul than mine.

This occurred when I was less than seven years old, and was my first introduction to the "realities" of the slave system. For many years after this I was left to the tender mercies of a slave woman, in whose charge the children belonging to Capt. Anthony were placed, on the Lloyd plantation. Aunt Katy was a good cook and very industrious, which gave her a strong hold upon our master. As a mark of his favor, she was the only woman among his slaves permitted to keep her own children about her. She was ill-tempered and cruel by nature, and was often feeding in her brutality even to her own children. Cruel as she was to her own offspring at times, she was not destitute of maternal feeling, and in her desire to satisfy their wants, she often starved the other children under her care. The allowance made for us consisted of coarse corn meal, not very abundant in quantity, and I was frequently stinted of my share by the hard-hearted old woman. I have been so stunted with hunger that I would dispute with the dogs and cats the crumbs and small bones shaken by the house-girl from the table cloth. I thought it a great thing to be allowed to dip my bread in water in which meat had been boiled. The skin of rusty bacon was a positive luxury to me. One day I had offended aunt Katy, I forgot how. My offenses in that quarter were numerous, and their magnitude depended upon her mood. She had taken her usual way of punishing me, making me go all day without food. For a while after my companions had dinner I bore up pretty well, but as the day wore on, I could stand it no longer and cried bitterly. Sundown came but no food; in its stead the terrible threat from aunt Katy that she would starve the life out of me. Brandishing her stick, she whipped the slices of bread for the other children and put the loaf away, muttering the while savage designs upon me. I went awhile, and then crept in the corner of the big fireplace, too hungry to go to sleep. Just then I caught sight of an ear of Indian corn on a shelf. Watch my chance I got it, shelled off a little and put it back again. At the risk of getting a cruel beating from Aunt Katy I put the grains of corn in the hot ashes. When it was roasted, I arranged it in a clever little pile upon a stool. I had hardly begun to eat it, when who should come in, but my own dear mother. The scene which followed is beyond my power to describe. The friendless, hungry child, in his extreme need found himself in the protecting arms of his mother. In a manner, I shall never forget her expression, when I told her Aunt Katy said she would starve the life out of me. There was deep and tender pity for me, an fiery indignation for Aunt Katy at the same moment, and while she gave me a large gingerbread, she read Aunt Katy a never-to-be-forgotten lecture. But my triumph was short. I fell asleep and waked in the morning to find my mother gone and myself at the mercy of the old virgin of the kitchen.

My mother had walked twelve miles to see me, and had to go over the same distance again before sun-rise. I do not remember ever seeing her again. Her death soon after this ended the little communion between us. I have since learned that she was the only one of all the colored people in Tuckahoe who could read. How she acquired this knowledge I know not, for Tuckahoe was the last place in the world where she would have been likely to find facilities for learning. I can therefore only and proudly ascribe to her an earnest love of knowledge. That a filial bond should learn to read in any slave state was remarkable, but in her circumstances it was extraordinary. In view of this fact I am happy to attribute any love of letters I may have, not to my supposed Anglo-Saxon paternity, but to the native genius of my able, unprotected and uncultivated mother, a woman belonging to a race whose mental endowments are still disputed by the most prejudiced of the great Lloyd estate. The white owners of the land were very rich, and lived in the enjoyment of great luxury, while the tillers of the soil, hundreds of slaves, kept in ignorance and degradation, in seed time and harvest. They were at all times scantily fed and clothed, and cruelly beaten at the will of the owner or overseer.

In regard to the wild singing, which was one of the noted features of slave life, he says: "They were expected to sing as well as work. A silent slave was not liked either by master or manager. There was generally more or less singing among the teamsters at all times. It was the means of telling the overseer at a distance where they were. Their songs were both merry and sad. Child as I was, these wild songs greatly depressed my spirits. Nowhere outside of dear old Ireland, in the days of want and famine, have I heard sounds so mournful. I did not, when myself a slave, fully understand the deep meaning of those rule and apparently incoherent songs. I was then within the circle, so that I could neither hear nor see those without might see and hear. They breathed the prayer and complaint of souls weeping with the bitterest anguish. They depressed my spirits and filled my heart with villageable sadness. In the olden times the remark was often made that slaves were the most contented laborers in the world, and their singing was a proof of their contentment. It was a mistake to suppose them happy. The songs of the slaves represented their sorrows rather than their joys. Like tears they were a relief to aching hearts; sorrow and desolation have their songs as well as joy and peace.

"I have nothing especially cruel or shocking to tell of my personal experience," Mr. Douglass says of the time spent as a boy at his master's home on the Lloyd estate. "Cuffs and abuse from Aunt Katy, and an occasional whipping from my master is all that I have to recall of this kind. My chief suffering came from hunger and cold. My ration, small enough at first, was further stinted in passing through Aunt Katy's hands. My clothing, consisting all the year round of a

cotton garment hardly reaching my knees, afforded me little protection in winter, and my sleeping place was the bare floor of a little closet in the kitchen. In cold weather I sometimes pulled the bag, which was sent to mill for corn meal, from its peg, and crawled into it, sleeping with my feet out."

"The family of my old master, Captain Anthony, consisted of his two sons, Anderson and Richard, with his daughter Lucretia, and her newly married husband, Thomas Auld. Captain Anthony was not considered a rich slaveholder, though he was pretty well off in the world.

I was not deemed old enough for work in the field, and there being little else than field labor to perform, I had much leisure. The most I had to do, was to drive up the cows in the evening, to keep the front yard clean, and to perform small errands for my young mistress, Lucretia Auld. This lady was very kind to me, and in a household where there was so much harshness, the slightest word or act of kindness was highly valued. Miss Lucretia, as we continued to call her after her marriage, sometimes bestowed on me such words and looks as taught me that she pitied if she did not love me. Once in a while she gave me a piece of bread and butter, an article not set down in Aunt Katy's bill of fare. Once, when one of Col. Lloyd's colored boys had cut my face badly in a fight, and Aunt Katy had coolly remarked it served me right, and now I would keep away from dem Lloyd niggers," Miss Lucretia tenderly bound up my head with her own soft hand.

When pious chat with hunger, I had a habit of singing, and the good lady soon learned to understand this, and when I sang under her window she often came to my relief with food from her table."

This sad experience of the slave child recalls similar episodes in the life of Martin Luther, whose biographer tells how the embryo reformer, with other choir boys of the old German city, often wandered through the dark cold streets singing hymns which touched the hearts of the charitable, and was answered by fragments of food most grateful to the hungry little poets.

Besides his friend Miss Lucretia, Mr. Douglass recalls with gratitude the kindness of Daniel Lloyd, the son of the land owner, a boy about his own age, who protected him from the big boys on the place, and occasionally gave him cakes or fruit from the abundant stores at his command. The kindness of these two friends seem to have been the only alleviation to the hardships of the unhappy child.

"As I grew older and more thoughtful," the narrative continues, "I became more and more filled with a sense of my wretchedness. The harshness of Aunt Katy, the cold and hunger I suffered, with the terrible reports of wrongs and outrages which I heard together with what I almost daily witnessed, led me to wish I had never been born."

I was in this unhappy state when I received from Miss Lucretia the joyful tidings that my old master had determined to let me go to Baltimore to live with Mr. Hugh Auld, the brother of Capt. Anthony. My delight at this information was further increased by hearing that I was to have a pair of trousers."

For the first time in his life, the ill-used slave child found himself comfortably clothed and fed, with a good school to attend. His occupation, tending care of Mr. Auld's little son Tommy, and running errands for his wife, were light and pleasant, and his desire for knowledge was gratified by Mrs. Auld's teaching him how to read. This pleasure came to a halt, however, when his old master returned from his wife's commending the aptness of her pupil, that the boy was gaining instruction forbidden to his race—by the cruel slave code.

"Mrs. Auld was sternly forbidden by her husband to teach the child any longer. The order came too late for its baneful effects to be severely felt. The boy, whose genius already began to show itself, had tasted of the tree of knowledge, and though in his circumstances the fruits might be bitter as well as sweet, he could never retract his steps; could never lose what he had gained. The opposition to his learning, combined with the incentives to improvement, which he gathered in his daily life, only increased his desire for information, which he strove constantly to acquire. "The plan which I mainly adopted, and the one most successful," Mr. Douglass says, "was that of using my young white playmates, whom I met on the streets, as teachers.

I carried a spelling-book in my pocket, and whenever chance offered, would take a lesson in spelling. I had earned a little money by blacking boots, and paid fifty cents for the Columbian Orator, then a popular school-book. After a while I decided to learn to write, and did so after this manner. I was much in the ship-yards of Mr. Auld and Durgon and Bailey, and noticed that the carpenters marked each piece of timber beveled, with the initial of the part of the ship for which it was intended. I soon learned these letters by sight, and after many attempts could copy them by hand, and with my playmates for teachers, chalk for pen and ink, pavement and fences for paper, I gradually increased my stock of knowledge. When I could write words, I began copying from books, and often wrote in my attic room, on a barrel head at night, when the rest of the family were asleep."

When Frederick Douglass had been three years in Baltimore, his old master Captain Anthony died, and his slaves were divided between his two surviving children, Andrew Anthony, and Lucretia Auld. Frederick had been sent for to Baltimore, to be present at the division of the property, and greatly dreaded facing the face of his old master, a cruel and dissipated man, whose name he was much relieved to find himself allotted to. Mrs. Auld; she permitted him to return at once to his home in Baltimore, and though much grieved at this result, the experience of being put up and valued as a chattel, and the risk he had run of falling into evil hands, made him fully realize his condition as a slave. Already bondage had been irksome to him, and the prospect of liberty long cherished in his heart, became a desire more passionate than before. He says, "I thrived forward more passionately than before."

TWELVE PACE MONTHLY.

(Reduced to eight pages from July to October, four months.)

Printed on the Normal School Steam Press by students, trained in the office.

S. C. ARMSTRONG, Editors.  
H. W. LUDLOW,

MRS. M. F. ARMSTRONG, Regular  
MR. W. N. ARMSTRONG, Contributors.  
MRS. ORLA LAMORSE,

Terms: ONE DOLLAR a year IN ADVANCE.

Specimen copies sent upon application. To secure safety, it is important that money should be sent by checks, Post office orders, or registered letters. Write plainly; give name in full, and name of Post-office, County, and State to which the papers are to be sent.

A limited number of advertisements inserted at following rates:

SPACE.	1 mo.	3 mos.	6 mos.	1 year.
1 square.	1 00	2 75	5 00	9 00
1-column	3 75	7 50	13 50	23 00
1-3	5 00	13 50	23 00	40 00
1-4	9 00	23 00	40 00	70 00

Special notices 10 cents per line.

Job work from all parts of the country is solicited, and will be executed cheaply and well. Estimates given.

A WRITER in the Popular Science Monthly estimates, on the basis of the census returns of 1880, that in the year 1985 the white population of the South will reach ninety six millions, while the Negro population will reach one hundred and ninety two millions. The census return shows, apparently, that the white population increased 23 per cent. and the Negro population increased 34 per cent. during the ten years preceding the year 1880. But the census return of 1870, is one of the two important factors in the problem, and its unreliability in the matter of statistics in the Southern States is well known. Curious stories are told of the slipshod manner in which it was done. Much of the work resembled the report of the old darkey who had deserted from General Lee's Army, and was brought before General Grant as an intelligent contraband, well posted in the number of Lee's men. "Do you know how many men General Lee has got?" asked Grant. "I reckon I does, Massa." "Well, how many has he?" "Bout a 'ousand million I reckon," was the reply. The same carelessness in dealing with figures may have occurred in the census of 1870, and really accurate data can hardly be obtained from it. The census of 1880, if accurately taken, will be of great value. It is certain, however, that those who have been predicting that the Negro would speedily become as extinct as the dodo, will be disappointed. The estimates made regarding his vitality were all wrong. He not only holds his own, but is rapidly increasing. It is idle to speculate on his future, without means for generalizing. After the conclusion of the civil war, the Negro found himself destitute of material resources. He had neither mule, land or corn. But he knew how to work, and his wants were few. Land was cheap, a drug in the market. The South was a wilderness. There was no crowding of inhabitants, and there was no competition for labor. The demand for field hands

was greater than the supply. On the other hand, the whites came out of the war, not only destitute, but without habits of industry, which, in agricultural communities, are the conditions of success. In the first struggle for existence, terrible as it was, the Negro had the best of it, for he lived in a hut, and ate corn bread. He still keeps the advantage. He can raise cotton at less price than the white, because his expenses are less. As the white is without capital, he has no advantages over the Negro, except in the use of better education, and greater financial skill. It is known that in many cases, the Negro is prosperous where the white falls behind. Under these circumstances, it would hardly be expected that the Negroes would decline in numbers. If they, on the other hand, had been thrown into a densely populated country, without opportunity to buy or rent land, and if their unskilled labor had come in close competition with skilled labor, if the means of maintaining life had been difficult to procure, there would have been no increase. If this condition of things shall occur hereafter, it is probable that the apparently rapid increase will be arrested. The writer in the Popular Science Monthly claims that the Negro will always remain socially apart from the whites. On this point there is little data. The Negro comes under the same social law which regulates society everywhere. In England and on the continent, the prejudice against color does not exist, and the Negro is on a footing with the most favored. What this writer calls the American "instinct" against the Negro is only a shallow and short lived prejudice. Twenty years ago, horse cars in New York City were especially reserved for colored people. The prejudice which required this distinction, died out, and "for colored people" was taken down. This writer believes that the Negro race, kept by itself, will increase in numbers, become restless, and menace the whites. If the Negro is shiftless, and idle, he will cease to menace the whites, for his decay will be assured. If he is intelligent and industrious, he will develop the same good qualities as his white brother. The moment he accumulates property, his interests are coincident with those of the whites. In political matters, the Negro will vote, not on the color line, for that is already broken, but mainly on the selfish line. The fear of the re-establishment of the slavery drove the Negro vote into the Republican party. Remove that fear, and the race question goes out of sight. The Germans, the Irish, the Swedes, in the Northern States, make no race issues. The question of ignorant and irresponsible voting may arise some day, and involve the Negro race, not on account of its color or blood, but on account of its danger to the Republic, arising from the general lack of education, or knowledge of civil institutions. The friends of the Negro see this, and desire to anticipate such a contingency by general education. The writer above quoted presents again the scheme of colonization as a solution of the difficulty. It is utterly impracticable. In slavery times, just before the war, the largest slave owner in North Carolina sent one of his best slaves to Liberia, with instructions to look into the plan of colonization. The slave returned and reported. "You and all others who wish to go to Liberia are free to leave at once, and I will pay your way," said the master. No one left. The Negro will stay here. Only physical force can put right here as we have. We forced him to come, and we forced him to stay. He will leave only when he can really better himself by doing so.

W. N. A.

At the last anniversary meeting of the American Missionary Association at Cleveland, Ohio, Ex-President Hayes made a forcible speech, from which we extract a few paragraphs. "In one of the late slave holding States, the ignorant voters constitute an absolute majority of the total voting population of the State. In more than one third of the Union the ignorant voters are almost one half of the total number of voters. Most seriously important of all, the illiterate voters of the South have increased in the last ten years,

from 1870 to 1880, almost two hundred thousand. It may be truly said that ignorance at the ballot box has increased; increasing, and ought to be diminished. In the electoral colleges, which choose the President, in both houses of Congress, in all the departments of the national government, ignorance at the South is as efficient for evil if it were in New England or New York. It was settled by the war for the Union, and recall that the United States constitute one people and have one national life, one interest and one destiny.

In pursuance of the constitutional amendments, the lately emancipated slaves, by the most solemn expression of the national will, became citizens and voters. In the presence of these facts, how can a statesman say that under this Constitution there is no duty and no power to give national aid to fit by education these freedmen for the responsible positions in which the Nation has placed them? Under the Constitution as it was before these vital amendments were made, Washington, Adams, Jefferson and other great men of the early days of this Republic, whom we are accustomed to call the "Fathers," by significant and solemn enactments and recommendations, fully affirmed the principle that the general government could and ought to give encouragement and aid to the education of the people. They placed in the ordinance of 1787 for the government of the Northwest Territory, as the corner stone of the institutions they wished to build, this article: "Religion, morality and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged." Under every administration, from the origin of the government to the present time, appropriations of money or land for education in the States and Territories have been made by the general government, and it is now too late to question the constitutional power of Congress to make such grants.

The situation of the South is so exceptional that it is needless to dwell upon it. Slavery and free schools would not exist together. Slavery could not tolerate universal education. The only American citizens who are in no way responsible for slavery are the sons of Africa. "They are here by the crime, of our ancestors, and not by the crime of their fathers." And it is especially these colored people who now eagerly and with uplifted hands implore the Nation for that light which education alone can give, and without which they cannot discharge the duties which the Constitution requires by making them citizens and voters.

It has plainly come to pass that the whole question of popular education at the South must be considered and dealt with by the great body of the whole people of the Nation. The appeal must be made to the popular judgment, conscience and patriotism. To finish the work of uplifting the slave, and to turn into one harmonious whole our interdivided people, we must rely upon the beneficent influences of time, and upon the forces which religion, business and education can furnish. Of these forces, the government can profitably employ only one. Religion, depending under God, upon individual conscience and sense of duty, unaided by government, wins its way by the voluntary contributions and efforts of Christian men and women. Business, an agency of vast and unmeasured power in promoting the peaceful progress of mankind, results from a deeply seated and universal principle of human nature—self interest—and will most efficiently do its work when government wisely lets it alone. To complete reconstruction and regeneration in the South, the only force now left to the government is popular education.

At the General Assembly of the Presbyterian Church held last year in Springfield, Illinois, there were many encouraging things said of the colored people of the South; we quote from the *State Journal*.

"I am ready for the Gospel, and I may add that they are the only race of people I ever heard of that were—whose natural instincts are with the followers of Jesus. Go to foreign lands and what welcome is there for the gospel! Go out west, and there is a feverish excitement over farms and lots, and mines and stocks, and it is almost impossible to get a hearing. Go to the Germans, in the country, and you find more opposition to the preaching against the gospel. Go to the Italians here, or the Irish, or whatever race we find here, and their instincts are all set against the gospel. But go to the colored men in these Southern States, brethren, and they all rise up, men, women and children, and say, 'Give us the gospel.' It is a peculiar feature of that race—they are the only race of people in your land whose prejudices are naturally for the gospel. They believe it, they trust it. Then they are a contented people. With all my experience with the colored people down South, I have never heard them whining or complaining. I didn't hear it even in times of slavery. They bear sor-

row with a patience that few people can, and they are happy even under unhappy circumstances. And I have ever heard them make charges against any one. They have a very well what the war was for when it came, but, brethren, I was there during all that war, and in the counties where we were, there was a population of twenty thousand, and eighteen thousand of them were black. The men were all gone to the war—nobody at home but the women and children and the old men. These black people might have risen and done just what they pleased with us, and yet, during all that dark time you could not point your finger to a single spot where they ever manifested a revengeful feeling—not one.

The freedmen are already laying the material foundations of self support, and are widening the circle of intelligence, and beginning to enjoy the blessings that gather around the homes of the industrious poor. Said a Southern paper I picked up the other day, "The negroes in our land are leaving the value of marriage and the home. They are learning the lesson of economy. They go where you will, you will find the schoolhouse and the church built by the labor of their own hands." And it is a characteristic witnessed in South Carolina and the rest of the Southern States, that these people have been taught at all, they have worked out the lesson of self-help. I saw, in a daily paper, brethren, that they are now building 3,500 acres of land—homes, and for what? They are paying to build, and the Company's report, in the State of Georgia, a box on \$30,000 worth of property. In South Carolina they are paying a box on \$10,000 worth, and last year they raised over \$10,000 for self support, \$1,000 more than they did last year.

Nothing pleased me more than to see during my trip south the little places they had cleared out, and on which they had built cabins and were raising cotton. They are beginning to value these things and to value the marriage relation which has been neglected among them. Now, brethren, what you have done among the people you cannot realize. I wish you could go to Sea Island, where there are 10,000 negroes and 1,000 white people. They are the blackest negroes I ever saw. One old negro said, "We are old time negroes here." Twelve years ago they were ignorant and degraded; you could not have understood their speech. Now, since they have our schools and churches, they have built good cabins, got more good beds and in some cabins sewing machines. I bless God for what we have done.

We have, indeed, a dense mass of ignorance in the Southern States. The illustrious emancipator, whose portrait adorns this hall, struck with one blow the fetters from their limbs. But all the emancipation proclamations in the world cannot make a freeman. "He is a free man whom the truth makes free; and all are slaves besides." They must undergo a second and higher emancipation from the shackles of ignorance and degradation. They must be emancipated through the spell-book and the Bible, the school teacher and the evangelist. As they now exist, in their present social, intellectual and moral condition, degraded and not virtuous, they are as the clay mingling with the feet of iron in our free institutions, which renders them unstable. We must either lift them up or they will drag us down."

The Atlanta Constitution says: "The tenant system has been tried in Georgia with satisfactory results, especially where the land owners have given their tenants the benefit of their skill and knowledge. There are very many lazy and thriftless negroes, but taking all the circumstances into consideration, it is surprising that there are not more. The great bulk of the race that live in the farming regions are reasonably thrifty and industrious; many of them are acquiring property, and large numbers have homes and land of their own. In short, in this as in other matters, Georgia is the Empire State of the South."

The Globe of New York seems to be a really independent Negro newspaper. It says:

"The colored men of the North may 'kick' against the independence of the *Globe* all they want to, but, until they acquire some of the backbone which we have all along told them they need, they will be used to pile up high majorities for the Republican Machine, and be squelched after the election just as if they were so many mushrooms. We think, and on the right track, and we propose to stick to it until the Republican Machine does the fair thing. There is no terror in Northern Democracy for us. It is just as good as Northern Republicanism and neither more nor less. We want a new, honest party—a party by the people, of the people, and for the people."

"THIRTY-THREE YEARS AMONG OUR WILD INDIANS," by Colonel Richard L. Dodge, with introduction by Gen. Sherman. Illustrated. A. D. Worthington & Co., Hartford, Conn.

This is throughout a very readable, and in some parts exceedingly interesting volume, with some very beautiful chromolithographs of Indian curiosities. It deals chiefly with the Indians of the Plains; "Those inhabiting the country between the Mississippi River and the Rocky Mountains," among whom Col. Dodge has lived for thirty-four years, at one time hunting Indians, at another time hunted by them; now associated but at dagger's point, again living in free and friendly intercourse, hunting, fishing, chatting, dancing, visiting." With these truly exceptional opportunities, Col. Dodge gives vivid pictures of Indian life and valuable information upon Indian habits and customs, their religion and language, and arts of peace and war. Among the most interesting chapters are those on Every day Indian Life, Indian Handiwork, Life and Training of Indian Boys and Girls, The Sign Language, Indian Chronology, Pictures and Inscriptions, Indian Drills, How Indians Travel, and "Trailing," the wonderful skill with which the Indian discovers and follows the trail of an enemy or friend, totally impenetrable to less practiced eyes. "An officer of the twenty-third Infantry having a small force of soldiers and some Apache guides was scouting after hostile Apaches in Arizona. To be successful, all movements of troops had to be made at night, though the scouts steadily spread over the country by day, looking for trails. One afternoon, a scout came in and reported that he had found a fresh trail which he believed led to a rancharia or village of hostiles. After dark the command moved. In due time, the trail was found and carefully followed, the Indian scouts working out the devil's route of the hostiles through rocks and thickets, by feeling the ground with their fingers." Before daylight the rancharia was discovered.

"Children are highly prized by every Indian man. His pride and affection for his sons knows no bounds." An Indian father has been known—as Col. Dodge quotes from Schoolcraft—to give himself up to a hostile tribe to be burned at the stake in place of his son whom they had captured.

"The Indian boy, of from twelve to fifteen I consider the best natural horseman in the world. At about this age, he begins to think himself a man." He is given more liberty and wanders about the country in search of the adventure which is to crown his ambition by making him a warrior. One can readily sympathize with the enthusiastic cavalry officer who exclaimed "Give me the handling and discipline of such recruits as the Indian boys, and I can whip an equal number of any cavalry in the world." We would be glad to make many interesting extracts did our space permit. Valuable suggestions on the health question may be gathered from the statements of Indian habits, as for instance that "the Plains Indian never by any circumstances sleeps in the open air. Possessing but one blanket, he will make a framework, spread the blanket over it, and lie on the bare ground even in the coldest weather." "Ten, twelve, or more Indians will sleep in a 'wicky-up' which I could have declared would not hold half that number." But he believes that "the extraordinary, unnatural diminution in certain tribes is due to nostalgia more than any other cause, from their removal to reservations by Government." "Homelickness with the Indians is a most dangerous malady." Col. Dodge gives no flattering pictures of the Indian. "He is vain, crafty, deceitful, ungrateful, treacherous, grasping and utterly selfish. He is lecherous, without honor or mercy, filthy in his ideas and speech, and inconceivably dirty in person and manners." He is affectionate, patient, self-reliant and enduring. In short he has the ordinary good and bad qualities of the mere animal, modified to some extent by reason." While "the mental capacity of the Indian is of superior order," he has "not the faintest conception of an idea of

moral obligation." To us "morality is inculcated with religion, and we with difficulty separate the one from the other. The Indian has a religion but that religion has no moral code. It teaches no obligation to God or man. The Indian is absolutely without what we call conscience; that inward monitor which comes, and which our religious teachers would persuade us in the voice of God. He is as religious as the most devout Christian, and if our good missionaries would let him alone in his religion and cease their efforts to proselyte him to their particular sect, and simply strive to supply him with a code of morals, his subsequent conversion might be easy and his future improvement assured." Col. Dodge thinks the Indian "has never had a fair chance, and is entitled to a full and fair trial.

"That with his miserable opportunities he has at least been partially civilized, is ample evidence of his capacity for further improvement." Like other good Indian fighters in our army, Col. Dodge has high respect for the fighting qualities of the Indians, considering them "the finest natural soldiers in the world"; real sympathy for their sufferings, and sense of their wrongs, which he lays directly to the Government, the agents it employs, the traders it licenses, the buffalo pot hunters, miners, and cow-boys it is not able to control. "Were I an Indian, I fear that with the Indian," "It must be conceded that the Indian behaves much better than we have any right to expect. The actual number of murders and outrages committed by Indians upon citizens is so small as scarcely would be thought of if perpetrated by the whites. In the summer of 1867, the white men of Julesburg robbed and murdered more citizens than all of the Indians have robbed and murdered during any one of the ten years past."

The local paper of a frontier town will carefully avoid any mention of the daily or nightly killings by its inhabitants; but let a frontiersman be killed, or even scared by an Indian, and column after column is devoted to the minutest and most generally imaginary details. This can readily be accounted for, each little frontier town desiring troops, not for protection but for the money they spend. That Eastern papers should so readily take up this cry giving a line to a murder by a Kentucky gentleman, a column to a murder by an Indian, can only be accounted for by the desire for sensation.

"Next to the crime of slavery, the foulest blot on the escutcheon of the Government of the United States is its treatment of the so-called Wards of the Nation." "The prolific source of all Indian ills is that most tragic of national forces the Treaty System. By it we have taken advantage of the greed or ignorance of Chiefs to swindle the Indians out of their land. Every so-called treaty has been opposed by a minority, sometimes by a great majority of the tribe interested. Sometimes the chiefs themselves have refused to be swindled. The Government has not hesitated, but deposing the refractory chiefs, has set up others, its own creatures, and concluded the melancholy farce by entering into a solemn treaty to which the United States were actually party of both parts. The Treaty System makes it impossible for us to enact laws for their benefit; there is no recognition of individual worth or advancement. But the crowning feature of the system is that the Government at this moment has treaty arrangements with hundreds of petty tribes held on reservations, actual prisoners of war. In violation of treaties or by virtue of treaties secured by fraud, the Indian is confined to reservations. In violation of law, the game on which he depended for food has been destroyed by white men. The United States having made prisoners of the Indians, and by negligence permitted them to be deprived of their self support, it is in honor bound to see that they do not suffer. Is this obligation fulfilled? Far from it! On the contrary, we leave our helpless prisoners to starve, and shoot without mercy the reckless few who, goaded to desperation by their suffering, dare to cross the dead

lines of the reservation.

In this horrid crime, every voter of the United States is either actually or passively implicated, for it has its root in the legislative branch of the Government. The appropriation for the support of the Indian is wholly inadequate, the most favored tribes receiving no more than about eight cents a day for the support of each individual. All this is criminal.

To advance, the Indian like other men must have an incentive to effort. Many of the so-called wild tribes are willing to labor, and to labor right manfully for the one drop which is all they can rely on under the present management. These are a few of the wrongs and iniquities practised upon the Indian by those who profess to be his friends. There is but one hope for him. Treaty system and tribal relations must be broken up, and the Indian absorbed individually in the great family of American citizens. This must necessarily be a gradual process, and meanwhile some plan must be adopted to protect him and soonest fit him for citizenship." Col. Dodge proposes an outline of such a plan, which is briefly as follows:

1. Turn the Indians over to the War Department.
2. Abolish the Indian Bureau, replacing its officers by detailed army officers.
3. Abrogate all existing treaties.
4. Give the Indians the same rights in trade—arms and liquor excepted—as are enjoyed by American citizens, till they become so.
5. Enact laws for them they come under the common law.
6. Make commanding officers of military posts on reservations, ex officio Superintendents of Indian Affairs.
7. Give the Indians farms in severity.
8. All other lands to be bought by Government and thrown open to settlement.
9. Give the Indian the ballot, and all the rights and duties of citizenship, as soon as the country in which he resides shall have been organized into a county.
10. Free the wild Indian sufficiently.

"The real friends of the Indian are injuring his cause by demanding too much. They insist that the treaties shall be regarded as binding for all time. There is no power in this Government which can much longer delay the settlement by whites of the Indian Territory, and it is a mere question of time when all the reservations will be overrun. The Government tried faithfully to keep the whites out of the Black Hills. It failed signally. Against the resistless tide of immigration, the Indian has absolutely no chance. His only hope is in setting with the tide, and this he can do only as an American citizen."

Concerning fully in this conclusion, we regret that Col. Dodge's book is not as well calculated to give weight to his opinions, as his long experience should make it. It contains doubtless much valuable knowledge of Indian manners and customs; it is picturesque and conversational, with something of the dash of the frontier soldier, and the breadth of the plains. You feel as if you had been sitting by a camp fire after a day's adventures, listening to the best talker in the party. Under these circumstances, you are not critical, you don't interrupt a good story or brilliant sentence to insist on firmness, or question a sweeping statement, or run down a contradiction. It is only when at the close of the volume, you come upon some practical conclusions, and a plan involving radical changes seriously put forth as the only solution of the Indian question, and going back to pick up the preface, read that the book is presented as "a careful study of facts," that you begin to turn over the pages again to look up statements which certainly sounded contradictory and sweeping and one-sided, some of them hardly consistent with his conclusions. It is rather confusing to read on page 62, that "Endurance and patience appear to be the warp and woof of Indian character," and read on page 591, of "this constitutional impatience" of the Indian; on page 248, that "There is no such thing as nervousness in either sex," and on page 437, that "He is excitable, nervous, easily stamped," on page 210, "He has not the faintest conception of an idea of moral obligation," and on page 586, "A rich man may be assessed five or six ponies for taking a poor man's wife. This comes

from a spirit of fairness and equity," and again page 430, "No earthly power could induce him to disclose a secret learned under an oath administered after their forms; and in answer to an effort at persuasion, he looks at you with wide-eyed astonishment and says 'simply, I have sworn.'" Nor is the consistency of the reasoning very apparent that, as the Indian has a religion which has no moral code, and the Christian missionary has one which, as Col. Dodge himself says, is "so welded with morality that the one cannot exist without the other," therefore the "good missionaries should let him alone in his religion, and simply strive to supply him with a code of morals,"—when in giving him Christianity they give him the purest code of morals with the strongest sanction and motives. But we fear that this last inconsistency is not the slip of a brilliant talker, but rather the nefariousness of prejudice. This is indeed the most serious defect of the book, and most injurious to its purpose. General Sherman himself in his introduction to the volume does not fail to criticize it in this respect, as regards its sweeping denunciations of Indian Agents and of the Government.

He says, "I do not agree with you and the world generally in assessing our ancestors and the General Government of a deliberate purpose to be unjust, and defraud these people." "Nor do I think it just to accuse all Indian Agents of being incompetent if not dishonest. I have personally met a great number of these, who are generally kind, honest and well meaning people, badly paid and deprived of all the comforts which civilized men like to enjoy. Some move higher than a desire to plunder must motivate men who risk so much and endure such hardship and privation. If our Indian policy has failed, we should seek for the cause elsewhere, in the nature of things, rather than in a systematic desire to do wrong." It only weakens Col. Dodge's denunciation of Indian Agents in general to give no credit to such men as John D. Miles, the Quaker agent of the Cheyennes and Arapahoes, Agents McLaughlin, of Standing Rock, Mc Gilleuday of Pine Ridge, Thomas, of the Pueblo Agency in New Mexico, and others like them. General Sherman takes no notice of the same sentence upon the good work of missionaries and teachers. Col. Dodge says, on the contrary: "While I have known many Indians who professed Christianity, I have never yet met one who, in his conversion, had really quitted his ancient faith. He is a Christian just so far as it is expedient or useful to him. I have never yet seen a so-called Christian Indian who did not in times of real trouble or affliction, go back to his ancient faith." "Here and there, a small tribe, as the Nez Percés, show a slight advance in morality, due to the efforts of Roman Catholic priests so long ago that their traditions but vaguely fix the time. Here and there also, even among the wild tribes, are found men who give some evidence of moral perception probably due to the influence of missionaries and teachers. These cases are however individual." What mention is made of the Riggs's and Williamson's and Bishops Hare and Whipple—what of White Earth, and Rosebud, what of Sisseton, Fort Sully and Santee, where, through the efforts of Christian missionaries—Episcopal, Congregational and Presbyterian—ones wild Indians are so prosperously settled that "a stranger would not think he was on a reservation?"

What of Peoria Bottom, "a charming village of over twenty Christian families in Christian homes," founded by the still more recent efforts of one Christian missionary, Rev. Thomas L. Riggs? "The Cheyennes and Ojibwas furnish, as Col. Dodge says, ample evidence of Indian capacity for improvement, to whom is it owing but to Christian missionaries? If Col. Dodge has not "seen" any of this, why has he not, and if he has, why does he ignore it? He makes a very handsome and a merited tribute to the American people—evidently does not believe with Mr. Charles L. Brace in "Gesta Christi." Believing as he says that "the Indian is absolutely without what we call a conscience"—and, though he thinks that a mere matter of education,

## LETTERS FROM HAMPTON GRADUATES.

NEEDS OF THE CHILDREN. TEACHING A MIXED SCHOOL. A WHEEL HORSE. TRYING TO PROVIDE FOR HER CHILD'S EDUCATION. NEITHER DOORS NOR WINDOWS. LINKS IN HAMPTON'S CHAIN.

## NEEDS OF THE CHILDREN.

"The needs of the little ones in the country districts, where most of our graduates teach, are of course great. Some of them have been supplied at times with a generosity that has seemed a fairy miracle to the receivers, and the heart of the giver must feel the good cheer of the 'Inasmuch as ye have done it to one of these least.'"

—Co., Va., Dec. 32nd, 1882.

Mrs. D.

## Kind Friend:

I am teaching. I have eighty pupils on roll, and am doing all I can to improve their morals as well as their intellects. I try to impress upon my pupils that it is more important that they be truthful and honest—than have a collegiate education with the character of a thief or a robber. I perceive that our people (the colored people) have improved very much in their industrial habits, tastes, &c., and many other improvements among them. I have noticed. One would not be long in this school if one formerly taught by Mr. and Mrs. —, [Hampton graduates], they had a very large school, rather larger than mine for several reasons. First, some good northern friends furnished them with good clothing for their children several times per session. They are now teaching about ten miles from me, and were the recipients of a good supply of clothing for their school not long since, and an outfit of charts for the walls of their school; books, &c., for their pupils. I am glad that they are so fortunate—I am aware that they are rich Christian people in the North who would willingly and gladly help the poor freedmen children of the South should they ascertain of their many pressing needs. Second-hand clothing, Sabbath school books, and many such things could be used and donated very profitably among my children, and would be highly appreciated. Hoping that I may hear from you are the year is out, I remain, yours with much respect,

## TEACHING A MIXED SCHOOL.

A young woman graduate of the class of '73, the first to bear the honor of the class salutatory at Hampton, and who has been teaching most of the time since, writes of her present position in a mixed school in the West, and her recent marriage to an ex-student.

—Co., Iowa, Nov. 21st, 1882.

Mrs. D.

## My Dear Benefactress:

I have always entertained a grateful heart for your kindness in sending me to Hampton school, for if it were not for that I would not be where I am now. I came out here in September last and stood a good examination, got my certificate, and am now teaching a mixed school in this place. I have a very large school, thirty-five are white scholars. My Superintendent visited my school and told the children that I was the only colored teacher in the county, and he gave me a certificate because I was as well qualified to teach as any of his white teachers. This of course made me feel awfully proud. The white scholars are very fond of me, and their parents also. Knowing that you want to hear from your pupils from time to time, I felt it a duty to write to let you know where I am, and what I am doing. Also to tell you that I am married. W. H. T. and I were united in marriage, November 14th, 1882.

Please extend my congratulations to Mr. G. D. I read the account of his marriage in the paper. If Mrs. A. D. is there please give her my love. I once saw an exercise song in the Southern Workman, with these words: "With shoniden erect and toes turned out. With hurrah, hurrah, now let us in unison gaily shout hurrah, hurrah, etc." I am very much to teach my children, so if you can let it be me. I am doing all I can to make my school a success. The paper that I saw it in was printed in the year '78 or '79, if I mistake not. Hoping this will find you well, and with much love to you and your husband, I am, as ever, your most grateful scholar,

## A WHEEL HORSE.

One of the original band of Hampton student singers, who has been, like most of all of the others, faithfully at work for his people ever since he laid down his work of singing, writes interestingly of his present position with its labors, trials and encouragements.

—Co., Va., Jan. 11th, 1883.

Mrs. D.

## My Dear Teacher:

As it has been some time since I have written to you, I feel that it is high time I was letting you hear from me. I am like the good old faithful wheel horse, always at my post. My school is larger now than it has ever been before. I have already on roll sixty-six pupils, and have five or six more new names to enroll now. My school house is small, but very neat and comfortable; and when all of us are together, we are very much crowded. I have applied for an assistant, but the School Board, feeling themselves poor at this time, say I shall have to make out the best way I can for the present. I must tell you how we enjoyed our Christmas. On Saturday before Christmas week, we all gathered at the school house. The boys got the cedars, and the girls tied them; we decorated our school house nicely. Monday, the first day in the Christmas week, was spent in receiving presents and placing them on the tree. At night, the house was over-crowded to enjoy a beautiful exhibition, which consisted of declamations, dialogues and singing by the school, after which each person received their presents, and many a little heart was made glad by the gifts bestowed upon them by their parents, teachers and other friends.

## HIS SEWING AND TINKERING CLASSES.

I am so glad you told Miss A. about me; she has been such a good friend to me ever since. Just before Christmas she sent me a package which contained five Testaments, ten Bibles, and ten library books for my Sunday School. They just arrived a few days before Christmas, in time for a nice Christmas gift for my Sunday School. As my pupils were poor and so badly clad, she encouraged me to commence a sewing class in my school, which I did about a month or two before Christmas. And you would be surprised to see what effect it has on my school. Every boy and girl take right hold and see how nice they can do. I have different women to come in and assist me every Friday. They attend to the girls and I to the boys. Some are sewing, some knitting, some patching, and some mending slate frames. It is quite amusing to the scholars to see me sewing, but I tell them my mother taught me how to cut, sew and knit when I was ten years old. I received a letter yesterday from Miss C., another of my old Hampton teachers. Enclosed, I found something for my sewing class. Miss C. is living only ten miles from me.

## "BEGREDDED" REBIDDER.

I feel greatly encouraged sometimes, though I have many discouragements to undergo. The poor whites and the most ignorant class of colored are very bigoted against me here. The colored say we teachers make our living too easy, and get along too well. The whites say, we colored teachers teach the colored children too fast, and get too much money. I have had them tell me so many a time to my face. My reply to them is, a man should always have what he earns. We colored teachers in this district get thirty dollars; it makes no difference how good the certificate is, but the whites get from thirty-five to forty dollars for common schools. For graded schools the whites receive fifty and thirty-five dollars; graded school, colored, thirty dollars, and it is a question whether the teacher will get any more or not. It is not decided; we have to wait a long time for our money. Yet I am pleased to know that my Superintendent and Board of Trustees are pleased with my teaching. Please excuse me for my long delay, I hope to hear from you soon. With my best love to all,

I am your old pupil,

B.

## TRYING TO PROVIDE FOR HER CHILD'S EDUCATION.

"Another married graduate, of the class of '73, writes of a rather hard experience in her praiseworthy efforts to help her husband lay by something for the education of their little boy.

—Co., Va., Jan. 8th, 1883.

Mrs. D.

## My Dear Friend:

I now take this opportunity to write you a few lines. I am well and doing as well as can be expected, (according to the justice of the people that we are employed by.) I am teaching up here in — county, where I was

last winter. I have a very large school numbering at present ninety-eight pupils daily. I am occupying the place as principal with an assistant teacher, a lady from —. Last year I assisted a white gentleman in the same school, and this year the people would not have a white teacher, so the Superintendent sent me and gave me the principal's place, but after I arrived here they would not give me any more pay than he did for being assistant. I thought it was real mean, but after I had made my arrangement at home to be absent all winter, I thought I would stay and do the best I could with it. Only twenty-five dollars is certainly poor pay, when they are paid thirty-five dollars last year. But it is the old way, I am afraid we never will get justice done by us out of some of the white race. I passed examination at — last summer to get a position in the city public school, but the Trustees put white teachers in it again. That is the reason I came up here when they sent for me. Our school house was very open, but the colored people made up some money and I gave a concert to help make money enough to ceil the house inside, so it is very comfortable now. I don't write often, but it is not because I have forgotten my kind benefactors, but for the want of time. When I am not teaching I take in sewing, doing all I can to help Mr. F. to get a home, and lay by a little to educate my little boy, if the Lord is willing. Give my love to all of my old acquaintances, and accept a large portion to yourself and companion. Mrs. D. can you direct me where I can get that piece that was recited and sang at the last commencement, called The Rock of Ages? If you please, send me the price of it. If the General has any books of the Hampton Students' songs, please send me the price of them as I would like one of them. I hope you had a merry Christmas, and I wish you a happy New Year.

Your old pupil,

F.

## NEITHER DOORS NOR WINDOWS.

A model of some of the country school houses in which a Southern colored teacher is called to teach, would be a curiosity for a northern educational museum, and furnish a text for an argument for National aid.

—Co., Va., Dec. 1st, 1882.

Mrs. D.

## Dear Friend:

For the last three years I have taught in this county, and so close to B., that we boarded at the same place, and socially as well as intellectually the one derived so much benefit from the other, that this year we intended not only to board, but to teach together. So we applied to our Superintendent for a double school, which he granted, and on or about the 15th of October last, B. being principal and myself assistant, we set out to our new school, with intentions to make it the model school of the district. We arrived there in the season of whom dwelt in a hamlet situated five miles from — on the railroad. Well, as I said, we found plenty of scholars, but nothing else pertinent to the school. As to state, there were only five benches about eight or ten feet in length. A house had been rented for us to teach in, but it had neither door nor windows, and scarcely roof or walls. We tried hard to have things set right, but of no avail; everything was too busy. We left there after a few days for the office of the Superintendent, related the facts of the case to him, and at the same time applied for other schools. B. for his former school and I for the double school at the above named place. The request of each was granted, and to-day we are at our respective posts.

With an assistant in the person of a minister of the Richmond Institute, I have taught a month and three weeks, and enrolled sixty-six pupils. The patrons say that they give as about a hundred after Christmas. Here are two coal mines at —, and the cars roll the coal off every day.

In front, on either side, and in an easy bow shot of our school house is a branch of the Society here, and it is much needed for the people drink freely, though they get low wages.

I am gratefully yours,

G.

## LINKS IN HAMPTON'S CHAIN.

Many students owe their introduction to Hampton to the words or example of Hampton graduates. The influence for good thus excited is a pleasant feature of our graduates' work, as in the case of the

one whose interesting letter we give below, who having been brought to Hampton thus himself, has already sent nine of his own pupils there.

—Co., Va., Dec. 30th, 1882.

GEN. S. C. ARMSTRONG.

## Dear Sir:

I am in receipt of a printed circular requesting me to let you know about my work since I left Hampton. I entered your valuable Institute in 1873, having been advised to go there by one of the graduates, Mr. S. V. Winslow, who was my teacher. I left June 6, '76, and was examined immediately by Major W. W. Ballard, Superintendent of Schools for Roanoke county. I passed a creditable examination and opened school, October 18, at a salary of thirty dollars per month. I was an inexperienced hand at the work, having never before taught in the Public Free schools. I buckled on my armor, however, and went to work, stimulated by the never-to-be forgotten fact that I had been taken from the wilds of Roanoke by divine providence, and placed at Hampton to further her civilization and Christian influence, where I had learned man's mission; viz: Fear God, do right, and help fallen humanity. "Having freely received, freely give." I taught at this place five months, and gave thorough satisfaction to the Trustees and patrons of the school. Among my pupils there was Miss Mary Hayford, who is at Hampton now. The next term, the Superintendent removed me to Bonanza where I superseded Rev. C. S. Boston and Mr. George E. Stephens, graduates from Hampton, who were considered among the best teachers in the county, white or colored. I taught at this place two years with marked success, and at the close of my school I sent you three students: S. C. Carrington, who has since graduated, George Blair and John Hay. The next term, I went to Hot Springs, where I had purchased a home. I taught here two years and sent you five students who are now at Hampton. This school was successfully taught by one of my pupils, Mr. S. C. Carrington. I now have a flourishing school at Cloverdale. I am getting on splendidly. If you so desire I will write you about the progress of the colored people generally, their hopes, prospects, etc. Please write.

Yours truly,

H.

## BORSFORD'S ACID PHOSPHATE

## PLEASANT TO THE TASTE.

DR. A. L. HALL, Fair Haven, N. Y., says: "I have prescribed it with marked benefit in indigestion and urinary troubles."

## A FAVORITE PAPER.

For judiciously selected and popular contributions, and strictly entertaining reading, the Youth's Companion of Boston, has no superior among the youth's publications. It has more than two hundred thousand subscribers, and unquestionably merits the success. A Special Correspondent, the well-known author Mrs. A. R. Leonard has been sent to Russia by the Youth's Companion, and will contribute a striking series of articles on "Life in the Out-of-the-way Rocks and Corners of Russia."

## FRANK LESLIE'S SUNDAY MAGAZINE.

The number for March presents several new and attractive features, and fully sustains the high character of this popular magazine. Rev. Dr. Porter contributes No. 3, of "Religious denominations in the United States." The reformer (Dutch) Church. The editor T. De Witt Talmage has an interesting article "The Blessing of Short Life." The exterior and interior view of the new Church of St. Francis Xavier are given, accompanied by a descriptive article, DeLeon. "The American Pilgrims in Palestine," is continued, with beautiful illustrations. The new serial story, "Justice Warren's Daughter," is continued, and "Weighed and Wanting" concluded; there are other delightful short stories, essays, sketches, etc., by some of our most popular writers, several excellent poems, &c. The Home Pulpit has a sermon by Dr. Talmage, "Garrison's Day," and besides a comprehensive and entertaining miscellany, are the interesting features, "The Collection Basket," "Record of Important Events," "Personal and Editorial Notes and Comments," etc. The number is elaborately illustrated. Price 25 cents a copy; \$3 a year postpaid. Address Mrs. FRANK LESLIE, Publisher, 63, 65 and 67 Park Place, New York.

## INCIDENTS OF INDIAN LIFE AT HAMPTON.

## CHRISTMAS AT THE WIGWAM.

Long before Christmas time the little Indian boys in A. Division, Wigwam, were looking forward to the holidays as playtime, and talked it over with their comrades in my room each night at the "Children's Hour." But only one of them had ever heard of Santa Claus and his benevolent car of children at Christmas time. This boy immediately became the lion of the day, and after he had told all he knew, the teacher was called upon for additional information concerning him. After having heard it all through a number of times, when they were exhorted to hang up their stockings for him to fill, they were rather unwilling to do so at first, and one of them, our little Dickey Donah, said he guessed it was an ox. Asking what that meant, they told me that when some one promised to do something, and failed to keep his word because he was unable to do what he had attempted, that was an ox. (Query, has ox, need in this sense, any connection with hoax?)

The day before Christmas our smallest boy, fifteen, "I wish I was now so that I could hang up my stocking." On this day fifteen new Indians arrived, among them, one small boy, and a family with a little baby; they came to live with us temporarily. Of course the stranger boys most be provided for, and it was a good opportunity to make them feel at home by showing them a little attention.

One of the boys, our Cresus, adopted the new comer as a brother, sharing his bed with him, and provided a clean stocking for him to hang up, taking care to pin the right name on it. Santa Claus should make a mistake. An invalid was also invited to join the stocking party, and his, with the baby's little sock, made eleven to be filled.

A rope was fastened under the mantle, above the fireplace, and amid excited talk and laughter, each boy fastened his sock to it with a large safety pin. Then after the story of the coming of Him who made our rejoicings possible, and another repetition of, "The night before Christmas," the little men went to bed, wishing it were already morning, though there was still a shade of doubt in the mind of our Thomas as to whether it was not all an "ox."

## CHRISTMAS MORNING.

Morning came at last, and when the door was opened for them, there was an anxious pause as each peered in to see if Santa Claus had kept up his reputation; then, as doubt gave place to certainty, there arose a grand shout, as they rushed to unfasten the stockings, but Santa Claus had been so liberal and the fingers were so excited that the loaded socks would not come off without help. The shouts of joy over each new found treasure, and the happy excitement, made me think of Christmas morning in a home in the suburbs of Boston, and, with one's eye shut, one could hardly here tell whether the children were Indian or white. In vain had the precaution been taken to send them to breakfast first; nuts, apples and candies disappeared with alarming rapidity.

Our Cresus was recognized by Santa Claus without any difficulty, as was proved by the pocket-book with a note from the old gentleman himself telling him that that was for the boy who knew how to serve his money. The children had heard the German belief about the good old, saint, how he always brings all sorts of nice things for good boys, and a bundle of rods with which to whip bad ones, and one little fellow was afraid that a very long slender bundle attached to his sock was something of that sort; but after reflection, feeling that his conscience was clear, he ventured to open it, and found a large United States flag. "Fall in, boys. Fall in," he shouted, and they were all ready for drill and parade, the whole Christmas brigade being in a uniform of new red satin neckties with a bright colored new handkerchief peeping from each pocket; picture books were laid aside, marbles and tops went into already hanging pockets, and the trumpeter and standard bearer heading the procession, they mimicked the doings of their elders as gravely and soberly as any soldier who ever appeared on dress parade.

The stranger boy had gone to enjoy the contents of his stocking in the society of his friends in the opposite room, and presently came back to take in the baby's sock, which certainly never was as full before. The father smiled his thanks as the baby on his knees began to examine it; later the mother came in, and being unable to express her thanks in words, at least, in English words—shook hands most heartily, and the plainest English could not have been better understood.

One little fellow summed up his satisfaction the next day, when he wished there was more than one Christmas in a year.

J. K.

## FROM AN INDIAN GRADUATE.

One of those Indian graduates of the class of '83, writes of his school among the Pottawatomies of Indian Territory. He is making the most of his opportunities for education, though he would naturally prefer to work for his own tribe, and we hope that he may yet have the chance to do so.

WAGOZA, POTTAWATOMIE NATION, INDIAN TERRITORY.

December 19, 1883.

My dear friend, Miss C.—Having received three postal cards and a circular, announcing the fact that Mrs. Dixon has felt obliged to give up her work as graduates' correspondent, and that you have undertaken it, the letter came to me like a command from Hampton Institute. I dare not any longer delay writing you at least a few lines and tell you my present situation among these strange people. No doubt you will notice the changed address above. Shortly after returning from my trip to Kansas, I left Shawnee town, and having accepted the kind offer made to me by Agent Carter—the position of teacher in the Pottawatomie Day School, which I opened the 6th of November with only nine scholars—I have taken my home with these people with the hope of doing some good among them. They are especially anxious in this neighborhood, very anxious to have their children educated, unlike those of Western tribes who take but little interest in the education of their children. All talk English language, and use it more or less, and most of them come to church and take part in the exercises.

They are very kind to me, although there is a strong feeling of dislike existing between them and the Shawnees, arising from the fact that attempts are being made by the former to move into the country occupied by the latter. According to treaties, both have the perfect right to settle anywhere within the "thirty miles square," as it is called, in which they are now living. But the Shawnees don't like the idea of the two tribes mingling together, therefore they are trying with all their might to keep off the Pottawatomies from coming into their settlements. But this does not interfere with my work or the progress of the school, and I am not going to meddle anything pertaining to their controversies if I can help it.

I have at present eighteen scholars; fortunately all talk English. My school house is a small log house, about 30x25, accommodates about 25 or 30 scholars. We also use it for Sunday School, of which I am also superintendent. We have had good Sunday Schools, but lack of song books. You know Government schools are not like the schools established by churches—plenty of good song books, &c., but always something lacking.

Mr. Elliott visits us every alternate Sunday and preaches a sermon. You asked me whether the Eastern Shawnees join the Cherokees or not. They have not, and I don't think they ever do so now.

When I was in Kansas, I thought of coming through the country to see Charles Blue-jacket, but finally, having found out that it was too expensive, I abandoned the idea and came the other way. I don't know him personally, but heard of him through others that he is a Shawnee minister. He is the man who sent me the books I had. I have the books still (Bible in the Shawnee language, etc.).

I received a good letter, a few days ago from John Downing. Oh, how I have not heard from since we left school.

I wish you a happy Christmas. But we in this country don't know when Christmas comes.

Sincerely your friend,  
T. W. ALFORD.

## GOVERNMENT REPORT ON WORK OF HAMPTON'S INDIAN STUDENTS.

Articles manufactured by Indian students at Hampton, for the Indian Department, have again received official approbation, as follows:

UNITED STATES INDIAN SERVICE,  
San Carlos Agency, Arizona.  
January 18, 1888.

S. C. ARMSTRONG, Principal,  
Hampton Normal School,  
Hampton, Va.

Sir:

In reply to your communication dated 10th instant, I would say that the shoes sent from your school will compare very favorably with any others received here. I would not have known that they were made by Indians had the boxes not been so marked.

Yours very truly,  
P. F. WILCOX,  
U. S. Indian Agent.

UNITED STATES INDIAN SERVICE,  
Cheyenne and Arapahoe Agency,  
Indian Territory, Jan. 23, 1883.  
GEN. S. C. ARMSTRONG,  
Hampton, Va.

Dear Sir:

I am in receipt of your letter of 10th inst., making inquiry as to the quality of goods furnished this Agency by you, and desiring to know if they give satisfaction. In reply, I take pleasure in informing that the goods, (1 dozen coffee boilers and 300 pairs of shoes) compare favorably with any goods of the kind that have ever been furnished here. The coffee boilers are neat and durable, while the shoes, in my opinion, are fully up to the standard, and combine neatness, comfort and durability. We have just completed the annual issue at which time the shoes were issued to the Indians, and they give entire satisfaction.

Yours truly,  
Jno. D. MILES,  
Indian Agent,  
per O. J. Wood, Clerk.

## THE LARGEST FARM IN THE WORLD.

For the Southern Workman, by E. A. W.

The Southern Workman may be interested to know of the famous "Glenn ranch" the largest wheat ranch in the United States and in this state. Ninety four square miles Dr. Glenn owns, and 60,000 acres are in a high state of cultivation. Fifteen hundreds to fifteen miles, and five miles wide, stretches an unbroken wheat field. Other smaller tracts are included in this estate.

Situated in Colima Co. running along the west bank of the Sacramento river for fifteen miles, and five miles wide, stretches an unbroken wheat field. Other smaller tracts are included in this estate. Ninety four square miles Dr. Glenn owns, and 60,000 acres are in a high state of cultivation. Fifteen hundreds to fifteen miles, and five miles wide, stretches an unbroken wheat field. Other smaller tracts are included in this estate. Ninety four square miles Dr. Glenn owns, and 60,000 acres are in a high state of cultivation. Fifteen hundreds to fifteen miles, and five miles wide, stretches an unbroken wheat field. Other smaller tracts are included in this estate.

Three beavers and numerous sheep and hogs are killed every day for the harvest workers. The cattle and sheep are raised on still another ranch owned by the same man in Nevada. The little town of Jacinto lies within this ranch and takes its name from an old Spaniard who received his title from the Mexican Government.

A good country hotel, several dwelling houses, one store and two large warehouses for wheat storing, are all the town can boast of; no church and no school house, for there are no children and but one woman in the place; it is quite like an early day settlement.

Dr. Glenn is a strong temperance man, and strictly prohibited the sale of liquor within his borders for eight years, till, as he expressed it, "they best him," for the laborers stole off at night on his horses, and killed so many valuable animals in this way that he was forced to allow the sale of whiskey in the one hotel under restriction; not a drop can be sold after ten o'clock p. m. The class of men which he employs are single men; low Germans and Irish the majority, and they will have liquor or leave the ranch; he would employ Chinks, but the race prejudice is so strong that it would react on him at harvest time.

Oak forests skirt the river bank, and from 25,000 to 30,000 cords of this wood are cut annually. The wood cutters receive \$1.25 per cord for cutting and piling it along the banks of the river, and, it is sold for \$3.00 per cord, supplying the small steamers which ply up and down the river, and much of it finds its way to the San Francisco market.

It requires four hundred thousand dollars per year to keep this ranch in motion. Dr. Glenn values his ranch at fifty dollars an acre, making the estate worth about three millions. With all this vast estate Dr. Glenn still cries more, and is not satisfied because he does not own the adjoining land.

I give a problem for the Hampton students to solve. Dr. Glenn raises 60,000 acres of wheat on which he gets 13 sacks per acre, each sack containing an average of 1924 lbs. which he sells for \$1.724 per 100 pounds. How much will his crop amount to?

## OUR COLORED TROOPS.

The former Commandant at Hampton sends us the following interesting tribute to colored soldiers, which would furnish a good item for Mr. Wilson's forthcoming book on "Colored troops in American Wars":

Editor Southern Workman;

I take pleasure in forwarding to you, for insertion in your column, the colored salute clipped from the Army and Navy Journal, of

the 20th inst., as they may be of interest to your readers, of both races.

"Honor to whom honor is due."

Very respectfully,

Your obedient servant,

Henry Romney,

Fort Brown Texas,

Jan. 29, '83.

"The annual report of Surgeon Joseph R. Smith, Medical Director of the Department of Texas, brings out the significant fact, while there were 964 cases of inflammation of the colon, cholera, and delirium tremens, among the white troops in that department, there was not a single case among the colored troops. The proportion of still more direveritable disorders among the white and colored troops are about the same; the warmer blooded Negroes at least showing no excess, though the percentage of disease as a whole, and of death was greater among them than the whites. Desertion is far less frequent among the Negroes. On the whole, the colored troops lose nothing by comparison with the white regiments."

"The town of Framingham, Mass., has placed a neat granite memorial over the grave of a Revolutionary hero, which bears the following inscription: 'Peter Salem, a soldier of the Revolution, died Aug. 16, 1816, Concord, New Hampshire. Erected by the town, 1883.' Peter Salem was the colored man who particularly distinguished himself in the Revolutionary War by shooting down Major Pitcairn at the battle of Bunker Hill, as he was mounting a redoubt, and shouting, 'he is ours!' this being the time when Pitcairn fell in the arms of his son, Peter Salem saved faithfully in the war for seven years in the companies of minute men under Capt. John Nixon and Capt. Simon Edgell of Framingham, and came out of it unharmed. He was a slave, and was owned, originally, by Capt. Jeremiah Belknap, of Framingham, being sold by him to Major Lawson Buckminster, of that town, he becoming a free man when he joined the Army."

## ADVICE TO YOUNG WRITERS.

William Challen Bryant once gave the following sensible advice to a young man who had offered him an article for his paper:

"My young friend, I observe that you have used several French expressions in your letter. I think, if you will study the English language, that you will find it capable of expressing all the ideas that you may have. I have always found it so, and in all that I have written, I do not recall an instance where I was tempted to use a foreign word, but that on searching I have found a better one in my own language."

Be simple unadorned, be honest in your speaking and writing. Never use a long word when a short one will do as well. Call a spade by its name, not a well known oblique instrument of manual labor; let a home be a home and not a residence; place not a locality, and so with the rest. When a short word will do, you always lose by a long one. You lose in clearness; you lose in honest expression; and in the estimation of all men who are capable of judging, you lose in reputation for ability. The only true way to shine, even in this false world, is to be modest and unassuming. Falsehood may be a thick crust, but in the course of time, truth will find its place to break through. Elegance of language may not be the power of us all, but simplicity and straightforwardness are. Write much as you would speak, and as you think. If with your inferior, speak no coarser than usual; if with your superior, speak no finer. Be what you say and within the rules of prudence. No one ever was a gainer by singularity of words or so speak that no one will observe how he speaks. A man may show great knowledge of chemistry by carrying bladders of strange gases to breathe; but one will enjoy better health, and find more time for business, who lives on common air."

"Sidney Smith once remarked: 'After you have written an article, take your pen and strike out half the words, and you will be surprised to see how much stronger it is.'"

The following words are often mispronounced. It will be well for the young reader to look them out in the dictionary, and fix the right sound and accent: Unusually, zoology, yolk, vingo, turbine, tour, fervor, rhythm, telegraph, assed, snit, strata, root, sonnet, soiree, almon, romance, robust, repaite, raspberry, pristine, radish, rapine, prairie, polonaise, plateau, pianist, piano-forte, orange, orange, oratory, fustian, nausea, naïveté, mogul, libertine, leisure, jaguar, heinous, homoeopathy, heigh, giraffe, ghoul, fessce, European, equipage, encore, ducat, dishabille, Egean Sea, Marmora, Mow, Cania, Mow, Potomac, Fort Said, Pompeii, Olesse, Nucene, Edinburgh, Ecuador, Ivry, Mexinia, Bombay.

REMINISCENCES.

The following were commenced in reply to a request from a colored author, who is gathering material for a book on the record of the Negro soldier, but have been slightly modified in their scope, and published as of possible interest to the readers of the *Workman*.

As Lieut. Colonel, I took command in the fall of 1893, of six companies of the 6th U. S. colored troops then organizing, with three other regiments in Benedict, Maryland, under the command of General William Birney; completed the ten companies, and drilled them 'till the following March.

Our brigade was then ordered by Sir to Hilton Head, South Carolina.

On this organizing period I say:

That these ex-slaves of Maryland were fine material. They escaped at all hours from the plantations about us, or were sent in from the recruiting stations of the Eastern Shore. We took only the soundest and best, put them at once into uniforms, armed and drilled them almost in the same day. At night they gathered, by hundreds, into a huge old tobacco barn, lit by a few tall candles, where these strapping fellows poured over primers and spelling books, aided by four teachers, three of them ladies, who toiled for months for two hours every night. The teachers had been sent, at General Birney's request, by a Boston Society; some of them have been to this day my comrades in work for the colored people.

In book knowledge, in drill, and in all military duty they made remarkable progress. Nobility was a greater help to the then new establishment, and not at all fashionable Negro service, than the decree of the Confederate Congress or Cohuet that the officers and soldiers of colored regiments should have no quarter if captured.

In our weekly officers' meeting to study tactics and discuss the situation, fully anticipating such treatment, we agreed that our men must go into battle in good shape, and must be made the most of. We told them what to expect. Never were men or officers more devoted to their duty. Their morale was remarkable.

Nobility in those days sought a commission in a Negro regiment without a purpose.

How we studied and drilled! Gen. Birney driving us hard, he proved himself a great organizer of camps. His service in Maryland in raising colored troops was a bold, successful and grand work. See 'Stanton was back of him; President Lincoln did not seem to feel quite so sure of a step not strictly legal.

Many a master who came to get a receipt for his human property, was halted by a sentinel who two days before had been his slave.

The old flag over our camp was like the serpent raised in the wilderness. Once in sight of it, across the sentry's best, was instant freedom. How the men sang at night, around their camp fires! Much of it was rough, unsmooth music, but the officers complained of it. One night I was drawn out of my tent by a wonderful chorus. The men had struck up an old church hymn. "They look like men of war; they look like men all marching around; they look like men of war," which fitted the scene, and their hearty singing of it sent through me a sensation I never shall forget. It became their battle hymn. These were the dramatics of war; the dynamics came later.

I did not then realize how wise it was to put the black man into uniform, and use him as a United States soldier; though the pay was but \$7 a month, while soldiers received \$13 a month. Treating him as a soldier made him one, just as treating him later as a citizen, did more than any thing else to make him one. The Negro replied grandly to the duty required. There was, as there has been ever since, more in him than we expected to find, and more than his old masters ever dreamed of.

The question about men is not so much what is their innate capacity, but what are the conditions in which they live. Success is a matter of conditions rather than of predetermination; not but that heredity is a power in life; but that it is secondary, decidedly, to the surroundings of a man. This fact is not appreciated as it should be. The "heredity of all the ages" without a chance will come to nothing; it is a wildcat savage with one, may become great.

Both armies despised our black regiments in those days; but before the war was over they were drilling Negro troops in the Capitol Square at Richmond, Va., to help save the Confederacy.

I was once called to command a party to hunt up a Southerner, who had shot, under excitement, one of our recruiting officers, and had the unpleasant duty of searching the house of a charming family, who had most kindly entertained me the week before. Having missed by accident, the steamer from Baltimore, and thereby incriminated, I was told, the displeasure of the General, commanding the de-

partment. I hired a little canoe, sailed sixty miles down the bay, landing at Plum Point, hungry and tired, received the greatest kindness from a delightful Southern family, and had been sent on one of their best horses to my command, arriving just behind the steamer. The search of this house was conducted gently.

The soldiers wished to do their whole duty. Galloping one day by the pioneer corps, who were returning from wood chopping, they solemnly "presented axes."

The sentries were loyal, but not always clear headed. A party of officers, lugging slyly into camp a keg of beer, were hailed with "Who comes there?" "Comrades, hear, the body of a deceased brother," was the reply; the solemn sounding words and the dignity of death overcame the awestruck guard, who let them in without the countersign.

Mass life was usually hilarious; the "Anvil chorus" was produced with great effect on tin cups, knives and tin plates; these and other like things at times tried the chaplain's equanimity.

With all the care in selecting men, the mortality was great. The men lived and were clothed differently from usual. Pneumonia carried off many. The new quarters, built of logs and mud covered with tents, were damp. Even on their own ground, with no climatic change whatever, the death rate was high. One reason was, no doubt, their superstitious fears excited by sickness. The doctors afterwards said that the black soldiers bore surgical operations with wonderful fortitude, but in ordinary sickness they plucked failed, and they gave up, in February, 1893, the brigade sailed for South Carolina.

Should any one ask "how did you get into this work," the answer is: being a Major—a high wheel where there is a Colonel and Lieut. Colonel, especially in a regiment covered down by over a year's campaigning in North Virginia—there was nothing to do, and so restless and baying heard of the use of the Negro as a soldier, it seemed a work worth trying. I left the 125th New York Volunteers, raised in Troy, New York, in the summer of 1892, which I had, just after graduating from Williams College, joined as a Captain; sorry enough to part with the brave boys, and especially to leave "Company D," which never finished. While they always got their share of turkey in some way I never discerned the "ready" for the dreadful work they had not often to do. I felt proud of them at Gettysburg, where many of them fell.

I have hardly a stronger tie in the world than to these boys. They used to call it the "Sunday school company." The truth is about half were from the Baptist and other Sunday schools of Troy, whom their mothers wished me to take "if they must go," and the rest were another class—country fellows; farmers from Pittsboro and Albion, and workmen from the Nail Factory; a motley crowd of eighty, always infused with fun by the little city fellows hardly bigger than their own knapsacks, who outmarched the country giants, and cracked jokes in the very jaws of death.

My pen runs away with me; make whatever you can of this letter so far as colored troops are concerned. I may write another, but will not promise. S. C. A.

RELIGIOUS WORK AT HAMPTON.

The text of the sermon preached in Bethesda Chapel on the first Sabbath of the year 1893, was this: "Ye have not passed this way heretofore"; but we little understood then, how true these words of Joshua were to be in our experience at Hampton.

Ever since the opening of the term, there has been an increased interest in religious truth on the part of the students, and a renewed earnestness on the part of the teachers. The Sunday school lessons for the last quarter of '92, were upon the death and resurrection of Jesus Christ, and these same truths which, as presented by Peter, had such great results in the conversion of souls on the Day of Pentecost, have had a like result in the minds and hearts of these pupils, when presented by faithful teachers.

The religious work of the school has been more thoroughly systematized this term than ever before. Every building on the place has had its own meeting for the several classes have been organized for work. We were able to give a more religious tone to the festivals of the year.

Thanksgiving Day and Christmas told their stories in a way which made an impression on many minds. At the suggestion of the Principal, the students contributed, not without some self denial, in order to give to those in need. Twenty-six families were visited by the students

and teachers on Christmas morning, and provided "with dinners, and thus an object lesson was taught, which come of us will never forget, as to the real meaning of the day." For weeks before, the school had been learning the hymns and verses which told them of the Babe of Bethlehem, and, when at last they came together, each class with a banner that gave some name that belonged to the Christ child, it was one of the most beautiful and instructive gatherings of the year. On New Year's eve, a number of the students and teachers met in a little upper room, and, as the old year passed out and the new year came in, we prayed that God would forgive the sins of the old and grant His especial blessing on the new. He has heard our prayer in a wonderful manner. During the week of prayer, there was much quiet religious interest, and when we came to its close, the students asked that the meetings which had been held every evening during that week might be continued. The request was granted, and with this new week came a turning point in the lives of very many among us. To many of us, has come, as never before, an appreciation of the power of God's spirit to convict of sin and to change men's lives. Night after night, the large chapel of Virginia Hall was filled with students, and many remained for guidance and help. Often, far into the night, the teachers, pastor and principal, worked with those inquirers, striving to show them the way to Christ. In this work, Mrs. A. S. Steele, a missionary of the A. M. A. at Chattanooga, who happened to be visiting the school at the time, rendered invaluable help. Her long experience in this work and her sincere interest in the colored people, gave her remarkable power in dealing with them.

A quiet but intense earnestness pervaded the meetings. As one and another rose to confess their faith in Christ, and their determination to follow him, there was a hush over that great mass of five hundred students that told of deep feeling. These confessions or prayers were sometimes uttered in words that we did not understand, in the Dakota or the softer language of the Pima Indians, but earnest faces and tones told of longings for the better life, and the unknown tongue did not hinder the rest of us from taking part in their devotions.

The story of the starting out in the new life was often told in figurative language; it was the coming out of darkness into the light; the getting off the wrong road on to the right road, the starting out from the city of Destruction toward the Heavenly city; but in it all there was the thought of Christ as their Saviour, and a desire to follow His lead. It was not always easy to make them understand that they were to take Christ at his word when He promised forgiveness and acceptance; there was often a seeking after some strange "experience," instead of Christ; but when they did come to believe that He called them, they could hardly contain themselves for joy. When, on Sunday evening of that week, the last two unconverted members of the Senior class came out as Christians, there was a grand praise meeting in Virginia Hall, and there they were rejoicing through all the school.

Between eighty and ninety of the students have taken a stand as Christians, and are trying to put their religion into their daily life. Nor are the good results of these days of earnest thought on religious subjects confined to the students. They have had their effect in many ways, and we all feel stronger for the work which we have to do. We can truly say, "The Lord hath done great things for us whereof we are glad."

THE MONTHLY CONCERT AT HAMPTON INSTITUTE.

During the present term, one Sunday evening of each month has been given up to the presentation of mission work in foreign lands. The plan has been to have the different classes of the Sunday School take up the countries where mission work is being done, study their geography, the customs of its people, the native religions, and the work done in bringing to them the gospel of Christ. We have been much favored in having with us missionaries from different parts of the world, from Japan and from Zululand, and Dr. Hyden from Liberia, so that we have come to be much

interested in the work which is being done in other lands.

Our last concert had for its subject, Mexico. The evening was one of the most interesting and instructive of the term. One of the girls' classes had been preparing for several weeks, and the papers presented were altogether creditable.

One paper took up the geography of the country, and with the help of a blackboard showed us the high plateau on which the City of Mexico is situated, which extends northward into the United States, along which rail roads are now being constructed, which will bring us into close connection with this interesting country. Dr. Ellsworth, a paper read before the General Assembly at Buffalo, says, "Years ago, Humboldt called attention to a fact which is now being recognized by our rail road projectors: that the whole distance from Santa Fe, New Mexico, to the old Aztec Capital, there is a natural grade for great highways of commercial intercourse. Above this plateau, the ancient Indian civilization drifted southward and along this plateau we foresee the grander tides of an international commerce. And along this plateau we must plant our churches and schools."

Another paper by one of the girls told of a railway journey from Vera Cruz through giant forests, up the side of the Cordilleras to the City of Mexico, 7500 feet above the sea.

In striking contrast with this was a story which Gen. Marshall had to tell of a journey across Mexico on the back of a mule, on his way from the Sandwich Islands to the United States in the year 1843, through a country where there were no roads but only brittle paths, and down mountain slides as steep as the mule was obliged to bring its four feet together and slide down rather than walk.

He told us of perils by robbers, of the rooms in the best hotels of Mexico to which he took for dungeon cells, and of nights spent on mud floors and hard, unplanned planks. His account gave us an insight into the customs of the people, the degradation of the Sabbath, their corrupt religion, which the Abbe Domenech, who went into Mexico with Maximilian, declares is not Catholic. He says Mexico is not a Catholic country. Mexican faith is a dead faith. The abuses of external ceremonies, the facility of reconciling the devil with God, the absence of internal exercises of piety have killed the faith in Mexico. It is in vain to seek any good fruit from this worthless tree, which makes the Mexican religion a stingy assemblage of heathen ceremonies, slothful ignorance, inane superstition and hideous vice.

Still another of the class told of the early history of Mexico; of how the Toltecs came in the 7th century and the Aztecs in the 13th century, of the coming of Cortez in 1519, of how he found idol worship and the sacrifice of human sacrifices, 250,000 victims year. This he abolished and in place of the idols erected shrines for the Virgin.

She told of the landing of Maximilian, and gave the sad story of his death. Gen. Armstrong gave some of his personal experiences in Mexico when he was sent down there with 20,000 colored troops to watch the movements of Maximilian and the liberals.

A letter from a former missionary of the Presbyterian Board in Mexico was read, which gave a good insight into the mission work being done there by the different Protestant churches. "Take for instance, the District of Zitacuaro. The whole district is largely Protestant and now stands out as a bright example where peace, temperance, regard for woman, and love for education, rule the masses. The prison, once full of overflowing evil doers, is now used as a storehouse. The Sabbath, once a holiday given up to drink and fighting, is now a day of rest, a time when the people go into God's house to pray and praise. The children are taught their fathers and mothers what they have learned during the day. All this was done five years through an open Bible. "And it is this open Bible which as Dr. Ellsworth says, has been the differential which has wrought the contrast between Mexico and the United States. He says, "While Mexico had a full century, start of us in the introduction of European civilization and the knowledge of the Christian faith, she has, until recent years, remained almost at a standstill in comparison with our progress. And the difference is to be traced not to any inferiority of soil or climate, for in their earlier civilization her Toltecs and Aztecs were in advance of the Peguots and Iroquois; not to any lack of vigor or enterprise in the power by which the country was conquered, for the empire of Charles V. of Spain was peerless in that age."

The free use of the Word of God, liberty of conscience, the unceremonious of the family, schools and colleges, the press and general enlightenment—these have been our heritage; while Mexico, with a crucifix instead of the scriptures, and ceremonies for instruction, and festivals and bull-fights, instead of Sabbaths, with foreign viceroys rather than citizen rulers, and a colonial policy which robbed the country without improving it—how could she keep pace with the general march of human improvement?"

## SOUTHERN LIFE.

(From Correspondence of the N. Y. Evening Post.)  
PLANTATION SHADOWS.

Let us draw a rough picture of the ordinary southern plantation home as one finds it today, eighteen years since the close of the war. It is usually a stately two-story structure, pillared in front, rarely ornate as to architecture, and with rather an impressive air of aristocratic comfort. But examine it closely, and you will find that the paint is worn off, and long weather-marks cross its front. The cornices and mouldings are fast rotting to decay. Here and there in the upper story is a broken window. The shingles are moss-grown, and the chimney is rough-edged from the disintegration of mortar and brick. The great front yard of several acres, which used to reach out far before this antique dwelling to the street or roadway, has been cut in twain by a cross fence, reducing it to half its old area. The rows of trees are rough and untrimmed. Ducks, geese, pigs, and a gaunt horse wander through the doorway, making its surface like that of a pasture. A scattered pile of wood within a circumference of chips is a side-scar on the scene. Butternut fences, a musty-looking clump of out-houses, a hayrack where one or two dismal mules are meditating, complete the picture of shabby grandeur.

The owner of this typical mansion is usually a gentleman—and a real one—whose outward aspect is not much different from that of a wall to do Yankee or New Yorker who has been born and bred in the country. But his is far more courteous and polite, not merely as an art but as a genuine element of his character. His kindness to a guest is not a formality but a hearty, voluntary impulse—even when carried to a point which would be considered as abjectly sacrificial. No inconvenience is too burdensome, no hospitality too unstinted to him refused a guest. The planter's own time, his family-plans, his horses, his guns, his fishing rod, must all be at the visitor's full disposal. Let me be absolutely just to Southern character and say that the same courtesy extends to the stranger-guest on the road or railway train, and that in less degree the same innate politeness is shown even by the poor Southern whites. I have often been amazed at the natural courtesy both of speech and manner of some unkempt natives of the South whom, at the North, we would set down as a common tramp. Southern civility has its deep-rooted and dateable faults, some of which will be touched upon before this letter closes. But among his best qualities must be cited the grace of common social intercourse, extending down through all classes, which the Northerner rarely finds equaled in his own communities.

Personally speaking, this quality I have described is most attractive. But economically, the kindly social habits generated during the slave times, inherited from fathers and still perpetuated, are a fearful bar to material progress. Well enough they were helpful when the planter had large surplus wealth in human stock, and when the sale of one or two negroes might fill the gap in the annual interest on a mortgage. But the annual interest on a mortgage, watchfulness, and household economy are the only conditions on which the plantation can be saved from the creditor. After seeing lately many plantations in the Mississippi Valley, I was asked what is the chief obstacle to Southern progress, the answer would be the wasteful extravagance caused by too much sociability—an extravagance penetrating the whole of the planter's life. The methodical Yankee, accustomed to close and systematic management, would be profoundly amazed at the way the ordinary planter "runs" a plantation, of say, a thousand acres, with a hundred negro hands. It is a vast and ramified interest, as intricate as a big New England factory. Yet the planter scarcely ever keeps a set of plantation books. His costly implements of cotton culture—ploughs, harrows, and cultivators—are constantly seen rusting in the fields, just where the negro hands had left them months before. He may be staggering under an annual interest charge, yet he must have his horses for pleasure, his costly guns, and expensive double wagons, to be worn out quickly on rough rutted roads, upon which a Yankee millwright would scorn to use a hickory. The younger planters, too, seem to think it essential to human existence that they should "treat" frequently, gambles a little, and buy a few lottery tickets each year. (I may add parenthetically just here that the Louisiana State Lottery is one of the economic bane of the whole Mississippi Valley, rarely from its effects on character.) To sum up the whole thing in a sentence, the age-long and misbegotten sociability of the planter, to which we give the hackneyed name of "Southern hospitality," is too often more like the last splendid banquet of a bankrupt on the verge of ruin than rational liberality. A very ordinary New Englander would make a good living out of what the planter habitually wastes.

## SOME WHOLESOME SIGNS.

Nevertheless, when all that is negative has been said, there remain many wholesome and encouraging signs. One is the really rapid decline of sectional animosity, now that the predatory carpet-bagger has been driven off. Politics are every where at a discount, and the South, so far as feeling goes, is arduously "on the make." Scarcely anywhere to-day would a Northern Republican be ostracized, provided he goes about his business, behaves himself, and does nothing worse politically than vote the Republican ticket. As to slavery, the feeling is also very rational. Of course there is a regret for loss, and wistful glances back to the days of comparative opulence. But rarely does one find a Southerner who will say that he wants the slave system, with its immoralities, back. The "institution" is remembered now with a poetic regret, often expended in a verse, story, or song, whose burden is the good old times.

To say nothing of upgrowth of cotton factories and other industries—for in this letter I am speaking of distinctively plantation life—the planter has received a big "lift" from the cotton seed industry. Before the war, practically all cotton seed was to waste except a small fraction used as manure and what was reserved for planting. Every bale

from the refining, and the hulls, which may be used both for fuel in the factory and as compost. But the home and the foreign demand for oil-seed products is increasing rapidly, and the factories are said to pay large dividends. But like cotton itself, cotton seed is a crop much wasted and abused. Every sack of seed seems to have a leaking hole in it, and at Memphis, all along the sloping river bank, one has to fairly wade through several inches of putrid decaying seed ere he reaches the wharf-boats. As to cotton, a single glance at the tattered, half-covered bales, soiled with mud or soaked with rain, is enough to prove how shiftlessly the crop is treated.

Finally, as to wholesome signs at the South, the annexed census figures are suggestive, as showing the break-up of the big farms and partial disestablishment of the plantation system:

	No of farms.	No of farms 1880.
Alabama.....	87,393	138,161
Arkansas.....	48,424	94,433
Florida.....	10,121	22,483
Georgia.....	67,566	125,425
South Carolina.....	51,822	94,984
	266,322	486,523

How far this subdivision has been accompanied by more improved and precise methods of cotton culture is hard to say. Certainly the system is bad enough now, and if there

AN ANCIENT AQUEDUCT IN SPAIN.

of cotton represents about 1,000 pounds of seeds, worth at the gin, say, six dollars. As summing that each acre grows half a bale of cotton—a low estimate—and that half the seed product is reserved for planting, there will be a net product per acre of 1.50, which was substantially lost in the old times. Within a few years the industry of making cotton seed oil has increased immensely, until the manufactured product in oil and oil cake is estimated at worth \$10,000,000. As is well known, the oil is often substituted for olive oil in table use, while the cake is exported in large quantities to be used for cattle feed. First, the seed is taken into a fine combed gin and the short cotton left by the plantation gin hulled away. This produces about thirty pounds of short staple cotton to each ton of seeds, worth six cents a pound. The seeds are then hulled by machinery, the kernels ground into meal, which is heated to a certain point, then placed in tough sacks and run into a hydraulic press, which extracts the oil, leaving the yellow meal in hard cakes. This meal is not unpleasant to the taste, much resembling buckwheat flour, and I have heard of its use for human food. Each ton of seed ultimately produces about thirty gallons of oil, worth forty-five cents a gallon; 800 pounds of cake, worth \$25 a ton; lint cotton worth \$1.80, besides soap material derived

has been much progress, the original system must have been absurdly wasteful.

To sum up the case, the Southern planter as well as Southern communities in general have a great deal to learn as well as unlearn. The planter must unlearn his prodigal habits, must curb his convivial nature, practise the plantation economy, and set bounds on his misguided hospitality; and communities appealing for our dollars must remember that Northern capital has a prejudice in favor of regions where "lying in the boots" is not so popular as passing away respectably in bed with the boots off.

## AN ANCIENT AQUEDUCT IN SPAIN.

Here is a picture showing a beautiful specimen of the old Roman aqueduct, such as still exist at Terragona, Pamplona, Segovia and many other parts of Spain. In this aqueduct of Segovia I drank from the stream of limpid water still running along its summit, ninety feet above the valley, as it has now done for sixteen hundred years. This aqueduct was probably built by Vespasian, though the Segovians call it the work of the Devil. Here we have combined grace and strength, solidity and softness, beauty and utility, the old giving life to the new. May the gospel streams flow as steadily during the coming centuries for the thirty millions of Spain.

Missionary Herald.

## THE FREEDMEN'S PETITION.

It is but fitting that those most nearly concerned in the question of National aid to education, should have an opportunity to express their anxious desire for help, as far as they have intelligence to feel it. That many do feel it is certain, and to this end a petition was framed and sent to all the graduate teachers of Hampton, who have taken great interest in explaining it, and circulating it among their people. The letters received from them give evidence of the interest felt. The following are samples.

WOODBRURY, N. J.  
JANUARY 20th, 1883.

Dear General:

Your circular with envelope and petition came to me on the 14th inst. I had not time to canvass our town till to day. Recognizing the importance of such aid, I have spent this day in securing the signatures of the most influential men of Woodbury, and of Gloucester County. I trust that Congress, in its wisdom, will grant that request.

I see that France has passed a bill granting assistance to public schools from her government.

Teach our country the people rule, and the power which rules should be educated. I shall forward the petition to Prof. Painter on Monday.

Wishing you a happy and successful new year,

I am yours sincerely,

L. B. LANGRISH.

LYNCHBURG, Va., February 7th, 1883.

Dear General:

I have been intending a long time to write and tell you of my success with the petition, as I felt quite sure you would like to know whether I was able to secure many signatures or not. At the time it reached me, we were having very disagreeable weather, and it was almost impossible for me to get around the city, so a gentleman friend kindly consented to do the work for me. I accepted gladly, as he was an old citizen and known to be a influential man of the city, and would be more successful than I. Very soon he secured quite a large number of names, over fifty I think, who are known over the State. It was sent in as promptly as possible, and I am sure in good season. I trust your efforts may not be in vain.

Wishing you good health and success

I am, truly yours,

JOHN A. STOKES.

NELSON CO. Va., Jan. 17th, 1883.

Dear General:

I have been thinking that I would write to you before this date, but various circumstances have prevented my doing so. I received your blank (Petition to Congress), and filled it out with signed signatures, and sent it in at once according to order. I could fill out another if I had it, but it would be too late I suppose, as you rec'd them to be sent in by the middle of Jan., though I did not receive mine until the 15th.

I guess you know by this time that I am teaching the same school, that I have been teaching for two winters. I have six months this session instead of five. The Superintendent is well pleased with my teaching. I have made only one mistake in making out my report since I have been teaching. I am not teaching just now, the snow is too deep to attend. I have been teaching two months and reported last month thirty-six scholars.

My Sunday school and Temperance Society are still progressing. I opened night school on Monday night, Jan. 15th, with four scholars, several have promised to come. I don't charge anything this year for teaching at night, as the people are very anxious to learn and money is hard to get hold of.

I am yet remembered by the northern friends who kindly consent to furnish reading matters for my Sunday school. I have just answered a letter to Miss \_\_\_\_\_ of Mass., a lady who having heard of me and my work, has offered to supply me with articles suitable for my school. I generally receive abundance of reading matter from the North, from friends who hear of my work; I make no delay in returning thanks, and giving them a sketch of my work.

Four of the Hampton graduates are teaching near me. I learn that they are circulating a good work among their people. Ignorance finds it hard to flourish among these teachers.

I have written to Miss Cleveland of N. Y., as you requested me to, and shall be pleased to give her an account of myself often. What I owe to Hampton, I feel greatly indebted to her. If you should find space enough in your Workman, and deem this worthy of attention, I shall be glad for you to publish this.

I will close with love for Hampton.

MILLIE A. BENNETT.

# Teacher's Cable.

## SENTIMENTS FOR REBUTATION.

WORK WHILE THE DAY LASTS.  
Work thou thy work, while it is day,  
With patient heart, and right of aid;  
And leave the wrong to him who said:  
"Vengeance is mine; I will repay."  
Work, though the task seem sad and slow;  
Gird on the onward silently;  
We know that better things shall be,  
But how, or when, we cannot know.  
What if the task pass human strength?  
What if the day be dark and drear?  
Each laborer in his proper sphere,  
And all complete the work at length.  
What if thou canst not see the end?  
Press on, in firm and fearless mood,  
And doubt not that all acted good  
To some result of good must tend.

MAN.  
"How poor, how rich, how abject; how august,  
How complicate, how wonderful, is man!  
How passing wonder, He who made him such;  
Who centered in one make, such strange ex-  
tremes.  
From different natures marvellously mixed.  
Connection exquisite of distant words;  
Distinguished link in being's endless chain;  
Midway from man to deity, a Delia  
A beam ethereal, sullied, and absorbent;  
Though sullied and dissonant, still divine.  
Dim miniature of greatness absolute!  
A heir of glory, yet a frail child of dust;  
Helpless immortal; insect infinite!  
A worm! A god!—I tremble at myself,  
And in myself am lost; at home a stranger.  
Thought wanders up and down, surprised,  
aghast;  
And wondering at her own, now reason reels!  
O what a miracle to man is man!  
Triumphantly distressed! What joy! what  
dread!  
Alternately transported and alarmed!  
What can preserve my life, or what destroy?  
An angel's arm may snatch me from the grave,  
Legions of angels cannot keep me there.

THORNTON'S Night Thoughts.  
"First in the orator, is the man. Let no  
man who is to be an orator. A man who  
is to be an orator must have something to  
say. He must have something that in his  
very soul he feels to be worth saying.  
He must have in his nature that kindly sym-  
pathy which connects him with his fellowmen,  
and which makes him part of the audi-  
ence which he serves, that his smile in their  
smile, his tear their tear, and the throbbing of  
his heart, the throbbing of the hearts of the whole  
assembly. A man that is humane, a lover of  
his kind, full of self earnest and sweet sym-  
pathy for their welfare, has in him the original ele-  
ment, the substance of oratory, which is truth.  
Conversation belongs to oratory. How many  
men there are who are weighty in argument,  
who have abundant resources at their com-  
mand, and who are almost boundless in their  
power at other times, and in other places, but  
who, when in company among their kind, are  
exceedingly unskilled in these methods. Having  
none of the secret instruments by which the  
elements of nature may be touched, having no  
skill and no power in this direction, they  
stand as machines before living sensitive men.  
A man may be as a master before an instrument;  
only the instrument is dead; and he has the  
living hand; and out of that dead instrument  
what wondrous harmony springs forth at the  
living touch! And if you can electrify an audi-  
ence by the power of a living man on dead  
things, how much more should that audience  
be electrified when the chords are living and  
the man is alive, and he knows how to touch  
them with divine inspiration!  
I advocate therefore in its full extent, and  
for every reason of humanity, of patriotism, and  
of religion, a more thorough culture of oratory.  
To make men patriots, to make men Chris-  
tians, to make men the sons of God, let all the  
doors of heaven be opened, and let men drop  
down charmed gifts, winged imagination, all-  
perceiving reason, and all judging reason.  
Whatever there is that can make men wiser  
and better, let it descend upon the head of him  
who has consecrated himself to the work of  
manhood, and who has made himself an orator  
for man's sake and for God's sake.

H. W. BARNES.  
EDUCATION.  
It is not the extent of the educational course  
which makes the best mind; that can only  
be the resultant of well directed, thorough,  
conscientious, faithful and persistent efforts.  
Students sigh for genius, but genius is main-  
ly the capacity for work. It is not a vast sur-  
face of ground poorly cultivated that brings  
the bounteous harvest, but that which is  
ploughed and cross ploughed, and harrowed  
and pulverized so that each little thread-like  
rootlet germinates months filled, and then the  
well fed plant thrives on its broad leaves to  
the sun and breeze, and the ripened corn  
lengths out from between the opening husks.

EDWARD P. WATERBURY.

# St. Home.

## BOYS AND TOBACCO.

BY REV. L. H. ELLIOT, KNEESVILLE, N. Y.

Why do most boys have such a hard time  
learning to use tobacco? Why did Fred, after  
using the old pipe, hurry off to bed the other  
night without any supper? Why did John  
turn so pale and ask his companions to help  
him one afternoon when he went out with  
some older boys into the pine grove, or down  
under the hill, out of sight, to have his first  
smoke? Why did mother become so fright-  
ened and suggest that the doctor be called  
when Charlie became so terribly sick after  
smoking a cigar? Let me tell you. There is  
poison in tobacco, and when a boy begins to  
use it, his stomach and his whole system reel.  
Give a piece of tobacco to an elephant and, if  
possible, he will strike you a hard blow with  
his trunk. Now that sickness is the blow  
your physical system is aiming at you for  
giving self that tobacco. You never would at-  
tempt the second time to give tobacco to an  
elephant, and if you are a wise boy you will  
never try to use it yourself more than once.

Dr. Willard Parker, one of the leading phy-  
sicians in New York city, says: "It is my  
opinion since my attention was called to the  
indignities but positively destructive effects  
of tobacco on the human system. I have seen  
a great deal of its influence upon those who  
use it and work in it. Cough and snuff man-  
ufacturers have come under my care in hospitals  
and private practice, and such persons can-  
not recover soon and in a healthy manner  
from cases of injury or fever. They are more  
apt to die in epidemic and more prone to  
apoplexy and paralysis. The same is true of  
those who chew and smoke. In my opinion,  
the habitual use of tobacco shortens a  
man's life at least ten years. The poison slow-  
ly but surely destroys life."

Dr. Marshall writes: "The smoker cannot  
escape the poison of tobacco. It gets into the  
blood, travels the whole round of his system,  
interferes with his heart's action and general  
circulation, and effects every organ and fiber  
of the frame."

Dr. Brown of Providence, R. I., says: "The  
symptoms liable to arise from the habitual use  
of tobacco in any form may be any of the fol-  
lowing: Dizziness, headache, faintness, pain at  
the pit of the stomach, weakness, tremulous-  
ness, hoarseness, disturbed sleep, irritability of  
temper, seasons of mental depression, epileptic  
fits and sometimes mental derangement."

Dr. Hosack says: "The alarming frequency  
of apoplexy and palsy and epilepsy, and other  
nervous diseases is attributable to the use of  
tobacco."

Dr. Ferguson says: "I believe that no one  
who smokes tobacco before his bodily powers  
are developed, ever makes a vigorous man."

Last year a man in my town was taken very  
suddenly and painfully sick, and for days his  
friends and physicians despaired of his life.  
When he had recovered sufficiently to talk,  
he said the cause was smoking fifteen cigars  
daily.

Dr. Prince, for a long time superintendent  
of the insane asylum, Northampton, Mass.,  
says: "Fully half of the patients who come  
under the asylum for treatment are victims  
of tobacco."

After the death of United States Senator Car-  
penter, a few months ago, an intimate friend  
wrote: "Died from smoking twenty cigars a  
day."

Only a few months ago the distinguished  
United States Senator Hill from Georgia died  
a most painful death from cancer in the mouth,  
produced by the use of tobacco.

Now what boy that reads these statements  
in regard to the injurious effects of tobacco  
will not say: "Give me health and strength,  
give me long life and happy old age, before all  
the pleasure that comes from the use of the  
poisonous weed?"

— Vermont Chronicle.

## TRUE WOMEN.

Every man of sense admires a woman as a  
woman, and when she steps out of this char-  
acter, a thousand things, that in their oppor-  
tunities would be admired, become disad-  
vantageous and offensive. The appropriate char-  
acter of a woman demands delicacy of appear-  
ance and manners, refinement of sentiment,  
gentleness of speech, modesty of feeling and  
action, a shrinking from notoriety and pub-  
lic gaze, aversion to all that is coarse and rude,  
and an instinctive abhorrence of all that tends  
to indecency and impurity, either in principle  
or action. These are the traits which are  
admired and sought for in woman. — Exchange.

## HORSFORD'S ACID PHOSPHATE

DR. A. L. HALL, Fairhaven, N. Y., says:  
"It forms an excellent substitute for lemon  
juice, and will furnish a refreshing drink for  
the sick."

# Health and Humanity.

## TEN LESSONS ON KINDNESS TO ANIMALS.

### FIFTH LESSON.

Open thy lips and speak,  
Protect the dumb and weak,  
Their cause maintain.  
Why should we listen above?  
Why these kind friends mislead?  
O let us never choose  
To cause them pain.

— HENRY HERBERT.

### THE HORSE—Continued.

(To be read to pupils by Primary Teachers.)

In Russia, people do not use blinders to cover  
the eyes of the horses, and so they seldom  
get frightened. They know when to start be-  
cause they can see when the people have got  
into the carriages, and when they hear noises  
they can see the cause.

Blinders were invented by an English no-  
bleman to hide a defect in the eyes of a val-  
uable horse, and then they were found to be  
good places for the nobility to put on their  
coats of arms, and so they came in fashion.  
They injure the eyes of horses, and have caused  
thousands of accidents, because horses  
with blinders cannot see behind them. In  
America a great many people are training their  
horses to go in carriages without blinders,—  
just as they do in saddles without blinders,—  
and by-and-by I think they will be out of  
fashion, and horses like all other animals, will  
be permitted to use their eyes.

It is a great cruelty to a horse to tie his head  
back with a tight check-rein, for he cannot  
breathe and he cannot swallow his food, and  
it is not so easy. Many horses suffer great pain  
and become diseased because of their cruel  
check-reins. If a boy had to draw or push a  
heavy sled or a wheel barrow with a bit in his  
mouth fastened to his back, which pulled his  
head away back of his shoulders so he could  
not lean forward, then he would know what  
a horse suffers with a tight check-rein. A  
check-rein, if used at all, should always be so  
long that when a horse draws a heavy load up  
a steep hill, he can put his head as far down  
as he would put it if he did not have a check-  
rein. Over five hundred horse doctors in  
Great Britain have signed a paper condemn-  
ing tight check-reins; and I think the time will  
come when all our men, women, and children  
will become so humane to horses that they  
will not make them suffer any longer with  
tight check-reins.

Some people, when their horses become old,  
or sick, or lame, sell them for a small sum to  
cruel men who beat them, and kick them, and  
starve them, and otherwise abuse them, then  
the poor horses have a hard time until they die.  
I think that a good horse that has worked  
faithfully for his master until he is worn out,  
never ought to be sold. When he has become  
too weak to work out to serve a good and mer-  
ciful master, then he should be killed in a  
merciful way without pain. This can be done  
in one instant by shooting him *in the middle  
of the top of the front of the head, near the  
top of the forehead.* The "Massachusetts So-  
ciety for Prevention of Cruelty to Animals" pub-  
lishes a little book that shows how horses and  
other domestic animals may be killed in a  
merciful way, and the Society employs per-  
sons in Boston to kill them.

Five other things about the horse, are  
worthy of being told, namely: (1st.) That  
the strongest part of a horse is just behind  
his shoulders, and the rider who leans forward  
in his saddle tires his horse less than one who  
leans back. (2d.) That when, because of old  
age, the teeth of horses do not properly chew  
food, they can often be put in good condi-  
tion by horse doctors. (3d.) That it is just  
as cruel to keep a horse in the stables for days  
without exercise, fresh air, and sunshine, as it  
would be to keep a boy in the house several  
days without exercise, fresh air, and sunshine.  
Horses should have some exercise every day.  
(4th.) That horses like to have other horses or  
other animals in the stable with them, and  
perhaps feel almost as lonely without them as  
boys do when they have no companions. (5th.)  
It has been found by experiments in Great  
Britain, that horses which work hard six days  
in a week will last much longer and do more  
work in a lifetime, if permitted to rest every  
seventh day. And this reminds me that a friend  
of mine near Boston, Mass., used to drive his  
horse six days of every week to the railway sta-  
tion, and the seventh day, by a different  
road to church. After a time the horse  
learned this, and of his own accord would  
take the road to the railroad station six  
days in a week, and every seventh day stop  
at church.

Horses differ in intelligence, but they all  
know when they are kindly treated, and  
whether they speak kindly to them or not,  
and they like to be kindly spoken to. I could  
tell you many true stories about horses, but it  
would make this lesson too long. If you  
want to be kind to horses, always refuse to  
ride a horse that is sick or lame, or that  
seems to be poorly fed and weak.

## SOME QUESTIONS.

[Others to be asked by the teachers.]

In what country are blinders not used on horses?

Why do we invent them and what for?

Why is it better to learn horses to go with-  
out blinders?

Why is it cruel to tie up a horse's head with  
a tight check-rein?

Could a boy push or pull a load well with  
a tight check-rein, and why not?

How long should a check-rein be if used at  
all?

When a horse gets old, or sick, or lame, is it  
right to sell him to strangers?

How can he be killed in a merciful way?

Does a rider who leans forward in the saddle  
tire a horse more or less than one who  
leans back, and why?

When the teeth of old horses become bad,  
what can be done for them?

Should a horse be kept in a stable without  
exercise, fresh air, and sunshine? If not, why  
not?

Why do horses like to have other animals  
in the stables with them?

What has been found in England in regard  
to horses that work hard six days in a week?

What can you tell about the horse in Mas-  
sachusetts that used to go to the railway sta-  
tion week days, and to church Sunday?

Do horses know when they are kindly spoken  
to?

If you want to be kind to horses what  
should you always refuse to do?

# Agricultural.

## A GOLD VEIN ON MOST FARMS.

Very many communities know the excite-  
ment produced by the rumor, even, that some-  
body in the vicinity has found indications of  
the presence of gold in the soil. Untold mil-  
lions have been expended in searching for the  
precious metal in localities where a bit of as-  
less iron pyrites (sulphide of iron) has been  
mistaken for gold, which resembles it in color.  
Our observation indicates that there is, on at  
least four-fifths of the farms of this country, an  
overlooked golden vein, of much greater val-  
ue than any yellow metal likely to be found  
outside of a few special geological formations.

The following experiment, tried on any farm  
or garden will explain what we are aiming at.  
Take a quart of fair quality yard manure, and  
pour upon it a pint of water. After standing a  
week or two drain off a half pint of the liquid.  
Now prepare two corn hills, a few feet apart,  
on any ground, even rich prairie soil. For  
one hill make a hole three or four inches deep,  
and pour into it the half-pint of liquid, and  
add a trifle of fine earth, and plant the corn.  
Plant the second hill without this preparation.

The result will be, almost without fail, that  
the first hill the rootlets, and subsequent roots, will  
grow downward where the liquid has soaked,  
much more quickly, grow stronger, spread  
wider, and send out far more numerous feed-  
ing fibres than will be found in the second hill.  
The young corn plants (and the same with other  
plants) will, like well fed young animals,  
develop much earlier and take far better  
advantage of the growing season. In short,  
whatever the soil, this will, on the average,  
year, ripen earlier, produce more stalks, and  
twenty to fifty per cent—often a hundred per  
cent—more sound kernels than the other  
hill.— And by the way, there is in the quart  
of fertilizer enough material left for a similar  
effect on three or four other corn hills.

Now, visit the farm-yards of the country  
generally, and in nine-tenths of them there  
will be found on one side or another, quarts,  
gallons, barrels of this golden liquid leach-  
ing away and wasting—often scores and  
hundreds of barrels in a year. Yet, at a trifling cost,  
perhaps only an alkali bank on the lower side  
of the yard, all this waste may be saved  
and turned to account. The streams rich in  
stimulating plant food, now lost from the  
yards of the four and one-third million  
farms of our country, may, with very lit-  
tle care and trouble, be retained in the rot-  
ting organic matter, and transferred to corn  
hills and the roots of other crops. Reef food  
will be found in the increased crops, and he  
obtained at far less labor and cost than is ex-  
pended by the great mass of miners. Proper  
attention to so simple a matter on the farms  
of the country, taken together, would add more  
to the wealth of the country every year  
than is now dug out of all the mines between  
the Atlantic and Pacific. During the leisure  
month let every one look over his own prem-  
ises, and see what he is wasting in this di-  
rection, and where he can save and profit.

## HORSFORD'S ACID PHOSPHATE

### IN CONSTIPATION

DR. J. N. ROBINSON, Medina, O., says:  
"I have used it in cases of indigestion and  
constipation, with good results. In nervous  
prostration its results are happy."

**HORSFORD'S ACID PHOSPHATE**  
Makes a cooling drink. Into a tumbler of ice water put a teaspoonful of Acid Phosphate; add sugar to the taste.

**THE NEW ENGLAND NEWS-PAPER.**  
A Comprehensive, Progressive, Independent Journal.  
Devoted to  
News, Political Economy, Social, Intellectual, and General Affairs.  
An Admirable Weekly Review of America Life.  
[Established in 1821 by Samuel Bowles.]

THE WEEKLY SPRINGFIELD REPUBLICAN is a convenient quarto sheet, covering a choice selection of the best features of THE DAILY and SPRINGFIELD REPUBLICAN, with rewritten and carefully classified news summaries and considerable or great matter.  
It is a valuable general newspaper for the family, for the farmer and for the active business or professional man who cannot keep pace with detailed daily issues, and especially for New Englanders at home and abroad.  
SUBSCRIPTION: Four cents a copy; 75 cents for six months; \$1.50 a year; in clubs of five or more \$1.25 a copy, one year. Trans. Remittance 25 cents for a copy, one year.  
A Special Cash Commission Allowed to Postmasters and others acting as local Agents.  
Specimen copies sent on application, and all subscription payable strictly in advance.  
ADDRESS  
**THE REPUBLICAN,**  
SPRINGFIELD, MASS.

**REVENUE** not life is sweeping by, go and dare before you die, something mighty and sublime leaps behind to conquer time. \$50 a week to your own town. No outfit free. No risk. Everything new. Capital not required. We will furnish you everything. Many are making fortunes, men, women, boys and girls.  
Ladies make as much as men, and boys and girls which you can make great pay at the time, write for particulars to H. HALLATT & Co., Portland, Maine.

**MUNN & CO. PATENTS**  
NEW YORK  
We continue to act as solicitors for patents, caveats, trade-marks, copyrights, etc. for the United States, and to obtain patents in Canada, England, France, Germany, and all other countries.  
Thirty-six years' practice. No charge for examination of models or drawings. Advice by mail free.  
Patents obtained through us are noticed in the SCIENTIFIC AMERICAN, which is the largest circulation, and is the most influential newspaper of the kind published in the world. The advantages of such a notice every patentee understands.  
This large and splendidly illustrated newspaper is published WEEKLY at \$3.50 a year, and is admitted to be the best paper devoted to science, mechanics, inventions, engineering works, and other departments of industrial progress, published in any country. Single copies by mail, 10 cents. Sold by all news-dealers.  
Address, Munn & Co., Publishers of Scientific American, 261 Broadway, New York.  
Handbook about patents mailed free.

**THE HYGEIA HOTEL,**

AS EXHIBED AND IMPROVED.

**OLD POINT COMFORT, VA.**

Situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. Mails, landing only twenty rods from the Hotel, which is substantially built and comfortably furnished; has two Out hydraulic passenger elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; water, rooms for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or any public building in the country. As a resort for the pleasure-seeker, invalid, or restful place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanatorium. Has during the cold weather over 15,000 square feet of the spacious verandahs (of which there are over 85,000 square feet encircling the house on all sides) enclosed in glass, enabling the most delicate invalid to enjoy the sunshine and fine water view without risking the slightest exposure. The climate of Old Point Comfort is unequalled for salubrity. *Material facts being absolutely unknown.* The record of the Meteorological Observatory for the past ten years show an average temperature of 60 deg., 74 deg., 76 deg., in summer, 70 deg., 58 deg., 48, in autumn, 45 deg., 44 deg., 43 deg., in winter, and 48 deg., 53 deg., 58 deg., for spring. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cold summers of the North. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few feet from the bedroom windows, are most healthful supports of the Hygeia.

**Hampton Normal and Agricultural Institute**

**HAMPTON, VIRGINIA.**

Established in 1876, by special Act of General Assembly of Virginia; exempt from taxation. Devoted to the Education of Negro and Indian youth in Agriculture and the Mechanical arts, and as teachers of their respective races.  
S. C. ARMSTRONG, J. F. B. MARSHALL, Principal, Treasurer.

Annual session from October 1st till the mid die of June following.

Terms of admission: a knowledge of reading and writing; of short and long division.

Tuition free to all, (provided by friends.) Board, etc., ten dollars per month, payable monthly; half in cash and half in labor; six dollars cash, and four dollars in work required of those under 19 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The Institution is aided by the State, but is supported mainly by voluntary contributions. Besides State aid and Government help for Indians, the sum of \$30,000.00 a year, must be raised by contributions, to meet current expenses.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all.

The great need of the Institution is a permanent endowment fund.

The Hampton Institute is supported by, and responsible to, no denomination or society; and has no paid soliciting agent or machinery whatever, but depends directly upon the public. It is earnestly Christian in its teachings and influence.

Present attendance, 490 students, of whom 99 are Indians; average age 18. Negro boys 238; Negro girls 170. Indian boys 60; Indian girls 53. All but thirty-two board at the Institute; twelve students represented, but chiefly Virginia and North Carolina.

**FORM OF REQUEST.**

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of ..... dollars, payable do., do., do.

For further information address,  
S. C. ARMSTRONG, Principal.

**JUST OUT**

A BOOK FOR EVERY  
Man, Woman and Child.

**EMANCIPATION**

ITS COURSE AND PROGRESS FROM  
1481 B. C. TO A. D. 1875.

BY JOS. T. WILSON.

In addition to the history of Emancipation, it also contains a review of President Lincoln's Proclamations, the XI amendment, and the progress of the freed people since Emancipation. Also a history of the Emancipation Monument, in Lincoln Park, Washington.

It is a work that has long been needed as it contains much valuable information and data that can only be obtained by long and laborious research through voluminous histories and encyclopedias.

The Review of President Lincoln's Proclamations and the XI amendment is valuable, showing as it does the opinions of the different leading thinkers and writers on the validity of the same.

The book contains 321 pages; printed in large, clear type, on heavy white paper, and is handsomely bound in full cloth. Price \$1.50—post paid.

**AGENTS WANTED**, to whom liberal inducements will be offered. Address

I HAVE REDEEMED THEE.

## IO VICTIS.

BY W. W. STORY.

I sing the Hymn of the Conquered, who fell  
in the battle of life—  
The hymn of the wounded, the beaten, who  
died overwhelmed in the strife;  
Not the jubilant song of the victors, for  
whom the resounding acclaim  
Of nations was lifted in choruses, whose brows  
wore the chaplet of fame—  
But the hymn of the low and the humble,  
the weary, the broken in heart,  
Who strove and who failed, acting bravely a  
silent and desperate part;  
Whose youth bore no flowers on its branches,  
whose hopes burned in ashes away.  
From whose hands slipped the prize they had  
grasped at, who stood at the dying of day  
With the work of their life all around them  
unpitted, unheeded, alone.  
With death swooping down o'er their failure,  
and all but their faith overthrown.  
While the voice of the world shouts its cha-  
rus, its psalm for those who have won;  
While the trumpet is sounding triumphant;  
and high to the breeze and the sun,  
Gay banners are waving, hands clapping and  
hurrying feet  
Thronging after the laurel-crowned victors—  
I stand on the field of defeat  
In the shadow, 'mongst those who have fal-  
len, the wounded and dying—and there  
Chant a requiem low, place my hand on their  
pain-knotted brows, breathe a prayer:  
Hold the hand that is helpless, and whisper,  
"They only the victory win  
Who have fought the good fight and have van-  
quished the demon that tempts us within;  
Who have held to their faith unswerving  
the prize that the world holds on high;  
Who have dared for a high cause to suffer, re-  
sist, fight—if need be—to die."  
Speak, history! Who are life's victors? Un-  
roll thy long annals and say—  
Are they those whom the world called the  
victors, who won success of a day?  
The Martyr or Hero? The Spartans who  
fell at Thermopylae's trust,  
Or the Persians and Xerxes? His judges or  
Socrates? Pilate or Christ?  
—Blackwood's Magazine.

A Funeral at the African Church.  
BY ORRA LANGHORNE.

The morning paper announced the death of "Mrs. Milly Walton," and stated that the funeral would take place in the African Methodist Church on Sunday afternoon.

To the brief notice, the editor added in kindly terms that many white families in the city would grieve to hear that a good woman, whose estimable character and efficient services had caused her to be highly regarded wherever she was known, was dead.

Perhaps nothing could more fully indicate the esteem felt for such a character as the deceased in a southern community, than the fact that a "Bourbon" editor should use the formal title of "Mrs." so graciously bestowed by the ex-slaveholders on Negroes, coupled with the familiar "aunt," always intended to show the affectionate respect entertained by the whites for old and worthy Colored people.

In my childhood, Aunt Milly was one of the authorities on the plantation of one of our wealthy neighbors, the beloved "Mammy" of thirteen white children, the trusted friend and counsellor of her master and mistress—beloved and respected by all.

She had been the life-long companion of the first Mrs. Landon, coming with the fair young bride to her husband's home from the estate of one of the old Virginia gentry, who had held his office and land-patents from the Crown in colonial days, and abated no antecedents when taking part in the organization of government under the young Republic, to which he had early transferred his allegiance. Aunt Milly always showed, in her erect carriage and dignified bearing, that she appreciated to the full extent "old master's" position in the county, and in her grave admonitions to the children of her care, it was evident that she embodied the idea of a "noblesse oblige."

In person, Aunt Milly was of stout form and medium height, very strong and healthy, slow in her movements, but persevering in industry, careful, accurate, and thoroughly reliable in all that she did and said.

Her color was dark brown, her features large and expressing much intelligence and benevolence. One of her peculiarities was keeping her eyebrows and those of her children closely plucked. This was a mysterious performance to the white children, whose curiosity on the subject was never gratified, until the reading of later years enlightened them with the knowledge that the western coast of Africa. Aunt Milly always maintained a dignified silence on the subject, though doubtless she had full understanding of its importance in the eyes of her ancestors.

Although apparently contented in her home and surroundings, and showing the most devoted attachment to her master's family, Aunt Milly had always, and passionately, desired her freedom, and her master's will, probated in 1854, stated that she should be set free at his death and a home provided for her by his children.

After the war, Aunt Milly acted as monthly nurse among the prolific race to which she had ministered from her earliest years, and found abundant occupation as the family extended its branches, and the grand-children of the children she had nursed were fast coming upon the stage from which their predecessors were disappearing.

As she grew old and feeble, and was no longer able to maintain herself, her master's children, sadly reduced in fortune by the results of the war, would gladly have given the dear old mammy, who had been their mother's friend, a home among them; but she steadily refused to leave her husband and children, though thankfully accepting the attention shown her by the white family who considered her one of themselves.

Her master's eldest daughter, a widow struggling to support her orphan children, constantly denied herself to supply Aunt Milly with delicacies, and when informed of the good old nurse's death, sent one of her two dresses to shroud the weary frame for its long rest. The youngest daughter of the house, which had once held its head with the highest of the land, blind for many years and living with one servant on a little mountain farm, which is all that remains of her patrimony, sent money earned by herself for "dear mammy Milly," and other members of the family showed their affection by like tender remembrances.

At the hour appointed for the funeral, I entered the African Church and found it filled with a large audience, and as the service had already begun, I took the first seat I found, near the door. The Colored people are very particular about doing everything in ceremonious style on such occasions, and a sister in the church soon spied me and came to request that I would "sit with the family," and directed me to the left side of the pulpit, where seats had been reserved for the white family and friends of the deceased, and those on the opposite side being filled with the Colored people of her connection. The carriage-driver of one of my stylish neighbors informed his employer the next day that "every Landon in the city, black and white, was at the funeral." A long bench, close to the coffin, was filled with the children of the white family, many of them Aunt Milly's nurslings, looking as if they had been placed there as specimens of the good nurse's skill. Scarcely have I seen a fairer sight than these wondrous boys and girls, from four or five to fifteen years old. Many of the children carried wreaths or bouquets of evergreens and early flowers to lay on the dear old mammy's grave. Their fresh rosy faces, hushed into unwonted solemnity by the strange scene around them, their little dangling legs in many-colored stockings, their dimpled hands clasping the funeral wreaths, formed a picture so fair to see that for a moment I almost lost sight of the presence of death and the grief of weeping friends in regarding the innocent beauty of the children.

The plain coffin which enclosed the remains of a noble-hearted woman stood in front of the chancel, and her sorrowful old husband, wiping tears from his withered face, sat near it. It would have seemed a curious gathering to a stranger from the North, who, unacquainted with Southern customs and with his mind full of cruel thoughts of slavery and the prejudices of the old slaveholders, had he chanced to enter the church on this occasion.

The Landon's are such strikingly handsome, refined-looking people, the eye could but rest with pleasure on the fair faces of the three generations whose infancy had been guarded by mammy Milly's tender care, her loving counsel; while in striking contrast, but no less interesting in their way, rose the dark background of people of their own race, all of them well-dressed, comfortable-looking, and reverent in their bearing, many of them fine and stalwart specimens of the Negro-American.

The Methodist preacher, Mr. Honor, in an almost rigid African, with powerful lungs and a ravenous-looking mouth, which, when open, displays not only every tooth in his head, but unlimited gums beyond them.

He is a good man, possessing fine natural powers of description, and having supplemented the fervid dreams of a tropical imagination and the physical training of a cornfield hand, with a ponderous amount of book learning since took to preaching, is a very popular orator among the Colored people. He heard him on the ramparts, with a large Colored audience, when he did not know that any "white folks" were about, describe the scene of the three holy children in the fiery furnace in a fervent manner, his blood, run cold. He depicted with impressive fervor of tone and gesture the burning of human flesh, the smell of singed garments, suddenly producing an electrical effect by announcing with distended eyes and thrilling frame the presence of the Son of God amidst the suffering children of man, pointing to the miraculous healing of livid wounds, while the obedient flames, yielding to the command of Deity, played harmless over their intended victims.

On this occasion, however, the worthy pastor was evidently cramped by the white portion of his audience, and for a time I feared he would make a complete failure, as he labored among axioms of philosophy, misquoted from their authors, misused, and words which he wrested vainly, mistook "analysis" for "analogy," and wandered wide of his mark in the effort to produce an effective discourse. As he warmed with the subject, however, the restraint vanished, and towards the close of the sermon, which was very long, he grew natural and impressive. He alluded pathetically to the sorrows of Aunt Milly's long life, spoke of her as a Christian for forty-eight years, whose faithfulness all bore witness; dwelt upon her absence forever from the scenes to which her friends had been accustomed to welcome her—the seat in the sanctuary, the place in the society, "the chair in the kitchen of her white friends," in the home circle and in public. Then he turned abruptly from the sadness of earth to the brightness of heaven, calling upon all who had loved her here to follow her in her Heavenlyward flight. When he closed with an earnest appeal to the little children, on whom she had bestowed so much affection and care, to remember their "dear mammy's" example and teachings, there were few dry eyes in the house, and the large congregation, forgetting the distinctions of caste, wet together for the loss of a common friend.

## I Have Redeemed Thee.

See illustration, page 37.

By the ancient Jewish custom, the borrower who did not pay his debts when due, became indentured "servant to the lender," working for him as his slave until he made up the full amount. But the law given through Moses provided mercifully that if the debtor's brother or near kinsman came to redeem him by paying the whole charge against him, the master must accept it and set him free. Our picture brings the scene vividly before us. The poor debtor, in his rags and misery, is working out his price, perhaps, of folly and of sin. Before him suddenly appears his rich brother who has hastened from his distant home to find the prodigal—has paid his debt in full, and now with face beaming with love and pity, holds out to him his free papers, saying—  
"Fear not, for I have redeemed thee."  
And what will the redeemed man do? Will he stand and argue whether his brother is really willing or able to save him, or whether he had not better patch up his old rags and work a little longer as a slave before he goes home a free man? And will he fail to show his gratitude to the brother who has bought him to make him free indeed?  
See 1. Peter, 1: 18, 19; Titus 2: 14.

## From Tuskegee.

TUSKEGEE, Feb. 19, 1883.

Editor Southern Workman:  
When you heard from us last, I think we had just moved into our new building. Everything now is beginning to appear quite home-like in our new hall.

So far in the term about 130 students have entered. Some of our classes have, of necessity, been too large. We have students from almost every part of the State, and even Georgia is represented.

Just now we are all feeling unusually lifted up, notwithstanding the absence of the State Treasurer. The Legislature has just passed a bill giving us \$1,000 more annually. The bill came up in the House the next day after the defection was reported, and passed by a large majority. I was invited to make a statement of our work before the committee on education, and it seemed especially interesting in the industrial

The State Supt. of Education, Hon. H. Clay Armstrong, has notified us that Dr. J. T. M. Carey, by his advice, has decided to give us \$500 from the Peabody fund.

It is certainly a cheering sign to see how interested some of the leading Southern whites are becoming in the education of the Negro. It is said that when the bill to increase our appropriation for tuition was before the House, that the speaker, a staunch democrat, made one of the most stirring and eloquent speeches of the session in favor of Negro education.

We had a very pleasant two-days visit last month from the Rev. K. C. Bedford, pastor of the Congregational church of Montgomery. He spoke one evening to the students and citizens in the chapel. The chapel was crowded, and he seemed to impart new life to every one.

I think we have not told you about Thanksgiving Day. In the day we had exercises in the chapel, and addresses were delivered to the students and visitors by the pastors of the white Baptist and Presbyterian churches and by one of the colored pastors. During Thursday and Friday evenings, and Saturday in the day, Miss Davidson, assisted by other teachers, held a Fair to raise means for the school. All through at the Fair the people showed in a practical way that they were willing to help *themselves* by their own efforts. We netted from the Fair \$145.00, \$150.00 of this amount came from a "jug-breaking" Friday evening. The jugs had been given out a month previous to twelve students, who left for persons unbegged for a nickel.

Our students are not ashamed to work. Soon after we moved into the building, the young men were called together and told that a large amount of work would have to be removed from the basement before it could be completed, and if we had to hire it done the cost would be \$30 or \$35. One young man suggested to the others that, since the basement was in such a kind of a state, that greater part needed to put up the building, students ought to be willing to give in work whatever they could. A proposal was made that each student should work every day in turn for an hour after school. This was done. The basement was now cleared out. Not one young man showed the least unwillingness to do his share.

Within a few days, a kind friend from Connecticut has sent us means to purchase an additional forty acres to our farm, making in all 140 acres.

We have not been able yet to take out our insurance on our building. This is the most pressing matter before us now.

By invitation of Capt. Wilson, Supt. of Education at Ballou's county, I go to-morrow to hold a two-days' Institute with the teachers of his county. I will try to send you an account of my trip for the next month. BOOKER T. WASHINGTON.

## Successes of Educated Women.

At the recent examination of the University of Bologna, a young lady received her diploma of doctorate, surpassing the students of the other sex in anatomy, physiology, and chemistry. At the University of Turin, a girl graduate obtained a similar degree for success in law.

Caroline E. Hastings, M. D. for seven years lecturer and demonstrator of anatomy in the Medical School of Boston University, has been made Professor of Anatomy in that school.

The Professors of Mathematics in Amherst and Swarthmore Colleges, are ladies.

Dr. Alice Bennett, resident physician to the female wards of the new Insane Asylum at Norfolk, Va., received at the recent Commencement of the University of Pennsylvania the Degree of Doctor of Philosophy, the first ever granted by that University to a woman.

In 1872, Miss White, of Michigan University, solved a mathematical problem which had previously been given to about 1,500 young men during a period of fifteen years, all of whom failed to present a correct solution. She presented the only correct solution by her class.

In 1873, at Vienna, a lady took the prize for an essay on "Operative Surgery," and was pronounced by the Professor the best operator in the class.

The calculator of lunar eclipses for the Nautical Almanac, Washington, D. C., has been a woman, because she did the best work.

To this list—which might be largely increased—we may add that, by wide acknowledgment of Greek scholars and literary critics, the best English translation of Plato's famous masterpieces, the Phaedo, Crito and Apology of Socrates, is one which has been made by a woman; and that—

The resident physician of Hampton Institute, to whose devotion and skill is intrusted the medical care of its five hundred and fifty students and officers, representing eight of the States, as well as the general sanitary interests of the school—is Dr. Martha M. Waldron, a graduate of the Woman's Medical College of Pennsylvania.

## Hampton Tracts for the People.

**SANITARY SERIES.** Ten numbers published  
1—Health Laws of Moses. by H. W. Ludlow.  
2—Bible of Teachers. by E. W. Collingwood.  
3—Preventable Diseases. by M. F. Armstrong.  
4—Who found Jesus? by H. W. Ludlow.  
5—A Haunted House. by M. F. Armstrong.  
6—Woman's Work in Sanitary Reform. (English).  
7—The Rights of the Body. by E. R. Colthrop.  
8—The Two Breasts. by Rev. Charles Kingsley.  
9—Cleanliness and Disinfection. by E. Harris, M. D.  
10—Our Jewish. by M. F. Armstrong.  
Published by Putnam's Room, New York.  
Edited and printed at Hampton, Virginia.  
For sale in both places, specimens sent from Hampton at 6 cts. a number, or 50 cts. a set.

THE SOUTHERN WORKMAN appears, this month, in a new dress; the first it has had in over eleven years; which is certainly keeping within the bounds of economy. The statement of its needs, made in our January number, has been so far—though not yet adequately—met by kind responses from some of the friends who are interested in its cause and believe in its mission, that we have felt justified in making the new departure in the fact that what is still lacking will be made up. The change had indeed become a necessity, much of the old type—part of which we had bought at second hand—being fit only for the foundry, while the demands on the office are increasing, not only for the *Southern Workman*, but its job work, and printing of pamphlets and books.

The improvement to the paper is its own witness, in the clearness and beauty of the new "old style" type, pleasant to the eye and doing fuller justice to the quality of the work done by our freedmen, Liberian and Indian student-compositors and pressmen. To do more justice, as far as our press will allow, to the large plates, which our very kind friends, of the *Harper's Weekly* and *Christian Weekly* generously furnish for the benefit of our readers—we have procured a better finished quality of paper for our outside pages; feeling both that we owe it to these kind friends not to misrepresent their beautiful pictures, and that the pictures will thus do more good in the many little homes and school-houses into which they go as a sort of "flower mission," carrying the light of beauty and suggestion.

We trust that our friends will approve our course.

With increased facilities, our printing office is prepared to do a first rate quality of work in both job and book printing on the lowest terms. We call special attention to its advertisement in another column, and suggest that, by putting work into its hands, the friends

of the school can give important aid to one of its most useful branches of industrial education.

THE ANNIVERSARY EXERCISES of Hampton Institute will be held, this year, on Wednesday, May 24th. There will be the usual programme of class recitations and examination of the graduating class, and inspection of industries, in the morning; essays, addresses and music in the afternoon; the graduating class represented, according to our present custom, by only its salutatorian and valedictorian; the Indians, by two of their number; the other student speakers being drawn from last year's class and former graduates of the school, whose real experience in life-work gives their words a vitality and practical interest.

The trip to Hampton, either from New-York or Boston, at that season of the year is a delightful one. The country here is in its full flower of beauty, the air bright with sunshine and cool with sea breezes. So it has been in former years, and we can only hope to be favored as usual. The steamers on all three lines—from Boston, from New-York by the Old Dominion line, outside, and the Chesapeake Bay line from Baltimore—are very fine in all respects, and the passage is a very pleasurable one to all who like the water. The Boston Steamship Company has, for several years, made special very pleasant arrangements for the Hampton excursion which is in their regular line. Connecting steamers from Norfolk—twenty miles—bring passengers from the Old Dominion and Boston boats to the wharf at Old Point Comfort (Fortress Monroe), and the Chesapeake Bay line steamers land there, where carriages are in waiting for the pleasant drive of two miles, on a fine shell road, to the school. There will be, also, as usual, special boats both from Norfolk and Old Point to the school wharf.

For those who do not enjoy a trip by water, or who like novelty, the connection of Hampton by railroad with the new terminus of the Chesapeake and Ohio railroad, at Newport News, makes it possible now to come all the way by land, by a pleasant ride of only three hours from Richmond. The new city of Newport News, springing up in the wilderness, with its magnificent harbor, and its wharf—the largest in the United States—with its lines of steamers to Liverpool and Brazil; expected to be, in fulfillment of General Washington's prophecy, the great seaport city of the future, is itself an object of interest worth visiting, though it will not at present take long to inspect.

The Hygeia Hotel, and other boarding-houses and hotels in the neighborhood and in the town of Hampton, are open then, and a few days longer stay by the sea shore in that pleasant season, in a spot which is the centre of so much natural beauty and historic association, as well as hopeful work for the future, will well repay a visit.

## The Sioux Treaties in Congress.

THE 47TH CONGRESS, which expired on the 4th of March last, has not left behind it a record of which the nation has any reason to be proud. During the session of 1881 and 1882, the country was threatened with an expenditure so extravagant and a legislation so corrupt in its tendencies that the only wonder is that the voters of the nation contented themselves with a protest as mild as that embodied in the elections of last November, and that even that mild protest produced so decided a result, is only another proof that the responsibility lies altogether back of the men whom we elect to represent us. The change in the point of view which took place in Congress after the election, is indicated, for example, by the fact that the same men who passed the disgraceful River and Harbor Bill of 1882 carefully avoided in 1883 appropriating a penny for any similar purpose, and that the Reform Bill of the

last session carried majorities which would have been honorable had they been, the result of honest conviction or determination.

During this session our legislators must also have the credit of having reduced internal revenue taxation, and made some changes in the tariff, and of action in regard to public lands, the postal system, and our Indian policy, which was all in the right direction. But that these and other apparent attempts at reform were only superficial and the result of coercion, becomes evident when we look closer into details. An instance which bears specially upon the work at Hampton, but which is also a fair general illustration, is to be found in a clause which, during the last hours of Congress, was tacked on to the Sundry Civil Service Appropriation Bill, making provision to carry out the so-called Sioux treaties, which the three Commissioners appointed for the purpose had reported as negotiated with these tribes of Indians during last autumn.

We have not, of course, space to present the specification of these treaties, but to briefly indicate their general drift is sufficient for our purpose. The Indians cede 12,000,000 acres of land to the General Government, receiving, as one item, 26,000 cows and 1,000 bulls, *no guarantee being given as to what the real value of these animals shall be.* When removed from their lands the holders are forced to take such payment for their improvements as may be awarded them. There is no provision made for conveying to religious societies the land on which their mission buildings stand, or indemnifying them for the great loss of their property. No sum is specified which the Government is bound to appropriate for education, and this alone would nullify all obligations as to schools, for the Government never fulfills a treaty involving money, which does not specify the exact sum to be appropriated.

There was in this entire amendment clause no attempt at justice or fair dealing; it was slipped in at the last moment as a "tag," and was passed by the House without debate.

That it was finally stricken out and the treaty passed over to the next Congress for fuller investigation, is due entirely to the active measures taken by a few individuals outside of Congress who happened to get wind of the facts, and before it was too late brought them to the attention of various Senators, whose hearty and prompt action prevented the success of this disgraceful piece of legislation.

Such a case as this needs no comment, and it does not stand alone. The Republican party has lost, during the last two years, an opportunity as fine as ever fell to the lot of any political organization. Whether it can in the future retrieve itself is still an open question.

A PETITION, signed by a number of weighty names, has lately been addressed to the trustees of Columbia College, New York city, praying that women may be admitted to the advantages of the college on an equal footing with the male students. The reply of the trustees to this is a somewhat curious report and resolutions, which shut the doors of the college in the face of the petitioners, but at the same time rather grudgingly and as it were under pressure, admit the proven capacity of women to receive and make good use of the higher education which the college could give them if it chose.

The discussion which has arisen out of this is interesting, although it covers no new ground, and is valuable principally as an open test of public opinion. There may be, in the judgment of the trustees, business reasons which make the admission of women at present inadvisable, but this is evidently a superficial obstacle, and it is upon the underlying question of co-education that opinions are really divided. The ability of women being conceded, as it vir-

tually is, the opponents of higher education in Columbia College, as everywhere else, have to fall back to their last stronghold and declare their conviction of the danger (to them hydra-headed) of permitting young men and women to work together in class rooms under the same instructor.

On the principle that an ounce of practice is worth a pound of theory, Hampton has, for some years past, put forth a claim to be heard on this point, holding that an experience gained from massing together at study and at work, some four or five hundred young men and women, albeit their skins are dark and their moral and mental standards not of the highest, may, if carefully weighed, be helpful (as mice may be to lions) to institutions whose age and dignity make such experiments more difficult.

In the first place it should be stated that the teaching at Hampton is, and has always been, largely in the hands of women—graduates, some of them, of colleges and normal schools, and some of them self-educated—whose work tested, not as mission work, but by the standard of educational experts, is of a very high order. To this it is fair to add, that being enthusiasts for their work and for their sex, they create and maintain an atmosphere which has an unmistakable effect upon their students. All this must be considered when we state, as an accomplished fact, that co-education here is an entire success, for the manner of the work done in a class room will depend at least as much upon the teacher as upon the student, and it is quite possible that the practical objections to co-education are to be looked for among those who teach, as well as among those who are taught.

We do not, however, claim for Hampton any special advantage in this direction, it is merely that, in order to be perfectly fair, we suggest a possibility, while there is certainly a full offset to this in the lower moral standard and uncontrolled physical natures of our students. The system adopted is sufficiently simple—the sexes work together in class and industrial rooms, and take their meals together, being at meal times permitted unrestricted intercourse, except as the presence of two or three lady matrons in the dining room prevents anything like disorder. They, of course, occupy separate buildings, and visiting or social intercourse of any kind is carefully regulated. They are all under the care of a resident lady physician, and are probably neither more nor less amenable to her rules than any other class of students would be, though her presence is a distinct advantage.

There is no special espionage, but always kindly and conscientious watchfulness on the part of those in charge. The factors in the case are, with the possible exceptions already mentioned, similar to those in most large boarding schools and colleges, and the per cent. of misdemeanors is so small as to be a constant surprise even to those who have most faith in the system.

Co-education at Hampton was, ten years ago, an experiment; to-day, it is such no longer; and we have a right to ask if the result should not throw some light upon the problem beyond the immediate limits within which it has been worked out?

MANY HAVE SUPPOSED that the Roman Catholic Church was making strenuous efforts to win over the Negroes of the South, and that its ceremonial and appeal to the senses would make it as successful with them as it has been among the poor and ignorant generally.

The following statement from the *American Missionary Magazine*, indicates in part the strength of that body in the South.

The Catholic Directory for 1882 reports for the Archdiocese of Baltimore 1 academy for colored girls with 60 pupils, and 4 other schools with 693 pupils; total, 753; Archdiocese of New Orleans, 7 schools, 100 pupils; Archdiocese of St. Louis, 1 school, 120 pupils; Diocese of Louisville, 6 schools, 323 pupils; Diocese of Natchez, 3 schools, 80 pupils;

Diocese of Natchitoches, 2 schools, 40 pupils; Diocese of Savannah, 2 schools, 75 pupils; Diocese of St. Augustine, 6 schools, number of pupils not given. Total schools, 30; pupils reported, 1,730.

The Negro accepts the religion as he does the language, habits and manners of the country where he makes his home. While this is in one sense a sign of weakness, it is a source of power. A common religion overcomes, to a certain point, race hostilities. The African has a genius for making his home anywhere. He has even more adaptation than the Anglo-Saxon. This makes him impressible; he is a permanent in the world's history. His readiness to do menial work, of which there is a vast deal to be done in the world, makes him in demand everywhere, and gives him a stepping stone for higher things whenever he has the talent and push for it.

Negro Catholics are mainly in Louisiana and in Maryland, where they fell into the hands of the Romanists. They have a fine and attractive Cathedral in Washington, and have made a vigorous but not very successful effort in Richmond, Va. as well as in other places. The anti-Catholic movement, the whites make common cause with the blacks. The South is intensely Protestant; its population is more truly American than that of the North, and the influence of the Catholic priest on its political system is far less serious now, and prospectively than in the dense and mixed elements of that of the North.

#### Congressional Temperance Society

The semi-centennial anniversary of the Congressional Temperance Society was held with appropriate ceremonies, on February 26, in the City of Washington, "not a jubilee," so its secretary sadly remarked, for the country is not yet rid of the curse of intemperance. But the conflict, though longer than the pioneers of the temperance cause looked for in their first sanguine charge, has not been without its triumphs and its good results, some of which were interestingly set forth by the speakers of the evening and in the report of the secretary, Dr. Chickering, from which we quote a sketch of the history of this time-honored society in the center of our nation, given in a copy of the National Republican which he kindly sends us.

"The Congressional Temperance society was organized Feb. 26, 1833 in the old senate chamber, of the old senate court room. There were twenty-five signers to the original call; among them John Bell, of New Hampshire; Horatio Seymour, of New York; Edward Everett, of Massachusetts; Gideon Tomlinson, of Connecticut; and Felix Grundy, of Tennessee. Over one hundred members of congress signed the constitution. William Wilkinson, of Pennsylvania, was appointed chairman and Theodore Frelinghuysen, of New Jersey, submitted the draft of a constitution pledging the members against using ardent spirits. Hon. Lewis Cass, secretary of war, was chosen president; vice president, Hon. Samuel Bell, of New Hampshire; G. Tomlinson, of Connecticut; John Reed, of Massachusetts; Lewis Condict, of New Jersey; William Wilkins, of Pennsylvania; Thomas Ewing, of Ohio; Felix Grundy, of Tennessee; John Tipton, of Indiana; Daniel Woodwell, of New York; James A. Wayne, of Georgia; secretary, Walter Lowrie, secretary of the senate; treasurer, Hon. Eliza E. Whitelsey, and an executive committee of T. Frelinghuysen, of New Jersey; A. Naudain, of Delaware; John Blair, of Tennessee, and E. Cook, of Ohio. Under this constitution the Society went on for nine years; but in 1842 a new departure was made, the pledge was extended to fermented and all other kinds of intoxicating liquors and a new constitution adopted. The report then went on to speak of the death of several of its members—namely, Morrill, of Maine; Dodge of New York, and Updegraff, of Ohio. The occasion, though a semi-centennial, was not a jubilee. The country is still enslaved by intemperance. Not even a modern congress has sent forth an utterance so bold as that of the old 'continental congress,' recorded on the 17th of Feb. 1776, in the following words: 'Resolved, That it be immediately recommended to the several legislatures of the United States immediately to pass laws the most effectual for putting an immediate stop to the pernicious practice of distilling, from which the most extensive evils are likely to be derived, if not quickly

prevented." Nor is the forty-seventh congress likely to appoint a commission of inquiry into the economical, sanitary, and other results of the liquor traffic.

Among these reports mentions the new tidal wave of public opinion among the men, and especially the women, of the land, and the example and influence of men of position and power like Messrs. Morrill, Updegraff, and Dodge, former members of the Society, who have just passed away, leaving a pure and safe example.

At the close of the meeting the following resolution was offered and adopted by a rising vote:

*Resolved*, That in the opinion of this assembly, the great principle and practice which has been for half century the basis of this society's operations—total abstinence from all that can intoxicate—is fundamental to any thorough and permanent temperance reform; and we highly value this public testimony and example of men in conspicuous positions, of whose recent departure we have now been painfully reminded."

While there is reason to doubt the sincerity of a majority of those in Congress who voted for Civil Service Reform, there is no doubt an earnestness of purpose among the people that will not be defeated.

An illustration of this is in a small body of public-spirited gentlemen of Norfolk, Virginia, who have, at their own expense, hired a column in one of our daily papers of that city, from which we quote.

The non-partisan party in the South is larger than many suppose. There is material for an independent political party, that will appear as the color line shall disappear. A very large class does not care for office, has contempt for most officials, but wishes good government. Commercial enterprise creates better public sentiment; men who work for a living are not apt to be bitter partisans. The new South will be an industrious South, which in the long run, means a better local and national government."

#### "INDEPENDENTISM."

It is asserted that independents never accomplish much in politics. That is, as a general rule, perfectly true so far as obtaining offices for themselves is concerned. But incredible as it may seem to some, there is a large and increasing class of intelligent citizens, both white and black, who neither expect nor desire to obtain offices, and whose only interest in politics is to make the two principal parties put up better candidates and run the government on business principles.

#### PRACTICAL INDEPENDENTS

They exist in large numbers in Virginia. They stay away from the polls. The most agonizing appeals on the one hand to pull down the Democracy, and on the other to save the white man's civilization are passed over as so much buncombe. Independents have become an obsolete fact, and year after year the party press and machinery have proved utterly powerless to remedy it. The cause of this independentism is not far to seek. The party press call it apathy; but apathy usually results from despair. These practical independents act as such, because they have lost confidence in all party machinery, and look upon elections as mere scrambles for the spoils, between men who are almost equally undesirable, whether they be active plunderers or weak men capable of being used by the wire pullers.

Under these discouraging circumstances the controlling managers of both parties, caring more for the offices than for principle; and both parties having repeatedly put reform planks into their platforms, and as often gone back on their pledges, and there being no hope of either party running the government on business principles, unless the people compel them to do so, it has become absolutely necessary in order to kill the detestable spoils system, that good citizens without distinction of party, should unite themselves not for the purpose of running independent candidates, (unless as a last resort,) but for the purpose of grasping the balance of power between the two parties and so compelling both of them to compete for votes by putting up good candidates and keeping their promises to reformers.

The reform issue is the most important issue in America, because corruption and venality are the most dangerous shoals in our track. From bribery by giving offices for party service the transition is easy to bribery of the individual voter. Public and private morality are being attacked without mercy, and the foundations of our government are thus being steadily undermined by the spoils system, and still the partisan jour-

nals insult common sense by exhorting their readers that the only hope for effecting any thing good is by sticking to the old party machine.

The Philadelphia committee of one hundred immediately turn out any of their members who may be elected to any important office. They are composed of men of both parties, but they have smashed both machines, and to day compel good nominations in both parties.

#### TOO MUCH POLITICS

Among the unfortunate facts which tend to keep men of capital from locating in this city is that the Norfolk press is extremely partisan. So far as most strangers who contemplate coming here are interested at all in editorials on local politics, they care to know whether sound financial administration in our municipal affairs is the main object sought, and whether good management of the public schools is demanded by the press.

A cordial and hearty support of the movement for Civil-Service Reform on the part of the leading journals would, we believe, would tend to show a healthy sentiment against rings, and all the rest of the machinery of party. It would indicate that our public opinion was more in earnest for good government than for any mere party success, and that Norfolk, being up with the times on such an important subject, was a desirable place for men of means to settle in."

#### The Virginia Historical Society.

The mission of historical societies is very important in searching out and preserving the local and personal memoirs which give vitality to history. The Historical Society of Virginia is doing excellent work in this direction. We take pleasure in publishing at its request the following announcement:

#### THE "DINWIDDIE PAPERS."

The Virginia Historical Society, in the due execution of its mission, desires to announce the publication of *The Records of the Administration of Robert Dinwiddie, Lt. Governor of Virginia 1754-1757*, a volume of which, to make 600 octavo pages, is being printed. It will be illustrated with steel-portraits and wood-cuts, and bound in cloth.

The fullest elucidation of the text has been diligently essayed in definite foot notes on the material and social condition of the colony at the period, and much never before in print, is given. A special feature is the biographical notices of English and American officials and of the individual actors mentioned in the Records, including numerous family names, of both South and North, in whose honorable record many living representatives will be deeply interested. Upon the completion of the *Dinwiddie Papers*, the concluding volume of the "Spotswood Letters" will be printed in uniform style. The edition of 1,000 copies is distributed only by exchange among learned bodies and to the members of the Society. The tone of the Society's publications are sold. The annual dues of the Society are \$5; no entrance fee; Life membership, \$50.

Correspondence is solicited with those interested in the objects and welfare of the Society, as well as the names of others who may be addressed in such behalf.

Corresponding Sec'y, Va. Hist. Society, Richmond, Va., March 10, 1883.

#### Poor Men and Reform.

We call our readers' attention to a communication on this subject in another column, sent at our request by Mr. F. B. Richardson, of Norfolk. Mr. Richardson was one of the early workers in Hampton Institute and contributors to the WORKMAN, and has since done a most beneficent work for colored people in Norfolk by giving them opportunity to secure comfortable homes, paid for by instalments, for less than they have been able to rent houses for. He has also contributed to the general prosperity of the city by building up its thriving suburb Brambleton, where he is also the agent of Mrs. Augustus Hemenway, of Boston, in her benevolent establishment of a model school for white children. His latest effort for the public welfare is as president of the Civil Service Association of Norfolk, a society which is likely to be of great good in this important direction. His words have therefore the weight of business experience and proved benevolence, and we hope to have more of them.

#### A Friend Departed.

DIED.—At Ithaca, N. Y., Feb. 21, 1883, Mrs. M. A. Washburn, wife of the late Dr. Charles E. Washburn of Fredonia, N. Y., and mother of Miss Lucy M. Washburn of San Jose, Cal., formerly a teacher at Hampton Institute.

In this sad and sudden bereavement, the sorrowing daughter and son have the earnest sympathy of their friends and former associates, teachers and students of Hampton. We sorrow for them and with them, for Mrs. Washburn also was well known at Hampton, and ever a warm and valued friend of the school and its interests. Possessing always a young heart of enthusiasm for all good and progressive work, she was especially interested in the people emancipated by the war for the Union, for which her husband gallantly sacrificed his life. Both for his sake and in sympathy with her daughter's faithful and valued work at Hampton, she has been a long proved friend of the school and its graduates, many of whom will bear with sorrow of her death. Since their removal to California, both daughter and mother have kept up a kindly interest in Hampton and contributed generously to its work; occasionally giving us the pleasure of a visit, and maintaining a personal correspondence with a number of our graduates, who will hear with sorrow of this loss.

They will be interested in the following particulars of her life and death which we extract from the "Tribute of Respect" published at her old home in the "Homer Republican."

"Mrs. Mariana A. Washburn was born in Homer, N. Y., Jan. 16, 1821, and died in Ithaca at the home of her brother-in-law, Mr. Henry B. Lord, Feb. 21, 1883. She was the oldest child of the late Hon. E. C. Reed so long known as one of our most prominent and highly respected citizens. After completing her studies she engaged with marked success in teaching in Norwich, N. Y., Montrose, Pa., and in a young ladies' seminary in New York City. In 1874, she was married to Dr. Charles E. Washburn, then the resident physician of New York Hospital. Dr. Washburn practiced with success at Binghamton, N. Y. and afterwards at Fredonia, N. Y. In 1862, a conscientious patriotism led him to offer himself to his country, and leaving his wife and three young children, he entered upon duty as surgeon of the 112th regiment of the New York State volunteers. After the fall of Wilmington, N. C. in the spring of '65, several thousand exchanged Union prisoners from Andersonville to Salisbury were brought to the city. The supervision of these fell upon Surgeon Washburn, who had been appointed Chief Medical Officer of Ames' Division of Terry's Corps. Unremitting personal toil among these unfortunates, which his official position did not necessitate, but which his unselfish humanity prompted, brought upon him the malignant fever which was raging among them. Mrs. Washburn on receiving news of her husband's sickness, hastened South only to find that his body had been forwarded to Fredonia. This crushing blow was heroically borne as by a heroic Christian woman. Her sympathy and aid of many of the officers of the army were extended to her, and she returned home to her fatherless children. How well she has cared for them those know who have been intimate with her history. She has lived to see them all established in honorable positions in life. For several years her daughter, Miss Lucy Washburn, has held a high position in the State Normal School at San Jose, California. Dr. Charles E. Washburn, after completing his hospital course, has commenced the practice of medicine in the city of New York. Arthur, after thorough scientific training in mechanical engineering, occupies a responsible position in Holyoke, Mass. Mrs. Washburn at the age of 17, united with the Congregational Church in Homer, and has led an earnest Christian life through all these years; for most of the last ten years, she has resided with her brother

or her children in San Jose. She had been spending a year at the East, and had come to Ithaca early in December to assist her sister in the care of her aged and now helpless father.

Mrs. Washburn was ill but one week. Her disease was obscure and she suffered acutely at times, but the symptoms did not indicate serious peril until a few hours before her death, when, in spite of all efforts, she sank rapidly. Without realizing her critical condition she became unconscious, and passed away.

SOCRATES—*A Translation of the Apology, Crito, and parts of the Phædo of Plato. With an Introduction by Professor Goodwin of Harvard University.* 12mo. Paper covers, price 50 cents. Published by Charles Scribner's Sons, 473 Broadway, New York.

Emerson says truly that the value of history is in its bearing on the present time, and the vitality of history is in its revelation of the oneness of humanity. "I feel the eternity of man, the identity of his thought. The Greek had it, seems, the same fellow-beings as I. The sun and moon, water and fire, met his heart precisely as they meet mine. When a thought of Plato becomes a thought to me—when a truth that fired the soul of Pindar fires mine—time is no more." A good translator does this important service: bridging the centuries, he brings the great teachers of the ancient people within reach of the people of today who have we find, the same essential needs. "What would you not give," said Socrates, himself, "to converse with Orpheus and Hesiod and Homer?" It would be pleasant, no doubt, to converse with all the immortals, in their several tongues, if life were long enough to learn them; but, as most of us cannot afford the time for that and the other work it brings us, we may as well follow the example of the Greeks who prized themselves on their devotion to their own language, and be thankful to the interpreter who has done the work for us far better than we should have been likely to do it for ourselves, and given us in pure and classic English these golden thoughts which belong to all time.

In the most brilliant period of intellectual activity in Greece, the prominent figure is that of Socrates, and, for the four centuries before the time of Christ, we see no greater. In extreme poverty, making no claim to be a teacher, and refusing all fees as such, only going daily up and down in Athens, questioning everybody on what he professed to know, "in order to find out who was really wise, and who only thought himself so but was not so," he met at last the fate that might have been predicted—being put to death on false charges by the Athenians who did not like, any more than the rest of the world, to be convicted of ignorance and shame. But he called his life not a defeat but a success, and so we see it across the centuries. While he founded no school of philosophy himself, he revolutionized its methods, and after his death several schools were founded by his followers, especially by his great disciples Plato and Aristotle, who, developing their master's methods, have not ceased to influence human thought. His methods have been superseded in the progress of intellectual development, but the character of Socrates shines with undimmed lustre. It was this that gave weight to his words when he spoke for truth and conscience in a day of utter skepticism and false reasoning. Reading his grand utterances of faith in the triumph of right, and seeing him go calmly to his death rather than deny his principles, disobey what he believed to be the divine voice, or be disloyal to his country's laws, we do not wonder that Plato thought him "the bravest, truest, simplest, wisest of mankind." As Socrates left no writings, we are indebted to his disciples, Plato and Xenophon, for the faithful transcript of his sayings and the dramatic scenes of his trial and death.

In this admirable translation, consid-

ered by many critics far the best that has been made for English readers, we have first his famous "Apology," or defence before his judges, in which we see him bravely defying the utmost of their power in words that remind us of Peter before the Sanhedrin: "You will not believe it, O Athenians, but it is impossible for me to be silent when God has told me to speak." In the next dialogue we see him steadily refusing the plan of his friend Crito to bribe his jailors and escape, because he would thus show disrespect to authority and law which, as a free citizen, he was bound to respect and obey,—a grand lesson to all free citizens whether of Athens or America. In the *Phædo*, we have the wonderful closing scene—his conversation on the hope of immortality with his friends on the day of his death, his calm departure and final utterance of faith.

By this translation, in its present cheap though very attractive form, this inspiring history and teaching is brought within the reach of all readers of English. We cannot too highly recommend its use in schools. It is a model of pure and simple English as well as a fine translation. It has been introduced with great benefit in the Senior literature classes at Hampton Institute, coming in opportunely, as they had just been learning of Socrates in their ancient history. Interest was roused to enthusiasm. We believe that no young minds could be properly brought into contact with the book without receiving an inspiration and uplift which would last.

HISTORY OF THE NEGRO RACE IN AMERICA—*From 1619 to 1880. By George W. Williams, First Laid member of the Ohio Legislature, and late Judge Advocate of the Grand Army of the Republic, of Ohio.* In two volumes. G. P. Putnam's Sons, New York.

This is a book of which the colored race may well be proud. It supplies a real need, and shows a great amount of patient study and research in a comparatively unworked field. That, within twenty years after emancipation of this new people, one of its own number should be found to do this work, speaks well for it, and we wish the book were within the reach of every intelligent colored reader. What defects it has in style or argument are but the natural results of existing conditions, and do not interfere with its value as a historical work or book of reference for any reader, colored or white. The work is divided into nine parts, of which the first volume contains three, viz:

Part I.—Preliminary Considerations: On the Unity of Mankind; The Negro in the Light of Philosophy, Ethnology and Egyptology; Primitive Negro Civilization; Negro Kingdoms of Africa; The Negro Type; African Idiosyncrasies, Languages, Literature and Religion; Sierra Leone, and the Republic of Liberia.

Part II.—Slavery in the Colonies,—a chapter on each.

Part III.—The Negro during the Revolution; Military Employment of Negroes; Legal Status; The Negro Intellectual; Banneker, the Astronomer—Fulcr, the Mathematician—Durham, the Physician, and others; Slavery during the Revolution; Slavery [after it] as a Political and Legal Problem.

These three Parts include the period from 1619 to 1800. The first chapters are of least value, though they contain also much of interest. The question of the origin of races will hardly be settled so easily, and we fear that ethnologists would say of him, as he says of an author he quotes, that he "sometimes gets real funny," reading his grave proposition: "It is fair to presume that God gave all the races of mankind civilization to start with. We infer this from the known character of the Creator." No funnier, however, than some of the solemn arguments he quotes, which used to be drawn in favor of slavery by dignitaries of Church and State, from the Bible, the common resort of special pleaders. His review of the African Kingdoms, Language,

Literature, &c., is very interesting. Of Abeokuta he says, "Adgai, in the Yoruba tongue, but Crowther, in English, was a native of this country. In 1822, he sold into slavery at the port of Badagry. The vessel that was to bear him away to the 'land of chains and stocks,' was captured by a British man-of-war, and taken to Sierra Leone. Here he came under the influence of Christian teachers. He proved to be one of the best pupils in his school. He received a classical education, fitted for the ministry, and then hastened back to his native country, to carry the gospel of peace. It is rather remarkable, but he found his mother and several sisters, still in the gall of bitterness and the bond of iniquity. The son and brother became their spiritual teacher and, ere long, had the great satisfaction of seeing them sitting at the feet of Jesus. His influence has been almost boundless. A man of magnificent physical proportions,—tall, a straight body mounted by a ponderous head, shapely, with a kind eye, benevolent face, a rich cadence in his voice,—the 'black Bishop' Crowther is a powerful looking man, who would attract the attention of cultivated people anywhere. He is a man of eminent piety, broad scholarship, and good works. He has translated the Bible into the Yoruba language, founded schools, and directed the energies of his people with a matchless zeal. His beautiful and benevolent life is an argument in favor of the possibilities of Negro manhood, so long debased by the dehumanizing influence of slavery."

Like Dr. Blyden, Mr. Williams credits Mohammedanism with a great civilizing and elevating influence upon Africa.

"During the Saracen movement, in the second century of the Christian era, the Arabs turned his face toward Central Africa. Everywhere, traces of his language and religion are to be found. He transformed whole tribes of savages. He built cities, and planted fields; he tended flocks and became a trader. He poured new blood into crumbling principalities, and taught the fingers of the untutored savages to war. His religion, in many places, put out the infidel fires of the fetish house, and lighted the glowing thoughts of idolaters heavenward. His language, like the new juice of the vine, made its way to the very roots of Negro dialects, and gave them method and tone. In the song and narrative, prayer and precept of the heathen, the Arabic comes careering across each sentence, giving cadence and beauty to all."

The chapter on Language, Literature and Religion, is interesting, with many illustrations of African poetry and songs.

"The negro nature is not sluggish, but joyous and vivacious. In his songs he celebrates victories, and laughs at death with the composure of the Greek Stoic."

"Rich man and poor fellow, all must die; Bodies are but shadows. Why should I be sad?"

"The following song is descriptive of a white man, and is the production of a Bushman."

"In the blue palace of the deep sea  
Dwells a strange creature;  
His skin as white as salt;  
His hair long and tangled as the seaweed,  
He is more great than the princes of the earth."

He is clothed with the skins of fishes—  
Fishes more beautiful than birds.  
His house is built of brass rods.  
His garden is a forest of tobacco;  
On his soil white beads are scattered  
Like sand-grains on the sea-shore."

The chapters on Sierra Leone and Liberia give well the history of these efforts of Christian colonization.

Part II brings together a great number of interesting, forgotten, or not generally known facts of the history of slavery in the thirteen colonies where both Negroes and Indians were enslaved, "not being Christians" their conversion to Christianity not, however, releasing them from servitude. One of these facts is the so-called "Negro plot" of 1741, in New York, when, in a phrenzy of fear and false swearing, like that of the Salem witchcraft days, one hundred and seventy-eight persons were arrested, thirty-six executed and seventy-one transported—most of them Negroes—charged with a conspiracy to

destroy the city of New York. Slavery is mentioned in the records of Massachusetts as early as 1833, and continued down to the adoption of the Constitution of 1780. It was not, however, without its opponents. "The earliest friend of the Indian and the Negro was the scholarly, pious and benevolent Chief Justice Sewall. He contributed the first article against slavery printed in the colony. It appeared as a tract, called 'The Selling of Joseph. A Memorial'—in 1700." The tract is given in full by Mr. Williams, with a reply it elicited from Judge Saffin; and also an early testimony of the Society of Friends against "that anti-Christian practice of making slaves of men"—published in Nantucket in 1733. Georgia, the last colony to be formed, was the only one which ruled out slavery altogether at its very start, in 1782. It held out twenty years against the public sentiment of the times. Then its first charter expired, and with the new form of government, the curse of slavery entered the last stronghold of freedom in the New World.

Part III relates to the military employment of Negroes in the Revolution, which was more extensive than is, perhaps, generally known. As the historian Sparks says: "Many black soldiers were in the service during all stages of the war." They were employed on both sides, though with some protests, and to the number on the American side, as far as the returns show, of 7,535. Frequent testimony was made to their bravery. A Rhode Island Negro regiment was thus complimented by a clergyman, himself a Revolutionary soldier:

"Yes, a regiment of Negroes, fighting for our liberty; not a white man among them but the officers. Three times in succession they were attacked with desperate valor by disciplined and veteran troops, and three times did they successfully repel the assault, and thus preserve our army from capture. They fought through the war. They helped to gain our independence."

Notwithstanding this acknowledgment, enlistment did not bestow emancipation. The legal status of the Negro in the Revolution remained that of a chattel, whether in the army or out of it. The slave trade also went on side by side with the war for freedom. At the close of the war, however, many of the States rewarded with freedom those who had served in it; and their valiant conduct had undoubtedly effect upon public feeling. It had also its reflex effect upon the slaves themselves. They began to "sniff the air of freedom," and the slaves of Massachusetts actually presented a memorial to the Assembly petitioning for a share in the "inalienable rights." We know only too well the issue of the "political and legal problem of slavery" after the Revolution, when the new United States of America lost the opportunity of disavowing the curse which another country had forced upon her colonies, and slavery fastened itself upon the Constitution of the infant nation.

As examples of the possibilities of the Negro intellect, even in times of general darkness and oppression, Mr. Williams points with just pride to Benjamin Banneker, the Negro astronomer and almanac maker; Thomas Fuller, a remarkable "lightning calculator" in Virginia, in 1790; Dr. James Durham, "at twenty-six years of age regarded as one of the most eminent physicians in New Orleans;" and Phillis Wheatley, who, under the fostering care of a kind mistress in Boston, where she was landed from a slave ship in 1761, developed remarkable intellectual powers, and wrote poems that attracted the notice of General Washington and many readers in America and England.

We should be glad to quote more from Mr. Williams' book did our space allow. Its second volume will be reviewed in our next number.

For our picture this month we are indebted to our friends of the New York *Illustrated Christian Weekly*.

as many more if I had had time to have gone out in the country. I see it has been presented to Congress. I truly hope it may be effective, for we certainly need some aid here from some source.

The Colored school houses are nearly all unfit for use in this county, especially to teach in during the winter season. And in some sections the people crave schools and cannot get them.

I shall do all I can to get some subscribers to the *Workman*. The people are very poor, they say.

Please find enclosed ——— for which you will send me the *Workman* for one year. I have a good school numbering 96 pupils but small pay. *Cheap* teachers are wanted.

CRUEL POSTPONEMENT OF PAYMENT

Scottsville, Va., 1883

**CRUEL POSTPONEMENT OF PAYMENT.**  
The following letter from an excellent and faithful young woman, gives an aggravated instance of a form of trial which, in different degrees, many experience, and which would be enough to dampen the ardor of most white teachers.

— Co., Va., Jan. 10th, 1883.

*My dear Friend,*

This is the third time this term I have attempted to write to you; but every time something prevented me from doing so. I am teaching at the same place I was last term, and I have a very nice school. I opened school the first of Oct.

My school will only last five months at this place, and at the end of that time I expect to take another school for five months longer; therefore I am enjoying much more my school here. I enjoy teaching very much, and I am trying to do all the good I can among the people both morally and spiritually. I went home to spend my Christmas holidays with my dear parents, and I had a very good time, after which I returned to my school, and had a New Year tree for my scholars. I have a very nice little Sunday school, and I am trying in every way to make it better. My aim is to improve the people, and do all in my power for them. I have the pleasure of attending church sometimes once a month; so on Sundays my greatest pleasure is to be with my dear little school to teach the children of Christ, and what He wants them to do, and how happy He would be to have them all good Christian children. I hope you will pray for me, and my work, and that you will be successful, and what would be interesting to you to hear of some of the difficulties I had in trying to get my money. I had a check for three months salary last term, and the bank told me it cashed, so I let the clerk take it. I cashed it, and used it, and he promised to let me have the money the first of December. I waited until the 10th December but I never called on him for the money. I could not go to him in any other way, so I got one of my little scholars about 10 years of age to go with me to get the money. I had to walk four miles; he was encouraged, thinking that was going

When I got home, I presented the bill to him, and he told me he could not let me have it; but to come back on the 15th, and he would let me have it all. Then I was disappointed; but I tried to content myself thinking in five days more I would have it. I was not thinking so much of myself; but I had promised to send some to my parents, who were needing some very badly. On the 17th of the month I got the gentleman I had with me to go for me. That day I was very anxious for him to come, thinking I was going to bring home good news. But what was the result. He said "Miss A. is not recovering for you. The man

I did not get any money for my yard. I said come back on the 20th and he will have it for you." I was so vexed I could not help crying. So on the 20th, he went for money again, as I was wanting him something for board, and so he owed him. He came back the same evening, and said, "I did not get it, so you will have to go yourself. I haven't the time to go any more." The next day I went myself, and he wanted to put me away with a part of it. I was then on my way home; so he paid me some money, and gave

On the 20th of the same month, I had to walk three miles through the snow, to get money I had labored for this term; but not a cent have I received yet.

33. I wish you would please send me some reading matter. I have but a very little and it would be quite a treat for me to get

ed. I but got otten: some. There are many other things I could speak to you about, which would be interesting to you; but for fear I would worry you in reading, I will save some for the ne

do right, and help fallen humanity. "Having freely received, freely give." I taught at that place five months, gave thorough satisfaction to the Trustees and patrons of the

B. tion to the Trustees and patrons of the school. Among my pupils there, was Miss Maggie Rayford, who is at Hampton now.

The effort of a certain county superintendent to have teachers visit each other's schools for suggestion was not pleasantly met, we hear, when he sent some colored visitors to a white school. A pleasanter report of Christian hospitality comes from North Carolina, from one of our young women graduate teachers.

—, N. C., Jan. 10, 1883.

Genl, Armstrong:  
Kind Friend,

"I opened school here on 13th. Nov., with 24 pupils the first day, the second I had 30, by Christmas I had on roll 74. The weather being so very disagreeable since the Holidays, my school only numbers 61, but a good many of these are new ones that did not come before Christmas. I have had since I opened here, 83 different pupils, the fullest school I ever had, not the best school but the best house. They have had several teachers here, but, judging by the progress of the children they were very poor teachers.

of the children, they were all here I have been going to get the school under a rule. It was very hard work, and is not what I call a good one yet, but those who visit the school and see they have never had ever so many visitors as school children had ever so many visitors among both white and colored. The white say they like my school better than the colored the white teacher of this place has been invited to see the school, and he called at the school a few days ago, and was very nicely treated by her, and asked to call again; said she has been wanting to come to meet again ever since the first time; and she said she would whenever possible. I went out to a good school; trouble at first to get books for the school; some hadn't any kind of a book so I had to work partly without tools. The other classes classified to separate the school, and nothing as yet. I have not much better than nothing as yet. It keeps me very busy indeed. It works me so hard that I have been feeling that I should not be able to hold out. I have been working within five minutes. The people whom I stay with are very kind to me, and they are nice people, but not religious. I like most all of the Colored in this country, and I like most all the white, but I do not like poor people. I stay up stairs very uncomfortable during the snowy weather, as it snows so much, but they are so kind to me I am making myself content, hoping to soon see my self here, but I am not sure it is a rough place. I have around here are very rough, was told by my friends with whom I live that the most of the inhabitants of the place are women and men, were very high school during the winter. I was told to think of it as a village. I am  $\frac{3}{4}$  of a mile from it. I have written to Miss C. I hope my sister is progressing. I have about 12 miles from the teaching school, and I hope to see her soon. I now how long my school will be here, I hope several months yet, so I am going to get the school under a rule. I see the progress of the children. I am not more than glad to hear of the progress of the children. I am not more than to receive from the Hampton friend or teacher that I may be able to write another account of this school ere I close. With love to the friends and well wisher for the school, and well wisher for the progress.

FROM A TEACHER AND CIRCUIT PREACHER.

The following interesting letter is from a hard worker who besides teaching daily, preaches in four places in Virginia.

—Co., Va., December 15th, 1882.

Miss C.

*Esteemed Friend :*

I have been teaching here seven weeks. The Board has changed the series of books formerly used, and many of my patrons are not able to buy such bookcases for their children need and supply their own. I have to be quite small. I only have 20 pupils on roll. This school is situated in the western edge of the county; is a very poor place; they only pay \$25.00 monthly for rent. The teachers are paid \$700.00 on last term to teach. My people are poor; there is nothing for them to do without going ten miles to town. Though they are poor, they are happy to go to school, and the majority of them are very anxious to have their children go to school. There has been a great deal of sickness in this neighborhood, and this has caused many to die. Many are now, nearly all the family being down at once, and no one to support them, but just having to live off the charity of others. There are two families with eight children, seven down, and seven or eight little children, with no one to help them. One of these families sends a little girl to school about 7 years old, but one week, because she has to go around and help her mother to earn for the others, her father lying sick with fever. The white people are very friendly, but the majority are poor. They are very kind, but they do not help us any. We have to furnish all of the fuel for the school, and all of the furniture except the desks. The laws of this State say that we are to have a school, and we can see how much we are put out. The whites do not disturb us, nor do they help us, and have very little to do with us as a matter of course. The preaching churches are small, and the churches are small; these Churches are small and pay about small salaries; all of them together pay about \$1600.00 per annum. So you see I have to teach to make a very small salary. I have to go to town every Sunday and I have to walk from eight to fifteen miles to get to some of them, and have to

## M

To forget a lower past and with it the hand that has lifted one above it, is common. A good memory and gratitude mark a true elevation.

—Va. Dec. 20, 1882

GEN. S. C. ARMSTRONG,  
Hampton, Va.

Dear Sir

I entered your valuable Institute in 1872, having been advised to go there by one of the graduates, Mr. C. C. Windsor, who was my teacher. I left June 6, '75, and was examined and accepted thereafter by Maj. W. W. Ballard, Supt. of Schools for Roanoke County. I passed a creditable examination and opened school Oct. 18, at a salary of \$30 per month. I was an inexperienced hand at the work, having never before taught in the Public Free Schools. I buckled on my armor, however, and went to work, stimulated by the never-to-be-forgotten words that I had been taken from the "Fruits of Roanoke" by Divine Providence, and placed at Hampton under the guidance of the noble and noble-minded civilization and Christian influence where I had learned man's mission: viz: Fear God

On the 20th of the same month, I had to walk three miles through the snow, to get the money I had labored for this term; but not a cent have I received yet.

Another of our graduates, a useful man among his people, reports on his success in interesting them in the freedmen's petition to the last Congress for national aid to education.

- Va. Feb. 12th, '83

Genl. S. C. Armstrong,  
Dear Sir,  
Your kind favors have been received. I did not get them until the 14th of Jan. but I attended to the petition at once. I got nearly 100 names signed, could have gotten

## Incidents of Indian Life at Hampton

## THE INDIAN SUNDAY SCHOOL.

It is Sunday noon at Winona. The great Hall is very quiet, for the girls have not yet returned from dinner. Let us glance for a moment at the lovely pictures on the walls, and the pots of geraniums on the broad-sillied windows, drinking in the warm sunshine. We can look, too, through the open door into the Chapel, where the one sweet picture of the Good Shepherd, carrying in his arms the stray lamb, may well recall to the scholars who gather here, the first words of Holy Writ in the new strange tongue, which are taught them on coming from their far away homes, "The Lord is my Shepherd, I shall not want."

But there is a sound of happy voices, and in groups of three or four the girls come tripping in, some by the front entrance looking out on the shimmering water, some directly from Virginia Hall through the long corridor, which reminded one of them of her Grammar class and a Conjunction, because it connects. There is time for them to get their Bibles, and be in readiness before the boys gather in the summons of the bell. Rev. Mr. Gravat, Rector of St. John's Church in Hampton, kindly officiates as Superintendent, teaching also the advanced class of boys. It is surely an inspiring sight, when all are met in that sunny room for the opening exercises; some of the faces so fixed and earnest, grave almost to severity, yet lighting up all over at a happy remark; others, some of the little fellows, hardly able to restrain the rollicking fun which seems their normal state, nevertheless, when once arrested, listening, as if spell-bound, to the speaker. What possibilities seem crowded within those four walls, as one's thoughts run on to the future, not very far distant for some of these scholars, when, almost alone, they must face life's problems amid scenes so strangely contrasted to this! What will they make, we wonder, of the homes, one day to be theirs, perhaps in the Agency camps of Dakota, or amid the raiding Apaches of Arizona? Will the boys prove brave soldiers in the war which makes only for peace and righteousness; and the girls will they be true to their motto "not to be ministered unto but to minister"? But the classes are filling out, with their teachers to the different rooms where they recite. The Hospital, when vacant, the Sewing Room, and other apartments make very pleasant meeting places. There are varieties of antecedents as well as of age and temperament represented in these classes. Among the tall, manly forms passing out so sedately, are three young married men who are here with their families. Two of them have left not only friends and kindred but thriving farms, well stocked with ponies, cows, poultry, &c., on their Omaha Reservations, thus sacrificing not a little to gain an education. Another took the brave step of cutting off his long locks while still at the West before coming within the limits of civilization. There are many thoughtful questioners among girls and boys, and even those whose slight knowledge of English makes it difficult for them to understand or to say very much, strive hard, with eyes intent upon the teacher, to catch some of the lessons that are taught, so as to be able to answer some of these questions when they go back as ministers of Christ's gospel to their people. Of course extremes meet, and close beside the stout husbands and fathers are the small impressible, whose class name is the "Little Workers," and whose teacher is certainly kept on the alert. She thus describes the beginning of her class. "What a noise and confusion, every chair moved out of its place, and eight little caps in the middle of the floor. Pretty soon, the chairs are still, and sixteen little feet moving in a hurry to get 'My cap.' To the question, what was our last lesson about, there is a chorus of answers: 'Cain and Abel,' 'Rebecca and Isaac,' 'Esau and Jacob,' 'Joseph,' without much anxiety as to whether anyone has hit the mark. One glance around the room, and you find one boy whittling a stick, another tying a string around his cap, a third singing some familiar tune from an old hymn book he has happened to find in his pocket, still another throwing his handkerchief rolled in a wad across the room for a catch at ball. It will take some time to get quiet again, and to impress the fact that to-day is Sunday, after which we will go on with the lesson, but one boy, (perhaps the one whose favorite query use to be, as he doubled himself up under a mild admonition—'You want to ke-e-l me? I'm not afraid to die!') is anxious to tell the story of Esau and Jacob; interesting, from the fact that Esau tried to kill Jacob and he got away."

An Act of Prohibition having been passed upon the too frequent drinking of a hyacinth on the way to recitation, as they always get in the way of the class that came after them, the teacher was quite encouraged the following Sunday to find her little boys walking serenely past the scene of their former temptations. Her satisfaction was somewhat

dashed, as later she noticed a roguish look passing around the class, and thought to herself "What can be up now?" Her attention was soon drawn to the boy on her right, as every body in the class looked that way and laughed. He was holding a quart bottle to his mouth, drinking water. "I asked him to put it away, which he did very quickly, but I wanted to know why he brought that bottle into the class." "To take a drink when we want it," you said not stop outside." Meanwhile the bottle started on its trip around the class, being passed furiously from boy to boy until it was emptied at the other end."

Another teacher, who suffers very much from a lack of chairs, as they have to be carried out from the Chapel, found a pitched battle impending between a Dakota and an Arizona boy, over some of these said chairs. Matters were at once settled however, and soon the class were all absorbed in the story of Moses, suppressed groans alone breaking the stillness as they heard of the poor babies thrown into the river, and of his own danger. When at last he took his place in the palace, the eager question broke out, "Did he see his mother again?" In the same class, when the sacrifice of Isaac was the theme, one boy covered his eyes as the mournful preparations were made, and the face of another, who had been bending forward to listen, grew radiant when the angel called from heaven.

On entering on a regular course of Bible study this year, the Old Testament has been taken up as preparatory to the New, and certainly a new charm has seemed to invest the old stories as they have been told in the simplest and most graphic way possible, to such eager listeners, and the fitness of many of the scenes to the understanding of the older ones at least, has been very striking. Abraham sitting at his tent door, Esau coming in hungry from the chase, with no care for the future if only present needs can be supplied, Jacob, resting on the hard ground, and leaving behind the land which had been promised him; all these, with many a deeper lesson, have caused a feeling of sympathy with Eliot, the translator of the Indian Bible, who fancied he had found in his Indian children the lost tribes of Israel. The following account of Noah, written by a little girl, will show how some of them get hold of these stories.

Noah is a good man, he loves God and God loves him to, he stay in ark for 40 days and 40 nights, he stay with the animals for 40 days and the other people get drowned and he sent a bird out to see and he come back and he sent it again and the bird brought an olive leaf so Noah know the water was going down and long time he look out he can see top of the mountains and long time the bird did not come back. The bird find something to eat and he come back.

Pictures are found very helpful. One teacher missing a blackboard on which to write some names she desired to impress on her scholars, spelled them in the air with her fingers, and found her class could follow her very intelligently. After the closing exercises in the Chapel, the boys usually remain at Winona for a time, some clustering near the piano to sing hymns, and some gathering about the pretty book case, the gift of Miss M. A. Longstreth, where the books, also largely her kind donation, are given out to the girls, the boys likewise being allowed to examine the pictures or look over the stories while they linger.

And so the Sunday afternoon slips away. Let us hope that, from this seed-sowing at Winona, golden harvests may spring in the West.

## Reports on Returned Indian Students.

The following interesting letters have been received from two Indian agencies in Dakota, in reply to requests for recent information in regard to students returned eighteen months ago to their homes:

UNITED STATES INDIAN SERVICE,  
Fort Berthold Agency, Dakota, Feb. 13, 1883.  
Geo. LeRoy Brown,

1st Lieut, 11th Infantry and Commandant of Cadets at Hampton Institute, Va.

Dear Sir: Yours of 29th ult. just received; glad to hear from you. We have thus far endured a cold winter; the average temperature for January was 18.0° below zero, with only four days during the month thermometer indicated above zero; thus we experience a partial illustration of the meaning of the word "latitude." Monthly reports from your School relative to the health and progress of Indian pupils from this agency are regularly received, and are gratifying, more especially to parents and friends of pupils. Of returned students, George White

Wolf and Laughing Face were in mechanics shop, last year—the former in carpenter, the latter in blacksmith shop; but unfortunately both were down in health, so as to render them unfit for duty. They have, however, measurably recovered, and will engage in farming the approaching season. Thomas Smith has done well farming, where oats, corn and potatoes, yield a good boy, with many traits of character. Arahochkiss attended Government School for a time. When his father located at Fort Buford he took him to his home, where he has been for near a year. Ka-What attends school. Josephine Malnourie was married last summer to a white man, now living sixty miles from this agency, and is doing well. The manifest superiority of these returned students over other Indians is strikingly apparent, yet, in my judgment, three years is too short, taken from their ignorant and untutored state, knowing nothing of the English language, to prepare them on returning to their people to exhibit that strength of character necessary to enable them to meet and combat successfully the old deep-rooted, long-cherished traditions and superstitions. In my judgment five or six years' training in your Institute would establish them more firmly in principle, and qualify them on their return to their own people to teach school, and thus enable them to exert an influence of great and lasting benefit among their people. I am convinced that the Indian is ready for citizenship, if the opportunity was given him. I urged upon the Commissioner of Indian Affairs the earnest request of my agency that Indians be located upon lands in severally. When I talk with my Indians upon this subject, and explain to them the advantages in occupying lands and making homes for themselves, they say it is good, and ask me to "mark" out their lands, for give them a "Paper," such as the white man has, meaning a deed, and they will occupy them and make homes; but I have recently been informed by the Commissioner that there is no prospect of action in this measure by the present Congress.

Very respectfully,  
J. KAUFFMAN, U. S. Indian Agent.

UNITED STATES INDIAN SERVICE,  
Chippewa Agency, February 20, 1883.  
LIEUT. BROWN.

Dear Sir: In answer to yours of the 23d January, I would say that Henry Fisherman is working in our carpenter shop, and is a very steady hand; the only trouble with him is that he tries to make trouble around the agency. He did the same when he worked here for Maj. Love. I gave him a talking to, and think it will do him good.

Joseph Walin is one of the employees and is doing very well. Charles White Bull is working for his father up the river. I had a good talk with him a few days ago, and think he is a good boy. Henry Brown, Lewis Agnewhousen, and Henry Schutashay are at McKenzie Point. Brown and Agnewhousen wrote me for work, and I sent them, but they finally told me I did not want it. I don't think they staid at Hampton as long as they should. White Bull and Schutashay may get them back. I can get them for you, and would be very much pleased to visit your school. I will do all I can for the Hampton boys here.

Yours,  
WM. A. SLOAN,  
U. S. Indian Agent.

## Letters From Returned Indian Students.

Thomas (Wildcat) Alford, whose interesting account of the school he is teaching among the Potawatamies in Indian Territory we published last month, sent to Hampton, some weeks ago, one of his pupils for whom he had requested and obtained admission to the Normal School, with the following letter of recommendation. "The young man is now doing well in the School:

Wagosa, Indian Territory, Jan. 31, 1883.

Dear General: Mr. Frank Goodbow, a Potawatamie Indian, the bearer of this, is a worthy, quiet, Christian young man, and deserves the sympathy and respect of all whom he may be thrown in association with. I first met and became acquainted with him, found him to be in earnest, seeking an opportunity to elevate and fit himself for a useful life. He is now on his way to school, and I do hope he may find a room in your crowded school.

I am, dear General, yours truly,  
T. W. ALFORD.

The following letter is from an Indian student of Hampton who, after three years here, was returned to his home a year and a half ago, and has been doing well:

LOWER BRULE AGENCY, D. T.,  
Boarding School, February 9, 1883.  
MY FRIEND, MR. GEO. LEROY BROWN:

Now, my friend, I am very much pleased to get your letter Friday, and I am going to write to you and to tell you how I am getting along here at boarding school in Lower Brule Agency. I here teach school this winter, and last winter I was teaching at boarding school in Yankton Agency. That all I got to do since I came back from Hampton School; also, I have kept what I learned from the Normal School always, and I never forget all my friends, who they are, know me, and also my teachers, too; I never forget that, because they are very kind to me. I was at Hampton. So I try to do what is right and good. I know those very well; so I have kept what I know from Normal School, or what teacher told me I have kept in my mind, and I try to live right all ways I can. Now, my friend, that is all I have to do in myself since I came back from Hampton Normal School; and now I am going to tell you how the Hampton boys were doing at home. I came here at Lower Brule Agency last July 2d, 1882, from Yankton Agency, and I got to study here about seven months ago, but I did not to see any of them to work any, except Henry Rencounter; he is working at Agency blacksmith shop, and the others I have not seen any of them to working any since I came here, and also I never go to their home; so I don't know what they were doing. That is all I have to know about Brule boys; else one of the Crow Creek boys go back to his old way, he has put on the Indians' clothes to wear, and dances with other Indians. I saw him last week; he dress himself like they and I am very sorry for him, because I know what he learned from Hampton. I will put in name on here? That is Frank Pamani—he is go back to Indian ways. Now, that is all I know about Hampton boys. So I must stop writing, and I say, give love to all my friends who they are know me. That is all I can said this time.

From truly your friend,  
FRANK YELLOW BIRD.

I said I am very glad to shake hand with you, friend.  
P. S.—How is Brother Tiyouwakite. I like to know how is getting along at Normal School.

Horsford's Acid Phosphate  
For Nervousness, Indigestion, etc.  
Send to the Rumford Chemical Works, Providence, R. I., for pamphlet. Mailed free.

## Frank Leslie's Sunday Magazine.

The April number contains even more than the usual attractive features. The Rev. Moses D. Hoge contributes "What is Presbyterism?" being No. IV. of "Religious Denominations in the United States"; the editor, Dr. Talmage, has a characteristic article, "Mending the Bible"; Edwin DeLoon continues those deeply interesting papers, "The American Pilgrim in Palestine," etc., etc. There are serial and short stories, a novel, a very excellent sketch, some admirably written essays, a sermon by Dr. Talmage, "Homesteads," several poems of great merit; a record of important events, Personal Notes and Comments, Editorial Comments, Obituary Notices, etc. The miscellany is most comprehensive, entertaining and instructive; the number in fact, overflows with good things, and abounds with illustrations. The price is only 15 cents a copy, or \$1 a year, postpaid. Address, MRS. FRANK LESLIE, Publisher, 55, 57 and 59 Park Place, New York.

The May number will contain the first of a series of papers by Lieutenant Fred Schwatka, the Arctic explorer, entitled, "Among the Natives of the North."

**MUNN & CO. PATENTS**  
NEW YORK  
We continue to act as solicitors for patents, caveats, trade-marks, copyrights, etc. for the United States, and to obtain patents in Canada, England, France, Germany, and all other countries. "Turkey" is great prize. No charge for examination of models or drawings. Advertisements by mail free.

Patents obtained through our office in the SCIENTIFIC AMERICAN, which has the largest circulation, and is the most influential newspaper of its kind published in the world. The advantages of such a notice every patentee understands.

This large and splendidly illustrated newspaper is published WEEKLY at \$3.20 a year, and is entitled to be the best paper devoted to science, mechanics, inventions, engineering, and all the departments of modern scientific progress, published in any country. Single copies by mail, 10 cents. Sold by all news-dealers.

Address, Munn & Co., publishers of Scientific American, 23 Nassau Street, New York. Handbook about patents mailed free.

### Poor Men and Reform.

The poor man who has nothing may perhaps think that he pays no taxes. The fact is, however, that a large part of his wages goes to pay taxes. If the clothing he wears, the whiskey he drinks, the pipe he smokes, the matches he burns, the tobacco he chews and the knife he cuts it with, if these were not all heavily taxed they would be much cheaper, and his money would buy a great deal more. If a man rents a house, the landlord has to charge enough to pay taxes on the house. If he owns a spade or an axe, or a cradle, or bed, or a clock, the Government has taxed all these articles when manufactured, and the poor man has to pay that much more for them when he buys them.

It is not necessary, therefore, that a man should possess a cow, or a horse, or a few pigs, or a little piece of land before he can be taxed. The bulk of the revenue, which is the

### PLAWTING OF CONGRESS,

comes from indirect taxation, which is paid by the manufacturer or the importer, and then collected out of the poor man.

That the public money should not be wasted is therefore very important to the poor man. A certain amount must be raised to carry on a well managed government. Every penny beyond is so much useless taxation. As there are more poor men than rich men, so the combined interest of the poor for economy and honesty is greater than the interest of the rich. But all taxpayers, rich or poor, are interested in reform, because they want to get the worth of their money.

### HOWEVER LIMITED THE EXPERIENCE

of a man may be, he can scarcely be ignorant of the fact that it costs the Government more to do a piece of work than it costs a private citizen. Money is wasted not only by stealing, but by bad management. This is true from building a war vessel down to the repair of the county roads and bridges. Men who are posted tell us that one-third of the Government money is wasted. In the Public Ledger of Norfolk, dated February 8, is the following remarkable comparison, which, as it is now six weeks old, and no one has ventured to contradict it, we presume must be correct. It refers to the Norfolk county ferry as follows:

Amount proposed to be paid as rent for the 12 years ending December 31, 1881, viz: \$12,000.00  
Total amount actually paid to the owners during the 12 years ending December 31, 1881, viz: \$3,209.66

The difference.....\$8,790.34

In round numbers, one hundred and twenty thousand dollars difference, between the net returns which private management would yield, and the net returns which party management has yielded in twelve years.

It requires no argument to prove that if the county of Norfolk and the city of Portsmouth had that sum to-day, it would be a very good thing for the tax-payers. One hundred and twenty thousand dollars would pay the cost of building every toll road and bridge leading to the two cities (except the road to Princess Anne county), and leave funds enough over to keep them up, and thus give the poor man free access to the markets and to his labor. But the little markets and the oyster business, and to truck farms, or in coming to market, though considerable, are but a drop in the bucket to what they pay by indirect taxation, laid upon them by Congress, on nearly everything they use or wear.

### TO POOR MEN

It is thus of vital importance whom they send to Congress. If they send men who care more for party than principle, those men will not spend their time at Washington in trying to save the people's money from being wasted. Instead of giving Government work to the best workmen, they will aim to buy up the little politicians at home by getting them offices. No matter how well qualified a man now in office may be to give the Government the worth of its money, they will have him turned out unless he will neglect his proper business and go running round electing to keep the Congressmen, or the party in power.

The Civil Service Reform Association have commenced to fight in favor of good economical management. They want to have the laws so that everybody, rich or poor, may have an equal chance to serve the Government; and that when a man has passed his examination, and is deserved by his good conduct to remain, he shall not be turned out on account of his politics. In other words, the reformers want the power taken away from Congressmen, to give the preference to anybody for any office. What any officer thinks is no business of the Government, so long as the officer does his duty, any more than it concerns a rider whether his horse likes fodder or hay the best.

Reformers also want laws passed as to custom-house officers and postmasters, and judges and sheriffs and justices and constables, and the whole tribe of office-holders who are now so anxious that poor men

should vote as they say is right—laws to compel officers to stick to their own business. As citizens they have, of course, a right to prefer any party they please, but when they are hired to do Government work, they ought to attend to it, and not be allowed to influence anybody. Because when a man is an officer, he has power to do favors; and that power don't belong to him as a private individual. It is a power he derives from Government. And of course, Government ought to let the people vote as they please. If the people want the same party to continue in power, they need not help from Government officers to say so. We appeal to poor men, as well as to the rich, to organize Reform Associations and help us to apply these principles to national, State and county affairs, so that there may be more common sense in politics and less corruption.

F. B. RICHARDSON, Norfolk, Va.

### Testimony to Tuskegee from North and South.

The story of the Normal School at Tuskegee has been repeatedly told in our columns, and through which this child of Hampton Institute was first introduced to Hampton's Northern friends, and the interest invited which has been so kindly bestowed. Mr. Washington and his assistant, Miss Davidson, have proved themselves well worthy of this introduction and interest ever since, on the recommendation of the Principal of Hampton Institute, in response to an application of the State authorities of Alabama, they were appointed to their charge. The enterprise has grown beyond its first intent, by their energy and devotion in establishing the principles of self-help and industrial training in their school, which have gained for it general respect and sympathy in the State. The latest news from Tuskegee, in a letter from its Principal, Mr. Washington, will be found in another column, and in our next number, an interesting account from General Marshall, Treasurer and Trustee of Hampton Institute, who went to Alabama recently on purpose to visit the school. We are happy also to print the following testimony to the good will of its neighbors, in a letter from the Pastor of the Congregational church under the American Missionary Association in Montgomery; and, below it, an extract from the report of the State Board of Education of Alabama.

Montgomery, Ala., March 1, 1883.

GEN. S. C. ARMSTRONG.

DEAR SIR:—A short time ago I made a trip to Tuskegee, Ala., for the purpose of visiting the State Normal School for colored people, located there. Inasmuch as four of the five teachers of this School, together with the wife of the Principal, were pupils of yours, I felt sure you will be interested to know what is going on there.

The School was opened less than two years ago, in one of the churches of the city. The State authorized the opening of the School, but made no provision for ground or buildings. Two thousand dollars were appropriated to insure free tuition for all pupils and, before the close of the year, the School had done so well that State Superintendent Armadon secured for it an additional \$300 from the Peabody Fund. Prof. Washington was not content to put up with the inconveniences of the church so, without waiting for further action on part of the State, he and his assistant, Miss Davidson, resolved to present their needs to friends at the North. They were so successful as to secure from one man the gift of one hundred acres of cultivated land within the city limits, and from others money enough to warrant them in letting the contract for a building to cost between five and six thousand dollars. The building was occupied last Thanksgiving, and, at the time of my visit was almost entirely completed, and money enough on hand to pay for it. In the meantime, forty acres of timber and pasture land have been bought and paid for. The building occupies the site of Col. Bowen's old homestead, and is beautifully shaded by the cedars, magnolias and magnolias, planted out by whom many and many a story is told. The first year ago, it is four stories high. The first story is to be used for a boarding house, the second for recitation rooms, the third is a library, and the fourth will furnish room for about 50 girls. All the work has been done by colored mechanics. In conversation with some of the older people who were brought up as slaves, and whose children are now members of this School, I learned something of their deep affection for it. From small beginnings, a little over a

year ago, the School has grown till now it has 250 pupils under its care, over 100 of whom are Normal Students old enough, and many of them well enough prepared, to teach. In addition to the special work of preparing teachers for the Public Schools of the State, attention is to be given to the various industrial pursuits. The farm will be carried on largely by the students, and they will there soon as possible a printing office will be opened, a carpenter-shop, a cooking and sewing school for girls, and such other industries as may be thought necessary. I attended the sessions of this school for two days, and was exceedingly pleased with the enthusiastic spirit of both teachers and pupils. One of the encouraging features of the School is the leading white citizens of Tuskegee. Mr. G. W. Campbell and Mr. Wm. B. Swanson are among the oldest and most respectable citizens of Macon county. They, with Mr. Lewis Adams, a prominent colored citizen, constitute the State Board of Commissioners for the School. Colonel Bowen, Mr. Varner and Col. W. F. Foster, all citizens of the present Legislature—all citizens of Tuskegee and familiar with the School, are among its warmest friends. A short time ago, in conversation with Gen. Armstrong, our State Superintendent of Education, I learned that he was so much pleased with the work of Prof. Washington and his associates, as to recommend to the Committee on Education to report a bill giving \$1,000 per year additional to the School. I afterwards learned that the Committee reported it unanimously to the House, and the Governor recommended its passage. I was present during the session of the House, and much interested was Colonel Foster, in its passage, that he left the Speaker's chair, and, upon the floor of the House, in an eloquent and effective speech, urged its passage. He said, "It has since passed the Senate and received the approval of the Governor, and is now a law. With this example of colored people can do if, like Prof. Washington and his associates and pupils, they will only take hold to win."

R. C. BENDFORD.  
From the Report of the Superintendent of Education of Alabama.

THE NORMAL SCHOOLS are each in a prospering condition, and doing faithful and efficient work. I deem it a privilege, as well as a duty, to make special mention of the School located at Tuskegee. Though only authorized by an Act of Assembly, approved March 1st, 1881, the friends of the enterprise proceeded at once to organize the School and to solicit funds in its aid. They have already raised, by subscriptions, independently of the State appropriation, the sum of \$5,521.94; and have erected a structure, imposing in appearance, to which they can point with exultant pride. For special particulars concerning this and other schools, I would invite your attention to the full and comprehensive reports, accompanying and made a part of the colored people's education.

REPORT OF TUSKEGEE NORMAL SCHOOL.  
TUSKEGEE, ALA., NOV. 8, 1882.

MR. G. W. CAMPBELL.

Pres't Board of Commissioners.

DEAR SIR:—The Normal School, at this place, was opened July 4, 1881, with 30 students, and the session closed with 112. The present session opened with 66, and the present attendance is 98, and is likely to reach 140 before the session closes. The total number in attendance since the School began has been 142.

STUDIES.  
Branches taught thus far: Orthography, reading, mental and written arithmetic, descriptive and physical geography, language lessons, grammar and composition, United States and ancient history, physiology, geometrical drawing, vocal music, and gymnastics.

The town public school is taught on the Normal School grounds, and is used as a model school for the Normal students.

The course of study extends through a period of four years and includes, besides others, all the branches laid down in the State school law.

GENERAL INFORMATION.  
Instructors employed.....18 1/2  
Average age of students.....18 1/2  
Counties represented.....9  
Non-residents.....81  
Residents.....61  
Number who have taught.....46

LAND.  
In order to give the students a chance to pay a part of their expenses in work, to teach the dignity of labor, and to furnish agricultural training, the friends of the School have bought a farm of one hundred acres, on which the School is located.

BUILDINGS.  
The building erected during the summer, by contributions from friends in Tuskegee and the North, is 67x58, and is three stories

high, without the basement. It contains six recitation rooms, one large chapel, reading room and library, office, dormitories for girls in third story, and is to have a boarding hall in the basement. The construction of the building, there are three smaller buildings on the place, containing in all five rooms, all devoted to the School.

FINANCE.  
The officers of the School have collected and expended for the objects named, the following amounts, outside of the State appropriation:

New building.....	\$4,450 00
Cost of farm and improvements.....	707 00
General expenses.....	131 59
Beneficiary fund.....	117 00
Books for library.....	48 35
Furniture for dormitories.....	70 00

Total outside of State approp'n.....\$5,521 94  
State appropriation.....2,000 00

Total, with State appropriation.....\$7,521 94

DONATIONS OF MATERIALS

Volumes for library, 600; 1 cabinet organ, and many other valuable articles.  
The School owes much of its present prosperity to the hearty co-operation of both the white and colored citizens of Tuskegee, and in the future, anniversary (Christmas), side help and State aid, it will move on to great usefulness.

Respectfully submitted,  
R. T. WASHINGTON, Prin'r.

### Pleasant Report From Tennessee.

A friend who knows that we are interested in hearing from other workers besides our Hampton graduates, sends us an extract from a letter recently received from a young colored teacher in Tennessee, with the following pleasant report of his work and the condition of the people:

Columbia, Tenn., January 1st, 1883.

MISS.....

Esteemed Friend: It is encouraging to see how rapidly the colored people are coming out of the old and very objectionable way of celebrating their anniversary (Christmas). There is quite an appreciable departure from the old plantation dance, the whiskey, and the wild man hilarity that once was so characteristic of the poor Negro. At present there are social parties, at which are gathered the reasonably gay and cheerful. The cabinet organ, good Christian and sentimental songs, and pleasant conversation. At these social gatherings harmless games are sometimes indulged, or frequently farcical narratives or poetry are given. The churches and societies give entertainments for their own benefit. I have, for a long time, made it my duty to induce as many persons to do regular reading as possible. I find that many of the young persons who have enjoyed school advantages do not much disposed to make those little sacrifices so necessary in order to have on hand substantial reading matter. The mind must be constantly and carefully fed.

Please let me hear from you. Your letters cheer me. May God give me many such friends, and may your reward be rich in the life beyond, for rendering such potent help to one who, amidst darkness, and with little strength, seeks to raise others.

Ever yours,  
WALTER L. LEWIS.

We ask the attention to the advertisement in this number, of Mr. D. F. Cook's Boarding House, opposite the Hampton Institute. It is most pleasant, well-kept, and especially adapted for those being abundant play ground and good housing at April and May the Virginia Club best.

### Picture Papers for Returned Indian Students.

As may be seen in our report of an interview with Agent McLaughlin, on another page, much good may be done by sending good illustrated papers with simple readings, or for their pictures alone, to our Indian boys and girls who have returned to their agencies. We have done this already to some extent, but we have not enough for them and others who need the same. If any friends will send us such papers after they are done with them, marking them for Indian training, they will be doing great good. Every such humanizing influence that we can throw around these young people in their difficult positions, is of utmost importance and value. The papers may be directed to the editor.

work. As long as their minds are occupied,

We didn't have one girl who left that school who did not marry one of our young men from our school, or one of our apprentices. They all got married. We persuaded the girls to remain in the school till they married. Then they would accompany them to their home, and see that it was as good as if they had never been away from the parents, when they came, saying, "My daughter has been three or four years at school, my wife is getting old, and I want to get married." So we were glad that she wanted us to sell her to some Indian. I saw we knew the only hope for the girls was in marrying them to some of our educated and Christianized boys. When they returned to the camp, they would return to their Indian life. Those who married we established, giving each couple 160 acres, wagons and stock.

We settled no two on one quarter-section.

"What is their title? Are they sure not to be driven out?"

Pretty sure, as far as the reservation system allows. The fee is in Government but

The first marriage we arranged at Devil's Lake was in 1877. When I left, in September, 1881, there were fifteen couples; now there are many more; there have been two or three a year, and they are increasing. The girls were able to read and write, and were

girls were able to read and write, and were instructed in household duties. We had one girl whose mother was a worthless woman. She was determined to take the girl home. She had been to school four years, and was a good girl. The sisters came to me and said, I wish you could find a good young man for her. The only one I could

think of was —. I talked to him about it. He said he had been thinking of marrying

for about a month. It rather took him by surprise, but he liked the idea. So did she and they were married the next Sunday. George Albert, the first to marry in 1877, was my assistant blacksmith. In 1879 I moved him out to the grist-mill. He runs it himself, and has full charge of it, receiving all the logs that come in. He is an educated young man, and all the Indians respect him.

young man are all the means respect his character and his wife. They take his advice. He has a nice house, with a floor and everything comfortable. All but three of the fifteen young men were farmers. Their houses are of hewed logs, with pine floors, shingle roofs and two windows. The Indians get out the logs and put them up: the

agents furnish them. There are 180 of these houses at Devil's Lake Agency; twenty-five have two rooms, half of them have two stories. The rest have one room, with a little storm shed, where, in summer, they

put their stove. The Indians there are very industrious and thrifty. They bring their logs to the mill—oak logs, hard to cut—and build their houses and sheds.

The treaty of 1867 with the Sisseton and

Wapeton Sioux gave the Indians certain articles on certain conditions, discretionary with the agent. The deserving were to be rewarded. They made use of this power. That is why these Indians advanced.

that is why those Indians advanced so rapidly. It is the only kind of treaty that should be made. Under the other kind, an Indian agent cannot possibly do as much to advance the Indians. When Government

advance the Indians, which Government fulfills its share of the treaties, Indians can easily be managed, but that is seldom done. Long Shoulder said to Gov. Edmunds, of Dakota, a commissioner in the last treaty to give up more of their lands: "Before you ask me for any more lands, go back and tell the Great Father to fulfil the promises."

"What advantage has a house over a tepee." Great advantage. It is not so exposed to

the weather, and has to be kept cleaner, and keeps the Indian from wandering. Those who haven't been to school don't know at first how to take care of one and keep it at the right temperature, and there is a danger. They can't get their lodge above a certain temperature, the fire escapes but in the

temperature, the men covered all the houses they sit round a stove till the perspiration is rolling off them, and then go out and take cold. So, in all the cahins at Devil's Lake, I furnished them brick to have a chimney and open fireplace for ventilation. I gave a man five dollars to build each chim-

"Would it be well to teach our boys to lay hrick?"

Very well. It is a good hrick country. It is the duty of the agents and his police to

In 1876, on the visit of the Inspector, I took him to see Chief Wanita. We found the family at dinner, seated round a table

spread with a nice white cloth, and set with nice dishes. The Inspector was astonished.

## Teachers' Table.

## Sentiments for Recitation.

"In oratory as in every other art, there is no excellence without labor. The two great orators of antiquity studied elocution as an art. Demosthenes, whose voice was weak, whose articulation was defective and whose tongue stammered, after an unsuccessful speech in which he had been hissed from the assembly, was persuaded by an actor whom he met, to undertake the study of elocution; and by a course of training such as few have ever subjected themselves to, proved that by persevering application the most formidable difficulties may be overcome. With Cicero it was much the same; he visited Asia and Rhodes to listen to the best orators, and to receive instruction from the best teachers."

This science has also been studied by England's most eminent orators. Mr. Pitt learned elocution under the tuition of his eloquent father, of one of whose speeches Fox said, "The orator of antiquity would have admired, probably, would have envied it." The case of Sheridan is still more striking. He came to that Parliament which was adorned by Burke, and which owned the sway of consummate orators like Fox and Pitt. But Sheridan had studied the elocution of the stage; his father had been his teacher, and Pitt himself wielded and pronounced him king of men.

"Be not fretful and anxious about the morrow. Face things like men; but remember, like men, that there are a thousand dangers around you from your prudence cannot save you. Do your best; and then comfort yourself with the thought that you have done your best. Do to-day's duty, light to-day's temptation; and do not weaken and distract yourself by looking forward to things you cannot see, and could not understand if you saw. Does fretting make us in the least more industrious? On the contrary, I know of nothing which cripples and hinders like anxiety."—Charles Kingsley.

"True courage comes by faith. There is a courage which does not come by faith. There is a brute courage which comes from hardness of heart, from stupidity, obstinacy, or anger; which does not see danger, or does not feel pain. This is the courage of the brute. He does not blame it or call it wrong. It is good in its place, as all natural things are which God has made. It is good enough for the brute, but it is not good enough for the man. You cannot trust it in man. And the more a man is what a man should be, the less he can trust it. The more mind and understanding a man has, so as to be able to foresee danger, the more he must be able to resist his brute courage driving way. To go through with a difficult or dangerous undertaking, a man wants more than brute courage. He wants spiritual courage—the courage which comes by faith. He needs to have faith in what he is doing; to be certain that he is doing his duty; to be certain that he is doing right; certain that right will conquer; certain that he will either conquer honorably or fall honorably. In a word, to have true courage, man needs faith in God."—Charles Kingsley.

"One grand virtue which a young man should cultivate is truthfulness. I believe with Plato, that 'a lie is hateful both to Gods and men.' Whoever in any special act is studious to make an outward show to which no inward substance corresponds, is acting a lie which may help him out of a present difficulty; but, like gilded brass, will be found out in due season. Plated work will never stand the wear and tear of life like the genuine metal. All finery, shallow, superficial work is a lie of which a man ought to be ashamed."—John Stewart Blackie.

Horsford's Acid Phosphate  
As a Nerve Food.

Dr. J. W. Smith Wellington, O., says: "I have used it advantageously in impaired nervous supply."

## The Best Reading.

Every family that desires to provide for its young people wholesome and instructive reading should send for specimen copies of the *Youth's Companion*. Its columns give more than two hundred stories yearly by the most noted authors. Besides one thousand articles on topics of interest, anecdotes, sketches of travel, poems, puzzles, incidents, humorous and pathetic. It covers every week, is handsomely illustrated, and is emphatically a paper for the whole family.

## Health and Humanity.

## Ten Lessons on Kindness to Animals.

## SIXTH LESSON.

Oh! let each boy and girl  
Sweet mercy's flag unfurl,  
And love his canine  
Dare to be kind and true,  
Give each dumb thing its due,  
Win them in love to you  
By God's own laws.

## THE DOG.

[To be read to pupils by Primary Teachers.]

In 1858 a funeral procession entered the old Gray Friars' graveyard in the city of Edinburgh, Scotland. It was the funeral of a poor man, and the chief mourner who followed the hearse was the poor man's dog.

After the funeral, all the dogs of this poor man went to their homes, but the dog would not leave his master's grave. Day after day people tried to get the dog away, but he would keep coming back to his master's grave. Finally, these daily visits became known through the city, and the neighbors led the dog and gave him shelter in cold weather, and the Lord Provost, or Mayor of the City, gave him a collar, and for about fourteen years, up to his death in 1872, he did not leave the neighborhood of his master's grave.

A few years ago that excellent English lady, the Honorable Harriet Martineau, caused a monument to be built for him near the entrance to the Gray Friars' Churchyard, and it will probably stand hundreds of years to tell the people of Edinburgh about this faithful dog.

And now let us see what dogs do for us. In the cold northern countries where there are no horses or oxen, dogs are used to draw the sleds over the ice and snow. In other countries, they are used to hunt wolves and other wild animals, and sometimes to follow bad men who have committed crimes. In countries where large numbers of sheep are raised, they guard the sheep, keeping off all wild animals. In some countries, it would not be possible to keep sheep if there were no dogs to guard them. In some places it would not be possible, without dogs, to protect chickens and poultry from foxes and other wild animals.

Thousands of human lives have been saved by them—lives of persons who have fallen into the water and would have drowned if dogs had not jumped in and pulled them out. In one case, while I was in London, England, about eleven years ago, a man fell into the water and sank to the bottom, and a good dog dove to the bottom and brought him up, and brought him safe to the shore. Some of us gave money to buy a beautiful collar for this dog, and we had written, "I member of the Royal Humane Society."

Sometimes, dogs save shipwrecked sailors, by swimming with ropes from the wreck to the shore. They have saved many lives of persons who have been almost frozen or buried under the snow. In one case I know of, three little children at Gloucester, Mass., going home from school in a great snowstorm, lost their way and were covered with snow, and would have died if a good dog had not found them.

And then dogs guard our houses in the night when we are all asleep, and drive off robbers and other bad people, or if bad people try to get in, they bark and awaken us. Only a short time ago, I knew of a case in which a whole family would have been burned to death in their house, in the night, if a dog had not barked and waked them; and of another case in which a whole family would have died in the night from coal-gas, which was coming out of a stove, if the dog had not barked and waked them.

There are many books filled with stories about the good things dogs have done, and many other books might be filled with other stories just as good. They have always been the friends and companions of human beings, and are generally, when kindly treated, very kind to children. A great writer of books, named *Cretier*, who has studied this whole subject, thinks that men could spare any other animal better than they could spare dogs.

Some dogs that have been badly treated become cross and dangerous. Some men and boys treat them cruelly, but when they have been treated kindly, I think they are almost always kind. Some of the greatest and best men that have ever lived have been very fond of dogs; such men as Sir Walter Scott and Sir Edwin Landseer. And poor men often find them their best friends. A poor, sick, colored man, sometime ago, travelled on foot hundreds of miles to the hospital at Louisville, Kentucky, to see if he could get cured, having with him his dog. But when they told him he must abandon his dog and turn him into the street, because they would not have any dog in the hospital, the poor man took the dog in his arms, and with tears running down his face, said he

would rather die with his dog than turn him into the street and go to the hospital. I am glad to say that when they found how much he loved the dog, they let the dog go into the hospital with him.

It is very cruel to keep dogs in the house all the time. They want to run and play just as much as boys do, and if kept in the house all the time will soon become sick. They should always have a comfortable place cold nights, and plenty of good water as often as they want it, and they should not be fed so often as to make them fat and unhealthy. And when, because of old age and sickness, their lives become painful and it is necessary to kill them, then they should always be killed instantly, without knowing that they are going to be killed, and without pain. And we should always be very careful to speak kindly to dogs unless they have done wrong, for there is no animal that suffers more when spoken to unkindly, or that is more happy when spoken kindly to. And I think we ourselves are always made happier by doing acts of kindness to these friendly creatures.

Many things I should be glad to tell you about dogs, but it would make this lesson too long.

## SOME QUESTIONS.

[Others to be added by Teachers.]

What can you tell about the dog that would not leave his master's grave?

Who caused a monument to be built for this dog, and where?

What are dogs used for in Northern countries, and why?

What are they used for in other countries?

Mention some of the ways in which they have saved human lives?

What can you tell about the dog that was called "A member of the Royal Humane Society"?

What can you tell about the three children saved by a dog at Gloucester, Mass.?

What can you tell about the family that came near being burned in the night?

What other family that came near dying from coal-gas?

What did Cretier think about dogs?

Name some of the great men who loved dogs.

What can you tell about the poor colored man at the Louisville (Kentucky) hospital?

Why should dogs not be kept in the house all the time?

When, through sickness and old age, life has become painful to them, how should they be killed?

Why should we speak kindly to dogs?

## At Home.

## A Welcome.

Far in the Sunny South she lingers,

Yet slowly comes along

With fairy garlands in her fingers,

With stanzas of sweet song.

Her eyes with promises are beaming,

Her smiles will rapture bring.

The sun-light from her hair is streaming—

Thrice welcome, lovely Spring!

She brings us gifts, the royal maiden.

Fair flowers to deck the hills;

With primroses her steps are laden,

With daisies and daffodils.

Pale crocuses have come before her,

Wild birds her welcome sing;

Ten thousand longing hearts adore her—

The gray world's darling, Spring.

## Some Poor Boys.

John Adams, second President of the United States, was the son of a farmer of very moderate means. The only start he had was a good education.

Andrew Jackson was born in a log hut in North Carolina, and was raised in the pine woods for which that State is famous.

James K. Polk spent the earlier years of his life helping to dig a living out of a farm in North Carolina. He was afterward clerk in a country store.

Millard Fillmore was the son of a New York farmer, and his home was a very humble one. He learned the business of a clothier, James Buchanan was born in a small town among the Alleghany mountains. His father cut the logs and built his own house in what was then a wilderness.

Abram Lincoln was the son of a very poor Kentucky farmer, and lived in a log cabin until he was twenty-one years of age.

Andrew Johnson was apprenticed to a tailor at the age of ten years by his widowed mother. He was never able to attend school, and picked up all the education he ever had.

Gen. Grant lived the life of a common boy in a common house on the banks of the Ohio river until he was seventeen years of age. James A. Garfield was born in a log cabin. He worked on a farm until he was strong enough to use carpenter's tools, when he learned the trade. He afterward worked on the canal.—*The Youth's Instructor*.

## Agriculture.

The interests of agriculture deserve more attention from the Government than they have yet received. The farmers of the United States, of half our people, and furnish much the largest part of our exports. As the Government ought to be the protector of our farmers, and the benefit of commerce, so it should give to the tiller of the soil the lights of practical science and experience.

JAMES A. GARFIELD.

## Feeding, Watering and Driving a Horse.

There are hundreds, perhaps we may say thousands, of persons in our towns and cities, who go into the country for a few days, weeks, or even months, in the summer season, who know little or nothing about the proper manner of feeding, watering and driving a horse, and yet are often desirous, and sometimes are obliged to perform this duty. In undertaking it, owing to their ignorance of such matters, they frequently greatly injure their horse, and occasionally cause its death. It is for such persons we give below a few brief hints as to general management which, if closely followed, will save, then doing injury, and perhaps incurring a considerable loss; causing them much pain instead of pleasure in the use of a horse.

We shall not now describe the varieties of food proper to be given to the animal, for this alone would require a long article, and shall simply say that, whatever this is, the ration at night should be twice as large as in the morning or at noon. The horse has then plenty of time during the night to digest his food, and give him strength for his work during the day. If he is fed too freely in the morning and at noon, his stomach becomes overloaded, and he cannot do any fast or heavy work without rendering him liable to injury. In any event, when first taken from the stable, either in the morning or afternoon, he should be driven very slowly, quite slowly and given an opportunity to clear his bowels two or three times. On the second mile he may be driven faster, and the third put up to his full natural speed, unless it is very hot weather, and in this case he must still be continued at rather a slow gait. A horse of good spirit feels very gay when first taken out of his stable, particularly if he has been standing idle in it a day or two, and is anxious to start off at full speed; but it is absolutely necessary to restrain him, on a full stomach rapid speed is liable to give him broken wind, and soon bring on the heaves.

In driving, especially if the weather be pretty hot, it is best to stop and give the horse three or four quarts of water every two hours, and be careful that this water is not too cold. A horse wants to drink as often as a man does under the same circumstances of exercise, and if watered often is the more grateful and refreshing to him; he does not want to take nearly so much at a time, and he is thus kept from overfilling his stomach and bringing on a dangerous ache. He can then also be immediately started again without injury, for traveling on immediately after drinking prevents this. When brought home from a drive, if the horse is hot or much fatigued, let him drink three or four quarts of tepid water, but not be allowed to eat anything until he has stood in his stall from a half to a full hour, or sometimes more, and fully rested; then he may be given four quarts more water and some hay. After eating a little of this, he should have his ration of grain, and a short time after eating this he may drink all the water he desires, which will not be much after the previous frequent waterings. In all cases see that the water is not over cold, such as comes from a deep well or close gushing spring.

If a horse in returning to his stable after a hot drive is immediately allowed to drink as much cold water as he craves, or if permitted to stand in water or in a very muddy place, he will be pretty certain to get foundered, which will greatly injure him for work through life, and perhaps render him utterly worthless.

When a horse is put up, unless rather hot, don't allow him to be placed in a draft. Opposite doors and windows must be closed to prevent this. If the weather be cool, blanket him till his coat has dried and he has become cool. The blanket may then be taken off, and the horse rubbed down and dressed clean.—*Christian Union*.

Horsford's Acid Phosphate  
In Dyspepsia.

FRANCIS H. ATKINS, A. A. Surgeon, U. S. A., says: "for dyspepsia, whether in the lean or corpulent, in nervous debility and in night sweat consumption, it has commonly given speedy benefit and some of my army friends are quite enthusiastic about it."

## HOTEL COMFORT,

Queen St.  
HAMPTON, VA.

This newly furnished and elegant modern Hotel, is now open for the reception of Guests. This Hotel supplies a want long felt in Hampton, combining, as it does in its management,

*Civility, Cleanliness well-prepared Food, and Spacious Bed Chambers,*

Coupled with

MODERATE CHARGE S.

These are the features by which the Proprietor trusts to receive the patronage of the traveling public.

To secure rooms an early application would be desirable. To families liberal arrangements would be made.

## THE HYGEIA HOTEL,

AN ENLARGED AND IMPROVED.

### OLD POINT COMFORT, VA.

Situated one hundred yards from Fort Monroe, at the confluence of the Chesapeake Bay and Hampton Roads, being the first point of land lying westward between the Capes of Virginia, about fifteen miles north of Norfolk and Portsmouth; all passenger steamers running to and from those cities touch at the pier, going and returning, with the U. S. Mail, landing only twenty rods from the Hotel, which is substantially built and comfortably furnished; has two Old hydraulic passenger elevators, gas and electric bells or Creighton's Oral Annunciator in all rooms; water; rooms for bath, including Hot Sea, and closets on every floor, with the most perfect system of drainage of any Hotel or any public building in the country. As a resort for the pleasure-seeker, invalid, or resting place for tourists on their way to Florida or the North, this house, with accommodations for about 1,000 guests presents inducements which certainly are not equalled elsewhere as a summer resort or cold weather sanatorium. Has during the cold weather over 15,000 square feet of the spacious veranda (of which there are over 35,100 square feet encircling the house on all sides) enclosed in glass, offering the most delicate invalid to enjoy the sunshine and fine water view without risking the slightest exposure. The climate of Old Point Comfort is unequalled for salubrity. Malarial fevers being absolutely unknown. The record of the Meteorological Observatory for the past ten years shows an average temperature of 10 deg., 74 deg., 76 deg. in summer, 70 deg., 52 deg., 40 in autumn; 45 deg., 44 deg., 42 deg. in winter; and 48 deg., 30 deg., 40 in spring. The invigorating atmosphere and mild temperature being especially adapted to that class who seek the genial winters of the South and cool summers of the North. For sleeplessness and nervousness, the delicious tonic of the pure ocean air and the lullaby of the ocean waves rolling upon the sandy beach, but a few rods from the bedroom windows, are most beautiful experiences of the Hygeia.

### EMANCIPATION

ITS COURSE AND PROGRESS FROM 1481 B. C. TO A. D. 1875.

BY JOS. T. WILSON.

In addition to the history of Emancipation, it also contains a review of President Lincoln's Proclamations, the XIII amendment, and the progress of the freed people since Emancipation. Also a history of the Emancipation Movement, to Lincoln Park, Washington.

It is a work that has long been needed, as it contains much valuable information and data that can only be obtained by long and laborious research through voluminous histories and encyclopedias. The arrangement is such that reference can be made in an instant of time to the date of emancipation in any country on the globe.

The Review of President Lincoln's Proclamations and the XIII amendment is valuable, showing, as it does, the opinions of the different leading thinkers and writers on the validity of the same.

The book contains 342 pages; printed in large, clear type, on heavy white paper, and is handsomely bound in full cloth. Price \$1.50—post paid.

**AGENTS WANTED**, to whom liberal inducements will be offered. Address

### Hampton Normal and Agricultural Institute

AT

### HAMPTON, VIRGINIA.

Incorporated in 1870, by special Act of General Assembly of Virginia; exempt from taxation. Devoted to the Education of Negro and Indian youth in Agriculture and the Mechanic arts, and as teachers of their respective races.

S. C. ARMSTRONG,

J. F. B. HARRIS,

Principal;

Treasurer.

Annual session from October 1st till the mid day of June following.

Terms of admission: a knowledge of reading and writing, and of short and long division.

Tuition free to all, (provided by friends.) Board, etc., ten dollars per month, payable monthly, half in cash and half in labor; six dollars cash, and four dollars in work required of those under 18 years of age. The first year is probationary. None under fourteen or over twenty-eight years of age need apply.

The Institution is aided by the State, but is supported mainly by voluntary contributions.

Besides State aid and Government help for Indiana, the sum of \$30,000.00 a year, must be raised by contributions, to meet current expenses.

Annual scholarships of seventy dollars, to provide free tuition, are solicited.

Donations of any amount are most acceptable, and are invited from all.

The great need of this institution is a permanent endowment fund.

The Hampton Institute is supported by, and responsible to, no denomination or society, and has no paid soliciting agent or machinery whatever, but depends directly upon the public. It is earnestly Christian in its teachings and influence.

Present attendance, 490 students, of whom 92 are Indians; average age 18. Negro boys 238; Negro girls 170. Indian boys 60; Indian girls 32. All but thirty-two board at the Institute: twelve states represented, but chiefly Virginia and North Carolina.

### FORM OF REQUEST.

I give and devise to the Trustees of the Hampton Normal and Agricultural Institute at Hampton, Va., the sum of.....dollars, payable to, &c., &c.

For further information address,

HENRY W. LONGFELLOW.

### Longfellow's Last Poem.

The following is the last poem which Mr. Longfellow wrote, the revised proofs of which were read by him but a few days before his death. The poem is entitled, "Mad River in the White Mountains," and represents a colloquy between a traveler and the river, the traveler seeking to learn the river's song, and to know the reason for its hurry. The traveler asks:

Why doest thou wildly roar and roar,  
Mad River; O Mad River?  
Wilt thou not pause and cease to pour  
Thy hurrying, headlong waters o'er  
This rocky shelf forever?

What secret trouble stirs thy breast?  
Why all this fret and flurry?  
Dost thou not know that what is best  
In this too restless world is rest  
From over-work and worry?

The river's answer is thus expressed.

A brooklet nameless and unknown  
Was I at first, resembling  
A little child, that all alone  
Comes venturing down the stairs of stone,  
Irresolute and trembling.

Later, by wayward fancies led,  
For the wide world I panted;  
Out of the forest dark and dead  
Across the open fields I fled,  
Like one pursued and haunted.

I tossed my arms, I sang aloud,  
My voice exultant blending  
With thunder from the passing cloud,  
The wind, the forest bent and bowed,  
The rush of rain descending.

I heard the distant ocean call,  
Imploping and entreating;  
Drawn onward over this rocky wall  
I plunged, and the loud waterfall  
Made answer to the greeting.

And now, beset with many ills,  
A tollsome life I follow;  
Compelled to carry from the hills  
These logs to the impatient mills  
Below there in the hollow.

Yet something ever cheers and charms  
The rudeness of my labors;  
Daily I water with these arms  
The cattle of a hundred farms  
And have the birds for neighbors.

Men call me Mad, and well they may,  
When full of rage and trouble,  
I burst my banks of sand and clay,  
And sweep their wooden bridge away,  
Like withered reeds or stubble.

Now go and write thy little rhyme,  
As of thine own creating,  
Till thou seest the day is past its prime;  
I can no longer waste my time;  
The mills are tired of waiting.

### Literature Among the Colored People.

BY ORRA LANGHORNE.

For some years past a modest little paper, neat in appearance and lively in contents, has come to me weekly from Washington City, bearing the name of "The People's Advocate."

The Advocate is edited by I. W. Cromwell, who was educated in Philadelphia, but lived in the South as a school teacher for some years after the war. Recently Mr. Cromwell sent me a strikingly interesting sketch of the Rev. H. H. Garnet, written by Dr. Crummell, the intelligent and accomplished colored United States Minister to Liberia, whose great desire it was to behold the land whence his forefathers had been carried away captive, and who died on African soil after a short residence there. About the same time, a volume of sermons by Dr. Crummell reached me. These sermons are written in excellent style and are instructive and interesting. I should advise all colored people able to buy books to procure a copy of Dr. Crummell's sermons, and would especially commend to careful attention those on "The Family and Marriage."

Then a remarkable production came into my hands from Mr. Cromwell. This was the bound volume of the "Anglo-African Magazine" published in monthly numbers in 1857. The list of contributors contains many names which of late years have attained wide celebrity, among them that of Hon. John M. Langston, now American Minister to Hayti. Full account of the trial of John Brown is printed in the last number, carefully compiled from the Court records and the newspaper reports. There are various essays, sketches and poems, and a serial of marked ability runs through several numbers. A handsome portrait of Alexander Dumas,

whose African descent is well known, ornaments the beginning of the Magazine. The whole book is of singular interest as the work of people whose mental culture was forbidden by vigorous statutes in many of the states, while a cruel sentiment on the subject long pervaded the Union. Much talent is displayed in the volume, and naturally enough a wall of sadness breathes through its utterances, as each writer felt in his own person and for his race the heavy burdens of slavery and proscription which then rested upon his people.

Frederick Douglass' narrative of his life and times, next attracted my attention. This book while telling the story of the writer in detail, is a work which its admirable style, with its national and human interest, lifts entirely out of any especial class or race relations. Its mission is to instruct and entertain mankind. As a history of the anti-slavery struggle, and the progress of the African race in our land, it is invaluable.

As these books, all written by Negroes, some of whom were born slaves, collect upon my table, I can but regard with astonishment such evidences of talent and education, from a people about whose mental capacity many absurd theories have obtained with the dominant race, and who were long prohibited by our laws from learning to read.

All over the country, papers are springing up edited by colored people. Among those I have seen especially worth notice, are the Methodist Recorder, The People's Advocate and the Richmond Star.

A number of the Recorder fell into my hands sometime ago, which contained the following hymn written by the editor, Dr. B. T. Tanner.

#### Jesu.

My meditation of Him shall be sweet Psalm civ. 31.

Jesu, sweetest name of all,  
Heard on this terrestrial ball;  
Lapped by men of any race,  
Lapsing kindles in their face.

See the tribes of Orient—  
They who first sweet Jesu sent  
Where they had that name confessed,  
Joy springs up in every breast.

And the tribes of Occident  
Tribe on worldly pomp bent,  
Stout they at the joyful Name  
And its honors wide proclaim.

And the sunny Southern tribes,  
Long reproached with cruel gifts,  
Out their hands stretch forth in praise,  
That have come to sweet Jesu's days.

And the New World tribes the same  
Heed the sweetness of this Name,  
Through Columbia's South and North  
Loud and long the joyous psalm forth.

Jesu rings from sea to sea,  
Jesu rings out joyfully,  
Jesu, Jesu, sweetest Name  
Men of Angelian psalm.

Christian Recorder, February, 1883.

So far as I have come in contact with the colored people everywhere, artistic and literary tastes are assiduously cultivated among them. Few colored families are to be found who have advanced beyond the struggle for daily life, who have not a musical instrument of some kind, books, pictures and newspapers. The library attached to the Richmond Institute, which owes its existence chiefly to northern benevolence, numbers 2,700 volumes. In our larger cities literary societies are flourishing among the colored people. The reports of the Bethel Literary Society of Washington City printed weekly in the Advocate, furnish very interesting reading. In other directions the minds and tastes of the colored people are fast developing. Mr. John W. Crawford, a colored confectioner of this place, has long been a collector of coins and other curiosities, and his cabinet has attracted much attention at our agricultural fairs. Mr. Crawford is considered quite an authority in regard to Confederate money, and has no little antiquarian information about his heterogeneous collection. He tells me that at a sale of books in Philadelphia some years ago he bid \$30 for a copy of the poems of Phillis Wheatley, the first Negro writer on this continent, a native African by birth; but was out-bid by some relic-hunter possessed of more means than himself.

That the colored people of our land should have accomplished so much in spite of the restrictions implied upon them, seems wonderful and indicates the existence of abundant native talent. At present, the restraints which in the past have cramped development are to a great extent removed, and will doubtless all vanish in time. Excellent facilities are afforded the young by state regulations for elementary instruction, while large sums for the purpose of educating Negroes are annually bestowed by charitable hands.

From what has already been accomplished against obstacles, there is every reason to hope for the mental progress of the African in America, and for great results in the literature of our country as time goes on, and the Oriental imagination shall have received full impress of our western civilization.

(Continued from November No.)

### Reminiscences of Hawaiian Life.

BY EDWARD BAILEY.

Speaking of Kekela and his wife Naomi, have raised up quite a family of children, some of whom are doing well, one daughter, Rachel, has been educated at the Female Seminary at Makauao, and has married a graduate.

Rev. E. W. Clark went from Lahainaluna to Wailuku, where he resided several years in charge of the native church; then he went to Honolulu and was pastor of Kawaiaho church for several years more; thence he went to the United States and had charge of the publication of Hawaiian books. He acted an important part in the revision of the Hawaiian Bible now in use. He died of sun-stroke in Chicago several years ago.

Rev. Sheldon Dibble died at Lahainaluna. He was never very strong from his first acquaintance with him. He was the author of several works relating to the islands, some of which are quoted as authority.

Rev. Lorin Andrews continued in the seminary some time after I left; then built a house between Lahainaluna and Lahaina, where he remained a few years, then went to Honolulu, where he became a judge.

He resided in Nuanu Valley till his death many years afterward. There he completed his large Hawaiian and English dictionary. He had a great desire to engrave the improvements of other countries on the Hawaiian islands. He initiated copper-plate engraving at Lahainaluna and several of the pupils attained some skill in the art. Some respectable maps were executed and were of use in the schools of the islands. But as no one really knew much about the business, it came to an untimely end.

Through his efforts, the school was supplied with suitable apparatus. One great desire of his was to originate or develop whatever might be of use instead of importing every thing from abroad. It was late in life that he produced the dictionary before spoken of.

Many of his descendants reside on the islands.

Mr. Edmund H. Rogers was the printer of Lahainaluna for several years, but afterwards he removed to Honolulu, where he had charge of the general mission printing. Both he and his wife are dead, but a number of their descendants remain at the islands.

It is not to be supposed that boys in the flush of youth, belonging to a race in which animalism is so predominant, would at once be trained to control those instincts, the perversion of which brings so much misery upon mankind. Consequently, of the many who entered the seminary to fit themselves for a higher usefulness, only a part came steadily through to the end.

The teachers were often made to despair as they saw bright buds of hope lighted before they fairly opened, and their highest hopes were dashed to the ground.

They came to feel anxious solicitude for any who showed unusual talent, for such were sure to be special marks for the teacher, and all too often fell into the snares which were spread for them.

Mr. Clark having returned to his post at Lahainaluna, and Mr. Dibble also, I became a supernumerary there, and it was thought best for me to remove to Wailuku.

Mr. Armstrong was leaving that station, having been appointed to take charge of the Metropolitan church at Honolulu.

Ophthalmia had been prevalent at Lahainaluna during our stay there of little over a year; and Mrs. B. had suffered exceedingly from it, resulting in weakness of the eyes, from which she has never fully recovered. Our second child, who was born there, was carried over the mountains to Wailuku in a box between two men, his eyes being quite closed by ophthalmia in its inflammatory stage. The rest of us rode over on horseback, moving perforce very slowly; till we reached Kamalea at the foot of the mountains, where we found the only carriage of the region—a box wagon drawn by an imperfectly broken horse. The seat was placed on wooden springs, one of which was broken, making it far from comfortable, though the road being rough, it was occasionally level.

Our food, put up for the occasion, was, by a blunder, carried off by the vessel which carried our goods around by sea, and our only relief was a kalo, which, by some chance, was found at Kamalea.

In the course of the day we reached the station of Wailuku, to meet such a welcome as only missionaries whose experience had been similar to our own could give.

I wish to say here that if any one, thinking to go on a mission, sits down to count the cost only in a worldly point of view, he had better give up the idea at once. The work of raising up a people from heathenism to Christianity cannot be separated from hardship. No lover of ease has any place there. It is incessant and earnest struggle. But it has its compensations.

Wailuku is at the eastern base of the mountains of West Maui, being the largest

one of four similar places, each of which extends up into a gorge cleft in the mountains, and is watered by its own stream of delicious water, and fanned by the fresh trade wind.

Wailuku valley, as it opened out from the mountains, was filled with luxuriant taro-patches, on the borders of which grew sugar cane, banana, and *ti*; all of which, with the addition of fish and seaweeds from the sea near by, furnished the natives their simple fare. The whole plain between East and West Maui, six or eight miles in extent, was covered with luxuriant waving grass; for though there were a few cattle on it, the more recent denudation, caused by the multiplication of herds, had not then taken place.

At Wailuku my first charge was the care of the schools for a region of about twenty miles square, containing upwards of two thousand children. Each village or "land" had its school house, and one or more teachers, according to the population. Regular wages had not yet been paid to the teachers, nor had provision been made for them by the Government. In fact government was itself in a very embryonic state. But the people contributed something for their support when they felt disposed to do so, and the honor of the position did the rest, though it often resulted in an empty stomach, sometimes in starvation, unless the teacher had resources of his own.

The school houses were then destitute of furniture, the pupils sitting on the ground. The teachers' stock of knowledge was soon expended, but was supplemented by energetic drill, and vociferation sometimes made up for the lack of anything better. Hawaiians are a very noisy race, seemingly incapable of silent thought.

A great want of educated teachers was felt, and I was soon at work in a select school of boys from the ages of ten or twelve years up to sixteen or eighteen. Pupils were not wanting, and I soon had 70 or 80 of the best island copy alford. Good progress was made in arithmetic, writing, geography, reading, moral philosophy, &c. But I did not stop there. General information, government, and political economy were canvassed freely—anything to right up the universal wrong of heathenism was indulged without let or hindrance. It is doubtful if such disquisitions as were frequently forthcoming on the spur of the occasion would be tolerated by the present thin-skinned Government.

This was my work for a year—a year of joy and hope following the great revival, when the minds of the people were susceptible, and when Pious and Mormon teachers, coming in unawares, had not yet persuaded the people that missionaries were all heretics and hypocrites; but their teaching was still valued and listened to. What might not the nation have become had they still listened to their real friends instead of giving ear to specious advisers, who only loved themselves and cared for the fleece, not the flock.

Nearly all the pupils of this school became useful men, and in some respect were above the ordinary. But I was destined for another field of labor.

#### WAILUKU FEMALE SEMINARY.

Among the most important departments of missions, labor in the islands must be ranked the education of the people. That it was so considered, the company of nine teachers, with their wives, sent out by the Mary Frazier, should be taken as proof.

It must not be supposed that the people were without a sort of education in their heathen state. Their geography of the islands was extensive and accurate. Each island is divided into districts, each district into smaller sections, and these again into portions, of which the ultimate divisions were farms and building lots. And not only the chiefs and priests, but the common people as well, appear to have had a pretty good schooling in the topography and character of these sections. They had their proverbs and wise sayings and songs relating to them. Their knowledge of their race was quite extensive, and their genealogies embraced not only the Hawaiian race but other cognate races. Their histories were stored in *meles* or songs, and many a heroic deed was thus kept in remembrance.

Astronomy, too, had received attention. The names of the planets and some of the stars were known to them, and their times were thus divided. But although such knowledge had its use, it did not fit them to become a part of the civilized and Christian world; more especially when its whole scope and tendency was to uphold the aristocracy at the expense of the common people. It maintained the idea that the people were only for the chiefs, and had no rights of their own, and of course no responsibilities. The idea stood as a barrier in the way of the elevation of the people, without which the labor of the missionaries was a failure. To do the chiefs justice, it must be said that they have from the first favored the education of the people. Intercourse

THE BUTLER SCHOOL, on the Hamp-  
ton Institute grounds, is this year, with  
most of the public schools of Virginia,  
enjoying under the new administration  
a prolonged session of seven months  
instead of five. This school, which is  
an object of attraction to many of the  
visitors to the Normal School, has its  
own historic interest as the first school  
for the "contrabands." It was built  
during the war from the public money,  
and very wisely, by General Butler,  
then stationed at Fortress Monroe, and  
took his name.

It held about six hundred, and was  
filled at once from the swarming camps  
of the refugees with little eager dark  
faces, and among them some wrinkled  
ones bowing with pathetic intensity  
over the mysteries of the spelling  
book. The number of course dimi-  
nished when other schools were op-  
ened in the town. When the ground  
was purchased for the Normal School  
by the American Missionary Associa-  
tion, the Butler building became its  
property, the Institute giving the use  
of it to the town for a public free  
school, reserving the right to nominate  
the teachers. This relation to the Nor-  
mal School has given it the advantage  
of constant interest and supervision,  
good methods and teachers, and regu-  
lar eight months sessions, maintained  
by the county for five months generally,  
and kept up for three more by special  
efforts of the officers of the Normal  
School, though an outside interest, the  
parents paying what they could and  
holding a little fair or festival to help  
it on; the school diminishing for the  
time in numbers by one third or one  
half, but keeping its best material.

For the last four years, the Butler  
has had further advantage as the  
training school for the Normal Insti-  
tute, with constant improvement in  
supervision, methods and all appli-  
ances, and increase in numbers. In that  
time, the school has grown from ninety,

to three hundred and twenty, and from  
two rooms open, to six rooms with six  
teachers, four young men and two  
young women, Hampton Institute  
graduates, under the superintendence  
of an experienced teacher, graduate of  
the Framingham Normal School of  
Massachusetts. It is an interesting  
fact that five of these six teachers have  
been to the Butler as pupils; four of  
them are from Hampton and its neigh-  
borhood.

The practice is, as far as consistent  
with the best interest of the school, to  
make use thus of home material, and it  
is pleasant to be able to say that some  
among the best graduates of the Nor-  
mal school have been residents of  
Hampton.

The majority of the children come  
from the east side of Hampton creek,  
on which the school is situated; some  
of them walk three miles to school.  
About half are girls. They are taught the  
three R's—with object lessons in lan-  
guage, number, form, etc., geography  
and singing. The course has been ex-  
tended, and hereafter the pupils will not  
enter the Normal School till they are  
prepared for its Middle class, when they  
will be better grounded and at a better  
age to go on and become teachers. This  
will be also an advantage to those who  
leave the Butler, as the majority do, to  
go to work and not to school. The  
grades are primary, intermediate, and  
lowest grade of grammar school. Once  
a week, on Friday, there is an hour of  
Bible instruction in all the rooms; the  
highest rooms using the International  
lessons in the Baptist Sunday school  
papers, the same as are used in the  
church which most of the children at-  
tend; the lower rooms learn texts from  
the Bible, and have the Bible stories  
read to them which they repeat very  
fluently. The "Kitchen garden" class  
two a week is interesting and profit-  
able to the children, and attracts visitors  
here as in Northern schools to watch  
with delight the little ones, both boys  
and girls, going deftly through the op-  
erations of bedmaking, washing, table-  
setting and sewing, with their Lilliputian  
furniture, and their merry songs.

The students of the Senior class of  
the Normal school, are practiced in  
teaching at the Butler, teaching each  
a turn from nine to twelve o'clock under  
direct supervision of the superintend-  
ent who gives them further instruction  
and model lessons at the Institute.  
Commencing in the lower rooms they  
practice in all the grades, with much  
profit in fitting them for practical ex-  
perience as teachers.

Industrial instruction has been intro-  
duced this year at the Butler, for both  
boys and girls. A class of eight girls  
from the highest grade, go every after-  
noon from ten to four—Fridays excepted—  
to the Normal School Industrial  
Room, and are trained in hand sewing,  
under a resident graduate teacher of the  
night school. Knowing very little when  
they began, they have made excellent  
progress, have completed a very neatly  
made set of miniature bed clothes for  
the kitchen garden, besides making  
many aprons, and learning to mend,  
darn stockings etc., very nicely.

The boys have a carpenters' class—  
six boys from 12 to 16 years, selected  
from the highest room. They have one  
work day a week, Fridays, working from  
nine to twelve and from half past one  
to four, under the instruction of one of  
their own Butler school teachers. They  
are taught the principles of the trade,  
and they also have done excellently  
well. Besides trellises, flower tubs,  
school pointers, etc., they have made a  
complete model of the Butler school  
house six feet long, with all its furniture,  
desks, tables and chairs; and several  
models of dwelling houses—all with  
frame, roof and clapboards complete,  
and painted according to their own  
taste. These industrial classes were  
started as an experiment, and have proved  
so eminently successful that they  
will probably be increased in size next  
year. The parents of the children are  
greatly pleased with them, the children  
interested and benefited. The experi-

ence suggests how easily useful indus-  
trial training might be introduced into  
many schools, with no increase of teach-  
ers and but trifling expense.

The past year has been in all respects  
the Butler's most successful year. It  
has been better graded, with one more  
room than before. The teachers have  
been unusually earnest, and the children  
have done well; the prolonging of the  
county school session has been of ex-  
cellent effect on the spirit of the school  
as well as a relief to the private efforts  
by which in the last year repairs were  
made to the amount of about \$1000, the  
whole roof having been re-shingled, by  
Indian student labor, and other greatly  
needed repairs made. By the same ef-  
forts, the school closing in May will be  
kept up a month longer as a pay school,  
probably not giving up more than one  
of its teachers. Next year, a longer  
room will be opened, accommodating  
more pupils in the highest grade.  
Shortly before the close of the county  
school, it received a pleasant visit from  
the new County Superintendent and  
Clerk of the Board, and one of the col-  
ored trustees who has children in both  
the Butler and the Normal School. All  
expressed hearty appreciation and in-  
terest, and for the sake of the commu-  
nity it is to be hoped that the historic  
Butler School will long continue to prosper  
in its work.

TUITION is free to all Hampton Students,  
its cost, estimated at \$70 per annum, is  
most contributed by friends of the School  
in what are termed annual scholarships.  
The students are charged ten dollars per month  
for board, which includes room rent, fuel,  
lights, washing and mending and medical at-  
tendance. Of this sum, they are expected  
to earn on an average five dollars a month,  
or one half, by their labor in term time, and to  
pay the balance in cash. This cash payment  
is either made by the students from their  
own savings and their earnings in vacation  
or by their parents and friends. Sometimes  
students get behindhand, and in debt to  
the School, either from sickness, which has  
prevented their earning the usual propor-  
tion of their bills, or from inability to meet  
their cash payments. In such cases, the  
student is sometimes sent out to teach for  
a year, or to earn money in some other oc-  
cupation, so as to be able to return and com-  
plete the course—sometimes personal aid  
is extended from the Beneficiary Fund, often  
by the donor of his or her scholarship—and  
sometimes, if the faculty think it best, the  
student is allowed to go on and complete the  
course, graduating with a debt to be paid  
from their first earnings after leaving school.

Once a year a circular is sent to those who  
have not paid these debts, calling their atten-  
tion to them and at the same time inform-  
ing them that if from any cause they find  
themselves unable to pay their debt or any  
part thereof, a letter from them stating cir-  
cumstances will be laid before the faculty  
who will make such deduction as seems prop-  
er and just. The replies to these circulars,  
almost without exception, express a desire to  
pay the whole debt without deduction, even  
when the circumstances would seem to war-  
rant an abatement. A few extracts may be  
of interest as indicating the spirit of the  
graduates in relation to their school debts.  
One, whose debt was about sixty dollars but  
who was offered a reduction of one half on  
account of long continued illness, writes "It  
is my intention to pay every cent of my debt.  
I would have done so ere this had not  
sickness taken about all of my pay. I am  
not willing to pay only half the debt which  
I know to be honorable and just, so believe  
me, sir, I mean to pay the last cent." Another  
writes, "My long illness and traveling ex-  
penses home and to this school have pre-  
vented my paying sooner. I'd rather you  
would not make any deduction as I expect  
to pay the whole amount next term." An-  
other "I feel that one very important duty  
has been left undone by my not writing to  
you. I can only ask your pardon. I have  
paid \$106 of my earnings; \$12 fare home; \$49-  
board; \$45 that I borrowed to go to Hamp-

ton and \$44. I have to pay my fare back to  
where I am teaching in. Buy a few clothes  
General, I do not want you to deduct one  
cent. I can pay all if I am allowed the  
chance and am glad I have it to pay." An-  
other says, "For the last three years I have  
not been able to teach or do much of any-  
thing else. I went North thinking I would  
be able to send it, but by the time I had earned  
a little money I was taken down, and had  
to be brought home, where I have been ever  
since—part of the time not expected to live.  
I am improving slowly but not able to go  
out of doors yet. The debt shall be paid as  
soon as possible. There need be no deduc-  
tions made in my case, as it is an honest  
debt, and I mean to pay it." Another sends  
the balance due and says: "Don't think your  
letter was the only cause of my sending the  
balance of my account. I was getting it  
ready to send when I received your letter,  
and was only sorry it did not get to you be-  
fore you wrote. Only too often have I  
thought of my indebtedness to you, but  
looking at it were, from between the two  
rather mistakes where I seemed to stand.  
I thought yours would be less apt to grind  
me to powder."

"Should have paid my debt long ago, but  
sickness and misfortunes have prevented me.  
I will pay every cent of it just as soon as I  
can."

The three last classes graduated with the  
following debts, viz:

	1880.	1881.	1882.
No. in class,	42	48	63
No. leaving in debt,	24	26	45
Amount of debts,	\$592.01	\$726.75	\$825.28

Of which the following amounts had been  
paid up to April 1, 1883.

Class of 1880	\$367.88	bal. due	\$224.13
" 1881	338.45	"	371.23
" 1882	252.26	"	60.75

The personal aid extended to Students  
from the Beneficiary Fund for these three  
years has been as follows:

1880	\$215.41	Among 17 Students
1881	300.00	" 17 "
1882	267.24	" 57 "

Owing to the increased opportunities for  
earning money afforded by our new indus-  
tries, this aid is less needed every year, and  
is extended chiefly in cases of sickness, or  
other disability.

J. F. B. M.

THE Negro schoolmaster is abroad.  
Living on a meagre salary, working  
without the stimulus of the society of  
his peers, mingling, except in the cities,  
among those with whom he has little  
but color in common; debased, what-  
ever his culture, by his complexion, from  
intercourse with those of similar attain-  
ments, he or she often has a lonely  
time of it.

None in the land are working more  
loyally, patriotically and to a better  
purpose than these teachers of the Col-  
ored race whose tremendous numbers  
and power and terrible condition, in  
many ways create concern among  
thoughtful people.

The letter below is from one of this  
worthy class, who replies to an invita-  
tion to give an oration at the next  
Hampton Anniversary; our custom  
being to call back graduates from the  
field of labor to give their thoughts and  
experience, rather than on their just  
graduating, to speak of what they do  
not know much of—the life before  
them;

"Your very kind letter of Jan. 23rd was re-  
ceived in due time, and I thank you very  
much for the honor conferred upon me in my  
appointment to speak at your next com-  
memoration."

I have taken good time for consideration,  
Gen'l, and while I feel more and more inter-  
ested in the future welfare of my race, and  
am anxious to do whatever I can for the fur-  
therance of that object; and while I believe,  
without a doubt, that an industrial and prac-  
tical business education, such as you offer at  
Hampton, is the best for the ground work or  
foundation for the upbuilding of any race, of  
whatever color or previous condition, still I  
must decline the privilege conferred by your  
appointment, because I am not sufficiently  
blessed with oratorical, or public speaking  
powers, to do justice to any subject upon

which I might write; furthermore, the duties of my position occupy almost every minute of my time, in school and out, and I do not think that I could do myself justice to write on any subject without impairing my work here. I started this school from almost nothing and am anxious to make it something; this, with a night class and active Sunday School interest, completely fill my time.

There are others of my class and school-mates with equally as much, perhaps more experience, who would write and speak with more credit to the Institution than I could, and I hope you will procure one of them in my place.

If nothing happens to prevent, I shall attend the Commencement, and shall hope to bring one or two prominent colored men from this place, who have been somewhat prejudiced from hearsay. I think a sight of Hampton will do them good.

I shall send in, soon, a detailed account of my work here.

#### Peter Cooper.

Just after writing the brief review of Mr. Cooper's last work, which is printed in another column, received news of the death of this venerable philanthropist at the great age of ninety-two. For many years he has been associated with the city of New York like one of its old land marks. He grew up with the city; starting in it a poor boy, working industriously at one trade and another, and investing his earnings, as fast as he could save them, in suburban lots which were absorbed one after another into the advancing city, accumulated value with its growth, and rolled up a fortune for their owner. It may be thought that the whole secret of his success lay in the fortunate accident which started him in life in a city just growing into a great metropolis. But other fortunes were made and lost there; failures are not the exceptions in business experience, even real estate in city lots changes hands many times; he saw hundreds fall at his right and left hand, while it was the boast of his old age that he had never failed in business. We are quite sure, and so he would have told us, that if, in sixty or seventy years from now, a Peter Cooper is left standing hopefully out into life in city or country, it will be one who has as had, a head to take advantage of opportunities, hands strong to work, grit to go through difficulties, and firmness of principle to resist temptation. If he leave behind him not only a fortune but a name like Peter Cooper's, honored and loved and still fruitful of blessing, it will be by living as Peter Cooper has lived, not for himself alone but for humanity.

THE CORONATION of King Kalakaua of the Hawaiian Islands has caused considerable amusement in this country, and has met with bitter verbal hostility from the white population of the Islands. The reason for this hostility is not understood here. A curious, though small problem is working itself out in those Islands. The coronation is a part of the development. The political power of the Kingdom, through the want of political foresight on the part of good men who created on the nation, is lodged in the hands of the King and a legislature which is almost wholly native Hawaiian.

The native population has been declining mentally, morally and physically for some years, and the extinction of the race is only a question of time. While the natives rule and control the revenues of the Kingdom and make its laws, they are ignorant of what we call "institutional government," and have had neither training or experience in self government. The whites, on the other hand, furnish the only civilization of the country, and hold the larger part of the wealth by reason of their superior thrift. They desire that the country should be ruled as civilized countries are ruled. There is nothing, however, in the constitution of the country which provides that the rule of the intelligent minority shall predominate.

The King and the natives, who are in the majority, insist that their opinions shall prevail. As these opinions are those of ignorant men who are somewhat pagan in character, there is nothing left for the whites but emigration or revolution. The two opposing ideas have now locked horns in debate.

The controversy is now carried on after the manner of ancient Marston battles, when the opposing forces met at sunrise, and, after a day spent in making faces at each other, and calling wicked names, retired at sundown for a comfortable night's rest. There is now a mild crisis in political affairs, which may last some years. The King's chief adviser is gifted with an extraordinarily picturesque moral character. He commenced his early manhood with an obscure act of insurrection in the Island of Sumatra; illustrated his middle life by establishing the Mormon church in the Hawaiian Islands, and is finishing his career by showing a Hawaiian King how to put himself off the throne. He appears to be the chosen instrument for wiping out the Hawaiian nationality. The small minority of whites, on the other hand, are jealous of each other, and are so divided in opinion, that Polynesian rule is, so far, a simple affair.

The attempts to solve race differences have been the same from the beginning of the world. The remedies used are always unpleasant. The whites are trying moral suasion on the Polynesian, just as the old man in the fable tried grass. They accuse the King of bad government, and are content with giving him a "piece of their minds." The King regards it as water on the back of a duck. His standing army of sixty men confronts the five thousand whites, and there is peace. The white community is peculiarly conservative. It lacks boldness, unity and decision.

The restless young men, and the old men with young blood, who appear in troublesome time are not there; men in middle life, with families and with property, are not the men who initiate reforms, either by moral or physical means. The softness of the tropics subdues the Anglo Saxon. The Polynesian government cracks and curls its whip around the legs of the whites. They yell and submit. This is, however, an educational process. We, ourselves, have little to boast of. The North and the South vituperated each other for thirty years, on the slavery question, before they came to blood and iron, and then, after all, settled the difficulty by butchering a half million of men. The average good man does not like radical measures. Ruskin said that the *inertia* of good men was worse than the wicked deeds of bad men. Men pull at the reform only when some radical cuts the boat adrift, and there is nothing left but to pull or go on the rocks. There are many whites in the Islands, who will not initiate revolts but who would do splendid service if a crisis was forced.

The United States have given to the Hawaiian Islands a treaty which is of great commercial value, but so far as the natives are concerned it is a disadvantage. There is in it the possibility of great good, both to the future of the Islands, and to the United States. It is a scaffolding upon which a decent civilization may be built up. It enables the whites to become prosperous, and with prosperity to create a solid, though small nation of English speaking people, in the centre of the Pacific. The kindly feeling of our own people for missionary work done there, aided largely in securing the treaty. If it becomes evident that the object for which it was created is not to be secured, it will be terminated in the course of time. Recent news from the Islands reports that the indecent orgies of the coronation period, reproduced paganism in its most repulsive phase. It is for those who are most deeply interested in the material progress of the Islands to show that the moral sentiment of our people shall not be outraged by such proceedings, and that they have not only the will but a way to check these insults to Christian civilization. Pagan-

ism is being rapidly restored to the Hawaiian Islands. There is forced upon the white residents the issue, whether or not it shall be subdued, and the issue cannot be avoided. If they meet it promptly and decisively, they will receive the warmest sympathy from the many Americans who take an interest in the Islands, but who are now becoming discouraged by the apparent failure of philanthropic work done there for the last fifty years.

W. N. A.

#### A Southern Educator.

The Springfield Republican says in a recent editorial: "No man better represents the 'New South' from a southern stand-point than Atticus G. Haygood, president of Emory college at Oxford, Ga., and also trustee of the million-dollar Slater fund for the education of the colored race. Dr. Haygood's thorough devotion to his college was shown by his declination of the bishopric of the Southern Methodist church. We trust that his 'Sermons and Speeches' just issued by the Southern Methodist publishing house at Nashville, Tenn., will call wide attention to the pressing importance of education for the white youth of the South. These sermons and addresses, with the exception of two given before Boston and Cleveland audiences, were delivered to the students of Emory college and the citizens of Oxford. Eloquent with manly and inspiring words for all young men there, they are especially adapted to the present needs and changing aspects of the South. Their first quality is a vigorous common-sense, thoroughly imbued with a hearty good-will to men of all conditions. Dr. Haygood sees things as they are, lets the dead past bury its dead, and strikes out hopefully and courageously for better things. He tells plain truths with such a winning frankness that all must hear, if they will. He treats the whole matter of education with a broad and far-sighted wisdom: 'Before the war the South had more sons in the college than the North had. Our mistake was, we tried to stand the pyramid on its apex; we neglected the common school.' He pleads that the better people of the South keenly feel the deficiency inseparable with their past history, and are doing their utmost to mend matters, and in their comparative poverty are in a desperate need of national aid for common schools, and of better endowments and equipments for their colleges. There is a constant widening and deepening of the desire among the poor young men of the South for an education. For instance, more than one hundred in Emory college are working their way and living on eight dollars per month. Never were there so many young men in college from the farms as now, with brains and backbone in them, and to be heard from in the golden day dawning upon the new South.

This is the way Dr. Haygood talks to his boys in one of his baccalaureate addresses:—

The first ground I mention of my confidence in your success is this: There is not a genius among you; and what is better, there is not, unless I am greatly mistaken, among you a man who thinks himself a genius. But many of you have what is better than genius, the spirit of hard, plodding, patient all-conquering work. Another reason I mention of my hope of you and confidence in you; most of you are what the world calls poor. For this I thank God. I hope there is not a man of you whose father has money enough for him to live without work. Except vice there is hardly anything in this world that so emasculates energy as gold. How many of you have already learned the uses of adversity; how bravely you have fought your way through college; eluding your small means, denying yourselves, and patiently practicing economy; how splendidly you have won in this conflict with poverty that does not cause you to blush to-day, and that in the years to come will be an inspiration to others, in like case, who will come after you; all this some of us know. Let me ask you this last time I will ever see you together. What are you

going to do? Something, I am sure. Most of you must; all of you should. . . . It is a shame beyond words when an educated man does nothing to deserve to live in this working world.

After pointing out the various peculiar and pressing needs of the South for educated, skilled, and practical men, he thrills them with their opportunity:—

There is a word I frequently hear the young men employ in their speeches—"Renaissance." I think you call it. Young men, this time is the Renaissance of the South, so far as time and opportunity can make it. It rests with our men, and women whether they will make an accomplished fact what history, nature and God has made a possibility. For my part, I am sick of croakers; I am worn out with the prophets of evil; I am disgusted with the men who have no voice except lamentations over what they call the losses of the South, and no gratitude to God for her infinite and eternal gains. You go your ways now; Emory's blessing goes with you. Whatever you do, be men—manly men. Clear a little space for you for your feet, and put them down firmly. Have opinions that rest on your convictions. Then express them when there is occasion. Maintain them, and, if need be, offer for them. Fear neither minorities nor majorities; fear what is wrong, what is false. Do your very best, and crucify unto death all petty jealousies and envies and suspicions. If you cannot win the world's rewards fairly and honorably. In such a case failure is success, and what is called success is failure forever and ever. When some crazy pre-destinist said to Emerson that the world was presently coming to an end, he answered, "I can get on very well without it." Until we can get on without the world, we cannot get on with it as God intended we should. Keep your ships seaward and sink her in the maelstrom before you will make a port by flying the enemy's flag. In every good and right way persuade as many to go with you as you can. But if you must, go alone—rather, if there be no one with you except Christ, the Lord, as was with the Hebrew children in the furnace of fire. He is the majority. Keep all things right between you and him. As to the rest, you can wait, if need be, to the judgment day. My dear boys, Emory loves and trusts you. She commits her honor to you and pronounces her blessing on you to-day. Be true—true to yourselves, to one another, to all men to God. Be true to your section, and to this great Union and nation that God has set up as the hope of the oppressed and that he would make a blessing to all the world.

While Dr. Haygood delights in 'his trust of the Slater fund for negro education, his heart is sore distressed for his poor and struggling college boys who also need dormitories, books, apparatus and all those equipments which make our northern colleges rich and strong. Rather than turn away from the last who came, he has given up to them all but four rooms of his own house at a great sacrifice of domestic comfort. May the next man who has a million to spare, or any lesser sum, or even a good book, remember his straitened room and his empty shelves. We commend Dr. Haygood's 'Sermons and Speeches' to northern as well as southern readers.

#### Truck Farming for the South. Orange Judd Co. N. Y.

A number of valuable books have been written upon the general subject of 'garden-ing for profit' but the volume before us professes to treat especially of gardening and trucking in the Southern States, and in that respect is almost unique. It contains many useful statistics and sound conclusions, and will be interesting to all who are engaged in trucking in any of its varied forms in the South. Either to the expert or the beginner, the careful study of this book ought to be of advantage, but it should always be borne in mind that no amount of book learning will supply the want of practical and organized labor. The secret of profit in market gardening, where, must be looked for in the brain and skill of the gardener, and if these elements are wanting, no book can supply them. The records of every agricultural year show that money, in large sums, is constantly being expended for sad experience, and that man is making a serious mistake with fancy, that careful study of works like this, he is fully equipped as a farmer. We do not wish to be understood as under rating the value of sound agricultural reading, we merely wish to press the point that such reading is only one out of many means by which successful farming is to be accomplished.

HISTORY OF THE NEGRO RACE IN AMERICA—Negroes as Slaves, Soldiers, and Citizens. By George W. Williams, First Colored Member of the Ohio Legislature and late Judge Advocate of the Grand Army of the Republic. In Two Volumes. G. P. Putnam's Sons, New York, Vol. II. 1800 to 1880.

We reviewed the first volume of Mr. Williams' interesting book in our last number. The second volume covering the period of this century, contains the last six divisions of his subject: Part IV, Conservative Era—Negroes in the Army and Navy; Part V, Anti-Slavery Agitation; VI, The period of Preparation; VII, The Negro in the War for the Union; VIII, The First Decade of Freedom; IX, The Decline of Negro Governments. Specially interesting chapters are on Negroes in the War of 1812, and in the Navy, the story of the Amistad Captives, Negro School Laws; Employment as soldiers in the Civil War; The Results of Emancipation; Representative Colored Men, Colored Churches of various denominations, and the Exodus. The book is well indexed and valuable statistics are added in the appendix; lists of works by Negro authors, and newspapers edited by colored men; engagements in the civil war, colored officers and employees of Government, with sketches of colored Senators and Congressmen. The testimony to the courage and efficiency of colored soldiers in our wars is invaluable, though it seems to have been always forgotten between times. This was noticed in the first volume to the Revolutionary war. In that of 1812, Commodore "Perry speaks highly of the bravery and good conduct of Negroes, who formed a considerable part of his crew. They seemed to be absolutely insensible to danger," and a Captain Shaler in the same war, says:

The name of one of my poor fellows ought to be registered in the book of fame, and remembered as long as bravery is considered a virtue. He was a black man by the name of John Johnson. A twenty-four pound shot took away all the lower part of his body. In this state he lay on the deck, and several times exclaimed to his companions, "Fire away my boys; no haul a color down." Another fell near me, and several times requested to be thrown overboard, saying he was only in the way of others. When America has such tars, she has little to fear from the tyrants of the ocean.

The Civil War record is well known and here fully given.

We have no space for as many quotations as we would like to make. Among the representative colored men of whom their race may be proud was John DeGrasse, M. D. of Boston, who as early as 1854, was admitted in due form to the Massachusetts Medical Society, the first instance of an honor of the kind. The history of the laudable efforts of the colored people for schools, and of some which were successful is given with that of the Negro school laws. In the chapter on the Results of Emancipation the significant statistics of education since the war are found, and young colored men would do well to notice Col. Williams' opinion of true education. He says:

"Few educated colored men ever return to agricultural life. The cause is first, reaction. There is an erroneous idea among some of these young men, that labor is dishonorable; that an educated man should never work with his hands. Second, they seem to believe that a profession gives a man consequence. Such silly ideas should be abandoned. There is great demand for educated farmers and laborers. It requires an intelligent man to conduct a farm successfully. No profession can furnish a man with brains or supply him a garment of respectability. Unfortunately there has been little opportunity to get employment at trades, and prejudice is giving way to reason, and there will soon be a free field. It matters not how many million dollars are given toward the education of the Negro; so long as he is deprived of the privilege of learning and plying the trades and mechanic arts, his education will rather injure than help him. We would rather see a Negro boy build an engine than take the highest prize in Yale or Harvard."

The chapters on "Reaction, Peril and Pacification," and the Exodus, are of much interest. In conclusion Mr. Wil-

liams expresses the belief that "the future work of the Negro is two fold; subjective and objective. Years will be devoted to his education and improvement here in America. He will then turn his attention to Africa" where "tribes will be converted to Christianity, cities will rise, states will be founded. In the interpretation of History, the plans of God must be discerned. 'For a thousand years in Thy sight are but as yesterday when it is past, and as a watch in the night.'"

Our readers will be interested in a few particulars of Col. Williams' life which we take from the *New York Globe*. He was born in Pennsylvania in 1846; of mixed German, Welsh and Negro descent. He served in the Union army during very young, and gained honorable mention and was wounded several times. At the close of the war he was transferred to the regular army, and had charge of drilling colored troops; served with distinction on the plains for awhile, returning to civil life in 1868, because the United States was unprepared to take colored officers in the regular army. While in the army he was converted and joined the Baptist church; after leaving it he entered Howard University, and then Newton Seminary, Mass., where he graduated in 1870. He edited a paper in Washington awhile, and then removing to Cincinnati became an acceptable contributor to the *Cincinnati Commercial* over the signature of "Aristides." He studied law in the office of Judge Taft, late Attorney General, and was admitted to practice in the Supreme Court, and in the meantime owned and edited the *South Western Review*. In 1877, he was appointed an Internal Revenue officer by President Hayes. He was twice nominated by the republicans for the legislature, and in 1879 was elected by large majority, the first colored member of the Ohio legislature. He has been for many years an influential member of the Grand Army of the Republic, has represented the Department as a national delegate, and was promoted judge advocate of the department of Ohio on the staff of Gen. John S. Kountz of Toledo. He has been engaged upon his historical work for seven years, as he tells us in his preface. In education, successful achievement and character as a man and a Christian, Col. Williams is a representative of whom the colored race may be justly proud.

IDEAS FOR A SCIENCE OF GOOD GOVERNMENT—In Addresses, Letters and Articles on a Strictly National Currency, Tariff, and Civil Service Reform. By Hon. Peter G. L. D. Treadwell. Boston: Bookbinding Co., 201, East 12th St., New York.

The venerable author of this book has been long and well known for his public spirit and devotion to the cause of popular progress and education. The Cooper Institute, in New-York City, founded and endowed by him many years ago, for a free lecture hall and free classes in all the arts and sciences, will be his lasting, noble monument, and secure for him the enduring gratitude of those for whose benefit it was given, and of all interested in the improvement of the people, whether they share his views of political economy or not. These are equally well known, and are embodied in his book, which is of interest and value to any who, from either side of the questions discussed, wish to consult a resume of the arguments adduced in favor of "flat money" and a protective tariff. We don't see that Civil Service Reform is mentioned on more than two pages, but have no doubt that Mr. Cooper is a hearty believer in this reform as he there declares himself.

#### DIED.

FRISSELL—At Bloomfield, N. J., April 18th, Mrs. Lavinia B. wife of the Rev. A. C. Frisell, and mother of Rev. H. B. Frisell, chaplain of Hampton Institute.

We are happy to publish in another column a reply from Col. Richard I. Dodge to parts of our last month's review of his very interesting volume on "Our Wild Indians." As to whether our reviewer, "fair" on most points as the Colonel complacently says, was "disingenuous" on any, we must leave to our readers with both papers and the book before them. The volume would certainly repay reading from any motive. In a later kind letter, Col. Dodge says:

PORT SULLY, D. T., March 20, 1883.

MR. EDITOR:

For many years I have been stationed among Indians. I do not claim to be a special friend of that race, but I am constitutionally impatient of wrong and ill treatment of any man or beast, and sufficiently honorable to feel a sense of wrong in even the smallest part that falls to my share of the cruelty and barbarity inflicted by our Government on the hapless Indian.

To right this wrong has been the aim of my life for some years, and I have written and talked on every occasion. In 1879-80 I wrote an elaborate and careful essay on the Indian question. It was shown to many persons. Prof. Angell borrowed it, and Dr. Davis wrote me in hearty commendation of it, other prominent persons urged me to continue the fight, and some even went so far as enthusiastically to predict that I was the Moses, destined to lead these poor barbarians from their "house of bondage." I had been too long acquainted with political modes to have any great hope of changing the existing state of things, but feeling called on to "do with all my might" I, in 1882, revised and condensed my former paper, and sent it, in pamphlet form, broadcast through the country. Where it will effect any good to the Indian is still an open question, but I have my reward in the commendation of many prominent and excellent men.

#### Appeal Against an Old Charge.

In a sketch accompanying the picture of William Lloyd Garrison, in our March number, the well known story was repeated of his imprisonment in Baltimore for denouncing, in his paper, the act of a Newburyport shipmaster in taking a cargo of slaves on his vessel from Baltimore to New Orleans. The publication has brought us the following interesting letter from a lady subscriber who, from long acquaintance with the shipmaster and his family, appeals against the further use of the word "infamy" affixed by Garrison to a name she reveres. We do not know whether the statement she presents of the case was brought forward at the time or not. We suppose it must have been, but the stern reformer—though notably gentle when principles were not concerned—would probably not have admitted any excuse for such an act in anyone, any more than in himself. Our correspondent's story of the circumstance may be new to many or all of our readers, and we are happy to publish it in the interest of truth and charity. We hope, also, that some one will be able to answer her inquiry.

NEWBURYPORT, March 27, 1883.

Editor of the *Southern Workman*.

DEAR SIR:—In the March number of the *Southern Workman* there is a sketch of the life of Mr. W. Lloyd Garrison. In mentioning the incident connected with Mr. G's experience in Baltimore, in reference to the domestic slave trade, it says, "he so vigorously denounced the 'infamy' of a Newburyport shipmaster who carried a ship load of slaves from Baltimore to Louisiana, that he was convicted of libel," &c. &c. A daughter of Captain Brown, the "shipmaster," living in Newburyport, is my intimate friend. In conversation with her, some months since, the Baltimore affair was incidentally mentioned. As I knew but little about it, I asked her for some particulars relating to it. She gave me, in effect, the following. She said: My father had nothing to do with the charter of the ship Francis; the consignee of the ship had the entire control, subject only to the owners. The ship was put into his hands to obtain for her a freight or charter for New Orleans. Not until the slaves were put on board his ship did my father have anything to do with them; but, from the time he received them on board until he delivered them to their new master, they were treated as kindly by him as his own

children would have been. They had the whole "between decks" of a large ship entirely to themselves, where they "kept house," had their "class" and prayer-meetings; and, instead of being "hand-cuffed," or chained, as Mr. Garrison reported them to have been, they were under no more restraint than *eighty* (which was all there were, instead of a "ship-load") white persons would have been who had paid their "passage" on the ship. Their master in Baltimore had failed in business, and at the time they were sold had scarcely *rags* enough to cover them. When their new master (Mr. Milliken, of "Milliken's Bend," below New Orleans) put them on board the ship, he also put many bales of woolen and cotton cloth, with thread, needles, &c., and the women were busy all the passage making new garments; so that long before they reached their new home they were all in new, warm, comfortable clothing. When my father landed them at Mr. Milliken's plantation, they parted from him with the warmest expressions of gratitude for the fatherly kindness they had received at his hands; and, on Captain Brown's return down the river from New Orleans (bound to Europe) he came to anchor off Milliken's Bend, and every one of those slaves was allowed, by their kind master, to go on board and once more thank him for his kindness, and bid him "good-bye." It was one of the happiest hours of my father's long life—as I have often heard him say—and further, that there was no act of his life that he could look back upon with more satisfaction. Mr. Garrison was one of the most benevolent of men, but my father was not *an* *idiot* behind him in everything that was generous and humane and self-sacrificing. He commanded ship for nearly fifty years, and his sailors found in him a friend and father always.

The system was "infamous" that required such service, but if Captain Brown had refused to take the slaves, what would have been the result? Who would have justified him, either North or South, in that day of darkness? John Newton wrote the *West of Africa* for slaves—I think—after he was converted. But the day at length dawned when the sin and guilt of oppression was seen; and the wrong, through the discipline of suffering was done away. Unnecessary thanks are due to him who rules the nations for this result! May the time be hastened when on the whole earth "they shall no more oppress."

As this is written as a private letter, I may be asked my object in writing it. I believe the exciting cause was, seeing the word "infamy" attached to Captain Brown's name; and further, as a sort of relief to my feelings for the wrong which was done him in thus applying it. I knew Captain B. from my childhood till he died, as a most kind, genial, large-hearted man, who would share his last loaf with anyone in need, black or white; and, as was said by one who knew him well,—"there would not be a slave upon the earth if he could free them."

I avail myself of this opportunity to add a few words relative to Captain Brown, and to ask a favor. For several years Capt. Brown sailed from New Orleans to Europe, and consequently was well acquainted with that city. He was very fond of singing, and liked to hear the "blacks" sing in their meetings. Upon one of his voyages, on his way to Europe, he became converted. It seemed a very remarkable circumstance, as no one else on the ship was in the least interested in religious concerns. There was a lone hymn which he used to hear the slaves sing which, during his last distressing sickness, was one of his "songs in the night," and which to the last was on his lips.

The following are two of the stanzas:—

In Him I have believed,  
Who has my soul retrieved,  
From sin He hath redeemed  
My soul that was lost;  
Oh, give Him glory,  
Oh, give Him glory,  
Oh, give Him glory,  
For glory is His due.  
And now I love my Saviour,  
For I am in His favor,  
And hope with Him forever,  
The golden streets to tread,  
Oh, give Him glory, &c. &c.

My friend has tried in vain to obtain the whole hymn! Would it give any trouble to make enquiry of your pupils, or through the *"Workman"*, if such a hymn can now be found in any of their collections. I would feel greatly obliged if the enquiry could be made, even if unsuccessful.

Will you say that the prayers and songs of the "oppressed" were not instrumental in leading him to Christ? I don't doubt they were.

With respect, C.

#### Horsford's Acid Phosphate For Wakefulness.

DR. WM. P. CLOTHIER, Buffalo, N. Y. says: "I prescribed it for a Catholic priest, who was a hard student, for wakefulness, extreme nervousness, etc., and he reports it has been of great benefit to him."

## Letters From Hampton Graduates.

TEACHER, ADVISER, LECTURER AND SEAMSTRESS. TEACHING A WHITE SCHOOL. HER HEART IN HER WORK. THE THINGS THAT DISCOURAGE AND THAT ENCOURAGE HIM. A COUNTRY IN SOUTH CAROLINA. CRAZED WITH COTTON. LIEN LAWS. THE DRV TICKET. INTEREST IN EDUCATION. THE PLACE TO STICK. ORGANIZING A READING CLUB. THE SCOFIELD SCHOOL.

TEACHER, ADVISER, LECTURER AND SEAMSTRESS.

The variety of demands made upon the young graduate teacher of either sex is thus feelingly set forth by one of our most faithful workers. She is equal to the occasion.

N. C. 29th, 1883.

My dear Miss C.

Last winter I taught in C., Va. with two other Hampton Graduates. I was comfortably situated, and had a very pleasant time, being blessed with kind friends and excellent opportunities for improvement. That is my bright experience; now I can tell a darker one, but which was the cause of effecting equally, if not more good. During the vacation I had a school in a remote country place, where there had been no school before. My little log-cabin was church and school-house combined. I had to be teacher, adviser, lecturer, and seamstress, whichever the occasion required, so you can imagine how precise I had to become. While down there trying to do my duty for my unfortunate brothers and sisters, I received notice of my appointment to teach in one of the Public Schools of the city, which was good news for me, for after having been from home nearly four years, it was indeed a pleasant prospect to know that I have been teaching here since October 2nd; have a large school with an average attendance of fifty; in our schools there are three Hampton graduates, and another under-graduate. There are four schools, two for each race; they are all graded, each being under the supervision of an expert teacher, who visits our recitation-rooms, hears, or conducts the recitation, and makes any fit suggestions. I have introduced the word method, and like it more than ever. The Hampton teachers are making a good impression, it seems, on those connected with school affairs.

I have not heard directly from M. for some time. Mrs. Steele, the missionary, who has been working so faithfully at school in the interest of precious souls, told me that Mary had become a Christian. If you have not heard sooner it will be a bit of glad news. They have had a successful revival. I have had a nice interesting class in our Sunday School, am using the "Church Teaching" or Lessons from the Epistles and Gospels. I am devoted to Sunday School, as well as to day school work. It is almost tired, and I have not said as much as I wanted, so thanking you for your kindness,

I am your old pupil,

TEACHING A WHITE SCHOOL IN NEW HAMPSHIRE.

An unusual position is filled by one of our graduates, who is passing, his studies industriously, and under very pleasant circumstances in the old Granite State.

HANOVER, N. H. Feb. 19th, 1883.  
MISS A. E. C.

I received your very kind letter last month. I am treated as well as any white boy at the college by the Faculty, by the students, and by the citizens.

I taught two winters in the white schools where the only colored person was the teacher. I was treated as well as any man could be treated, both by parents and pupils.

The Superintendent said in his report that my school outranked any school in the town during the two winters I taught. I love to teach, and shall make it a profession. I want to teach the higher branches, and that is what I am fitting myself for.

I'll graduate here next June if I live and go from Hampton since I graduated from there. I hope you will write me more, it was so charming and good. I am a Christian, I hope, and will try and stand up for Jesus.

I hope you will excuse this letter, for I am in the midst of examination before committee. But if you write again, (which I hope you will do before long) I will give you a better letter, with more minor details which may be interesting to you. There has been a revival here in college, and several have become Christians. I am glad to hear good news from Hampton.

I remain yours very truly,

C. J. W.

HER HEART IN HER WORK.

A faithful worker writes thus to a very kind friend of Hampton graduates, who sends us her letter for this column.

Va., Nov. 27th, 1882.

DEAR MISS L.

As I have said many times, I am never better pleased than I am when I can get a letter from you. It matters not how long I have been away, your letters always revive my drooping spirits. They seem so much like my dear mother and sister speaking to me, those two who are now so near me. I have now been teaching for nearly three months, and it doesn't seem I have been at the work hardly a month. I have never once thought I should like teaching so well. I now truly have my whole heart in the work. Can never think I've done half enough for the dear little children. I leave my home about eight in the morning, get there about half past; find the most of the children sitting on their waiting; after a good morning to and from all, I open my school with some pretty hymn, and prayer, then have them repeat a Psalm, and they have learned the 2nd Psalm, and they have learned the 2nd Psalm, and they have learned the 2nd Psalm. I then stay there till about 4 p. m. I have then done what I could to instruct the young friends. I also attend our Sabbath School regularly. I always take those wise papers you send, whenever I have them. Oh! how pleased the children are when I hand each a paper, and tell them who sends them to me for them. They always say what a dear kind lady she must be, to be thinking of us while we are so far from her. I tell them you are always thinking what good you can do for so me body. I read those pieces I saw marked on one of the papers. The words were very beautiful indeed.

Affectionately, your girl,

S.

THE THINGS THAT DISCOURAGE AND ENCOURAGE HIM.

There is enough to discourage in the isolation and deprivations of the teachers in the scattered country schools of the South. Our graduates generally have a way of looking also on the bright side, and summing up their encouragements, in which Hampton's constant interest may always count.

S. C., December 21, 1882.

DEAR TEACHER:

In reply to your circular, I take this opportunity to say that I have been teaching at the above named place since the 14th of August. I have on roll seventy-two pupils. My school-house is made of logs; it is not as comfortable as it might be, but I think that it is about the best colored school-house in this district. It was formerly a church, but, as the congregation has built a frame house, they have turned this over to me. I find the people, white and black, very friendly disposed. The most discouraging thing that I have at present is the absence of school furniture, such as maps, charts, objects, &c. I have been trying to raise money enough among my pupils to buy at least one map, or chart. I have succeeded in raising about one dollar and a half, cash; and I have many more promises.

The things that encourage me, are, my pupils' eager desire to learn, the kind letters of encouragement which I receive from friends, the reflex that I get from doing what I believe to be the best thing to elevate the people among whom I am, and to know that Hampton feels such a deep interest in her sons and daughters. I might go on to name many other things that encourage me, but space will not allow.

W.—is teaching only three miles from me.

We have organized a Teachers' Association for the purpose of promoting the cause of education among our people, especially in this country.

I have nothing more of interest to write at present. I shall be pleased to hear from you at any time you are at leisure.

Your sincere pupil,

A COUNTRY IN SOUTH CAROLINA.  
An intelligent young man, teaching in South Carolina where he has always lived, writes thus of the condition of things there, making many points—

Co. SOUTH CAROLINA.  
December 31, 1882.

DEAR TEACHER:

I am teaching school at a place eight miles from the county seat. This is a low and level country; the soil is slightly fertile, and the chief productions are cotton, corn, rice, and potatoes. The cotton is the chief one that finds its way to market, and is either sold in— or Charleston.

CRAZED WITH COTTON.

The Southern people seem almost crazed over cotton raising, and seem to think there are no other means for getting ready money. It is bartered for goods in country stores, and even in the merchants there have cotton-houses for small quantities of seed cotton, that they may be able to gather during the cotton season. When the season for cotton is over, all the cotton is ginned and shipped, and the country stores close.

LIEN LAWS, &c.

The lien laws are very severe and sweeping. Some people are foolish enough to take, say two, three, or four, different kinds of fertilizers for their farm, and of course a failure will ruin their limited fortunes. Often, quite often, are farmers broken entirely up by the middlemen and merchants. It is all their own fault, or their mistake, that these men fall into such ill-fortune. We need more brain in farming here. The "obnoxious no fence law" is here, and the people seem too stupid to change, with the change, but content themselves with almost nothing, looking for something almost out of the natural order of things to better their condition. The South, under political restrictions, or under any other hindrances, might be made a rare, comfortable home for both white and black; but, unfortunately, are blundering over good chances and hand-some little fortunes, and seem not to realize it. I hope a change may soon come.

Morals are at a pretty low ebb, but in some places they seem ordinarily good.

THE DRV TICKET.

Voting on the "wet" and "dry" ticket came off, a few days ago, in—and the "dry" ticket won in both places, to our happy surprise, and rum will now be obtained only by prescription, or for medical purposes. I hope it will soon be dropped from the medical list, for I think him a poor physician who recommends so much whiskey as I have known so many to do. I hope that the effect will be so satisfactory to all, that when we vote again, in 1884, our success may be greater.

INTEREST IN EDUCATION.

I have been teaching here something over a month. As I am in the country I am, at times, lonesome. My whole school numbers about forty or more. The school-house is not large enough to hold all comfortably. I expect more, and I do not know what I shall have to do. The people are somewhat interested in education, and they desire me to remain the whole of this coming year, 1883. There is being prepared a nice little room for me, and I think I shall accept their offer. It is hard, very hard, for one to decide to stay twelve months in an out-of-the-way place like this, and where the people are so far behind the times.

But, I suppose, where the most good is to be done is the place to stick.

OPENING A READING CLUB.

I have called together a few into an organization known as a Reading Club, the object of which is, to read from periodicals and to keep them informed of the current news. I would write you more if I had anything worth telling. Your dutiful pupil, W.

THE SCOFIELD SCHOOL.

The school in Aiken, founded by Miss Emily Scofield, and bearing her name, is well known to those interested in the work of the freedmen. Industrial training is being started there under difficulties. It is felt to be the right thing for the development of character as well as a means of securing education. One of our graduate young women who resides in Aiken, and is an assistant in the school, thus writes of it.

AIKEN, S. C. Jan. 8th, 1883.

DEAR MISS C.

I received your letter some time ago, would have answered sooner but having

been busy I could not. Yes, I am teaching, began about the middle of October last. I am assistant in the Scofield School here. I enjoy teaching very much.

Our school is a Normal and Industrial school. It prepares teachers, and many who come to school all winter teach in the summer so as to enable them to return again another year. The industries of the school at present are printing (we have a Job Press, which does very good work) sewing for the girls, out-door work for the boys, such as keeping the yard and place clean.

We began school in our old board building, and taught there until the holidays, after which we began in our new two story brick building which was completed for us. The building is 60 by 65 feet, six large airy recitation rooms, a large chapel, a library and principal's office.

It was built last summer, the corner-stone was only laid August 1st, '82. On that day we did have a crowd to see it and a good time, being the first for a building of this kind and for school use.

The public fund has been withheld now for two years from this school. It was taken away two years ago while the principal and business manager were up North to their homes on a visit during the summer vacation. We do not know whether it will be returned, nevertheless, the school has gone on as usual through the aid of friends who have donated liberally toward it.

The colored people are as they always have been, willing to have their children educated, and will send them to school though but poorly clad. They have always befriended this school and its teachers, which is one of the great comforts to us.

F. A. Peters is the nearest Hampton graduate to me; he is about thirty miles; but his school closes, and he will then come up and teach with us; begins on 15th inst. I am engaged in Sunday School work. I never before thought to have my children interested in mission work until you told me. I like the little Magazine; I think I'll take it.

Yes, Aiken is the place for graduates, many of them are here already.

We have had snow twice; it did not last long, for the sun came and melted it. We have been having a very rainy season, but not a very cold one.

I will send you one of our last reports. It gives a full statement of the School.

Respectfully,  
S.

## Horsford's Acid Phosphate

AS A REFRIGERANT DRINK IN FEVERS.  
DR. C. H. S. DAVIS, Meriden, Conn., says: "I have used it as a pleasant and cooling drink in fevers, and have been very much pleased with it."

## Incidents of Indian Life at Hampton.

The large number of people who are curious enough to know about the Indians at Hampton will, probably, be interested in reading something concerning the Indian boys' work, their appreciation of their new style of dress, and their life in the "wigwam" which is so very different from that on the plains of the west.

It is as you know, quite a change through which the Indian passes in coming from his home in the forest, where he went almost without clothing, to live in a comfortably furnished room of a large brick building, and wear citizens' dress. His being placed here does not simply put him where his surroundings are very different, but necessitates a change in his personal habits.

Among the Indians, as among other people, there is to be found quite a variety of characters, so a general statement will not apply to every individual. While a majority seem to try earnestly to learn, and comply with the rules of health, neatness, and comfort, there are some who are not docile and have, to some extent, to be forced to do it. Many find pleasure in keeping their rooms neat and well decorated with their own paintings or other pictures.

They associate quite pleasantly together, a little more so with their own tribe than with others, and, by so doing, learn a great deal from Indian boys who have been here longer, or from colored boys who in some cases are their room-mates. I was told by a steady young colored man who has an Indian boy in his room that, after seeing the Indian retire several nights without saying his prayers, he asked him why he didn't pray before going to sleep. The boy's answer was that he didn't know how to pray. The young man said that he taught the Indian the Lord's Prayer, which he learned very readily. Then he found there was another hindrance—the Indian's forgetfulness—but, after being urged several times to leave his bed on his account, he never failed to pray before going to rest. This is one of the many instances I might mention to show how the Indian boys become acquainted with civilized habits and learn English much faster than they would with simply the help of the school-room. They who know only their own language when they come here, are for a long time very timid, both in the school-room and while at play, about using the English that they learn. The greater part of their conversation now is in English. As the boys are not able yet to interest themselves by reading, their idle moments are spent generally in foot-races and jumping, which seem to be their favorite amusements.

I think of all them, without one exception, like to wear good clothes. There are many to whom their present style of dress is entirely new; and they, as well as the others, like good suits, but not to keep them so. They like to keep getting good ones. In other words, they seem to be perfect clothes machines; not used for cleaning or making new, but for making dirty and wearing to pieces. They like to ask very often for, "some cap," "some coat," or "some collar," and have apparently no idea of how to take care of them. Their need of care for clothing makes it necessary for them to have a lesson not taught exactly as the others. Telling a boy how to take care of a coat does not have much effect so long as he knows he can have another when that one, as he says, "is no good." They are not only told how to take care of their garments, but the garments are issued in proportion to the amount and quality of their work.

The Indian boys, being used to doing nothing, when the time comes for work, had a little trouble to do something else. You see, then, that the way of teaching the above mentioned lesson is a good one, for it works well two ways. It not only causes the careless boy to be careful with his clothes, but encourages all to do more and better work. Considering the fact that the Indian boys were never required to do any regular work before coming here, some of them do exceedingly well at their trades. In fact, nearly all of them work well when settled to one thing. When on the plains they were used to moving about, and it seems here to be a part of their nature to be restless, and always ready for a change from one shop to another.

To the people who visit the School the general progress of the Indians can be better shown than told. GEO. BRANDON.

## From the Berthold Indian Mission.

The Rev. C. L. Hall is an authority on the Indian question. What he writes is always worth attention. Withal, public attention is unusually awakened respecting Indians. Such letters as the following are timely and hopeful:

FT. BERTHOLD, D. T. March 10, 1883.  
MR. EDITOR:

Dear Sir:—We are glad to have a good report from the scholars at Hampton. Hence the prospect of those who are termed "months ago," is not very bright. In the first place, those who could be persuaded to go from a community yet thoroughly heathen, were not as a whole of the most desirable class. They were those who had come in contact with the lowest class of whites, and become familiar with white people only to be injured in body and soul. This class of Indians is the first to come about the Mission, and we have to work through it to the better element which is more conservative. So, it was unavoidable, that the first to be taken East should be—many of them—from the lower grade of Indian life. It was just as unavoidable that they should very soon fall in again with the low associations from which they came, especially when missionary work had not previously created a new place for them. I found some of the returned boys here obliged to live in families, or rather with parties of the lowest kind. Some of them, after a while, gave way to indulgence from which they had been restrained for three years, with such abandon that they nearly killed themselves. Regular employment, under the care of the Agent, would be a great aid to them and to all the Indians; but the Agent informs me that the appropriation for the Agency is cut down so low that he cannot employ the returned scholars, as he did at first.

Here is the great need of the Indian—to be set at work. He is willing, but unable to direct himself. To give him directions and instructions means a present increased outlay to Government. Instead of this, appropriations are being cut down. It is folly to say that the Indian is lazy, and deserves to starve if he does not work. What is he to work at? We have isolated him, so that he cannot leave his reservation without a permit. We have driven him off from contact with the civilization which gives other poor and dependent persons work and direction, and we cannot say, "starve or work," because we keep him from working. This long winter there has been very little the Indians here could do to earn any money, though they have been willing to work hard, and they were a dozen willing to do any little job that offered. Many, having no other employment, wanted to hunt, but the Government would not let the trader sell them any fixed ammunition, so that in every way they are isolated and shut in to idleness and the cultivation of vices.

The missionary force of the country cries out to Congress to break down the barrier between the races, to give us the severally bill and law for Indians, and to give sufficient appropriations—not to feed them—but for the industrial education of old and young. Private benevolence is wasting its efforts for the want of public justice.

Yours sincerely, C. L. HALL.

It is fair, and pleasant to state, that of the original Fort Berthold party, one young man has, at his own earnest desire, returned to Hampton to learn more of his trade and of English, and is doing well here, while the two little girls who did not go home with the rest—now in their fifth year—have been developing as any young girls that could be found in any school or family. This shows what can be done for Indians under favorable circumstances. Mr. Hall's remarks upon the difficulties are deeply true, and justice to the effort demands that it be stated.

A later letter from Mr. Hall adds an interesting criticism of Indian character which is in line with some of Col. Dodge's views.

We sympathize with you in reading your report in the April Magazine, and hope the Indian will be steadfast in the faith they profess. The trouble with them is that they do not realize the exclusive nature of Christ's truth—that it is Jesus only, and not some thing added to their own superstition, and at war with them.

Ahuka even does not yet, and is offended or rather wishes me not to enforce the first and second commandment in my talk to his people. He wishes the religion of their "old men," and the religion of our white ancestors to exist together side by side. Dopeach the first commandment to them, for any people have gods, many and lords many, it is the Indians of this Interior; and if any people are ready always to say yes to anything and everything whatever may be their "heart judgments," it is the Indians of this Interior.

God bless you and your work.

Pray for ours.

Yours sincerely  
C. L. HALL.

## The Chinese Question.

FROM A CALIFORNIA COLORED MAN'S STAND-POINT.

MR. EDITOR:—

I have been called on, at my church in this city, by your mother and sister, who spoke highly of your work for my people in my old mother State. It of course made me feel proud to hear them speak creditably of the progress of my people. During the conversation your mother requested me to give you the condition of my people in California, and my views concerning the Chinaman, as a blessing or a curse. I will first give the real status of my own race here. California is a free-and-easy State; too much so for the moral strength of the colored man; he is apt to take the white man as his pattern, especially when the tide of prejudice is as low as it is in California. Pat's declaration of the black man is true in California, that "he is as good as a white man, if he behaves himself, and sometimes a little better."

Here, a colored man is weighed in an almost even balance; he does not have to be considered a white man's superior, before considered his equal. "Color, race, and previous condition of service," are things of the past; so much so that colored men, who were born in the extreme southern States, have forgotten all about Virginia, Georgia, Florida, Alabama, or Mississippi, and so free the air he breathes in this country, so uncontaminated with prejudice—his enjoyment so great, his rest so deep and undisturbed—that, concerning his native State, he is a Rip Van Winkle; and has forgotten the State that gave him birth. Ask him of his native State and while, perhaps, he has heard the yelp of the bloodhound on his track, has seen the auction block where many a mother's heart has been broken by a child being torn from her arms by the slave-driver, yet, when asked for the State of his nativity, he will say that he was born in the State of Massachusetts. The colored man in this country, as a general thing, of the higher grade intellectually, there being a great many raised in this country, and have the advantage of schools which others have not had, has given them the pre-eminence of acquired ability. There are a great many of the West Indian colored people here who, generally speaking, are cultured. There are some who are property holders; some are collectors, clerks, and in other branches of business; and a colored man can get employment in any place where he can take his part. The colored man here is not a man of pleasure to grow rich very fast, but there are some exceptions. We have, in San Francisco, three colored churches, whose value runs from twenty-five thousand to forty thousand dollars; and some who have comparatively small debts, averaging from eighteen hundred to two thousand dollars—the Baptists, Zion Methodists and African M. E.—There are about four thousand colored people in San Francisco; perhaps not more than eighteen hundred attend church, The saloons are open on Sunday; also theatres, gambling dens, and other places of internal amusement. Hence the colored man, loving pleasure more than God, spends his Sabbath day and night in these horrible dens that tend to degrade, impoverish, and damn him.

I have tried to paint the colored man in his true light; and now, sir, permit me to speak of the Mongolian as he is in this country. Having considerable experience of him I need not borrow from anyone to give you his true and correct status. I learned from your mother that you are in favor of Chinese immigration. This is nothing more than reasonable for a man who has spent his life as you have in caring for the outcast and down-trodden, yet the people for whom you have been laboring differ greatly from the Asiatic serf. The Chinaman is cunning, sneaking, mean, and ruthless. For a few examples: I in this city Chinamen have been employed in houses, as servants, for several years in succession, and the dissolving of this union between employer and employee is caused by some crime perpetrated by the latter. A wealthy lady had one in her employ for five years who, not long since, watched where she had laid several hundred dollars, and at a convenient time, he took the money and embarked on a ship for his native land; but the law wanted John a little longer, so he is now paying for his crime in State's prison. Another, a gentleman living outside the city, had in his employ a Chinaman, nearly twelve years ago, a short time ago while the gentleman was in town attending to some business, tried to outrage his wife; then took a hatchet and tried to kill her. There is no doubt that he holds sacred; the marriage vow is no more to him than the prognostication of a gypsy fortune-teller would be to a southern gentleman. He will take a woman, live with her, raise children, and then sell her for less than thirty pieces. He regards no punishment but death. There are three hundred of them in State's prison, a great many for life. While in the prison, serving a life sentence, they have committed crimes for which they have been hung. This

is the only punishment he dreads, and that but little. For one thing, they are thoroughly organized, and clandestine in their movements; so much so that our police must see him commit the crime, then and there put hands on him, or he escapes unarrested. Their crimes of murder are generally among their own people. Having touched lightly on his faults, my objections to his immigration to this country are, that he is low, filthy and dirty. We must admit that he is industrious, and every dollar he gets is a prisoner awaiting his exile to CHINA. We cannot compete with him in work or in business. He can live on ten cents a day, providing he has to buy his food; or he can eat a dollar's worth if some American is to furnish it for him. He will rent a room that an American man would consider too small for himself and wife to occupy, and he will put from eight to ten sewing machines, or three or four ironing tables, or a junk shop, or make it any other place of business, and at night some twenty-five or thirty will sleep in the same room. In the South, where there were fifty people it was a village; and a hundred, a big town; and a thousand was a large city. But here there are as high as three thousand of them sleeping in one large house, formerly used as a hotel by the whites. The question asked, what right has America to object to the immigration of any people, when our prosperity, welfare, and best interests are threatened; friends and children turned out of doors, unemployed, because they cannot work for the wages (and live honorably) that a Chinaman can when he lives in his filth and dirt; and then and there to compete with the coolies of Asia? If there was such a thing, as some missionary societies are claiming to do, to civilize and Christianize the Chinaman, might we not have some hopes that he would eventually grow into the customs of our country and be one of us, but all of this is a failure; he is a Chinaman; his habits and customs are his, and no power on earth could change him, and if any in heaven will elevate him one degree above his low level. It has been said by some philanthropic men of the East, and missionaries, that power divinity, and the Lord, that power he greatly needs. John is cunning enough even to use his pretensions to morality as a means to obtain money. They have their missionaries, churches, and schools, where thousands of converts are made. John is very religious when he is at work for some pious person, or wishes to be employed by them. He'll bow with reverence at the family altar, eat the bread and drink the wine as a token of his fidelity to the God of his employer; and will, sometimes, even cut off his eye, put on citizen's clothes, and throw away his opium-pipe; but as soon as something happens that their union is broken and John is discharged, he is a Chinaman again, and will be found at his josh-house worshipping his pagan god. America never was infested with a plague that should be so much dreaded as the immigration of Chinamen. It is true, they work cheap; possibly, the U. P. or C. P. would not have been built so soon had they not been so loving and obedient. The whole State would not have been owned by a few men. If a man wished to, he could go to one of the China Co's. and hire from one to five thousand Chinamen, at eight dollars per month, and have them sent to him if he wished. I asked a railroad contractor, not long ago, when he wanted five hundred men, to let me get him colored men. To this he replied that he would rather have the colored men, but if he employed them he would have to make a bargain with every man, but if he employed the Chinamen he could hire all he wanted from one man, and he would always keep the gang full; if one got sick or died he would replace him, while if he had white or colored men and one died he would have to hunt another man to fill his place, and considering this, and the difference there is between eight dollars a month and thirty-five, of course he would rather have the Chinaman. Whenever they are allowed to settle in cities, property around them is soon depreciated, and deserted by the Americans. In what is known as China town, and near to it, there have been several of the leading churches of the city, but they are now so abandoned that where they have cost from seventy-five to a hundred thousand dollars, a few years ago, they can be bought for from twenty-five thousand to thirty thousand dollars. A few days ago, in a part of the town where there are no Chinamen living, a small piece of ground (20x33) sold for seventy-thousand dollars. Less than a mile from this, in what is known as China town, I can buy a lot with a good house on it for twenty-two thousand dollars. The Chinamen, in their country, imitate the ants of South America. They crowd out and force all other inhabitants to leave them. The question has been and is asked, if they are such a curse to the country, why do Americans employ them? All sectarian and national love and sympathy fade away before the blazing sunshine of money.

R. SEYMOUR.

with white men soon taught them that they could never be their equals while they remained in ignorance. They therefore wished educated clerks and other helpers of their own race, though at first they had not very exalted ideas of general education. Especially did they not seem prepossessed in favor of female education, which they considered thrown away.

Not so the missionaries. Napoleon's reply when asked how France might best be elevated, "Eduquer les mœurs," had a peculiar significance to them. They knew that the mother tongue was not more surely woven in the organs of speech than was mother education into the very texture of the soul. And that there might be mothers to bring up their children aright, the young girls must be separated from corrupting influences, and trained up as they should train up their own children. With such views the missionaries early and anxiously sought for a way by which such a result might be attained; and a female boarding school seemed then, as it seems now, the only feasible means of accomplishing it.

But how could the missionaries leave their preaching, and other general labors among the people, to devote themselves to this arduous task, or how could they who were already taxed to their full strength add another department to their work. But the work must be done even if other pressing work was retarded.

So in 1836 the Female Seminary at Wailuku was commenced by Rev. Jonathan S. Green, assisted by Miss Maria Ogden, a most devoted Christian lady, who continued with the school through its whole course.

Although Mr. Green and his estimable wife labored in the school a few years, he desired to devote himself more especially to his vocation of preaching, and in 1841 I was invited to assume the charge of the school. This I did, with many misgivings as to my fitness for so important a sphere of duty; and at the same time I felt a peculiar reluctance to relinquish the boys' school in which I had spent so prosperous and happy a year of labor.

The seminary had been in the main prosperous, had numbered from forty to sixty pupils, chosen from all parts of the islands. They were from the ages of six or eight to sixteen or eighteen years of age.

In one important respect the seminary had not been successful. Many of the pupils had sickened and died, and many remained in an invalid condition. The change from their former life of careless freedom to one of regular habits and hourly duties, however light, was a greater one than can now well be conceived. The change, too, from living in grass huts to close houses was great, and its severity was greatly aggravated by entire ignorance of ventilation. Every part of a thatched house, except the floor, is a ventilator.

The people had begun to construct houses of adobe, or hardened mud, with windows, a thing never found in their grass houses. These, instead of being left open to admit light and air, were carefully closed with mats, or what would keep them dark, and being unforced, the exhalations from the ground, or from the decaying grass and mass spread upon it, or from what was still more objectionable, kept the air of the house filled with an unpleasant and highly pernicious odor. This was but partially relieved by the lack of ceiling, whereby was added the air from the decaying grass roof to that from below.

Lack of means obliged the missionaries to adopt in some measure the prevailing fashion, and the dormitories for the boarding school were long, unforced adobe buildings, divided into small rooms by partitions of the same. The beds built across one side and filling about half the room, were of short posts on which small poles were laid; these again were covered with dried grass, and the native mats over all. The pupils, according to the means of the parents, furnished a part of the bedding.

There was not much change in the matter of eating, except that the food was furnished at regular meals three times a day instead of being snatched at irregular times as appetite or opportunity prompted. The food was poi, a paste made from the taro root, and pounded, and fish, mostly albacore or salmon, in the absence of the native fish, which were not easily obtainable in such quantities as were required.

And here lay one of the difficulties of carrying on the institution. The albacore was cheap, and when properly preserved, was a wholesome food. It was mostly obtained from whale ships, being caught and packed at odd times when they were not immediately engaged with whales. Packed in salt it kept well, but sometimes the temptation was too strong for lack to increase his profits by packing in it quick-time instead of salt, in which case it became a poison, occasioning deadly sickness, and not unfrequently death. It was therefore necessary, that every cask opened should be closely exam-

ined, and, if suspected, that it be so disposed of as to be beyond the reach of the natives who could so surely restrain their appetites for the half putrid delicacy.

It thus happened that a famine of fish would sometimes occur; and the whetted appetite would create a longing like that of the Israelites for the flesh pots of Egypt, till a new, though always uncertain, supply could be obtained.

The tendency of such a state of things is always to mutiny, but to do the pupils justice it must be said that they bore it with exemplary patience, using salt or sea weed as the best substitute for the savory fish. To those who had been fed and petted at home by wealthy friends the trial must have been great; but their pride came into useful play here, and made them martyrs to maintain in all respects their superiority.

The care was better when salmon could be obtained, though that was not always in a good state; and the price was from four or five dollars per barrel to double or treble that sum, or even more at times. This was obtained from traders who generally favored the school and would furnish it as low as the state of the market allowed.

The clothing of the girls, which was very plain and simple, was mostly furnished by the Mission, as were books, slates and other articles.

For the whole support of this school of from forty to sixty scholars, about hundred dollars per annum were allowed, with extra grants occasionally for unusual needs, as building, &c., &c. This did not include the support of the missionary teacher, \$450 per annum being allowed for my family and myself—a small addition being made for the older children. Miss Ogden was partly supported by means of her own.

In assuming the charge of the school my first care was to promote the health of the pupils. No change was made in diet or clothing; nor did funds allow any change in buildings at first. But the number of school houses was diminished, and physical education commenced in earnest. Once each week a half day, or a whole day if need be, was spent in a ramble. One week the teacher, or a trustworthy assistant, went with the pupils to the mountains in the immediate vicinity, up which all ascended to a greater or less elevation, frolicking, singing, shouting, uncaring ferns, or the sweet trail of mule or myrtle, in which they were adepts. On the alternate week they were led to the sea shore, about two miles distant, where they bathed and swam, collected shell fish, and edible algae, which were abundant there.

Each girl was given a small plot of ground, which she was allowed to cultivate in flowers or vegetables as she saw fit. But an hour or two in the open air, with a hoe or other implement in brisk exercise, was required. The gardens were neatly kept, and a mass of bloom encouraged them; and through them a taste for the cultivation of flowers was diffused through the islands. A taste for flowers is inherent in Hawaiians, and needed but a little direction to develop florists extensively.

The buildings were very gradually changed as means could be obtained to do it. The adobe rooms were abandoned, and the school was lodged in the stone buildings.

Much too small now occupied by William H. Bailey as a dwelling. These means superadded to the care of their persons and their rooms, and their assistance in the domestic concerns of the school filled up the time not given to books, &c., and diverted their minds from the very morbid fancies they had acquired by witnessing the numerous cases of sickness and death which had occurred and had cast a damper on the usual buoyancy of youth. They were rewarded in due time by a state of exuberant health of the whole school, which continued as long as the means were persisted in.

The domestic training of the pupils was conducted by Miss Ogden. They cut and made their own garments, and attended to the ordinary care of the table, &c. For a few years it was easy to procure the requisite number of men to cultivate the food on the land belonging to the school. Cotton cloth was given in payment for labor, the traders' prices, viz.: three yards for one dollar; and thus the actual cost of a day's labor was only five or six cents. But the price of labor rose gradually, and at length could only be paid for in money. Then it became more and more difficult to procure laborers at any price.
